Illinois Department of Transportation  
Bureau of Bridges and Structures  
QUALIFIED LIST OF HIGH LOAD MULTI-ROTATIONAL BEARING MANUFACTURERS  
June 4, 2018  
This list supersedes the March 16, 2017 list.  
For High Load Multi-Rotational Bearings according to Guide Bridge Special Provision No. 13.  
Material Code: 70308 (Pot) – 70322 (Disc)

Domestic Steel Act Applies:  
All iron and steel products, which are to be incorporated into state projects shall be domestically manufactured or produced and fabricated. The Contractor shall obtain from the iron or steel producer and/or fabricator, in addition to the mill analysis, a certification that all iron or steel materials meet these domestic source requirements. The application of all coatings, epoxy, galvanizing, painting, etc., to metal products shall be domestically applied.
A. Scope
Before materials can be used for a Department project, the manufacturer/supplier must have a producer/supplier number assigned to their facility. The following guidelines are provided to clarify the submittal requirements and expedite the process.

B. Procedure
Companies interested in being considered for prequalification to fabricate HLMR bearings as specified in the IDOT specification for HLMR bearings [link to specification] shall provide two copies of a system approval package to the Department for review and evaluation. As a minimum, the system approval package should contain the following:

- Bearing manufacturer’s company name to be listed on the web site and other contact/address information.
- Contact Person’s Name, title, address, email address and phone number.
- Any supporting research if available.
- A brief list of recent past projects where your company’s bearings have been used including owner’s name and phone number.
- Show typical shop drawings, notes and plan details including installation instructions.
- All materials specifications.
- Any literature, case histories, and brochures providing insight into the bearing use and applications.
- A signed letter stating the subject material will not be changed without written notification to the Department.
- Prequalification Long-Term Deterioration Test package.
  - This test shall be performed on one expansion bearing with a rated capacity of 300 kips (1335 KN) or higher. The bearing shall be loaded to the rated capacity, and then subjected to the plus and minus .02 radians rotational displacement amplitude for 5000 cycles. The bearing shall also be displaced through at least 1000 cycles with a plus and minus amplitude equal to 1 inch (25 mm). The maximum sliding speed for this test shall be 10 inches (500 mm) per minute. Damage visible to the naked eye upon disassembly of the bearing such as excessive wear, cracks, or splits in the material, or a coefficient of friction which exceeds the value allowed for the material used, shall be grounds for rejecting the test. A successful, accepted test will result in prequalification good for no more than four years.
  - Photographs of the complete bearing assembly, and of each of the primary components before testing.
  - Certified copies of any test reports on the physical properties of the component materials for the bearing tested and a certification stating the bearing assembly furnished conforms to all the requirements specified in the Special Provision for HLMR Bearings. Submittals with insufficient test data and supporting certifications will not be accepted.
  - The actual complete bearing assembly after testing shall be shipped to the Department.
Two copies of the system approval package shall be submitted to:

Illinois Department of Transportation
Bureau of Bridges and Structures
2300 South Dirksen Parkway
Springfield, IL. 62764
Attn: Design Section.

Actual tested bearing assembly (including all components) shall be submitted to:

Illinois Department of Transportation
Bureau of Materials and Physical Research
126 East Ash Street
Springfield IL 62704-4766
Attn: Metals and Misc. Products Technical Coordinator

If you have any questions concerning the specification or the requested information, please contact Kevin Riechers at 217-782-9109 of our Policies, Standards and Specifications Unit.

C. Renewal of Prequalification
The Prequalification Long-Term Deterioration Test Package shall require resubmittal on a four year cycle in order to continue supplying HLMR bearings for State contracts. It is the responsibility of the bearing producer to monitor when their bearing system prequalification expires and to resubmit for approval 3 months prior to the expiration date.
**Instructions for Acknowledgement by Company:**
The owner, partner, or corporate officer shall complete the following and return a signed and dated copy with the product submittal or recertification.

_________  (Insert name of company) desires to obtain approval of materials to be supplied to Department of Transportation contractors as more fully described herein. I and _____________ (Insert name of company) understand that the Department of Transportation reserves the right in its contracts to approve materials at the source of supply as provided in Article 106.01 of the Standard Specifications for Road and Bridge Construction. I and _____________ (Insert name of company) further understand that approval of company supplied material pursuant to this request does not constitute a contract to supply material to the State of Illinois or any of its contractors, and that the Department of Transportation does not assure or guarantee that any materials approved hereunder will be supplied to the State or any of its contractors. In consideration of approval, I and _____________ (Insert name of company) agree to the terms, conditions and performance standards of the Standard Specifications for Road and Bridge Construction.
