Bench Mark: brass disk set in concrete along the north side of Anthony Drive. Sta. ±1223+71, 150' Lt., Elev. = 734.35.

Existing Structure: S.N. 010-0021 was originally built in 1956 as F.A. Route 39 Sec. 14-VB-VF and widened in 1992. The structure length is 725'-1" back-to-back of abutments. The out-to-out deck width is 121'-2". The superstructure consists of a reinforced concrete deck supported on four multi-girder spans, a 3 span continuous unit and a simple span unit. The original girders from 1956 are 102½" deep and consist of double angle flanges riveted to a web plate. The widening girders from 1992 are of welded plate construction with a web depth of 96". The deck and girders are non-composite. The superstructure is supported on two stub abutments and three multi-column piers all founded on concrete piles. The superstructure and Pier 3 will be replaced, while the other substructure elements will be reused.

Stage construction will be utilized to maintain two lanes of traffic in each direction at all times.

No salvage.

HIGHWAY CLASSIFICATION

F.A.I. Route 74 - I-74
Functional Class: Interstate
ADT: 63,100 (2017) / 75,700 (2037)
ADTT: 8,455 (2017) / 10,145 (2037)
DHV: 6,155
Design Speed: 70 MPH
Posted Speed: 60 MPH
Two-Way Traffic Directional Dist. 50:50

DESIGN SPECIFICATIONS (New Const.)

2017 AASHTO LRFD Bridge Design Specifications, 8th Edition

SEISMIC DATA (Exist. Const.)

Seismic Performance Category (SPC) = A
Horizontal Bedrock Acceleration Coefficient (A) = 0.047g
Site Coefficient (S) = 1.2

LOADING HL 93 (New Const.)

Allow 50#/sq. ft. for future wearing surface

DESIGN STRESSES

FIELD UNITS (New Const.)

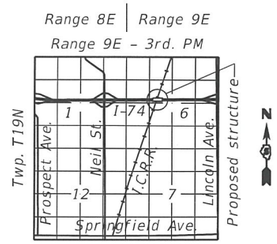
f'c = 3,500 psi
f'c = 4,000 psi (superstructure)
fy = 60,000 psi (reinforcement)
fy = 50,000 psi (M270 Grade 50)

FIELD UNITS (Exist. Struct. 1956)

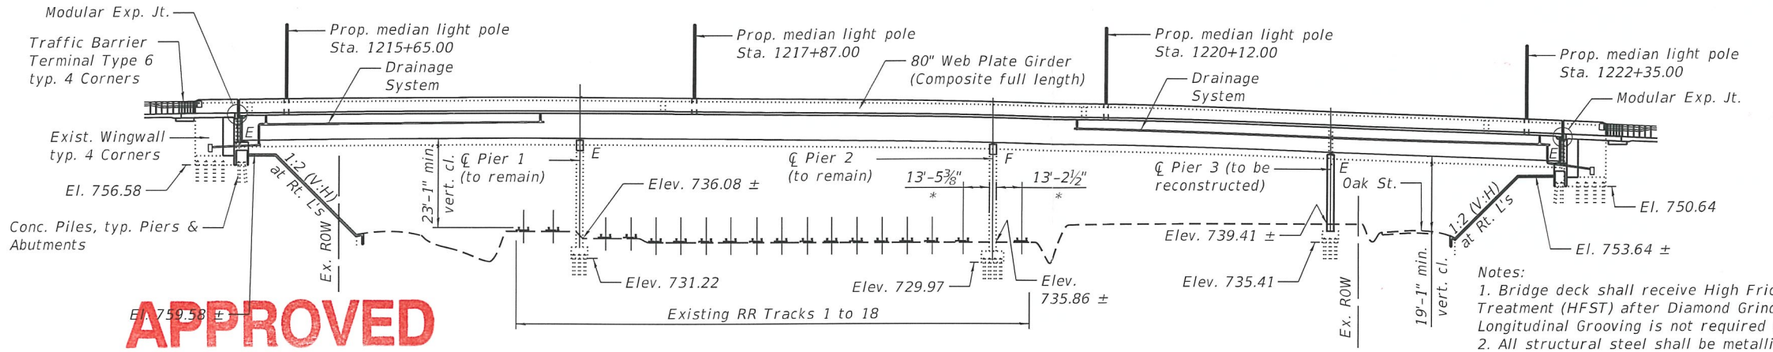
f'c = 2,500 psi
fy = 40,000 psi (reinforcement)

FIELD UNITS (Exist. Struct. 1992)

f'c = 3,500 psi
fy = 60,000 psi (reinforcement)



LOCATION SKETCH



ELEVATION

* Dimensions at Rt. L's to Track

Note: No free fall deck drains will be permitted in the span over the tracks or within 10 ft. of cross arms of a railroad pole line.

Notes:
1. Bridge deck shall receive High Friction Surface Treatment (HFST) after Diamond Grinding. Longitudinal Grooving is not required with HFST.
2. All structural steel shall be metallized (or galvanized as permitted by special provisions).
3. Up to ¼" may be ground off the bridge deck and the bridge approach slabs.
