EXECUTIVE SUMMARY

While the original goal of the Interim Report was to concentrate on RTA's discretionary fund, it became clear that viewing this program in isolation will not address the funding allocation challenge the RTA region has been confronting. A more comprehensive approach that considers all funds, operating and capital, and that examines the statutory formulas as well as discretionary funding, will lead to options that could generate outcomes that are both more equitable and more effective. This report describes five approaches or options for the allocation of funding to the Service Boards. These options range from the current 2013 allocation to proposals that provide awards for improved performance, options that emphasize a competitive process, allocations based on sub-area equity, and formula-based allocations with advantages and disadvantages of each option presented.

A significant aspect of the Interim Report is the identification of a set of strategic guidelines to shape the discussion of different allocation approaches. These include:

1. ***The funding allocation process should emphasize regional goals.*** Rather than focus on what is best for individual Service Boards or specific sub-regions, funds should encourage actions that support a healthy regional economy anchored by a strong, safe, and customer-focused regional transit system that is accessible to all residents;
2. ***Changes in how funds are allocated should not be viewed in isolation,*** but rather as part of efforts to improve regional governance, planning, livability, and coordination of public transit service in the RTA region;
3. ***Any change in how funds are allocated should involve a process*** that is transparent, targeted, objective, and that demonstrates results; and
4. ***Recommended options should be viewed in a broader context*** that covers the allocation of all capital and operating funds. This overall view and impact on funding will be addressed in the Final Report on Funding Allocation Scenarios.

Deciding how much money to provide for each transit agency through any funding allocation option will generate controversy, particularly at a time when reasonable needs exceed available funds. Any new allocation process that focuses on one specific portion of the RTA's program will increase funds for one or more Service Boards at the expense of another – unless of course there is a sufficient increase in overall revenues. While opportunities exist for increased revenues, significant growth is unlikely in the immediate future. This Interim Report describes several options for allocating funds, while recognizing the importance of financial stability for the Service Boards.

The principles and options should help stimulate a productive debate over how best to improve the region's transit system. Any specific discussion of possible changes in how funds are allocated only makes sense as part of a presentation regarding possible changes to the full RTA program.

INTRODUCTION

The Regional Transportation Authority (RTA) for Northeastern Illinois must pass a budget that includes capital and operating funds for the region's three transit providers (known as Service Boards[1]). In 2012 RTA was unable to meet budget deadlines because of disagreements over the allocation of a discretionary fund among the Service Boards. While RTA is responsible for the allocation of transit funds to the three Service Boards, most funds are distributed based on fixed formulas set by state legislation passed in 1983 and updated in 2008. For 2013, RTA's discretionary fund for operations totaled $189 million. Historically, almost all of this discretionary funding has gone to CTA, with Pace receiving the balance. Apart from extraordinary funding related to the June 2003 destruction by fire of a wooden trestle railroad bridge, Metra has not received discretionary funding since the late 1980s.

During the budget negotiations in 2012, Metra made a case for a share of discretionary funds, which inevitably would have reduced funds for CTA and Pace. While the dollar amounts were not large relative to the RTA region's annual budget, CTA considers that virtually all of the discretionary funding is needed in order to maintain its operations and they have relied on this historical precedent. Metra considers that while it has not had reason to request discretionary funds for almost a decade, current financial circumstances dictate that this is no longer the case.

The 2012 deadlock regarding allocation of discretionary funds was broken at a special meeting of RTA's Board of Directors on October 10, 2012. The RTA Board passed an ordinance which provided Metra with capital funds from the RTA fund balance so that CTA and Pace received their expected level of funds from the discretionary account. Recognizing that the basis for the 2012 solution was unsustainable, the RTA Board called for an independent review of funding options:

"As soon as practicable, RTA staff is directed to solicit and engage an independent entity, with relevant expertise in public transportation and finance, to study and develop a recommended method of determining the allocation of public funding to the Service Boards. The vendor shall, as part of its report/study, map the source of all subject funds, including 'discretionary' funds not specifically allocated by statute."

While the origin of this study relates to the unprecedented 2012 impasse over the allocation of discretionary funding, the scope of work covers both discretionary and formula funding for operations as well as funds for the capital program. This Interim Report focuses on discretionary funding, in part since RTA has considerable flexibility in how these funds are allocated. This report also covers the principles that will be used to develop allocation scenarios. The Final Report on Funding Allocation Scenarios will address possible changes to the formulas, including some changes that will require state legislation.

While the origin of this study relates to the 2012 impasse over the allocation of discretionary funding, the scope of work covers ***both discretionary and formula funding*** for operations as well as ***funds for the capital program***.

1 Chicago Transit Authority (CTA – provider of bus and rail service within the City of Chicago); Metra (provider of the Chicago region's suburban rail service); and Pace (provider of the Chicago region's paratransit service and bus service outside of the City of Chicago).

BACKGROUND

In recent decades, the RTA region, like many other metropolitan areas across the nation, has experienced strong economic growth in its suburbs, known locally as the collar counties (DuPage, Kane, Lake, McHenry, and Will). There are signs of a second wave of suburban expansion extending beyond the collar counties. This suburban growth has been driven by many factors, notably the widespread availability and cost of land and lower traffic congestion compared to the central business district and close-in suburbs. Since the end of the recession, the City of Chicago has accounted for half of the region's growth in jobs since 2010.

Suburban expansion, however, presents serious challenges to the Service Boards—CTA, Metra, and Pace. For example, Metra commuter rail services cannot easily adapt to serve reverse commuters (i.e., those who live in the central area and commute to the suburbs.) Similarly, the fixed route nature of most Pace bus services cannot easily serve the numerous suburb to suburb travel needs of those who both live and work in the collar counties. The lower density of trips also leads to high costs per passenger mile for bus service.

The challenges presented to the provision of transit services, in both the City of Chicago and in the suburbs, should be addressed at a regional level. Although there is some overlap, the institutional environment for transit decisions in the RTA region is focused on the three Service Boards, each with its own chain of command, internal accountability, and base of political support. In effect, transit services provided by the Service Boards are subsystems within a larger regional system, each with different operational characteristics and core customer bases. The Service Boards' first responsibility is to ensure their respective transit services are safe, efficient, and meet the travel needs of their customers.

The challenges presented to the provision of transit services, in both the City of Chicago and in the suburbs, *should be addressed at a regional level*.

THE SERVICE BOARDS

- *Chicago Transit Authority (CTA)* is the oldest of the three Service Boards, technically formed in 1947 when it took over the Chicago Rapid Transit Company and the Chicago Surface Lines. These rail lines had been in operation since 1892 and some of the infrastructure when CTA was formed was already 55 years old. The CTA system is currently the second largest public transportation system in the nation in terms of passenger trips, and serves the City of Chicago as well as 35 communities adjacent to the city. CTA service accounts for more than 80 percent of the transit trips (1.6 million rides per average weekday) made in the six county Chicago metropolitan area. CTA operates 1,200 rail cars over eight routes covering 224 miles of track, making 2,145 trips per day. CTA's 1,781 buses make 19,709 trips per day, serving 11,493 posted bus stops along 1,959 route miles.

- *Metra* is the second largest commuter rail agency in the nation (based on directional route miles) serving Cook, DuPage, Will, Lake, Kane, and McHenry counties. The agency was branded with the name Metra in 1984, but commuter rail service has been prominent in the Chicago area for much longer. Metra's rail system covers 495 miles and serves 241 stations. Metra operates 702 weekday trains, and carries about 50 percent of the trips into downtown along major expressway corridors. Of the morning peak trips made on Metra, 88 percent end in Chicago.
- *Pace* is the suburban transit provider for the Chicago region, providing suburban bus and regional ADA-paratransit services. Pace operates vanpools and Dial-a-Ride programs in the six county Chicago metropolitan area as well as providing bus service to suburban Cook County and the collar counties, serving 284 municipalities. The agency was created in 1983, and in 2007 Pace became responsible for ADA and paratransit services in the full six-county Chicago region. Pace's total ridership in 2012 was about 39 million. Pace has 209 accessible bus routes, 454 paratransit buses, and 694 vanpools.

Transit services provided by the Service Boards have overlapping geographic footprints, but are generally supportive of economic and other activities in the City of Chicago and suburban Cook County, which together serve as the traditional economic hubs for the region. Both CTA and Metra face serious challenges such as ageing rail infrastructure, rail capacity constraints, and numerous station access issues for travelers with disabilities.

RTA RESPONSIBILITIES

The responsibilities of RTA are mandated by provisions specified in the RTA Act. One of RTA's main responsibilities is to review and approve annual financial plans from the three Service Boards for operating and capital investments. The approval of a budget requires a super majority vote of the RTA Board, allowing groups to block plans that they dislike. The Board consists of 16 representatives, including a Chairman and 15 members appointed from within the six-county region. RTA also continually monitors the budgetary and operational performance of the Service Boards. RTA prepares and adopts a five-year capital program each year and issues bonds for Service Board capital programs. In addition, RTA conducts regional planning, feasibility analyses for regional capital projects, and provides program management oversight for those projects that are approved. RTA is also responsible for audits and regional coordination of government affairs. RTA administers the Reduced Fare Program for seniors, students, and persons with disabilities, as well as the ADA-paratransit Eligibility Certification Program.

RTA is responsible for fulfilling financial oversight and strategic regional planning functions that enhance the regional transit system for the residents of the entire six-county region, including the City of Chicago. This study is consistent with that mission. Each of the Service Boards recognizes transit's key role in supporting and enhancing the economic vitality and quality of life of the RTA region and the State of Illinois, particularly in the face of competition for jobs from other regions and states. Both the traditional central business district model and suburban expansion have been successful where they improve

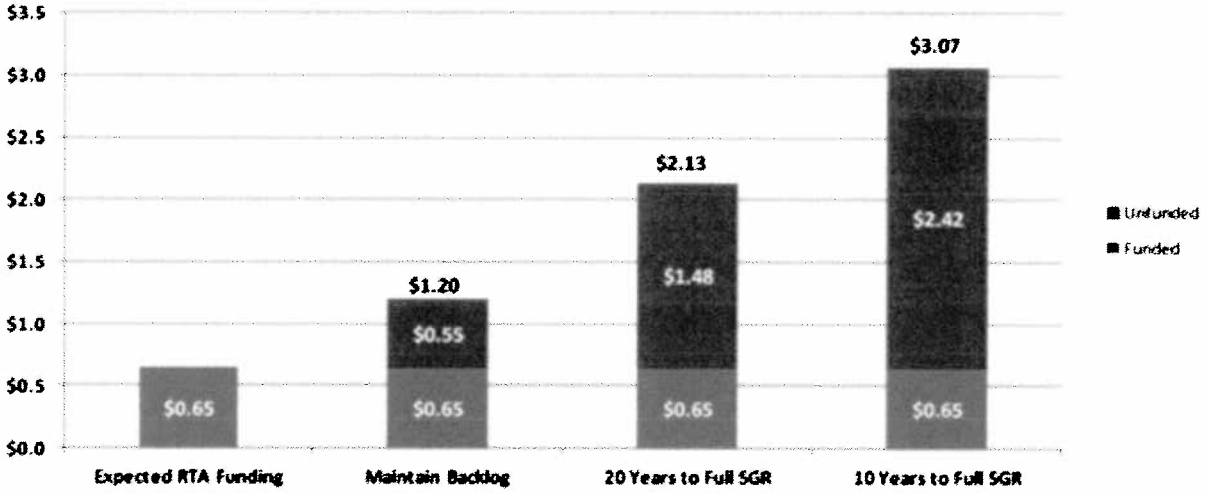
The *Service Boards* provide service to the third largest transit market in the U.S. The region consists of a population of *more than 8 million*, and serves two million daily riders.

access to labor (for employers) and to jobs (for employees).

GENERAL SHORTFALL IN FUNDS

The Service Boards provide service to the third largest transit market in the US. The region consists of a population of more than 8 million, and serves 2 million daily riders. Chicago's system comprises some of the nation's oldest transit facilities. To reach a state of good repair as of late 2011, the RTA would require $18.7 billion to address the state of good repair backlog, and an additional $12.4 billion to meet the ten-year need for normal capital reinvestment for a total of $31.1 billion.[2]

Figure 1: Expected vs. Required Annual Funding to Achieve a State of Good Repair[3]



To obtain a state of good repair over a 10 year period, the annual cost would be approximately $3 billion, or $1.20 billion to maintain the current backlog. But, the region's expected annual capital funds amount to only $650 million. Even when spreading the costs over a greater span of time, this is still a significantly higher amount than the capital funds available to the region. Since the 2010 analysis, the estimate of backlog and 10-year state of good repair needs has grown by 17 percent. This sharp increase is due in part to more precise methods of estimation, along with improved data and the completion of inventory records. The RTA is currently working with all three Service Boards to generate consistency with respect to how assets are characterized.

Aside from capital funding, operating costs are also increasing each year; this will continue to be a challenge faced by all three Service Boards. While it is recognized that the RTA requires new sources of funding, the focus of this report is the allocation of existing funds among the Service Boards.

2 Backlog is defined as investments that have been deferred for purposes such as asset rehabilitation, replacement, and annual capital maintenance. The details regarding these estimates can be found in RTA's Capital Asset Condition Assessment Update.
3 RTA's Capital Asset Condition Assessment Update, as of December 31, 2011.

NOT UNIQUE TO NORTHEASTERN ILLINOIS – PROBLEM FOR OTHER METRO AREAS

This problem of shortfall in transit funds is not unique to the RTA region. Every major US city faces similar gaps between available funds and capital needs – this is particularly true for regions with older rail systems. The national estimate of the cost to return the nation's transit systems to a state of good repair totals $78 billion.

TRENDS SUMMARY

POPULATION

In the 1980 to 2012 period, Cook County's population has fallen by 0.4 percent while the other five counties in the RTA region have grown. Chicago's population fell by 9.7 percent while the balance of Cook County has grown by 11.9 percent. As a share of the regional population, Chicago shrank from 42.3 percent to 32.4 percent of the RTA region from 1980 to 2012. Since 2010, Cook, DuPage, Kane, and Will Counties have grown slightly, while Lake and McHenry Counties have lost population.

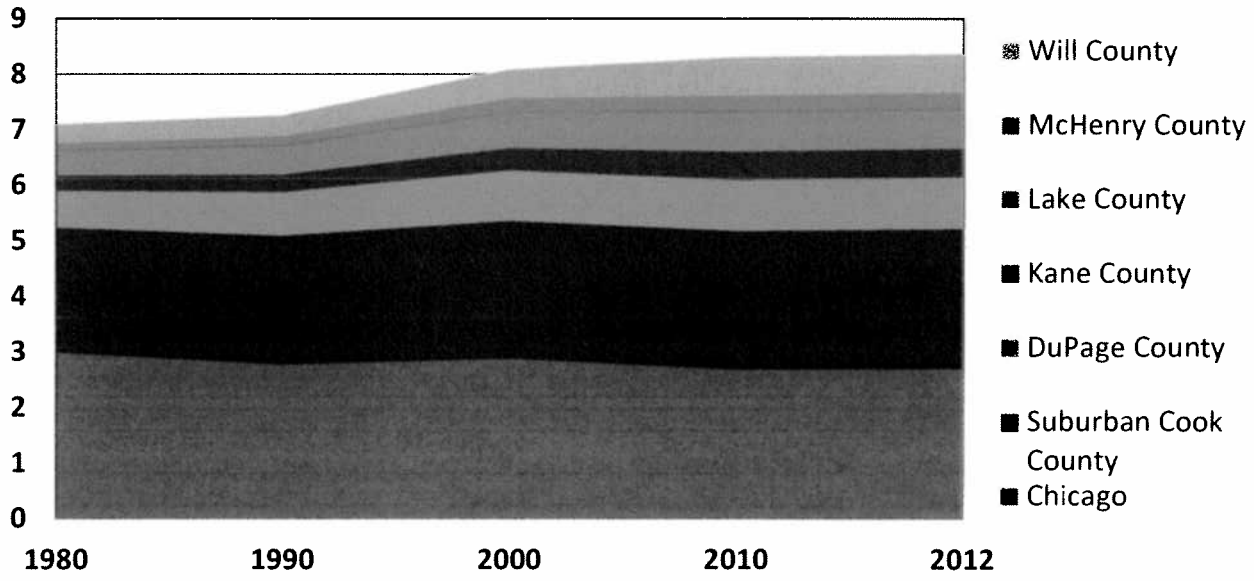


Figure 2: Shares of Regional Population, 1980 - 2012, in millions

EMPLOYMENT

The location of jobs in the RTA region over the 1981 – 2012 period indicate two trends:

1. Sub-urbanization of jobs throughout the collar counties; and
2. Decline of employment in the inner ring suburbs (suburban Cook County and DuPage County).

Suburban Cook County and DuPage County are mature and largely built out; meanwhile, firms might be moving to more cost-effective or productive locations within the region. Will and McHenry counties were the only RTA counties to experience employment gains between 2001 and 2012. Since 2010, all RTA geographic divisions have experienced employment growth, with suburban Cook County and McHenry County lagging the rest of the region. Conversely, employment in the Loop peaked in 2007 just prior to the recession. It should be noted that these data do not include non-incorporated self-employed persons—which include many professional job categories such as attorneys, accountants, and physicians—and thus likely under-counts the number of employed persons working in central Chicago.

Some of the loss of jobs in the counties can be attributed to the recession of 2008–09; slight job declines were already evident in Cook, DuPage, Kane and McHenry counties from 2007 to 2008. Suburban Cook County saw a much steeper job decline from 2001 to 2012 than did Chicago. Between 2001 and 2012, Chicago lost 5.5 percent of its jobs while suburban Cook County lost 14.8 percent and DuPage lost 4.2 percent. Since 2010, the City of Chicago has accounted for about half of the regions's growth in jobs.

