

Illinois 83/137 Study

CAG Meeting #3

ENGINEERING TOOLBOXES EXPLANATION

Two Engineering Toolboxes, the Roadway Toolbox and the Bicycle & Pedestrian Toolbox, are being provided to you for your use during our upcoming Alternatives Development Workshop.

The Engineering Toolboxes are a collection of design “tools” used to improve safety and mobility along a roadway (e.g. crosswalks, refuge islands, turn lanes, medians). These tools are intended as a starting point for the discussion of potential improvements to the Illinois Route 83/137 roadway.
