

# Why A Full Closure?

## Traditional

- Three to four construction seasons
- Lane shifts and crossovers present potential conflicts to motorists and the men and women who work on construction projects
- Costs more  
Using the traditional method the cost for this project would be approximately \$78 million

## Full Closure

- **FASTER**  
One construction season
- **SAFER**  
Eliminates potential conflicts for motorists and the men and women who work on the project
- **CHEAPER**  
Closing this stretch of roadway allows for a saving of approximately \$14 million