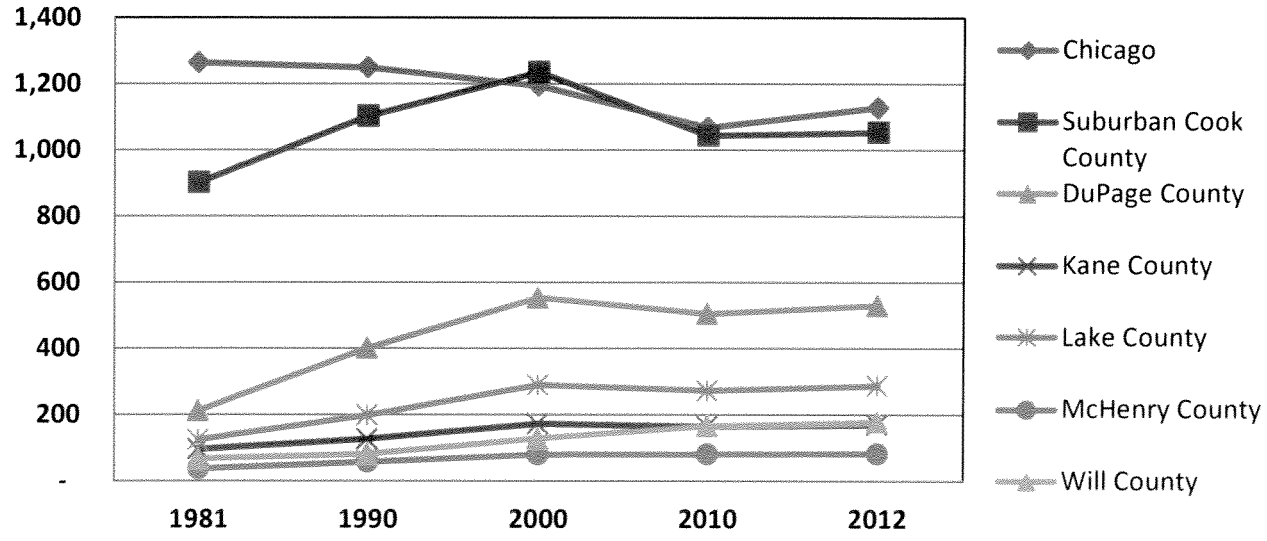

Figure 3: Jobs in RTA Geographic Divisions, 1981 - 2012, in thousands

RIDERSHIP BY SERVICE BOARD[4]

Between 1991 and 2012, total annual RTA ridership experienced growth of only 1.6 percent. However changes in CTA's method for counting rail ridership changed in 1997, meaning that trends for the period from 1998 onwards are more consistent. During the period from 1998 to 2012, total annual RTA ridership grew by 19 percent. During this period, Metra, CTA rail, and CTA bus saw gains of 17 percent, 50 percent, and 8 percent respectively, while Pace bus experienced a ridership loss of 15 percent.

ADA-paratransit, dial-a-ride, vanpool, and other demand response services are excluded from counts of unlinked passenger trips. The Service Boards' shares of RTA ridership have roughly held steady over the 1991 – 2012 period. As a percentage of overall RTA ridership, Metra's share has grown slightly while CTA and Pace's have declined slightly. Despite this, CTA has consistently provided the vast majority of unlinked passenger trips, making up at least 80 percent of RTA's unlinked trips each year.

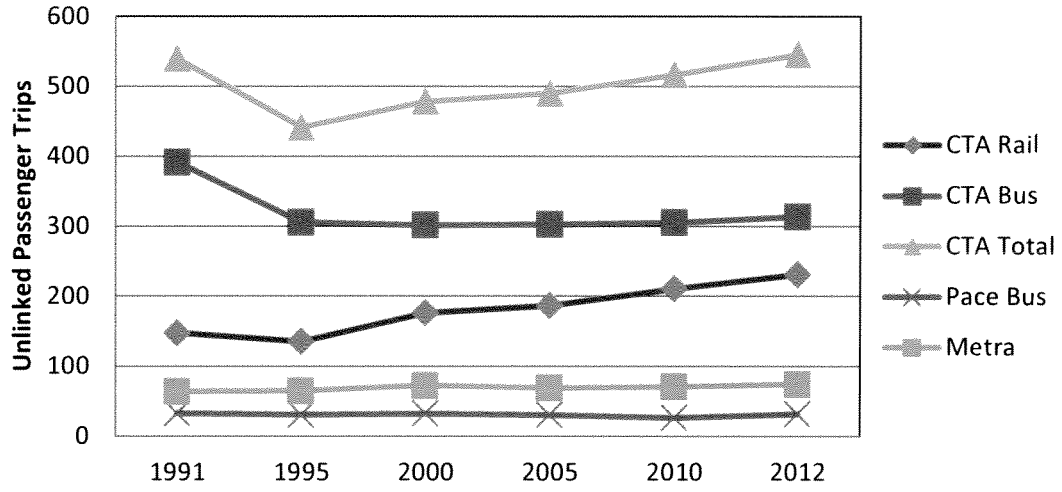

Figure 4: Service Board Ridership, 1991 - 2012, in millions

4 1991-2011 Ridership data come from the National Transit Database. 2012 ridership data come from RTA using methodologies consistent with the National Transit Database.

PASSENGER MILES TRAVELED

Passenger miles are not measured directly, but rather depend on surveys regarding average trip lengths. 2011 is the most recent year for which estimates of passenger miles traveled are available. Before 1995, data for Metra does not include passenger miles for contracted services provided directly by host railroads. In addition, Pace data do not include vanpools, dial-a-ride, or paratransit services.

Passenger miles traveled trends for the RTA Service Boards have been mixed since 1991. CTA rail has seen tremendous growth in ridership and passenger miles, more than offsetting the steady CTA bus ridership decreases. Meanwhile, Metra has experienced steady ridership growth while it extended its network outward. Pace experienced periods of both growth and decline since 1991, with modest growth in recent years. Service Board shares of RTA passenger miles have remained fairly steady since 2005, with CTA's share increasing slightly and shares for Metra and Pace bus decreasing slightly.

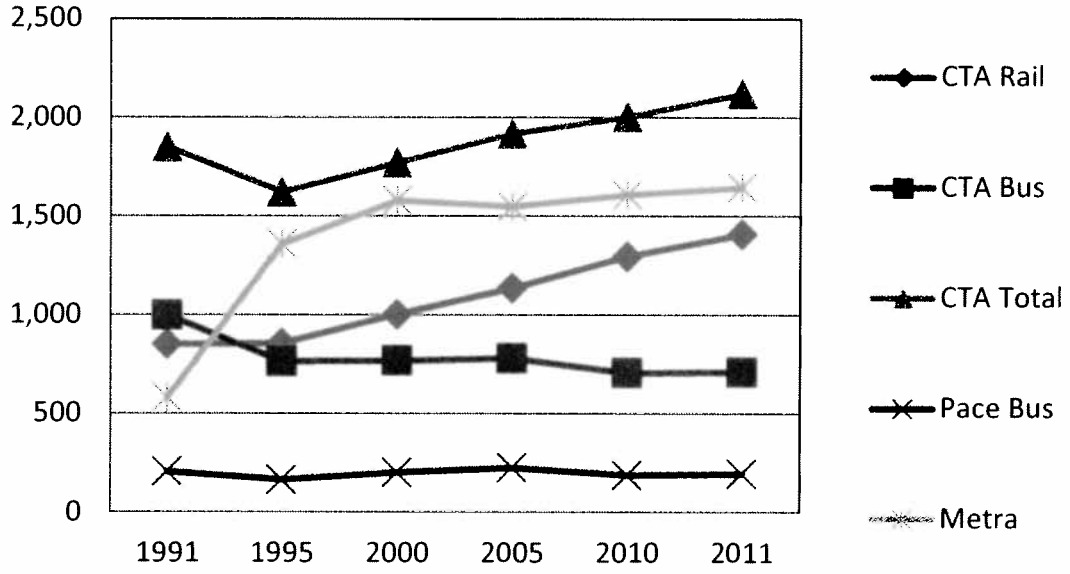

Figure 5: Passenger Miles Traveled, in millions

OPERATING COST PER TRIP

Operating expenses for both Pace and Metra grew considerably over the 2005 - 2011 period. Metra service did not include all commuter rail service in the region in 1991; privately owned services were absorbed into Metra in 1995 and 1996. Thus, Metra data for the whole 1991 – 2011 period does not accurately represent regional commuter service during this span of time.

CTA'S cost per trip has varied greatly for the bus and rail modes; operating cost growth has been very modest for CTA rail, while the operating cost for CTA bus has risen rapidly in the 1991 to 2011 period. At the same time, ridership for CTA rail has grown, but fallen for CTA bus. These conditions have resulted in a reversal for the two CTA modes: CTA rail cost per trip was 62 cents higher than CTA bus in 1991, but CTA rail now costs 19 cents less per trip than CTA bus. Operating cost per trip has fallen slightly for both CTA modes since 2005. Cost reduction has resulted largely due to substantial reductions in service for both modes in 2010 (bus in particular).

For Pace, suburban bus ridership has fallen steadily since 1991 while costs have risen, resulting in the largest increases in cost per trip between 1991 and 2011 amongst all Service Boards and modes. This figure does not include dial-a-ride, ADA-paratransit, or other demand response services; these direct response services are by far the most expensive types of transit service to operate.

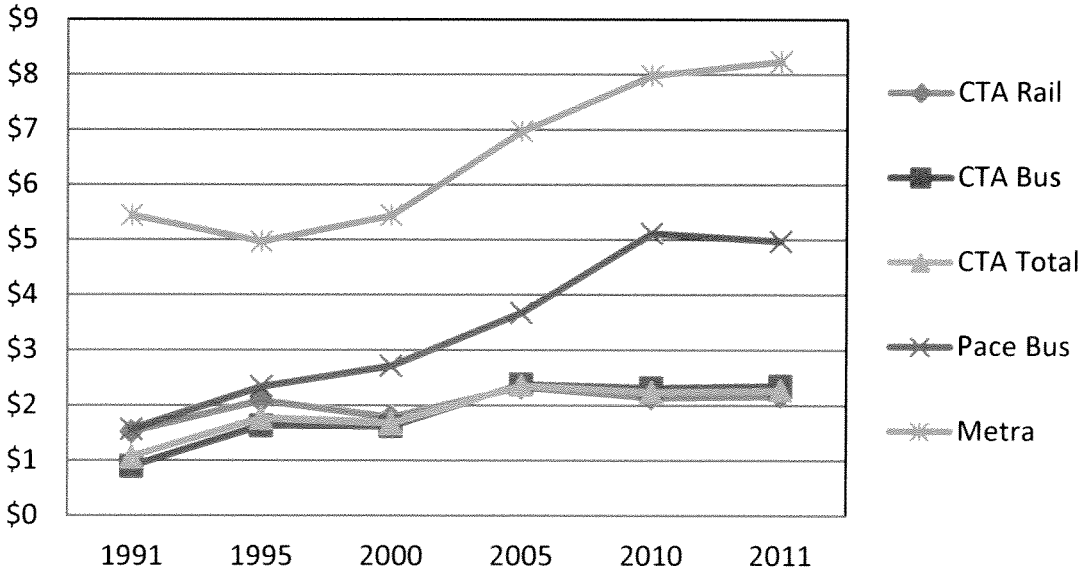

Figure 6: Operating Cost per Trip, 1991 - 2011

OPERATING EXPENSE PER PASSENGER MILE

Rail operations costs tend to be influenced by route distance served much more so than bus operations (which are more heavily influenced by vehicle operating time). On a per passenger mile basis, both CTA Rail and Metra have the lowest costs. CTA and Metra operate very different types of rail systems. CTA operates electric multiple-unit trains on a CTA-owned exclusive track system with stations in close-proximity to one another, while Metra operates a push-pull commuter system with both diesel-electric and electric locomotives on a mixed-use and mixed ownership network of rail lines with stations that can be several miles distant from one another. Since 2005:

- Overall CTA costs per passenger mile have fallen due to slow total cost growth (largely because of service cuts to both modes since 2010) and rising rail ridership; CTA bus costs per passenger mile have increased by 11 percent while CTA rail costs have decreased by 11 percent.
- Pace suburban bus service costs per passenger mile have risen by 41 percent because of a 23 percent rise in operating expenses in combination with a 13 percent drop in passenger miles and an 8 percent drop in passenger trips.
- Metra costs per passenger mile have increased by 17 percent.

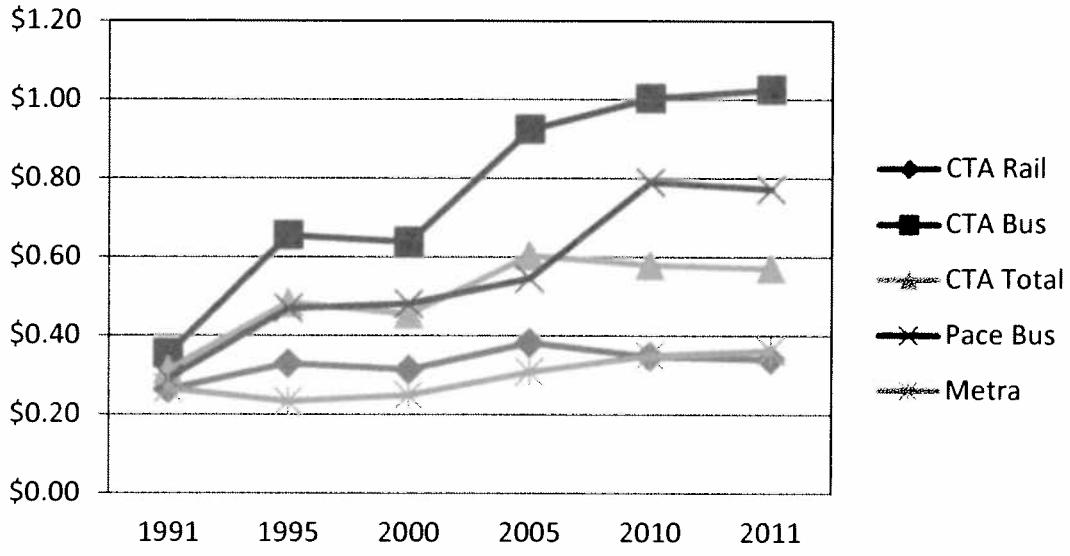

Figure 7: Operating Cost per Passenger Mile, 1991 - 2011

ADA-PARATRANSIT

RTA consolidated ADA-paratransit services under the new Pace ADA umbrella in 2006. Pace and CTA had previously provided ADA-paratransit services within their portions of the RTA region. Since 2007, the ADA-paratransit service has grown at an annual rate of 8 percent. In 2011, the total operating expenses for ADA-paratransit service amounted to more than $125 million. The cost per trip also rose steadily between 2007 and 2010, dropping slightly in 2011 to about $37 per trip. The farebox recovery ratio for these services is 7 percent. This is increasingly becoming a major concern for RTA and all three Service Boards since funding for ADA is paid before formula allocations take place.

PEER ANALYSIS

In addition to a review of existing reports, history and background on RTA, the consultant team analyzed existing practices in a number of peer metropolitan areas with the goal of identifying lessons learned regarding the allocation of funds. The team also conducted a series of stakeholder interviews, covering staff from RTA and the three Service Boards as well as other interested groups. Appendix B lists the individuals and organizations contacted to date.

PEER ANALYSIS

More than a dozen metropolitan areas across the country were reviewed before narrowing the list down to five regional case studies. These following five regions offer specific lessons with regards to management, institutional structure, governance, and funding distribution:

- *New York City* – the largest metropolitan region operated a centralized management structure with the nation's biggest and most complex transit system.
- *Philadelphia* – a large transit operator of an aging commuter rail, bus, and subway network in one of the most populous urban areas in the country, that also operates a centralized system with funds provided by the state.
- *Seattle* – the umbrella agency, Sound Transit, has a structure with many similarities to RTA and relies primarily on local sales tax funding, making it useful to understand how they have dealt with similar funding issues. They also allocate spending in part based on sub-area equity.
- *San Francisco* – the region's Metropolitan Planning Organization (MPO) is widely seen as a model for regional collaboration and funding distribution and offers lessons about institutional structures and coordination of multiple transit agencies.
- *San Diego* – has a strong MPO that takes the lead on regional planning and distributes funding to two operating agencies that adhere to the MPO's plan.

Three topics are particularly relevant:

- Approaches to governance and its impact on a regional focus,
- Funding allocation and fiduciary responsibility, and
- Other innovative ideas to improve transit in the region.

INSTITUTIONAL STRUCTURE AND GOVERNANCE

Board structure and the assignment of responsibilities among participating organizations plays a role in a board's ability to remain neutral with regard to the interests of individual agencies, and maintain a regional focus. New York's MTA and Philadelphia's SEPTA offer examples of effective governance consolidation. Both MTA and SEPTA combined previously existing transit agencies into one large organization, responsible for operations, planning,

and capital improvement. MTA and its subsidiaries share one cohesive board. MTA board members sit on committees representing each sub-agency, often sitting on multiple committees. Having multiple responsibilities enables board members to maintain a sense of neutrality and ability to see the larger regional picture.

Having multiple responsibilities enables board members to maintain a ***sense of neutrality*** and ability to see the ***larger regional picture.***

The MTA structure is somewhat similar to the RTA, with a governing board overlooking several sub agencies, except MTA has direct control over the sub-agencies in terms of governance and budget allocation. SEPTA has gone even further in consolidation of transit agencies. The four divisions, including the subways, buses, trolleys, and commuter rail, have acted as one unit for more than 40 years, with only one board and no subcommittees. While the accounting and operations framework still recognize differences among the four divisions, customers perceive this as an integrated network.

The west coast examples provide alternate structures that are more similar to the RTA, with separate organizations responsible for different aspects of the transit system. These agencies have clearly defined roles that are useful in assigning planning and service responsibilities. Sound Transit in Seattle, for example, was created to deploy a regional rail transit system with funds from a new dedicated regional sales tax. While each of the three counties in the Seattle region owns and operates its own transit agency, Sound Transit is helping to extend new lines across county borders and create a more cohesive transit network.

The Metropolitan Transportation Commission (MTC) is the San Francisco Bay Area's regional MPO and is legislated to coordinate the services of the 26 transit operators in the region. The MTC board, which has representation from each county (notably, not necessarily corresponding to specific transit agencies), has the responsibility and discretion to distribute state and federal funds to agencies in part by need. As with the MTA in New York it can approve or reject capital improvement plans based on MTC's long range plan.

The San Diego Association of Governments (SANDAG) is the MPO for the San Diego region. It also has a clear role apart from the two transit operators in the region. SANDAG is solely responsible for planning a regional system and approving capital plans within that framework while the two operating agencies, Metropolitan Transit System (MTS) and North County Transit District (NCTD), are solely responsible for providing transit service within that plan. In each of these cases, the larger regional organization with a significant planning function also has a direct regional impact on capital investment decisions.

With respect to RTA's governance structure there are three options that could improve outcomes.

With respect to ***RTA's*** governance structure there are three options that could ***improve outcomes.***

1. One model could be a consolidation effort to make RTA more like MTA or SEPTA, with one board of directors and increasingly blurred lines between agencies. While it might take a number of years to fuse the three Service Boards into a cohesive system, merely indicating an intention to move in this direction would be a strong first step. The MTA in New York and the MTC in San Francisco include toll authorities, so this consolidation might include the Illinois Tollway.

2. A second model would be to strengthen RTA's role in planning, capital improvement, and oversight for the three Service Boards. For this option to work, RTA would still need to reform its Board governance procedure in order to prevent individual Service Boards (through their appointing authorities) from blocking capital programs and funding decisions they did not like.
3. A third option would combine RTA and CMAP functions regarding planning, allocation of funds, and oversight. This could be done with CMAP, the MPO for the Chicago region, as the surviving organization. This parallels the San Francisco and San Diego experience where the MPO combines regional planning with the allocation of funds. Under this structure, any investment by the Service Boards would need to be consistent with the MPO's plan for the region. An enforcement mechanism would likely be needed to ensure that CMAP could exercise this power.

Two agencies with the most similarity to RTA that also have effective power of discretion over the allocation of funds are the *New York MTA* and *San Francisco's MTC.*

FUNDING ALLOCATIONS AND FIDUCIARY RESPONSIBILITY

In each of the case studies, the source of revenue plays a crucial role in determining how funding is distributed. For MTA and SEPTA, the bulk of funding comes from the state and federal government, reducing the need to distribute funds back to the counties from whence they came. This enables MTA and SEPTA to allocate funding within their systems based largely on regional investment needs rather than regional equity. While neither system avoids sub-regional "equity" issues completely, they are far less pronounced than at RTA.

Of the peer regions examined, the two agencies with the most similarity to RTA that also have effective power of discretion over the allocation of funds are the New York MTA and the MTC in the Bay Area. Sound Transit is tied to the sub-area equity requirement and SANDAG is responsible for only two agencies in its jurisdiction. SEPTA can distribute money among its four divisions based on the Board's discretion, but the divisions are much more cohesive than the subsidiary agencies at MTA or the 26 regional operators in the Bay Area.

The MTA Board consists of 17 voting members, including the Chairman. Four members are nominated by the New York State Governor, and one member by each of the county executives. After nomination, the State Senate must confirm all board members. The Chairman serves as the Chief Operating Officer of the MTA. Each subsidiary also has its own President. The MTA Board uses a committee structure that helps the Chairman in discharging responsibilities of each operating agency, but these committees are subservient to the larger MTA Board. The seven subsidiary agencies do not have their own, separate boards and have committees on the MTA board instead. The Chairman assigns each board member to multiple committees and each committee has a mix of representatives from New York City as well as the surrounding counties.

MTA retains direct control over capital and operations at each of the subsidiary agencies, and has direct control over setting fares and tolls for each agency. Annual operating budgets are created by each agency within MTA's constraints and must be approved by the MTA board. The five-year capital budgets follow a structure that has mostly been unchanged since 1982, allocating approximately 75 percent of capital funding to the urban transit network and 25 percent of

funding to the commuter rail network. The agencies choose projects within MTA's long-range plan and performance goals and then MTA reviews the selection for final approval.

While the board has discretion over how much money to distribute to the subsidiary agencies, the annual budgets are consistent. Figures 8 and 9 show the annual operating budget of each MTA agency in dollars (millions) and its percentage of the overall MTA budget.

Figure 8: Budget by MTA Agency 2005-2013, in millions

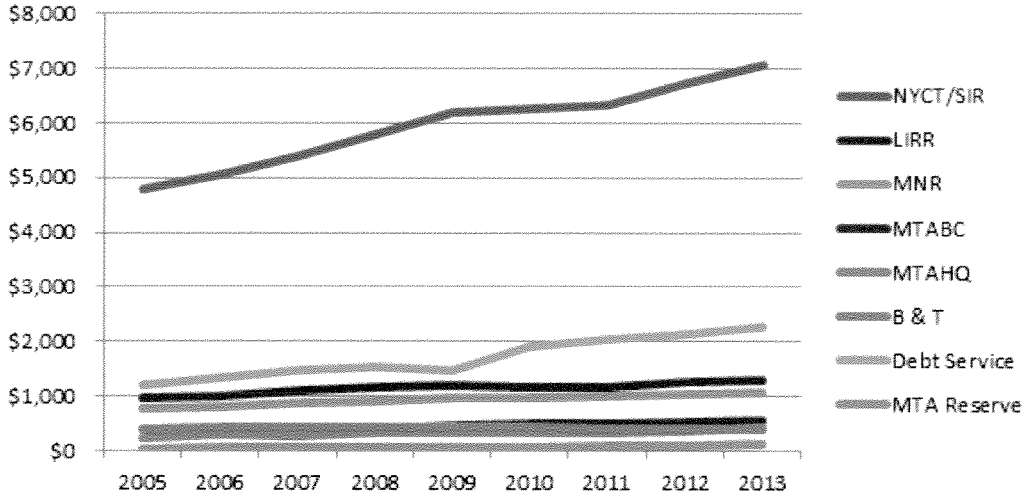

Figure 9: Percentage share of MTA budget by MTA Agency

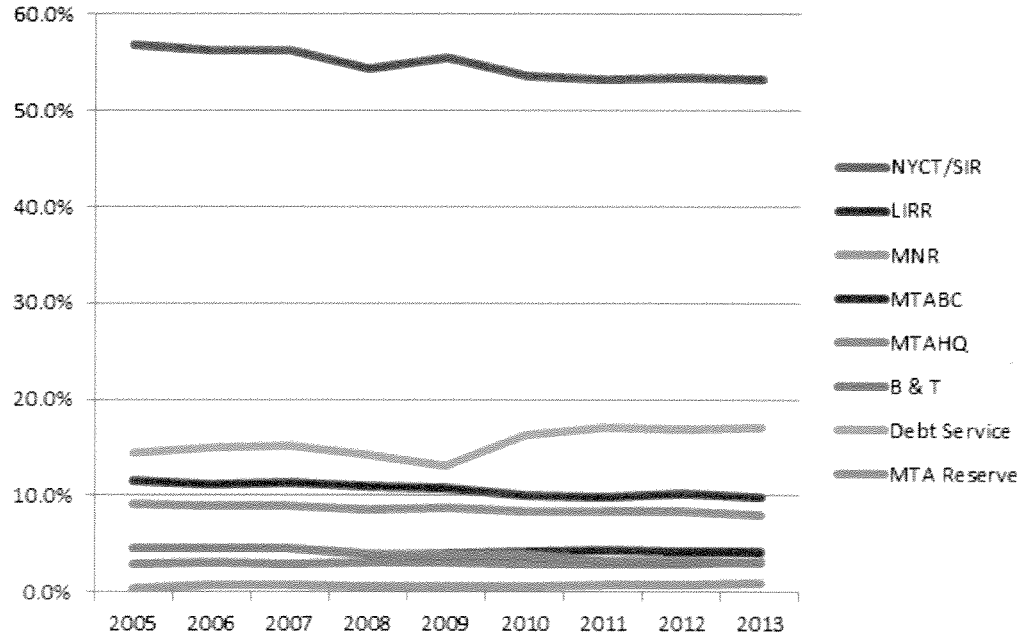

As the two figures demonstrate, changes in the annual budgets are phased in gradually over multiple years. This is helped by a slowly increasing tax base that allows each agency to receive at least the amount of funding that it received during the previous year. Capital funding for the MTA is done on a 4 year cycle. Much like the operating budgets, the MTA board allocates funding to projects within each of its subsidiary agencies. Each agency received more capital funding in the 2010-2014 capital plan than in the 2005-2009 cycle, but the relative share for each agency changed to reflect the board's investment decisions.

Fiduciary responsibility manifests itself differently for the MPOs in California. San Francisco's MTC must appropriate funding to each local county tax district based on formula, but the board has discretion over which agency receives the funding within that district. This allows MTC to make funding decisions that recognize differing needs among agencies within jurisdictions and that reflects regional transportation strategies. For the fiscal year 2011-12, approximately $534 million of state and local transit capital and operating funding was distributed through the MTC. Including federal grants, the total funding allocation is nearly $1 billion on an annual basis. Each transit agency has its own dedicated local funding source, which they often use for bonding, and MTC often distributes funding to agencies that have the most need. For example, BART is well funded through its dedicated local sales tax and thus receives a smaller amount of funding from the MTC than other agencies such as AC Transit and Muni. This funding distribution creates tensions among agencies but MTC has become the neutral forum for such fighting. MTC has control over the final funding allocation and is able to keep conflicts over funding to a minimum. The large amount of operators in the Bay Area also helps to diffuse the funding fight.

On a percentage basis, funding allocations from MTC to the regional agencies are fairly consistent from year to year. The total amount of funding available has been increasing over the past decade, with a reduction coming in 2009-2010 due to reduced state and local sales tax revenues. Since 2003, the relative amount of operating funding allocated to the largest recipients, AC Transit, Muni, SamTrans, and VTA, has not varied more than a few percentage points. Capital funding is more varied in both terms of percentages and total dollar amounts. This is due to the relatively lumpy nature of capital investments. When a regional transit agency wants to make capital investments, especially for infrastructure, it must be approved by the MTC board and be consistent with MTC's regional plan.

In terms of funding distribution, SANDAG offers a less useful comparison because it is responsible for two agencies within a single county. These agencies, MTS and NCTD, have minimal service overlap when compared with a more complex region like Northeastern Illinois. SANDAG does distribute funding to the two agencies, but is bound mostly by formula and the single county structure does not give it the flexibility that MTC enjoys. However the transit agencies must operate within SANDAG's regional plan, which allows cooperation and regional coordination to be implemented effectively.

Sound Transit provides an example of what pure sub-area equity looks like. Sound Transit is legally committed to investing the sales tax revenue that each of the five defined sub-areas (three counties plus two parts of King County) contribute back in that sub-area. The board has created a methodology for determining which investments in capital and operations benefit which sub-areas. For example, a light rail extension to the airport in one sub-area is a large capital investment but the operations provide benefits to users mostly of the other sub-areas. Properly accounting for these benefits has been a challenge, but the Sound Transit board provides detailed statements outlining the benefits and costs and how they are distributed back to each sub-area based on their respective tax contribution. For the time being Sound Transit's primary aim is to foster capital expansion, a role that is not currently in direct competition with sub-area equity. There are concerns that as the focus shifts from expansion to operations and maintenance that sub-area equity may not continue to be a viable option.

A reliance on regional tax revenues for about 70 percent of public funding makes it difficult for the RTA to have greater discretion over funding to the Service Boards. SEPTA and MTA both take advantage of a large portion of funding coming from state sources, allowing allocation decisions to be made without emphasis on returning the benefits back to certain tax jurisdictions. While the State of Illinois already provides significant contributions to the RTA region, in the long run RTA could push for a shift to a more complete state funded model, which would help dispel the sense of inequity felt between the City of Chicago and the collar counties. Given the financial pressures currently faced by the state of Illinois, this is likely to be quite difficult an exercise for some time. Alternatively, RTA could further examine the methodology used in the Seattle region and create a transparent and understandable accounting system that assigns the benefits of the network to each of the six counties and compares those with the amount of tax revenue received. However, the Chicago metropolitan region is focused on maintaining state of good repair while Seattle is expanding their network. The different focus and needs in the RTA region makes a sub-area equity approach difficult to implement.

OTHER INNOVATIVE IDEAS FROM PEER REVIEW

Changes to RTA's governance, financial structure, and regional perspective could help to reinvigorate and better coordinate regional transportation in Northeastern Illinois. The case studies also revealed that some agencies are looking to new and innovative ways to increase financial resources, as well as ways to appropriate those resources to encourage desired development.

Other agencies have become more creative in how they distribute existing monies. MTC in San Francisco has employed a program to encourage investment related to its transit-oriented development plan. The region's program distributes formula-based federal money to counties based on population, but includes requirements that 70 percent of this funding be spent within MTC-designated 'Priority Development Areas', often near transit stations. This program has allowed MTC to ensure that federal funding dollars also assist in advancing its regional plans. Implementing a similar program in the RTA region could potentially be done without substantial change to the organization.

As a source of new revenue, both MTA and MTC have looked to toll authorities to help finance their projects. Through taking partial ownership of existing toll authorities, these agencies have been able to use surplus toll revenues to fund transit projects. These revenues often have more flexibility to use on the projects that need the most funding, however they are often reinvested into a specific corridor. Using toll revenues would require a more dramatic change to the institutional structure and laws governing RTA, which makes this difficult to implement, but other regions demonstrate successful use of toll revenues for transit services.

BASIC PRINCIPLES FOR ALLOCATION DECISIONS

Lessons learned from review of recent history, peer reviews, and stakeholder interviews include:

- The region is short of funds for capital and operating costs. Limited resources are one reason for such a strong emphasis on the allocation of existing funds, but there is a need to focus on additional sources of money.
- Additional revenues could make change in allocations easier to manage. This offers the opportunity to begin to shift how discretionary funds are allocated, but avoid cutting the base of funds that each Service Board receives.[5]
- Institutional change is an essential part of improved regional governance, planning, and coordination of public transit in the RTA region.

Institutional change is an *essential* part of improved regional governance.

Based on this review, we identified several principles that could be useful in helping to evaluate alternative allocation options.

Emphasize regional goals. Rather than focus on what is best for individual Service Boards, encourage actions that support a transit network that can meet customers' travel needs from start to finish regardless of the agency that provides each link. The next five principles provide different dimensions of a regional focus.

Provide a safe system – for customers and employees. This is an obvious goal, but one that should not be forgotten. There is a close link here with sound maintenance of equipment, track, facilities and rights of way. Sound maintenance helps make progress towards a state of good repair, in part by extending the effective life of equipment and track.

Support for a strong and growing regional economy. Access to jobs for individuals and labor for business provides a direct link with growth in regional economic productivity. Transit in Chicago is a vital part of this access. Firms with access to a larger pool of labor will be more likely to find individuals with the most relevant skills, thus helping to increase the quality of their product or service and the size of their market. Individuals with access to a larger base of jobs will be more likely to find a more appropriate job at a higher rate of pay. These changes result in improved overall economic productivity, a key long-term force in supporting higher wages for individuals and a higher return on

5 Additional funds is no guarantee that allocation rules will change. The 2008 legislation increased funds for the RTA region, but the allocation rules did not change.

investment for business. It is a key part of sound economic growth and provides a competitive advantage over other regions.

Ensure customer satisfaction. This should be common sense for public and private entities. This will include characteristics such as quality of service that reflect the daily experience of most travelers: buses and trains that are on time; vehicles and stations that are clean and safe; operations that are frequent enough to provide a viable service; and service to locations where people want to go.

Support livability. The concept of livability is a vaguer but perhaps useful term that describes the ability to support attractive lifestyles. Examples here include the ability of transit to help individuals find locations that allow them to manage their combined transportation and housing costs. Transit oriented development offers a practical example for a way that transit supports economic development as well as attractive individual life styles.

Cost effectiveness. This is important both due to the limited resources faced by all transit agencies and in response to the interest from all residents to make sure that their taxes are well spent. This approach also calls for greater use of performance measures. The ability to track the effectiveness of funding is important both for internal management and to communicate with the public in general. Given what is likely to be a perpetual shortage of funds relative to perceived needs, it is vital to show that service combines quality with a recognition of limited resources.

OPTIONS FOR RTA DISCRETIONARY FUNDING

BACKGROUND ON DISCRETIONARY PROGRAM

The RTA has three primary sources of operating funds: 15 percent of the 1983 RTA regional sales tax, the 25 percent State Public Transportation Fund (PTF I) match of the 1983 sales tax, and, since 2008, the Innovation, Coordination, and Enhancement Fund (ICE) of approximately $10 million. The 15 percent of the 1983 sales tax and PTF I funds cover debt service, regional expenses handled by the RTA such as ADA certification, customer service, regional insurance, RTA administrative expenses, etc. with the balance left to be allocated to the Service Boards at RTA's discretion.

The discretionary fund has been a major source of recent RTA Board disagreement. The largest portion of the RTA discretionary program is PTF I that was established in 1983[6]. Of the discretionary funds distributed to the Service Boards between 2001 and 2012, CTA received $1.88 billion (96.4 percent), Pace received $55 million (2.8 percent) during the same period, and Metra received $15.4 million in 2003 to assist with extraordinary costs due to a fire.

The 1983 Act shifted RTA's role from an operator to the manager of three newly created independent Service Boards. The 1983 Act also introduced the 15 percent set aside as well as the 25 percent PTF match to cover certain RTA expenses including the discretionary program. The legislation does not define discretionary nor provide instructions on how to allocate these funds. Even so, the RTA was given the authority to allocate the funds among the Service Boards. The 2008 revisions to the RTA Act continued the discretionary fund, but again without definition nor instructions.

The legislation *does not define* discretionary nor provide instructions on how to allocate funds.

There is no written legislative history for this provision nor is there legislative history on allocation suggestions for discretionary funds. In 2005, the Illinois House Committee on Mass Transit conducted an analysis of RTA funding. What emerged was a sense that the CTA operating budget could not be sustained with only its statutory sales tax allocation. IDOT Secretary Kirk Brown's statement at the 2004 hearing testified that the discretionary fund was expected to supplement the CTA budget[7]; although he was not part of drafting the 1983 Act. In contrast, some people who worked on the 1983 Act believe that while the original intent was to support CTA and Pace, over time the funds could be provided to any of the Service Boards based on their financial needs. There is no documentation for or against this perception.

The RTA has historically provided almost all of the discretionary funding to the CTA, based on the assumption that CTA funding needs are not fully covered by statutory formulas and that its operating shortfall requires discretionary funds to make up that difference. CTA received 97 percent of these funds in 2012 and 98 percent in 2013. Pace is also a recipient of discretionary funding for operating purposes receiving 3 percent in 2012 and 2 percent in 2013. Metra has not received discretionary funds since 2003.

6 Pace also receives the Suburban Community Mobility Fund and the South Suburban Job Access Fund from RTA's portion of the 1983 Sales Tax and Public Transportation Fund I.

7 Testimony of Kirk Brown, former Secretary of IL Department of Transportation, and Steve Schlickman, 10-25-04

Regardless of the name, the discretionary fund has not been discretionary in practice. CTA receives the vast majority of the money and has come to depend on these funds for their financial plans. While an argument can be made to include more of a flavor of true discretion in allocating these funds, any change should be phased in, allowing CTA time to adjust. There is also logic in integrating any change to the discretionary program with changes to the overall allocation of funds, including the capital program. These options will be discussed in the Final Report for this project. Economic growth will increase all sales tax and PTF receipts including discretionary funds.

CTA receives the *vast majority* of the discretionary money and has come to depend on these funds for their financial plans.

NEW SOURCES OF FUNDS

There is some logic to focus new allocation approaches on new sources of revenues. The RTA Region has at least six potential sources of new transit revenues – not all equally likely, of course.

- Economic growth will generate an increased level of sales tax receipts. Between 2013 and 2016, this could generate an additional $340 million in revenues (including matching funds from the state) for the three Service Boards. Of this growth, $80 million would be available through the discretionary program for relevant uses – help in covering operating expenses and efforts to replenish the RTA reserve fund. [8]
- Current federal rules limit the ability of many states to collect sales taxes on internet sales. There is growing interest in changing these rules – and states such as Maryland and Virginia have already passed transportation funding legislation built in part around an eventual change in these laws. The timing and magnitude for any change is difficult to forecast.
- Some observers believe that certain corporations have been able to avoid the higher sales taxes in the RTA region by appearing to purchase goods in other parts of the state. RTA is involved in lawsuits that attempt to collect these funds. It is too early to speculate regarding the likelihood of success in these lawsuits or the potential dollar value.
- In recent years, the state of Illinois has used toll credits from the Illinois Tollway rather than cash to provide matching funds for federal grants. The federal government allows state DOTs to receive credit for transportation investments made by these toll authorities. These credits can be used as a "soft" match for federal funds. While this practice helps state and local governments to continue to receive federal grants for roads and transit, it does not provide actual cash to the RTA and the Service Boards. The state of Illinois has substituted toll credits for state funds in RTA projects in order to help the state conserve its cash. One option would be for the state to return to its earlier practice and provide actual cash payments. This could generate an additional $50 million or more a year for transit. In addition, if RTA was still allowed to use the toll credits to match federal funds, the cash payments received from the state would be state funds and thus free from any federal regulations.

8 The increase in funds relative to 2013 grows each year. By 2016, the increase relative to 2013 would total $179 million, with $40 million for discretionary uses.

- RTA has the authority to impose additional taxes with receipts dedicated to transit. These taxes include certain parking charges and rental car fees.
- Finally, of course, the state legislature could increase taxes dedicated to transit. This year several states (Maryland and Virginia for example) have raised motor fuel taxes and related fees, with portions being used to fund transit.

FIVE OPTIONS FOR ALLOCATING FUNDS

This section describes five options or approaches for the allocation of transit funding for the RTA, along with major advantages and disadvantages. At this stage, the options represent a conceptual framework. The next step is to analyze these options and assess their respective impacts in detail. Options will be fully developed as part of the Final Report on Funding Allocation Scenarios, after capital and formula programs have been integrated into the impact assessment. Any change to current practice has the potential to increase funds for some Service Boards and reduce it for other – unless changes are linked to net new funds such as the internet sales tax. These options include

1. Current practice
2. Competitive grant program
3. Fixed allocation formulas
4. Performance-based program with bonus awards; and
5. An option built around sub-area equity but with some flexibility

A later section provides detail on how the RTA might implement a competitive program (option 2). Another section presents principles for developing formula-based allocations (option 3).

OPTION 1: CURRENT PRACTICE

Continuing the current practice would minimize short-term budget disruption for CTA. Continuing the current allocation of discretionary funds for the Service Boards based on the average allocation for the past five years would provide CTA with at least 97 percent of available funds with the balance allocated to Pace. Metra would not receive funds other than for an emergency situation.

Figure 10 - Option 1 Pros and Cons

PRO	CON
Policy with least amount of change	Does nothing to resolve recent budget stalemates or to adjust for changes in ridership growth

Five Funding Options

1. Continue Current Practice
2. Competitive Allocation
3. Fixed Allocation Formulas
4. Performance Based Allocation
5. Sub-Area Equity

OPTION 2: COMPETITIVE ALLOCATION

A competitive program would encourage creativity and allow the RTA to fund activities that support regional goals. Such an approach would allow partnerships between Service Boards and other agencies within the region. Funds would come from the growth in discretionary funds whether from sales tax receipts or possible new sources (internet sales tax, for example). The discretionary fund would be kept at 2013 levels so that CTA and Pace would not see a drop in their current allocation of discretionary funds. The available funds would be modest to begin with but grow annually, with future growth expected in line with the economy. Outside agencies would be asked to provide matching funds, so that total funds could grow further. Another option would call for transferring a portion of the base funds to this new program – say 10 percent in the first year. Different goals could be emphasized: performance; cost; growth; need; safety; technology. RTA would set the annual mix of goals, with possible input from other groups. Projects might include support for new technology, such as the deployment of the Ventra ticket system by CTA and Pace.

Figure 11 - Option 2 Pros and Cons

PRO	CON
Encourages spending linked with achieving regional goals	Will create uncertainty regarding level of funds for CTA and Pace
Supports accountability regarding ability to achieve promised objectives	Requires a more involved decision process: one option is to rely on an independent committee that makes recommendation to RTA
Encourages partnerships, either between Service Boards or with other groups	
Requirement for matching funds could increase funds	
Puts tangible meaning into RTA's strategic plan	

OPTION 3: FIXED ALLOCATION FORMULAS

There are problems with any specific formula. Each Service Board has a particular metric that they prefer. In terms of output measures, CTA likes ridership; Metra and Pace prefer passenger miles. Formulas could be based on different types of criteria such as performance measures or outputs. Outputs are often mentioned since they are relatively simple to measure. On the other hand, they do little to reward improvement. Performance measures have strong conceptual appeal, although given the significant differences among the Service Boards it may be best to focus on improvements within each board (increased fares; expanded service; reduced or controlled unit costs). Needs, such as costs to reach a state of good repair, would be attractive for capital grants.

Given the significant differences among the Service Boards it may be best to *focus on improvements within each board* such as increased fares; expanded service; reduced or controlled unit costs.

Figure 12 - Option 3 Pros and Cons

PRO	CON
Greater predictability	Harder to link with broader goals
Lack of annual budget battles	Likely to be active debate and disagreement over specific formulas

OPTION 4: PERFORMANCE-BASED ALLOCATION WITH POTENTIAL BONUS

Option 3 focuses on fixed formulas. One drawback with this approach is the lack of feedback for good performance. This option would focus on performance measures, rather than output measures. An important change from Option 3, however, would be a bonus pool for Service Boards that made substantial improvements in key performance areas: ridership growth; development of new markets; cost controls; farebox recovery etc. Some changes require difficult decisions and a tangible financial reward may encourage action. For example, fare increases generate opposition, yet they also help control the growth in operating subsidies. Similarly efforts to attract new riders may require up-front investments. The potential of additional funds if these efforts were successful would encourage management to try something new.

One obvious question here, of course, is the source for any "bonus" funds. These could come from growth in revenues, as described under Option 2 for the competitive program. Alternatively, a portion of funds could be set aside and not allocated directly, but kept in reserve for bonuses for Service Boards that made a significant improvement in performance. Setting specific targets and reward levels will require some debate.

Figure 13 - Option 4 Pros and Cons

PRO	CON
Somewhat greater predictability for base funds	Still uncertainty regarding funding levels
Tangible reward for improved performance	Likely to be active debate over specific bonus levels and criteria

OPTION 5: SUB-AREA EQUITY

In Seattle, sub-area equity is used to ensure that, over a period of time, defined geographic areas receive transit funding investment that is broadly consistent with the funding that each area generates. This approach attempts to ensure that the benefits of transit investment (new rail lines, stations, and interim express bus services) are experienced across the region as a whole. In the case of San Francisco Bay Area, funds are allocated to counties and MTC has discretion to assign funds to individual transit agencies based on regional objectives or on specific needs for individual authorities. If this model were emulated in the RTA region, it would give the RTA the ability to make decisions based on regional goals or to reflect specific problems or opportunities. For example, if suburb-to-suburb trips were deemed a priority, Pace might receive additional funds in the collar counties and suburban Cook County. At present, it appears that suburban Cook County might benefit the most from this program. Since all three Service Boards operate there, however, it is not clear how this option would affect the overall allocation of funds.

Figure 14 - Option 5 Pros and Cons

PRO	CON
Combines two important goals - regional objectives and geographic equity	No guarantee that the long-term source of funds matches with regional goals
Puts tangible meaning into the RTA's strategic plan	Some allocation uncertainty

Table 1 provides a summary of the five options with respect to five elements: 1) support for a regional focus; 2) potential to mitigate budget conflicts among the Service Boards and the jurisdictions within the RTA region; 3) budget predictability for the Service Boards; 4) flexibility in meeting changing demands for transit funds; and 5) ease of implementation – in particular, the degree to which change is needed in state legislation. The results are summarized in terms of low-medium-high – with high being positive and low being negative.

Table 1: Factors Varying by Option

	FACTORS				
Options:	Regional Focus	Potential to Mitigate Budget Conflict	Budget Predictability	Flexibility	Ease of Implementation w/ Respect to Legislature
1. Current Practice	low	low/medium	high	low	high
2. Competitive Allocation	high	low	low**	high	medium
3. Formula Based Allocation	low/medium	high*	high	low	medium
4. Performance Based Allocation	high	low	low**	high	medium
5. Sub-Area equity	medium***	low/medium	medium/high	medium	medium

* Once formula has been agreed upon.

** Refers to the early years; once Service Boards become familiar with submission requirements, predictability will increase.

*** Refers to how the discretionary funding would be allocated within the counties.

GENERAL GUIDELINES FOR COMPETITIVE GRANTS

Competitive grants are not a new concept. Almost every transportation agency is involved in some form of competitive application every year. These may range from high visibility national programs such as US DOT's TIGER grants (now in its fifth round) or FTA's New Starts program. Several of these programs cover operating grants, such as for federal Congestion Mitigation and Air Quality (CMAQ) funds or Job Access Reverse Commute (JARC).

Almost *every* transportation agency is involved in some form of *competitive application* every year.

A revised program would make funds available on a competitive basis to all Service Boards or to other entities with specific plans to improve transit service in the RTA region. Any entity beyond one of the Service Boards would need to provide additional funds – perhaps up to a 50 percent match. Service Boards could partner on proposals or submit them separately and they could submit multiple proposals.

Performance measures are an increasingly important part of transportation allocation. US DOT's TIGER program is based on performance measures, including benefit-cost analysis and five broad objectives that link with measurable criteria. These methods help prioritize and determine the level of funding the federal government chooses to invest. This allows the US DOT to prioritize national goals with respect to these funding allocations. Similarly, RTA could use such a program to prioritize regional goals over those of specific Service Boards.

An effective performance-based discretionary grant program typically has at least four characteristics:

- *Transparency.* A discretionary program must be transparent to be sustainable. Without transparency about decision-making, potential grantees may suspect they are being treated unfairly if they do not receive the grants they expect. Transparency means being clear about the criteria used to make grant decisions and the process under which the decisions are made. Performance-based discretionary grant programs often take a few iterations to refine the process and transparency helps give the grantor feedback to improve the program.
- *Specificity of Purpose.* The more a program can be targeted to a specific purpose – for example, reducing emissions or increasing ridership – the easier it will be to compare proposals. A specific purpose with tangible results not only demonstrates public accountability and fosters better decision-making, but also allows grantees to better understand how they can develop worthy proposals.
- *Objective Criteria for Evaluation.* Criteria for evaluation should be based on more than the priorities of the grant-making agency. They should parallel priorities outlined by elected officials, other public planning and policy entities and agreed to, at least on a conceptual basis, by potential grantees. Criteria should be tailored to the purpose and outcomes. Also, criteria should not be set in stone but should be refined as the process moves forward over time. Some of the criteria need to be specific to the purpose of the funding.
- *Demonstrable Results.* An essential ongoing and last step is to have measures that can be used to help evaluate the progress of the effort with respect to its purpose and possibly tweak the measures; including the ability to measure progress after grants have been made and projects have been completed. This can promote confidence in the program while also serving to refine both purposes and criteria. This is often the most neglected component of such programs.

Without ***transparency*** about decision-making, potential, grantees may suspect they are being treated unfairly if they do not receive the grants they expect.

RTA PROGRAM SPECIFICS

Being transparent and demonstrating results are two aspects that should go along with any government program and are relatively straightforward exercises. These criteria can support the allocation of capital as well as operating funds. But developing a specific purpose and objective criteria is more specific to RTA. The following are some suggested ideas for each:

PURPOSE

RTA grants should reward ideas that improve the customer experience, show substantial returns for investments, promote regional transportation improvements and can be completed within budget and within a specific time frame from the grant award.

RTA grants should ***reward ideas that improve the customer experience,*** show substantial returns for investments, and promote regional transportation improvements.

Innovation is essential because this is an opportunity to use the leverage that comes with offering additional funding to push thinking beyond conventional boundaries. It would be ideal for this money to focus on innovative ways to improve the customer experience.

High return is important because this is a very limited pot of money and it would be a missed opportunity if it were used on proposals that do not return sizeable benefits in relation to their costs. Projects that would increase the operational or capital costs of the RTA and Service Boards must be examined carefully. Projects that lower transit costs or add new revenues would be particularly attractive.

Regionalism is the hallmark role that RTA can play. This funding represents an opportunity to promote collaborative regional transportation initiatives that work across traditional boundaries to produce clear regional benefits, not benefits to one specific Service Board. The objective is to create a transit system/network and not simply transit service silos.

Social and Economic Benefits are the primary reason for public investment in public transportation. Attractive projects should identify how they:

- Contribute to sustainable and livable communities;
- Improve the Chicago region's economic competitiveness by giving people reliable access to employment centers, educational opportunities, affordable housing, etc.; and
- Measurably improve transportation safety for the region.

PROCESS

A critical element for less contentious discretionary funding is the organizational structure and process. The RTA would have a key role in defining the parameters, including:

- Strategic regional goal(s);
- Selection criteria;
- Performance measurements to determine if the goals have been achieved;
- Amount and duration of the funding;
- Expectation as to the level of funding match needed; and
- The organizational structure to analyze applications and recommend projects.

These competitive options call for a different organizational structure to review and recommend projects to the RTA Board. This structure must include professional analytics, and should be transparent, fair, and objective. Such a process explicitly cannot benefit decision makers who make the

recommendations. One option would be for the RTA Board to establish a Discretionary Funding Committee. While the chair might come from the RTA board, the committee members would be selected from the business community; community organizations; transit customers; and others with a clear interest in a successful regional transit system. This committee would receive the proposals, review them and make recommendations with justifications to the RTA Board. RTA staff would support the committee. The chairmanship (and most members) should rotate every two years.

These competitive options call for a *different organizational structure* to review and recommend projects to the RTA Board.

All committee recommendations and justifications should be made public prior to the RTA Board's decision and the RTA Board would account for why they accepted or rejected the committee's recommendations.

Appendix A contains a first cut at some suggested criteria:

- Innovation;
- Above average return on investment;
- Regional value;
- Performance measures; and
- Social impacts.

GUIDELINES FOR FORMULA-BASED ALLOCATIONS (OPTION 3)

An important part of the Final Report will be a series of funding allocation scenarios. These will describe optional ways to allocate capital and operating funds among the three Service Boards. Each scenario will describe the rationale for selecting a specific method, describe the allocation results, and provide the advantages and disadvantages of each method.

This section describes the approach that will be used in developing these scenarios including some of the expected advantages or disadvantages. These scenarios will cover both capital and operating funds and will include options for the current base level of funds as well as possible increases in funds, whether from general economic growth or from potential new sources.

Any change in how regional transit funds are allocated should help the region meet one or more regional goals. This may involve some trade-off since support for one goal may actually harm another. Of course many allocations may be difficult to implement due to a lack of direct measured effectiveness.

Output measures begin with simple metrics. The downside here is that these do not reflect the overall quality or cost effectiveness of transit service. Also, some observers argue that outputs provide incentives for unproductive actions by agencies – such as adding more vehicle hours of service than needed to meet demand in a cost effective way. Such events seem unlikely, however, since the marginal costs for most activities exceed the likely revenues that will be generated. Some possible metrics:

- *Ridership* – attractive for CTA;
- *Passenger miles*[9] – attractive for Metra;
- *Revenues* – should be linked to both passengers and passenger miles (other than for ADA services); and
- *Vehicle miles* - vehicle hours; seat miles. [10]

Needs refers to the investments called for to keep transit systems in good repair and to expand services. The term is vague, and could benefit from more analysis since needs are often estimated without considering available resources. There is no reason to believe that all needs are equally important.

- *State of good repair* – this is an important concept since it helps define capital requirements. It attempts to measure the cost to maintain a given level of service or to maintain/replace equipment and facilities on schedule. The Service Boards differ in some assumptions (useful life of equipment or buildings, for example) but RTA has made progress in developing a consistent set of assumptions.
- *Safety* – an important sub-category of state of good repair investments
- *New capacity* - This includes new service on existing lines as well as new lines or routes. The tough question is which ones are most attractive given available resources.
- *ADA-Paratransit* – this serves a very specific market, one that is growing rapidly in line with an aging population. A focus here could be a first step towards finding a separate dedicated source of funds for ADA and paratransit services.

Performance measures have received increased attention at the national level. This is one reason for the performance-based option (number 4) and the option (number 2) to emphasize competitive allocation of a portion of discretionary funds.

- *Cost* per passenger or passenger mile.
- *On-time performance* – a very important part of customer service. Measurement is less easy than it sounds, since transit properties often used different measures of how close to on time is good enough.
- *Subsidy level* – or improvements in the farebox ratio. It may be attractive to provide specific financial recognition to Service Boards that are able to raise fares or that can find new sources of revenues or ways to reduce costs.
- *Trends* in these measures may be the best focus, since each board has different operating characteristics, making an "apples to apples" comparison difficult.
- *Growth* in ridership or passenger miles.

9 Number of passengers times the average miles travelled.
10 Measures of the amount of potential transit service provided.

Sub-area equity. The principle here is to ensure that funds provide services to each region in proportion to the taxes that each region generates. These calculations are not always easy to carry out since some transit service crosses county boundaries. Thus, results tend to focus on dollar flows, rather than benefits received. Should this be viewed on an annual basis or over a longer term—say a decade or so? There is some logic to focus on geographic equity, but it also contradicts many regional goals. There is some evidence that suburban Cook County provides additional resources for both the City of Chicago and the collar counties. Is this imbalance enough to justify changing allocations—or increasing transit service to suburban Cook County?

Any scenario will likely combine these principles. The Final Report may provide examples of single-metric allocations, however, in order to highlight their implications. Certain "easy" measures may not provide the best long-term incentives. Sub-area equity may contradict regional goals since it could focus on benefits for only one part of the region.

It is difficult to consider any set of new allocation scenarios in isolation from the level and source of funds. For example, each of the Service Boards depends on a reasonably predictable level of funding. This argues for making limited changes to the current allocation of baseline discretionary funding. This could change over time, of course, as the Service Boards became comfortable with newer allocation formulas.

Any **scenario will likely combine these principles.**

It is difficult to consider any set of new apportionment scenarios in isolation from the level and source of funds.

APPENDIX A: DETAIL ON POSSIBLE COMPETITIVE GRANT CRITERIA

Evaluating grant proposals requires objectivity on whether each proposal fits the purpose of the grant program and how well it does so compared to other proposed ideas based on knowable and stated set of criteria.

INNOVATION

- Has the proposed idea or something like it been done before in the region or in the US? If so, what made it successful? If not, what has changed to make it successful in this region?
- Does the proposal represent a break from the traditional practices of the proposing agency? If so, how would it be integrated into the existing organization or communities?
- Does the proposal represent a positive improvement in the customer experience? Can this positive experience be duplicated?
- Does the proposal reduce the costs of operations and maintenance?
- Do RTA and/or the communities have the capabilities of deploying the innovation?

HIGH RETURN

- What are the economic and social returns of the proposal?
- What are the proposed costs and benefits? When will the benefits be achieved?
- What benefits have been included in the analysis and how are they calculated?
- How sophisticated is the included cost-benefit analysis?
- Will there be a need for extensive training of Service Board personnel to implement the activity?

REGIONALISM

- How does the project make the regional transportation system better and more integrated?
- Does the proposal include collaboration among Service Boards?
- Does the proposal improve customers' ability to use transit in making regional trips?
- Does the proposal include benefits that reach across traditional political and jurisdictional boundaries?
- Does the proposal ease transfers or improve connections for system customers between Service Board operations?

SOCIAL AND ECONOMIC BENEFITS

- Does the project enhance the livability for residents, businesses, potential new residents and/or employers in the region?
- Does the project provide safe and efficient mobility access for the transit dependent population to work, school, hospitals, and entertainment?
- Does the project enhance the region's ability to be economically competitive?
- Does the project lower travel time for riders?
- Does it help manage traffic congestion?
- Does the project improve coordination of linked trips?
- Will the project lower the cost of mobility to the customers?
- What are the social and economic benefits the project will achieve?

APPENDIX C: BACKGROUND ON AUTHORS

ABOUT THE AUTHORS

Delcan Corporation is an independent 800-person international transportation consulting firm. Established in 1953, Delcan's largest practice area is mass transit. The firm's management consulting arm, based in Northern Virginia, focuses on policy, finance, and economics. Delcan's transit experience includes the allocation of public funds in a competitive environment, allocation modeling, and formulas. Delcan has a demonstrated track record of working with multiple players and with the public.

The Delcan team includes two subcontractors:

- *The Eno Center for Transportation*, a neutral, non-partisan DC-based think tank that promotes policy innovation in transportation. Founded in 1921, recent work includes an assessment of the impacts of significant cuts in federal funds for transit, including implications for how funds might be re-allocated.
- *TranSmart,* a Wisconsin-based Disadvantaged Business Enterprise specializing in transportation planning and technology. From its inception in 1996, TranSmart has focused on providing and delivering professional services and solutions for advancing and enhancing the nation's transportation infrastructure.

Delcan has long-established working relationships with both Eno and TranSmart, having worked together on similar projects, both as firms as well as on an individual basis.

Our Transit System at a Crossroads; 2007 is the Year of Decision

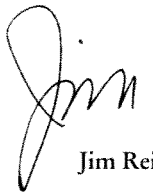
A Letter from the Chairman

Northeastern Illinois' regional transit system represents one of our most important public assets, valued at over $27 billion and generating an annual economic impact of more than $12 billion. Two million riders a day use the CTA, Metra or Pace to get to and from work. In addition to the economic benefits transit provides, it enhances our quality of life by reducing traffic as well as air pollution. Strengthening our transit system requires a major commitment on the part of the entire state and region. For that reason, the Regional Transportation Authority (RTA) launched a major campaign in 2006 to insure that this critical public asset continues to serve the region's needs.

Our challenge is two-fold: rising costs for transit and increasing traffic congestion. Today's transit costs are climbing dramatically while revenues to support transit are not keeping up. Inevitably, needed repairs are delayed, resulting in slow zones and service cuts. And today, Chicago-area traffic congestion is the second worst in the nation. The average commuter spends a full week each year behind the wheel wasting time and gas.

This budget helps meet these challenges in the short-term, but the long-term answer is to unite behind the RTA's strategic plan called *Moving Beyond Congestion.* Developed in partnership with CTA, Metra and Pace, *Moving Beyond Congestion* calls for upgrading the existing system and adding new transit services in all six counties of northeastern Illinois. Nearly 400 Partners for Transit representing business, labor, municipalities, planning and community groups as well as educational and cultural institutions have contributed to the plan. It proposes a financial investment of $57 billion over 30 years to pay for new service projects in Cook, DuPage, Kane, Lake, McHenry and Will counties and to ensure that existing services we rely on each day are improved.

As we prepare to present a formal proposal to the Illinois General Assembly during spring 2007, join us as we pursue a bipartisan region-wide consensus to take us where we all need to go... and to get there on time. Supporting *Moving Beyond Congestion* stands to benefit both transit users and drivers because the more people who use transit, the faster the traffic on the roads will flow. For more information, go to www.movingbeyondcongestion.org or call 312-913-3200.



Jim Reilly, Chairman

1 Strategy

Strategic Plan

Overview

After months of intensive work involving staff from all three service boards and the RTA, leading transportation consultants, and with input from hundreds of transit partners and thousands of individuals, elected officials and community leaders in the city and the suburbs, the RTA released its five-year strategic plan, *Moving Beyond Congestion* early in 2007.

The *Moving Beyond Congestion (MBC)* five-year strategic plan is our 30-year vision for maintaining, enhancing and expanding our public transit system which is valued at $27 billion dollars and provides two million rides each weekday and thousands more on weekends. Parts of the system are newer, serving growing communities as well as changing urban neighborhoods but other segments of the system are more than a century old.

In recent years demand has grown for expanded and improved service. Ridership is up and our performance is meeting or exceeding industry standards across a range of performance indicators however, we face enormous challenges. The system's annual revenues do not support annual operations and much of the rolling stock is beyond its useful life. The lack of state capital funding has caused needed repairs to be deferred, leading to more slow zones, slower travel times and rising frustration on the part of passengers.

The *MBC* plan offers a review of revenue options with a goal of generating an average of $400 million dollars in new operating funds over the next five years. The plan also calls for approximately $10 billion in capital funding over the next five years, which will help leverage billions more from the federal government. The funds will help to design and implement services and expansion projects that will ensure that our public transportation system can meet the future demands of one of the world's great metropolitan regions.

Many new businesses and communities are locating further from the central city as we grow. Six of the state's top 10 largest cities are located in the suburbs and they need improved transit services. Chicago is bidding to host the 2016 Olympics and our ability to compete for

that prize depends—in no small measure —on our willingness to invest in public transportation.

The quality of our air and the amount of traffic congestion on our roads are directly related to public transportation. Congestion costs this region nearly $5 billion dollars annually whereas public transit generates over $12 billion in annual economic benefits. We have a responsibility to future generations to make the hard choices today that will make their lives easier tomorrow. But when you consider how much is at stake—our economy, our quality of life, and our environment —there really is no choice. Public transportation is vital to our future.

Investments in our public infrastructure, such as transit, are the basis of our economy and we strongly feel the state must act now—in 2007—to ensure our region can prosper in the years to come.

Highlights

The *MBC* plan addresses several major issues across the region which includes congestion and mobility, changing travel markets, service coordination and integration, capital and operations funding, and the risks without additional funding.

Capital funding focuses on three themes for investment to maintain, enhance, and expand the system. As discussed earlier, parts of the system are more than 100 years old and require state of good repair upgrades to sustain reliable day-to-day service. Enhancements are needed to provide better community options and seamless service throughout the region. System expansions are needed but far exceed available resources at the federal, state and local level. The *MBC* plan proposes an evaluation process so that funds are committed to those projects with the greatest potential. This process will serve as a screening tool to make community proposals more competitive throughout the development process.

The Service Boards will face an operating budget shortfall before the end of 2007, leaving few options but to reduce service and raise

fares unless additional funding is secured. The 2007 budget and 2008-2009 financial plans, presented later in this document, are predicated on securing additional funding ("New Transit Funding") for mainline bus and rail operations and Additional Funding for *ADA* paratransit service. If these funds are not secured the aforementioned options are foremost considerations.

Additional *MBC* plans focus on three major themes. The transit system must be people friendly, serve markets, and supported by land use and transportation policies. Initiatives that support these themes include sub-regional planning, integrating development and land use with transit services, congestion pricing, demand management tools (hot lanes), seamless public transportation, modal integration, suburb-to-suburb services, and technology applications. Other initiatives include public-private partnerships, administration coordination, performance measures, improved budget processes, and environmental protection measures.

The plan also provides an overview of the investment required to fund the *MBC* program. It describes funding sources, presents options that could be used to enhance revenues, and discusses cost recovery and cash flow implications. Topic discussions include federal funding, state and local funding, an international perspective, innovative funding methods, and tax and fee options.

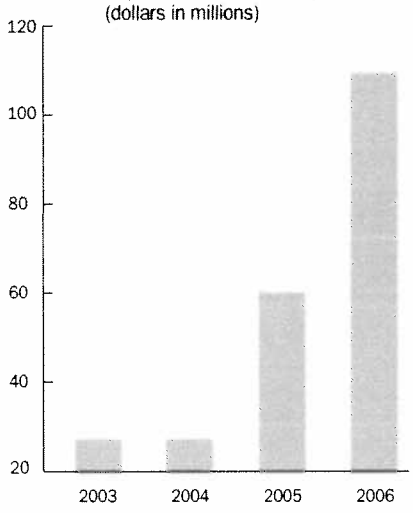
2007 is the year of decision for the northeastern Illinois transit system and moving forward from the *MBC* plan to implementation has two major elements. The first is a set of initial key action items and the second is to use the plan as a living document that is continually updated and refined to reflect on-going changes across the region. Action items include expanding funding and implementing the initiatives discussed earlier and the RTA (Agency) is in its initial stages of formulating strategic goals and measurable outcomes that support this plan.

For complete details of the *Moving Beyond Congestion* plan, please visit our website (www.MovingBeyondCongestion.org).

Budget Issues

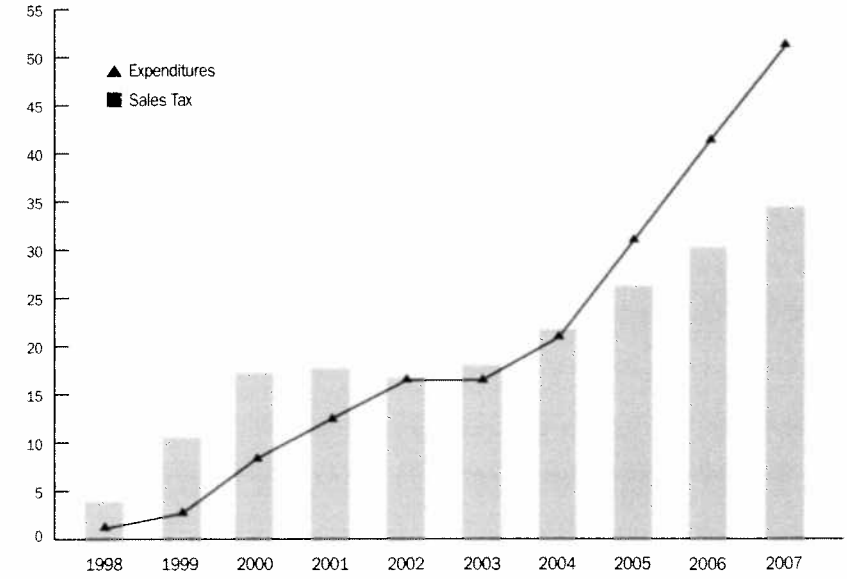
The primary concern facing the Service Boards (CTA, Metra, and Pace) is the lack of both operating and capital program funding. In recent years, to cover the growth in operating expenses, the Service Boards have transferred capital funds to operations as allowed by federal regulations. This amount has grown from almost $27 million in 2003 to more than $102 million in 2006 (Exhibit 1-1).

Exhibit 1-1: **Capital Funds Used for Operations** (dollars in millions)



The main reason the Service Boards have had to use capital funds for operating purposes is the disproportionate increase in operating costs compared to the growth in sales tax funding, the major revenue subsidy that funds Service Board deficits. The imbalances in costs are driven by increases in healthcare, fuel, electricity and security expenditures since 2001. From 1998 through 2001, sales tax growth consistently outpaced operating cost increases as the RTA and Service Boards held cost growth in check (Exhibit 1-2). Despite continued cost containment efforts, since 2002 expenditures in the aforementioned cost categories have increased significantly faster than inflation. However, the RTA and Service Boards continue to implement cost containment measures and have worked with the State Auditor General's Office on further improvements in a number of areas. The report on these matters is expected in the first quarter of 2007.

Exhibit 1-2: **1998–2007 Sales Tax and Service Board Expenditure Growth** (cumulative percent)



In 2006, the Service Boards had a combined operating budget shortfall of $156 million. The shortfall represents the total amount of Service Board operating costs ($1,775 million) not covered by RTA funding and Service Board revenue ($1,619 million). The RTA system covered the 2006 shortfall with $102 million in federal capital funds transferred to operations and a $54 million grant from the State for *ADA* paratransit services.

Exhibit 1-3: **Service Board Operations Funding Summary** (dollars in millions)

	2006	2007	Change
Total Service Board Operating Costs	**$ 1,775**	**$ 1,944**	**$ 169**
RTA Funding and Service Board Revenue			
Service Board Operating Revenue	838	906	68
RTA Sales Tax and PTF	781	812	31
Total Revenue for Operations	**$ 1,619**	**$ 1,718**	**$ 99**
Funding Shortfall	**$ 156**	**$ 226**	**$ 70**
Shortfall Funding			
Federal Capital Funds	102	—	(102)
Additional State Funding	54	—	(54)
New Transit Funding for Mainline Operations	—	144	144
Additional Funding for ADA paratransit	—	82	82
Total Shortfall Funding	**$ 156**	**$ 226**	**$ 70**

Exhibit 1-4: **Mainline Service Funding** (dollars in millions)

	2006	2007	Change
Total Service Board Operating Costs	**$ 1,699**	**$ 1,852**	**$ 153**
Service Board Operating Revenue	828	896	68
Sales Tax and PTF	781	812	31
Total Operating Revenue	**$ 1,609**	**$ 1,708**	**$ 99**
Funding Shortfall	**$ 90**	**$ 144**	**$ 54**
Shortfall Funding			
Federal Capital Funds	90	—	(90)
New Transit Funding	—	144	144
Total Shortfall Funding	**$ 90**	**$ 144**	**$ 54**

In 2007, the operating budget shortfall increases by $70 million ($226 million vs. $156 million) as cost growth continues to outpace the increase in Service Board revenues and RTA funding from sales tax and the public transportation fund (PTF). To cover this shortfall, the RTA is seeking new transit funding for mainline (bus and rail) service, as well as additional funding for *ADA* paratransit service (Exhibit 1-3). The operating budget was adopted before the region-wide *Moving Beyond Congestion* capital program was finished. Metra's 2007 capital program is based on receiving "additional legislative initiative" program funds of $60 million. If these funds are not secured Metra's capital program has a shortfall of $49 million.

Of the $226 million in new operating funding needed in 2007, $144 million supports mainline service (Exhibit 1-4). In 2006, mainline service cost $1,699 million to operate. The Service Boards balanced their operating budgets by transferring $90 million in federal capital funds to cover operating costs for these services.

In 2007, operating costs for mainline service are expected to increase $153 million, or 8.9 percent. This increase is driven by increases of $94 million in labor costs (including healthcare and other benefits), $44 million in fuel and electricity costs, and $7 million in security costs. Cost containment efforts will hold all other expenditures to an increase of $8 million. Increased Service Board revenues in 2007 cover $68 million of these increased costs, and the RTA projects that funds available to the Service Boards from sales tax and State matching public transportation funds will increase by $31 million.

The $82 million remaining balance of the $226 million in new operating funding needed in 2007 supports *ADA* paratransit service. This reflects $92 million in operating costs of which $10 million is covered by Service Board revenues. In 2006, *ADA* paratransit service required $66 million in funding ($76 million in operating costs less $10 million covered by Service Board revenue). The State provided a grant of $54 million, and the remaining $12 million was covered by additional federal capital funds (Exhibit 1-5).

In the 2007 budget, the funding needs for *ADA* paratransit service increase to $82 million—driven by increases in both passenger demand and the prices charged by the outside service providers. At the end of 2006, extensions to five-year contracts were under negotiation with several of these carriers. The 2007 budget looks for paratransit funding—from State or other sources—to increase from $54 million to $82 million for this federally mandated service. Service Board funding shortfalls total $156 million in 2006 and $226 million in 2007 (Exhibit 1-6).

Exhibit 1-5: **ADA Paratransit Funding** (dollars in millions)

	2006	2007	Change
Total Operating Costs	**$ 76**	**$ 92**	**$ 16**
Service Board Revenue	10	10	—
Funding Shortfall	**$ 66**	**$ 82**	**$ 16**
Shortfall Funding			
Additional State Funding	54	—	$ (54)
Federal Capital Funds	12	—	(12)
Additional Paratransit Funding	—	82	82
Total Shortfall Funding	**$ 66**	**$ 82**	**$ 16**

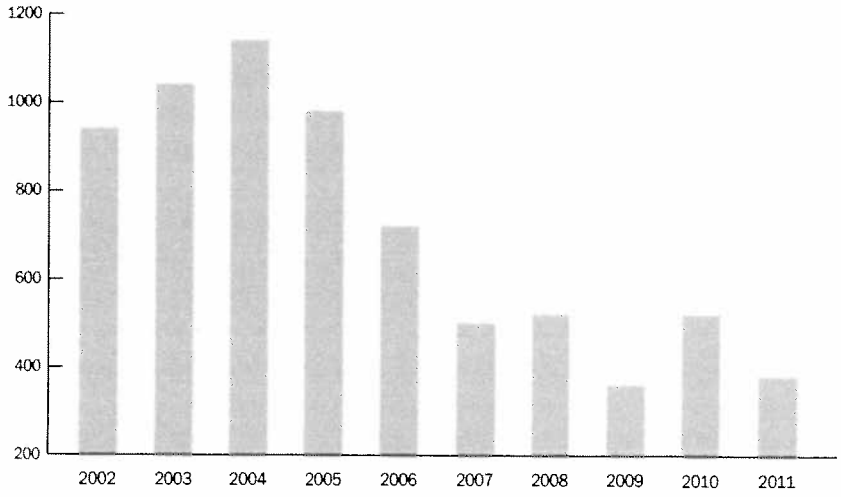
Exhibit 1-6: **Service Board Funding for 2006 and 2007** (in millions)

2006	CTA	Metra	Pace	ADA	Total
Operating Cost	$ 985	$ 536	$ 178	$ 76	$ 1,775
Operating Revenue	497	273	58	10	838
Deficit	**$ 488**	**$ 263**	**$ 120**	**$ 66**	**$ 937**
Public Funding	455	245	81	—	781
Funding Shortfall	**$ 33**	**$ 18**	**$ 39**	**$ 66**	**$ 156**

2007	CTA	Metra	Pace	ADA	Total
Operating Costs	$ 1,133	$ 554	$ 166	$ 91	$ 1,945
Operating Revenue	553	285	53	10	901
Deficit	**$ 580**	**$ 269**	**$ 113**	**$ 82**	**$ 1,044**
Public Funding	470	257	90	—	818
Funding Shortfall	**$ 110**	**$ 12**	**$ 23**	**$ 82**	**$ 226**

The 2006 figures are estimates with region-wide ADA paratransit services seprated from mainline CTA and Pace operations. Some totals may not sum due to rounding. Public Funding includes RTA Sales Tax, PTF and Pace CMAQ funds.

Exhibit 1-7: **2002-2011 Capital Program** (dollars in millions)



As previously noted, in recent years the Service Boards have used capital program funds for operating purposes. However, this transfer of funds can not continue because capital funding substantially decreases over the next five years (2007-2011) compared to the capital funding during the previous five years (2002-2006). Between 2002 and 2006 capital program funds averaged almost $944 million. However, this average plummets to $606 million between 2007 and 2011 (Exhibit 1-7). This sharp decline results primarily from the expiration of the *Illinois First* capital program in 2004 and the absence of a new State capital funding program. The RTA is not able to augment its capital program with additional borrowing because it has insufficient revenue to service any new bond offering debt. The operating amounts available to the Service Boards in 2007-2009 are based on securing additional funding for mainline and *ADA* paratransit service. If these funds are not obtained, the Service Boards must take actions to balance their budgets such as using capital funds for operations, changing service levels, and adjusting fares.

Detailed information regarding Service Board and RTA operations between 2005 and 2009 can be found in subsequent sections of this document, which is also posted on the RTA website (www.rtachicago.com).

Governance

Overview

The RTA was established in 1974 upon approval of a referendum in its six-county northeastern Illinois region. The operating responsibilities of the RTA are set forth in the *RTA Act*. The RTA is a unit of local government, body politic, political subdivision and Municipal Corporation of the State of Illinois.

As initially established, the RTA was an operating entity responsible for providing day-to-day bus and rail transportation services as well as a planning and funding agency. However, in 1983, the Illinois General Assembly reorganized the structure and funding of the RTA. The reorganization placed all operating responsibilities with three Service Boards—the Chicago Transit Authority (CTA) and two operating divisions of the RTA, a Commuter Rail Division (Metra) and a Suburban Bus Division (Pace)—each having its own independent board of directors. These divisions conduct operations and deal with subsidized carriers. The RTA became exclusively responsible for financial oversight and regional planning issues.

The Service Boards operate within the RTA's region, but are separate legal entities. The Board of Directors of each Service Board is completely independent of the RTA Board. The RTA Board has control neither in the selection nor in the appointment of any Service Board director or its management. Further, directors of the CTA, Metra and Pace are excluded from serving on more than one entity's board of directors, including that of the RTA, except for the Chair of the CTA Board, who is also an RTA Board member.

The corporate authority and governing body of the RTA is the 13-member RTA Board of Directors. Twelve directors are appointed from within the six-county region: four directors by the Mayor of the City of Chicago, and a fifth director who is the chairman of the CTA; four directors by the suburban members of the Cook County Board; two directors by the Chairmen of the County Boards of Kane, Lake, McHenry, and Will counties; and one director by the Chairman of the DuPage County Board. The Chairman of the Board, its 13th member, is elected by at least nine of the 12 appointed members.

To administer the Agency's statutory requirements, the Board hires officers and staff. One of its officers, who must be approved by the Board, is the Executive Director. The Executive Director executes the Board's policy decisions and staffs the Agency to carry out its mission and goals.

The *RTA Act* sets forth detailed provisions for the allocation of receipts by the RTA to the various Service Boards, and imposes a requirement that the RTA's system as a whole achieves an annual "system-generated revenue recovery ratio" (i.e. aggregate income for transportation services provided) of at least 50 percent of the cost of the operation of transportation services. The Service Boards achieve their required recovery ratios by establishing fares and related revenue to cover the required proportion of their proposed expenditures. The RTA is responsible for supervising the budgets and financial performance of the CTA, Metra, and Pace.

The Service Boards are considered fiscally independent of the RTA. Although the RTA reviews the budgets of the CTA, Metra and Pace, approval of the budgets is mandated by State statute if such budgets meet specified recovery ratios.

The Service Boards maintain separate management, exercise control over all operations (including the passenger fare structure), and are accountable for fiscal matters including ownership of assets, relations with federal and state transportation funding agencies, and the preparation of their operating budgets. They are also responsible for the purchase of services and approval of contracts relating to their operations.

The CTA, Metra and Pace provide services to different geographic areas within the six-county region. The CTA provides rail and bus service to the City of Chicago and 38 neighboring suburbs within Cook County. Metra provides transit service to the six-county area, with the majority of the transit riders residing in the suburbs and commuting to the City of Chicago. Pace's primary bus service area is suburbs in the six-county region, with service to areas within the City of Chicago. Pace is also responsible for region-wide ADA paratransit service.

The *RTA Act* establishes the RTA as the primary public body with authority to apply for and receive grants, loans, and other funds from the state or the federal government for public transportation programs in Cook, DuPage, Kane, Lake, McHenry and Will counties ("northeastern Illinois"). The RTA is responsible for the allocation of certain federal, state and local funds to finance both the operating and capital needs of public transit in the six-county region.

The *Act* confers upon the RTA Board powers to prescribe regulations requiring that the Service Boards submit to the RTA such information as the RTA may require. The Board has statutory authority to establish by rule or regulation financial, budgetary, or fiscal requirements for the system.

In addition to its annual budget and financial plan responsibilities, the RTA, each year, is required to prepare and adopt a five-year capital program. The Service Boards are prohibited from undertaking any capital project in excess of $250,000 unless the project has been approved by the RTA Board and incorporated into the RTA capital program. The RTA also conducts market research and coordinates planning for public transportation in northeastern Illinois. The RTA funds the development of new types of service, both in the suburbs and in the City of Chicago, on a demonstration basis.

Budget Process

As previously discussed, the *Act* requires that the RTA Board of Directors approve an annual budget, a two-year financial plan, and a five-year capital program. The budget calendar and statutory oversight and amendment requirements govern this process. The essential aspects of the budget calendar are outlined below. A detailed calendar is provided in the Appendices (Exhibit 8-1).

Budget Calendar

By July 1 of each year, the Office of Management and Budget (OMB) is to submit to the RTA an estimate of revenue to be collected from taxes for the next fiscal year.

Based upon the estimate of tax receipts and revenue from other sources, "the Board shall, not later than...September 15 prior to the beginning of the Authority's next fiscal year" advise each Service Board of the amounts estimated to be available during the upcoming fiscal year and following two years. The Board is also required to advise the Service Boards of the times when the amounts will be available and the next year's cost recovery ratio.

Between September 15 and November 15, each Service Board must prepare and publish a comprehensive annual budget, program document and a two-year financial plan. "The proposed budget and financial plan shall be based on the RTA's estimate of funds to be available to the Service Boards, by or through the Authority, and shall conform in all respects to the requirements established by the Authority." Before submitting the budget to the RTA, the Service Boards must hold at least one public hearing in each of the counties in which it provides service and must hold at least one meeting with the affiliated county boards. After considering the comments from these meetings, it must formally adopt the budget prior to submitting it to the RTA on November 15. The *RTA Act* requires that the budgets submitted by each Service Board not project or assume receipt of revenue greater than that set in the estimates provided by the RTA.

The RTA Board must then hold at least one public hearing in the metropolitan region and one meeting with each county board on the proposed budget. Twenty days prior notice is required for the public hearing. The public hearing notice for the 2007 budget may be reviewed in the Appendices Section (Exhibit 8-2).

After conducting these hearings and taking into consideration the comments, the RTA Board must adopt a budget that meets the statutory criteria. Unless the Board can pass (by nine votes) a budget and financial plan for a Service Board that meets these criteria, the *Act* states that "the Board shall not release to that Service Board any funds for the periods covered by such budget and financial plan except for the 85 percent of sales tax proceeds which are directly allocated to the Service Boards."

Also, if the RTA does not find that a Service Board budget meets the criteria set forth under the *Act*, the Board shall, five working days after the start of the Service Board's fiscal year, adopt a budget and financial plan meeting these criteria. The RTA, CTA, Metra, and Pace all report on a calendar-year basis.

Statutory Requirements

The *RTA Act* sets forth six statutory criteria for Board approval of the budget and financial plan of each Service Board. These six criteria are:

Balanced Budget

Such budget and plan shall show a balance between (a) anticipated revenue from all sources, including operating subsidies, and (b) the costs of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness.

Cash Flow

Such budget and plan shall show cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenditures as incurred.

Recovery Ratio

Such budget and plan shall provide for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board which allow the Service Board to meet its required recovery ratio.

Assumptions

Such budget and plan are based upon and use assumptions and projections, which are reasonable and prudent.

Financial Practices

Such budget and plan shall be prepared in accordance with sound financial practices as determined by the RTA Board.

Other Requirements

Such budget and plan shall meet such other financial, budgetary, or fiscal requirements that the RTA Board may by rule or regulation establish.

Oversight

After adoption of the operating budget, the RTA Board has continuing oversight powers concerning the budget and the financial condition of each Service Board and region as a whole. The RTA monitors the budgetary and operations performance of the Service Boards on a monthly basis to ensure compliance with their budget and recovery ratio. On a quarterly basis, the following oversight is conducted:

- After the end of each fiscal quarter, each Service Board must report to the RTA "it's financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction" for that quarter. If in compliance, the RTA Board so states and approves each Service Board's compliance by adopted resolution.
- If "in the judgment of the Board" these results are not substantially in accordance with the Service Board's budget for that period, "the Board shall so advise the Service Board" and it "shall, within the period specified by the Board, submit a revised budget incorporating such results."
- Once a Service Board submits the revised budget plan, the RTA must determine if it meets the six statutory budget criteria necessary to pass an annual budget. If not, the RTA does not release any moneys to the Service Board(s) except for the statutory allocation of taxes.
- If a Service Board submits a revised budget and plan which shows that the statutory budget criteria will be met "within a four quarter period," the RTA "shall continue to release funds to the Service Board." The RTA may require the Service Board to submit a revised budget and plan that shows that the budget criteria "will be met in a time period less than four quarters."

Amendment

When prudent, the operating budget is amended due to shifts in the economic climate, governmental funding programs or new projects. Depending on the type of request, the proposed amendment may be presented to one or more of the RTA Board Committees for approval. However, the Board's Finance Committee must approve all proposed amendments before they are recommended to the RTA Board. The RTA Board ultimately approves or disapproves all proposals. If approved, the RTA and Service Board budgets are amended to include all changes and actual results and are then monitored against the amended budget.

Operations Funding

The RTA provides operating funds to each Service Board equivalent to its budgeted deficit for the year as opposed to funding the actual deficit. This policy encourages cost efficiencies by the Service Boards and allows them to retain any budgeted funds that are not expended. Such funds are generally referred to as a positive budget variance, or PBV.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level on the unreserved and undesignated fund balance. The ordinance affirms that the annual budget adopted by the RTA each year will reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for that year. If actual sales tax receipts or other RTA revenue falls short of the amounts reflected in the annual budget, then the succeeding year's annual budget and two-year financial plan will provide for the replacement of any shortfall in the unreserved and undesignated balance of the RTA general fund, by no later than the end of the three-year planning period.

The RTA established this policy to maintain financial stability in order to carry out the RTA's legislative mandates to plan, fund and oversee public transportation in the region. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods.

Cash Management

The RTA's policy complies with Illinois law, addresses safety of principal, liquidity of funds, rate of return, public trust, and Investments in Local and Disadvantaged Institutions. It further permits investments and prescribes safekeeping, collateralization, and reporting requirements.

Credit Risk

The RTA's policy for credit risk states no investment shall be made in short-term obligations of corporations unless such obligations are rated at the time of purchase within the highest classification established by at least two standard rating services, the investment matures no later than 180 days from the date of purchase and the issuer is domiciled in the United States.

General Obligation Bonds

The RTA's policy states that bonds should be payable from all revenue and all other funds received or held by the RTA that lawfully may be used for retiring the debt. Exceptions to this are amounts in the Joint Self-Insurance Fund (JSIF) and amounts required to be held or used with respect to separate ordinance obligations. The bonds are secured by an assignment of a lien on the sales taxes imposed by the RTA. All sales tax receipts are to be paid directly to the trustee by officials of the State of Illinois. In addition, RTA Sales Tax must be 2.5 times greater than the debt service requirement. If, for any reason, the RTA has not made the required monthly debt service payment, the trustee is to deduct it from the receipts. If all payments have been made, the funds are made available to the RTA for regular use. Under the *Act*, the CTA, Metra and Pace fare box receipts and funds on hand will not be used for payment of debt service.

Pension Funding

The RTA, Metra, and Pace are required to contribute the amounts necessary to fund the benefits of their respective employees in the Plan using the projected unit credit actuarial method. Employer contribution and the income it earns through investments are used to operate the Plan and to pay benefits. Assets are valued recognizing a portion of both realized and unrealized gains and losses in order to avoid wide swings in actuarially determined funding requirements from year to year.

ORDINANCE NO. 2006-38

AN ORDINANCE AMENDING THE PACE 2006 MARKS, THE RTA 2006 BUDGET, AND PACE'S 2006 BUDGET AND PROGRAM

WHEREAS, Ordinance No. 2005-66, adopted on September 15, 2005, advised the Service Boards of the funding amounts estimated to be available and called on each to prepare and submit to the Regional Transportation Authority (the "RTA") proposed budgets for 2006 and financial plans for 2007-2008; and

WHEREAS, the Service Boards adopted and submitted to the RTA proposed budgets for 2006 and financial plans for 2007-2008; and

WHEREAS, Ordinance 2005-84, adopted by the Regional Transportation Authority Board on December 16, 2005, approved the 2006 budgets and 2007-2008 financial plans of the Service Boards and their respective recovery ratios for 2006, adopted the 2006 Budget and Program of the Authority, appropriated funds for the 2006 Budgets, and approved the Five-Year Capital Program for 2006-2010; and

WHEREAS, Ordinance 2006-22, adopted by the Regional Transportation Authority Board on April 6, 2006, amended the Capital Marks and Program for the CTA and Pace; and

WHEREAS, the July 2005 amendment to the RTA Act requires the transfer of operation of CTA's ADA paratransit services to Pace by no later than July 1, 2006; and

WHEREAS, Pace will incur additional capital program costs for start-up activities related to the transition to providing all of the ADA paratransit services in the RTA region; and

WHEREAS, Pace's 2006 budget presumed a level of fare revenue from ADA paratransit service based on the CTA paratransit fares increasing from $1.75 to $3.50 on January 1, 2006, which did not occur, thereby negatively impacting actual revenues received; and

WHEREAS, Section 4.11(c)(1) of the RTA Act provides that: "If the Board shall at any time have received a revised estimate, or revises any estimate the Board has made, pursuant to this Section of the receipts to be collected by the Authority which, in the judgment of the Board, requires a change in the estimates on which the budget of any Service Board is based, the Board shall advise the affected Service Board of such revised estimates, and such Service Board shall within 30 days after receipt of such advice submit a revised budget incorporating such revised estimates. If the revised estimates require, in the judgment of the Board, that the system generated revenues recovery ratio of one or more Service Boards be revised in order to allow the Authority to meet its required ratio, the Board shall advise any such Service Board of its revised ratio and such Service Board shall within 30 days after receipt of such advice submit a revised budget incorporating such revised estimates or ratio"; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take such actions in order to carry out its powers and duties under the Act.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY THAT:

1. The 2006 RTA Operating Marks for Pace adopted by the RTA Board on September 15, 2005 by Ordinance 2005-66, and the Pace 2006 Budget adopted by the RTA Board on December 16, 2005 by Ordinance 2005-84, are hereby amended as set forth in Schedules I-B, I-C, and I-F ("Service Board Deficit Funding", Recovery Ratio Calculations", and Regional Transportation Authority Cash Flow"), of this Ordinance.

2. The RTA hereby advises Pace that the amounts set forth in Schedule I-B ("Service Board Deficit Funding") are estimated to be available for Pace operating purposes for 2006, provided that the RTA determines that Pace's budget for 2006 satisfies the provisions of Section 4.11 of the Act.

3. The 2006 RTA Capital Marks for Pace adopted by the RTA Board on April 6, 2006, by Ordinance 2006-22, is hereby amended as set forth in Schedule I-D ("Service Board Capital Funding"), of this Ordinance.

4. The 2006 RTA budget adopted by the RTA Board on December 16, 2005 by Ordinance 2005-84, is hereby amended as set forth in Schedules I-A, I-C, and I-F, ("RTA Statement of Revenues and Expenditures", Recovery Ratio Calculations", and Regional Transportation Authority Cash Flow"), of this Ordinance.

5. Pace is hereby directed to develop and submit to the RTA, as part of the documents that the Act requires the Service Boards to submit to the RTA within 30 days from receipt by the Service Boards of this Ordinance, its proposed budget for 2006, which budget and plan shall not project or assume a receipt of funds from the RTA in 2006 in amounts greater than those set forth in Schedule I-B, of this ordinance.

6. Pace's amended budget for 2006 shall comply with the terms and provisions of Ordinance 2005-84, except that such amended budget shall be based on the amounts estimated to be available for 2006 as set forth in Schedule I-B, and the recovery ratio as set forth in Schedule I-C, of this Ordinance. Nothing in this Ordinance estimating amounts available to the Service Boards is intended to or shall have the effect of waiving any discretion the RTA may have under law to appropriate amounts available to the Service Boards, subject to compliance by the Service Boards with terms and conditions established by the RTA.

7. The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance, and to file the amended budget with the Governor, General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago, and the Auditor General of the State of Illinois along with appropriate certification that this budget meets the requirements of the Act.

8. The Executive Director is authorized and directed to inform Pace of the amounts and times established by this Ordinance promptly after adoption of this Ordinance. The Executive Director is further authorized and directed to take such action as the Executive Director deems necessary or appropriate to implement, administer and enforce this ordinance.

9. The Executive Director is authorized and directed to file the amended 2006 Annual Budget and a copy of this Ordinance with the Governor and the Auditor General of the State of Illinois along with an appropriate certification that this budget and program meet the requirements of the Act.

Schedule 1-A: **RTA Statement of Revenues and Expenditures Amending General and Agency Funds for 2006** (dollars in thousands)

Revenue	Ordinance 2005-84 2006 Budget	2006 Budget Amendment	Amended 2006 Budget
Sales Tax	$ 719,900	—	$ 719,900
Public Transportation Fund	179,975	—	179,975

ORDINANCE NO. 2006-50

AN ORDINANCE ESTABLISHING ESTIMATES OF AMOUNTS AVAILABLE TO THE SERVICE BOARDS FOR 2007-2009 AND THE REQUIRED RECOVERY RATIOS FOR 2007

WHEREAS, Section 4.11(a) of the Regional Transportation Authority Act (the "Act"), requires that the Regional Transportation Authority (the "RTA"), on the basis of estimates of receipts from taxes imposed by the RTA and of estimates of amounts expected to be available from the State and other sources: (1) advise each Service Board of the amounts estimated to be available to it during the next fiscal year and the two following fiscal years and the times at which such amounts will be available; and (2) advise each Service Board of the system-generated revenues recovery ratio ("recovery ratio") it is required to achieve for the next fiscal year; and

WHEREAS, Section 4.11(b) of the Act directs each Service Board to submit its proposed budget for the next fiscal year and its proposed financial plan for the following two fiscal years in conformity with such actions by the RTA; and

WHEREAS, the amounts available to the Service Boards for 2007-2009 are predicated on the RTA receiving from the State of Illinois funding for Reduced Fare Reimbursement; and

WHEREAS, the amounts available to Pace for 2007 – 2009 are predicated on the RTA continuing to receive funding from the State of Illinois for ADA paratransit services and other costs and services and are also predicated on securing additional funds and achieving cost savings, from funding sources and cost efficiencies that may have been identified in the RTA-Pace Memorandum of Understanding entered into in June 2006, or that may be identified by the paratransit funding plan now being developed by the RTA in cooperation with Pace, CTA and the Illinois Department of Transportation pursuant to Section 2.30(f) of the RTA Act; and

WHEREAS, the amounts available to the Service Boards for operations in 2007 – 2009 are predicated on securing additional funding, and to the extent that such additional funding is not obtained, the Service Boards will have to take actions to balance their operating budgets that may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels, and adjusting fares; and

WHEREAS, the RTA recognizes that the Chicago Transit Authority (the "CTA") and the Suburban Rail Division ("Metra") have taken measures to protect their operations from terrorism and consequently have incurred significantly higher security costs, and moreover the RTA has determined that it is in the best interests of public transportation in the region to exclude certain amounts of security costs for purposes of calculating the CTA and Metra recovery ratios, thereby providing the CTA and Metra with a period of time to balance such higher security costs within their respective budgets; and

WHEREAS, the RTA desires to continue to facilitate the integration of fare media accepted for fare payment by the Suburban Bus Division ("Pace") and the CTA by funding a portion of Pace's costs in providing service to riders using the CTA 7-day pass, U-pass, and Visitor/Fun (1-day, 2-day, 3-day and 5-day) passes (collectively, the "Additional Passes"), in addition to any CTA fare media that are already accepted by Pace; and

WHEREAS, the RTA has considered current and projected economic conditions in its development of estimates of amounts expected to be available for expenditure for public transportation purposes in the metropolitan region in the fiscal years 2007, 2008 and 2009; and

WHEREAS, the RTA has taken into account the needs for, and the costs of, public transportation in the region.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY THAT:

1. The RTA hereby advises the Service Boards that the amounts shown in Exhibit A, Schedule I, "Total Funds for Service Board Operations," of this Ordinance are estimated to be available for operating purposes for the CTA, Metra, Pace, and ADA paratransit services respectively, for 2007, 2008 and 2009, provided that the RTA determines that the Service Boards' respective budgets and financial plans for 2007, 2008 and 2009 satisfy the provisions of Section 4.11 of the Act.

2. The Service Boards are hereby directed to develop and submit to the RTA, as part of the documents that the Act requires the Service Boards to submit to the RTA by November 15, 2006, their proposed budgets for 2007 and proposed financial plans for 2008 and 2009, which budgets and plans shall not project or assume a receipt of revenues from the RTA for operations in 2007, 2008 and 2009 in

amounts greater than those set forth in Exhibit A, Schedule I, "Total Funds for Service Board Operations."

3. The required recovery ratios for 2007 for the CTA, Metra, Pace, and ADA paratransit services are set forth in Exhibit A, Schedule II, "2007 Recovery Ratios."

4. The times at which the receipts from taxes imposed by the RTA and other amounts expected to be available from the State and other sources for operating purposes for 2007 are estimated to be available to the Service Boards are set forth in Exhibit A, Schedule III, "2007 Estimated Cash Flow for RTA Sales Tax and RTA Discretionary Funds".

5. Nothing in this Ordinance estimating amounts available to the Service Boards is intended to or shall have the effect of waiving any discretion the RTA may have under law to appropriate amounts available to the Service Boards, subject to compliance by the Service Boards with terms and conditions established by the RTA.

6. The Executive Director is authorized and directed to inform each of the Service Boards of the amounts, times and ratios established by this Ordinance promptly after enactment of this Ordinance.

Schedule I: **Total Funds for Service Board Operations** (dollars in thousands)

	2007	2008	2009
CTA Operating Funds	$ 580,349	$ 655,400	$ 775,933
Metra Operating Funds	267,924	270,253	278,548
Pace Operating Funds	112,416	117,039	124,330
ADA Paratransit Operating Funds	81,810	91,627	99,893

The amounts available to the Service Boards for operations in 2007–2009 are predicated on securing additional funding, and to the extent that such additional funding is not obtained, the Service Boards will have to take actions to balance their operating budgets that may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels, and adjusting fares. Pace's amount includes separate RTA Discretionary Funds to Pace for a portion of Pace's cost in providing services to riders using CTA passes ("Additional Passes"). The *ADA* Paratransit Operating Funds figure includes additional RTA Discretionary Funds sourced from Additional State Funding for the costs of *ADA* Paratransit services and other costs or services, and is also predicated on securing additional funds and achieving cost savings, from funding sources and cost efficiencies that may have been identified in the RTA-Pace Memorandum of Understanding entered into in June 2006, or that may be identified by the paratransit funding plan now being developed by the RTA in cooperation with Pace, CTA and the Illinois Department of Transportation pursuant to Section 2.30(f) of *The RTA Act*.

Schedule II: **2007 Recovery Ratios**

	CTA	Metra	Pace	ADA Paratransit
Recovery Ratio %	52.0	55.0	36.0	10.0

The CTA figure includes Chicago Police Department (CPD) "in-kind" revenue and expense. *The RTA Act* allows certain expenses to be excluded from the recovery ratio calculation including security, depreciation and facility leases. In addition, Ordinance 2005-06 authorized the exclusion of additional security costs from Service Board expenditures. These exclusions are reflected in the CTA and Metra recovery ratio calculation. The Pace figure includes under contract, RTA discretionary funds for "Additional Passes", and ADvAntage "in-kind" revenue and expense.

Schedule III: **2007 Estimated Cash Flow for RTA Sales Tax and RTA Discretionary Funds** (dollars in thousands)

	CTA	Metra	Pace
January	$ 37,534	$ 19,937	$ 6,558
February	38,264	21,047	6,905
March	42,471	25,354	8,259
April	36,017	18,919	6,200
May	37,099	19,440	7,355
June	38,162	20,803	6,646
July	38,134	20,958	6,709
August	38,749	21,390	7,853
September	54,154	22,757	20,695
October	53,093	21,447	20,281
November	53,841	22,810	21,706
December	53,129	21,070	20,167
Total	**$ 520,647**	**$ 255,931**	**$ 139,333**

ORDINANCE NO. 2006-78

APPROVING THE 2007 BUDGETS AND 2008 - 2009 FINANCIAL PLANS OF THE SERVICE BOARDS, ADOPTING THE 2007 BUDGET AND PROGRAM OF THE AUTHORITY, APPROPRIATING FUNDS FOR THE 2007 BUDGETS, ADOPTING THE FIVE-YEAR PROGRAM, ALLOCATING CERTAIN REVENUES OF THE RTA TO THE RESPECTIVE SERVICE BOARDS, AMENDING THE ESTIMATES OF AMOUNTS AVAILABLE TO THE SERVICE BOARDS FOR 2007-2009, AND TAKING CERTAIN OTHER ACTIONS WITH RESPECT TO THE BUDGET AND PROGRAM FOR FISCAL YEAR 2007

WHEREAS, Section 4.01 of the *Regional Transportation Authority Act* (the *"Act"*) directs the Board of Directors of the Regional Transportation Authority (the "RTA") to appropriate money for the expenses and obligations of the RTA, including payment of certain public funds to the Service Boards, and to prepare and adopt a comprehensive budget and program document for fiscal year 2007; and

WHEREAS, Section 4.02 of the *Act* establishes certain requirements with respect to the allocation and payment of funds appropriated by the RTA to the Service Boards; and

WHEREAS, Section 2.01 of the *Act* authorizes and directs the RTA to adopt a Five-Year Program with respect to the operations and capital projects of the RTA and the Service Boards; and

WHEREAS, Section 4.11 of the *Act* authorizes and directs the RTA to review the budgets and financial plans of the Service Boards for fiscal year 2007; and

WHEREAS, pursuant to Section 4.11 of the *Act*, the RTA has taken certain action by ordinance identifying the amounts estimated to be available for expenditure by each Service Board during fiscal year 2007 and the two following fiscal years and the times at which such amounts will be available; and

WHEREAS, pursuant to Section 4.11 of the *Act*, each Service Board has presented its proposed fiscal year 2007 budget and proposed 2008–2009 financial plan to the RTA for its review and the RTA has conducted public hearings with respect to its Proposed Annual Budget and Five-Year Program, and considered the proposed budgets and financial plans of the Service Boards and the public comments with respect to those budgets and financial plans; and

WHEREAS, the amounts available to the Service Boards for 2007-2009 are predicated on the RTA receiving from the State of Illinois funding for Reduced Fare Reimbursement; and

WHEREAS, the amounts available to Pace for 2007 – 2009 are predicated on the RTA continuing to receive funding from the State of Illinois or other sources for ADA paratransit services and other costs and services and are also predicated on securing additional funds and achieving cost savings, from funding sources and cost efficiencies that may have been identified in the RTA-Pace Memorandum of Understanding entered into in June 2006, or that may be identified by the paratransit plan now being developed by the RTA in cooperation with Pace, CTA and the Illinois Department of Transportation pursuant to Section 2.30(f) of the RTA *Act*; and

WHEREAS, the amounts available to the Service Boards for operations in 2007 – 2009 are predicated on securing additional funding ("New Transit Funding"), and to the extent that such New Transit Funding is not obtained, the Service Boards will have to take actions to balance their operating budgets that may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels, and adjusting fares; and

WHEREAS, the RTA adopted estimates of the amounts available to the Service Boards for 2007-2009 ('funding marks") in Ordinance 2006-50; and

WHEREAS, to reflect updated estimates of funding available, the CTA's funding mark for 2007 has been increased by $108,000 and Metra's funding marks for 2007-2009 have been increased by the respective amounts of $1,000,000, $1,795,000, and $2,130,000; and

WHEREAS, pursuant to the RTA's policy regarding Service Board Financing Transactions ("Funding Policy") the RTA Board must approve the Service Boards' use of the proceeds from any Financing Transaction, as such term is defined in the Funding Policy, before such proceeds are used, and the primary use of such proceeds should be for capital programs; and further, such proceeds are excluded from the Service Boards' System-Generated Revenues Recovery Ratios; and

WHEREAS, by RTA policy (Ordinance 2004-54) federal capital funds used for the capital-related portion of the operating costs of paratransit services provided under contract are appropriately considered operating revenue for the pur-

pose of the Service Boards' System-Generated Revenues Recovery Ratios; and

WHEREAS, the CTA's proposed 2007 budget uses certain federal capital funds carried-over from prior year capital programs for 2007 operating purposes; and

WHEREAS, the RTA recognizes that the CTA and Metra have taken measures to protect their operations from terrorism and consequently have incurred additional security costs, and moreover the RTA has determined that it is in the best interests of public transportation in the region to exclude certain amounts of security costs for purposes of calculating the CTA and Metra recovery ratios, thereby providing the CTA and Metra with a period of time to balance such higher security costs within their respective budgets; and

WHEREAS, the RTA desires to continue to facilitate the integration of fare media accepted for fare payment by Pace and the CTA by using additional RTA discretionary funds to fund a portion of Pace's costs in providing service to riders using the CTA 7-day pass, U-pass, and Visitor/Fun (1-day, 2-day, 3-day and 5-day) passes (collectively, the "Additional Passes"), in addition to any CTA fare media that are already accepted by Pace and for this purpose the RTA Executive Director may extend and amend as necessary an intergovernmental agreement, authorized by RTA Ordinance 2004-44 between the RTA, the CTA, and Pace regarding Pace acceptance of CTA fare media; and

WHEREAS, the RTA recognizes the importance of maintaining an adequate cash balance to ensure that ADA paratransit service, bus and rail service, and other operating services run well and that such services are responsive to the needs of the region, and consequently, the RTA has determined that it is in the best interests of public transportation in the region to authorize the issuance of working cash notes to fund such operating services as needed; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take the following actions in order to carry out its powers and duties under the *Act*.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY THAT:

ARTICLE I
APPROVAL OF BUDGETS AND PROGRAMS

Section One:
Service Board Budgets
and Financial Plans

1.1 In compliance with the *Act*, the RTA has received and reviewed proposed budgets for 2007, and financial plans for 2008 and 2009, of the Chicago Transit Authority (the "CTA"), the Commuter Rail Division ("Metra") and the Suburban Bus Division ("Pace") (each a "Service Board").

1.2 With respect to the proposed budgets and financial plans of the CTA, Metra and Pace (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board sufficient to allow the Service Board to meet its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices; and

(f) Provided that each Service Board acts in conformity with the provisions of this Ordinance, each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established.

Unless the RTA Board makes a determination, by the affirmative vote of at least nine members of the Board no later than July 1, 2007, that the funds identified as New Transit Funding and Additional Funding for Paratransit in Schedules I-A and I-B of this Ordinance are available for 2007, the findings in this Section 1.2 are repealed for the remainder of 2007, such amounts are eliminated from Schedules I-A and I-B, and the Service Boards shall present to the RTA revised budgets for 2007 reflecting such revisions.

1.3 Pursuant to Section 4.11 of the *Act*, the budgets for 2007 and financial plans for 2008 and 2009, for the CTA, Metra and Pace, as presented in the attached Schedule I-B, are hereby approved provided, however, in the event that a budget or financial plan is inconsistent with the provisions of this Ordinance, the provisions of this Ordinance shall govern.

1.4 Pursuant to Section 4.11 of the *Act*, no more than 30 days after each fiscal

quarter, each Service Board is directed to report to the RTA its financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction, as of the end of and for such quarter, for review by the RTA for conformity with the approved budget for such period.

Section Two:
RTA Annual Budget and Program

2.1 The RTA has received and reviewed the 2007 Annual Budget and Program of the Regional Transportation Authority as summarized in Schedule I-A. The 2007 Annual Budget and Program is hereby approved and the Board finds as follows:

(a) The 2007 Annual Budget and Program shows a balance between anticipated revenues from all sources and anticipated expenses, including the funding of operating deficits and the discharge of encumbrances incurred in prior periods and payment of principal and interest on outstanding indebtedness when due, as summarized in Schedule I-A.

(b) The 2007 Annual Budget and Program shows cash balances sufficient to pay with reasonable promptness all obligations and expenses as incurred, as summarized in Schedule I-F.

(c) The 2007 Annual Budget and Program shows that the level of fares and charges for public transportation provided by, or under grant or purchase of service contracts of, the Service Boards is sufficient to cause the aggregate of all projected system-generated revenues from such fares and charges received in 2007 for mainline service to equal at least 50 percent of the aggregate cost of providing such public transportation in 2007, and at least 10 percent for ADA paratransit service in 2007, as required by the *Act*, and as summarized in Schedule I-C.

(d) The 2007 Annual Budget and Program is based on and employs assumptions and projections which are reasonable and prudent.

(e) The budgeted "administrative expenses" of the RTA for 2007, as defined in Section 4.01(c) of the *Act*, do not exceed the maximum administrative expenses (Statutory Cap) permitted for 2007 of $14,626,303 ("Agency Administration" expenses are summarized in Schedule I-A).

Unless the RTA Board makes a determination, by the affirmative vote of at least nine members of the Board no later than July 1, 2007, that the funds identified as New Transit Funding and Additional Funding for Paratransit in Schedules I-A and I-B of this Ordinance are available for 2007, the findings in this Section 2.1 are repealed for the remainder of 2007, such amounts are eliminated from Schedules I-A and I-B, and the Service Boards shall present to the RTA revised budgets for 2007 reflecting such revisions.

Section Three:
Five-Year Program

3.1 The Five-Year Program of the RTA for the fiscal years beginning January 1, 2007, and ending December 31, 2011, has been the subject of public hearings in each county in the metropolitan region as required by Section 2.01 of the *Act*. The RTA has considered public comments on the proposed Five-Year Program. The RTA hereby adopts the Five-Year Program attached as Schedule II, subject to continuing review by the RTA. In accordance with Section 2.01(c) and Section 4.02(b) of the *Act*, no Service Board shall apply for or receive any capital grant or loan unless it is identified in the RTA Five-Year Program.

The Service Boards cannot obligate or expend before July 1, 2007 an amount greater than 50% of the federal formula funding for 2007 allocated to such Service Board for the projects identified in Schedule II, until the RTA Board makes a determination, by the affirmative vote of at least nine members of the Board, that the funds identified as New Transit Funding and Additional Funding for Paratransit in Schedules I-A and I-B of this Ordinance are available for 2007.

ARTICLE II
APPROPRIATION
OF FUNDS AND CERTAIN
OTHER ACTIONS

Section One:
Appropriation for each
Service Board

The following amounts for 2007 are appropriated for payment to each Service Board from the enumerated sources of funds and for the specified objects and purposes. The total appropriations as shown on Schedule I-A for RTA Operations Funding represents the legal level of budgetary control.

1.1 Statutory RTA Taxes

There is appropriated, for expenditure by each Service Board pursuant to the 2007 Budget approved in Article I, 85% of the RTA receipts from taxes imposed pursuant to Section 4.03 of the *Act* and allocated according to the percentages listed below and specified in Section 4.01(d) of the *Act*, and from the State and Local Sales Tax Reform Fund pursuant to Section 4.01(e) of the *Act*. The estimated amount of the appropriation is specified as "85% Sales Tax" on Schedule I-E.

	Collected Within Within Chicago	Collected Within Suburban Cook County	Collected in DuPage Kane, Lake, McHenry and Will Counties
CTA	100	30	0
Metra	0	55	70
Pace	0	15	30
Total	100	100	100

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the *Act*, the Executive Director of the RTA shall provide for the payment to each Service Board the specified proportionate share of such proceeds.

1.2 Reduced Fare Reimbursement

There is appropriated, for expenditure by each Service Board pursuant to the 2007 Budget approved in Article I, amounts received from the State of Illinois Reduced Fare Reimbursement Program. The estimated amount of the appropriation is included within the Service Board "System Generated Revenue" on Schedule I-B.

After receipt by the RTA of funds from the State of Illinois Reduced Fare Reimbursement Program, the Executive Director shall provide for the payment to each Service Board their proportionate share of the proceeds estimated to be received from the State as identified on Schedule I-A.

1.3 Discretionary Funds of the RTA -- Public Transportation Fund, 15% Sales Tax, Other RTA Revenues

(a) Operating Programs: There is appropriated, for expenditure by each Service Board pursuant to the 2007 Budget approved in Article I, the amounts specified as "RTA Discretionary Funds" on Schedule I-B from other receipts and revenues of the RTA, or so much as may be necessary such that the actual amounts appropriated for each Service Board under paragraphs 1.1, 1.2, and 1.3(a) of this section equal the amounts specified as "RTA Operations Funding" on Schedule I-B.

The Executive Director is hereby directed to provide for the payment of such funds as soon as may be practicable upon their receipt provided that each Service Board is in compliance with the requirements of Section 4.11 of the *Act* and this Ordinance.

(b)Capital Programs: There is appropriated, for expenditure by the Service Boards for projects specified on Schedule II, and pursuant to the first year of the Five-Year Program approved in Article I, the amounts specified as Transfer Capital – RTA Funds on Schedule I -D from other receipts and revenues of the RTA.

(c)Operating Funds for Passes: There is appropriated, for expenditure by Pace pursuant to the 2007 Budget approved in Article I, for accepting certain CTA passes, a maximum amount as specified in "RTA Discretionary Funds for Passes" on Schedule I-B from other receipts and revenues of the RTA.

The Executive Director is hereby directed to provide for payment of such funds pursuant to grant or intergovernmental agreements with each Service Board.

Section Two:
Appropriation to the Regional Transportation Authority

In 2007 there is appropriated, for expenditure for the operating purposes of the RTA (the "Agency") the amounts specified on Schedule I-A as Agency Administration, Regional Services and Coordination Programs, Regional Technical Assistance Programs, and Regional Technology and Agency Capital, pursuant to the 2007 Budget approved in Article I, from other receipts and revenues of the RTA.

The total appropriations as shown in Schedule I-A for 2007 Agency Administration, Regional Services and Coordination Programs, Regional Technical Assistance Programs, and Regional Technology and Agency Capital represent the legal level of budgetary control. The Executive Director is authorized to transfer up to 10% from and among each of these items.

ARTICLE III
IMPLEMENTATION

The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance and to prepare and disseminate the 2007 Annual Budget and Program of the RTA in accordance with the *Act* and the policies established herein.

Nothing in this Ordinance estimating amounts available to the Service Boards is intended to or shall have the effect of waiving any discretion the RTA may have under law to appropriate amounts available to the Service Boards, subject to compliance by the Service Boards with terms and conditions established by the RTA. Furthermore, nothing in this Ordinance is intended to or shall have the effect of waiving any discretion the RTA may have under law to subject to review the determinations made in this Ordinance, including, but not limited to, setting recovery ratios for the Service Boards, establishing exclusions or inclusions of certain revenues or expenditures from the calculation of such recovery ratios, or determining the allowable uses of federal, state or local funds.

The Executive Director is authorized and directed to execute and file applications on behalf of the RTA with the United States Department of Transportation

(USDOT), Federal Transit Administration (FTA), the Illinois Department of Transportation (IDOT), and any other funding agency (collectively the "funding agencies") for any monies available for funding of the RTA Annual Budget and Five-Year Program. The Executive Director is authorized to furnish such additional information, assurances, certifications and amendments as the funding agencies may require in connection with such applications or the projects. The Executive Director is authorized and directed on behalf of the RTA to execute and deliver grant agreements and all subsequent amendments thereto between the RTA and the funding agencies. Further, the Executive Director is authorized and directed to take such action as the Executive Director deems necessary or appropriate to implement, administer, and enforce said agreements and all subsequent amendments thereto on behalf of the RTA.

The Executive Director is authorized and directed to file the 2007 Budget and Program and a copy of this Ordinance with the Governor of Illinois, the Illinois General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago and the Auditor General of the State of Illinois, along with an appropriate certification that this budget and program meet the requirements of the *Act*.

Schedule 1-A: **RTA Statement of Revenues and Expenditures General and Agency Funds**
(dollars in thousands)

System-Generated Revenue	Budget 2007	Plan 2008	Plan 2009
Sales Tax	$ 745,937	$ 769,807	$ 794,440
Public Transportation Fund	186,484	192,452	198,610
State Financial Assistance	122,836	125,180	127,500
Reduced Fare Reimbursement	36,275	36,275	36,275
Other Revenue	14,722	14,400	14,350
New Transit Funding (1)	144,534	225,748	331,927
Additional Funding for ADA Paratransit	81,810	91,627	99,893
Total Revenue	**$ 1,332,598**	**$ 1,455,489**	**$ 1,602,995**
Operating Expenditures			
RTA Operations Funding to Service Boards	$ 811,915	$ 837,880	$ 864,648
RTA Discretionary Funds to Pace	4,000	4,000	4,000
New Transit Funding	144,534	202,103	308,282
Additional Funding for ADA Paratransit	81,810	91,627	99,893
Reduced Fare Reimbursement and Sales Tax Interest (2)	37,125	37,125	37,125
Agency Administration (3)	7,360	7,596	7,840
Regional Services and Coordination Programs	18,248	18,833	19,436
Regional Technical Assistance Programs (4)	6,170	6,367	6,570
Total Operating Expenditures	**$ 1,111,162**	**$ 1,205,531**	**$ 1,347,794**
Debt Service and Capital Expenditures			
Principal and Interest	$ 186,218	$ 195,157	$ 196,305
Regional Technology and Agency Capital (4)	7,499	7,735	7,980
Transfer Capital–RTA Funds	23,802	20,353	20,353
Total Debt Service and Capital Expenditures	**$ 217,519**	**$ 223,245**	**$ 224,638**
Total Expenditures	**$ 1,328,681**	**$ 1,428,776**	**$ 1,572,432**
Fund Balance (undesignated/unreserved)			
Beginning Balance	$ 6,198	$ 10,115	$ 36,828
Change in Fund Balance	3,917	26,713	30,563
Ending Unreserved/Undesignated Fund Balance	**$ 10,115**	**$ 36,828**	**$ 67,391**
% of Total Operating Expenditures	**0.9**	**3.1**	**5.0**
Recovery Ratio %	**50.4**	—	—

(1) The figures for 2008 and 2009 include an annual amount of $23,645 to achieve a RTA fund balance of 5 percent by the end of the planning period. (2) Includes annual sales tax interest of $850 thousand. (3) The 2007 statutory CAP for agency administration is $14,626. (4) Appropriated funds that remain unspent at the end of 2007 continue to be available for this purpose without subsequent appropriation action.

Schedule 1-B: **Service Board Deficit Funding** (dollars in thousands)

CTA	2007 Budget	2008 Plan	2009 Plan
Total System-Generated Revenue	$ 552,694	$ 560,970	$ 569,980
Total Operating Expense	1,133,151	1,215,865	1,341,903
Total Deficit	580,457	654,895	771,923
Deficit Funding			
RTA Sales Tax	295,098	304,469	314,165

Total Deficit Funding	**$ 962,072**	**$ 1,045,220**	**$ 1,177,278**
ADA Paratransit			
Total System-Generated Revenue	$ 9,653	$ 10,547	$ 14,504
Total Operating Expense	91,463	102,174	114,397
Total Deficit	81,810	91,627	99,893
Deficit Funding			
Additional Funding for ADA Paratransit (2)	81,810	91,627	99,893
Total Deficit Funding	**$ 81,810**	**$ 91,627**	**$ 99,893**
Grand Total (1) (2)	**$ 226,344**	**$ 293,730**	**$ 408,175**

(1) The amounts available to the Service Boards for operations in 2007-2009 are predicated on securing additional funding ("New Transit Funding"), and to the extent that such New Transit Funding is not obtained, the Service Boards will have to take actions to balance their operating budgets that may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels, and adjusting fares. (2) The amounts available to Pace for 2007-2009 are predicated on the RTA continuing to receive funding from the State of Illinois or other sources for ADA paratransit services and other costs and services and are also predicated on securing additional funds and achieving cost savings, from funding sources and cost efficiencies that may have been identified in the RTA-Pace Memorandum of Understanding entered into in June 2006, or that may be identified by the paratransit plan now being developed by the RTA in cooperation with Pace, CTA and the Illinois Department of Transportation pursuant to Section 2.30(f) of the *RTA Act*.

Schedule I-C: **Recovery Ratio Calculations** (dollars in thousands)

System-Generated Recovery Ratio Revenues (1)	2007 Budget
CTA	$ 582,694
Metra	285,062
Pace	62,191
RTA	14,722
Other Revenue	262
Total System-Generated Recovery Ratio Revenues	$ **944,931**
System-Generated Recovery Ratio Expenses (2)	
CTA	$ 1,119,817
Metra	518,239
Pace	170,882
RTA	31,779
Other Expense	32,834
Total System-Generated Recovery Ratio Expenses	$ **1,873,551**
Recovery Ratios %	
CTA	52.0
Metra	55.0
Pace	36.4
Total System-Generated Revenue Recovery Ratio %	**50.4**
ADA Paratransit	
Revenue	$ 9,653
Expense	91,463
Recovery Ratio %	**10.6**

(1) CTA's figure includes $8 million of certain federal capital funds carried-over from prior year capital programs for 2007 operating purposes and Chicago Police Department (CPD) in-kind revenue and expenditures of $22 million. The Pace figure includes $4 million for Pace's costs of accepting CTA fare media and ADvAntage in-kind revenue and expenditures of $4.8 million. The RTA revenue is primarily earnings on investments. Other revenue reflects CTA leasing transactions of $4.3 million, which by policy is excluded from the revenue figures of the Service Boards less the $4.0 million for Pace's cost of accepting CTA fare media. (2) The *RTA Act* allows certain expenditures to be excluded from the recovery ratio calculation including security, depreciation, and facility leases. RTA Ordinance 2005-06 authorized further security exclusions for Service Board recovery ratios. The amount of these additional exclusions is $32.8 million. This amount is added as other expenditures to calculate the statutory system-generated revenue recovery ratio.

Schedule I-D: **Service Board and RTA Capital Funding** (dollars in thousands)

	2007 Capital Program Budget				
Service Board Capital Funding	**CTA**	**Metra**	**Pace**	**RTA**	**Total**
FTA Capital Grants (1)	$ 289,344	$ 177,474	$ 34,468	—	$ 501,286
IDOT Grants	—	—	—	—	—
Other Service Board Funds	—	5,110	—	—	5,110
Transfer Capital–RTA Funds	20,353	—	3,449	—	23,802
Transfer Capital (2)	—	48,808	—	—	48,808
Carryover and De-obligations	1,554	25,000	—	—	26,554
Total Service Board Capital Funding	311,251	256,392	37,917	—	605,560
CTA Financing	125,000	—	—	—	125,000
CTA Debt Repayment	(30,336)	—	—	—	(30,336)
Total Program	**$ 405,915**	**$ 256,392**	**$ 37,917**	—	**$ 700,224**
Tollway Credits Requested (1)	**$ 31,200**	**$ 23,084**	**$ 6,494**	—	**$ 60,778**
RTA Regional Technology and Agency Programs	—	—	—	**$ 7,499**	**$ 7,499**

(1) Federal Funds require a local match of at least 20 percent. The State of Illinois has traditionally provided capital funding for matching purposes but at this time the State has not provided local matching funds. Tollway credits can be used as local match but they are not spendable funds and using them leaves critical projects underfunded.
(2) New Transit Funding for operations on Schedule I-A excludes capital program funding needs. Therefore, this amount is not included in the Transfer Capital–RTA Funds amount shown on Schedule I-A.

2 Budget in Brief

Executive Summary

The upcoming budget and two-year financial planning period will prove to be extremely difficult years to achieve balanced operating budgets for all bus, rail and *ADA* paratransit service in the region. In total, overall cost pressures, particularly relating to fuel, security, labor, healthcare and electricity, increase the system's operating expenditures from $1.9 billion in 2007 to $2.2 billion in 2009, and increase total Service Board (CTA, Metra, Pace) funding needs (operating deficit) from $1.0 billion in 2007 to $1.3 billion in 2009 (Exhibit 2-1). Included in these figures are the funding needs for *ADA* paratransit service. This rapidly growing service requires $82 million in 2007, $92 million in 2008, and $100 million in 2009.

From a funding standpoint, the projected growth in sales tax, the RTA's largest source of public funding, and Public Transportation Funds (PTF), which are appropriated by the State at an amount equal to 25 percent of net revenue realized from sales taxes, do not keep pace with the overall cost pressures. For example, in 2007 Sales Tax and PTF funds provide 78 percent of the overall funding requirement (Exhibit 2-2), but only 68 percent in 2009 (Exhibit 2-3).

To address this dire situation and make the case for public transportation, the RTA, CTA, Metra, and Pace have joined forces in *Moving Beyond Congestion*, a forward-looking view of what transit can do to improve mobility in America's transportation hub. We expect this effort to have the result of providing us with the resources we need not only to balance our operating budgets, but also to keep our valuable public transportation system in good repair and to address the growing mobility needs and changing demographics of the region. To achieve these goals during the 2007-2009 planning period, the RTA is seeking New Transit Funding for Service Board bus and rail operations and Additional State Funding for *ADA* paratransit service in the combined amounts of $226 million, $294 million and $408 million, respectively (Exhibit 2-4).

The Capital program also lacks the funds needed to achieve the desired level of investment necessary to maintain, enhance and expand our public transportation system. The needs far exceed current federal and state funding authorizations, and the RTA and the Service Boards are working jointly on a strategic plan (*Moving Beyond Congestion*) that identifies the needed level of capital program funds. This level of investment is in the closing stages of development but not part of the five-year capital program adopted by the RTA Board in December (see Capital section).

In 2007, total public funding and Service Board operating revenue (source of funds) of $2.2 billion is used to pay for regional transportation system expenditures of almost $2.2 billion. A remaining balance of $4 million is used to commence replenishment of the RTA fund balance (Exhibit 2-5). The interchanges between the source and use of funds for operations and capital (Exhibit 2-13) programs in 2007 are illustrated in Exhibit 2-6.

The remaining content in this section offers an overview of the region's public transportation system and the budget process, service characteristics in the six-county northeastern Illinois region served by the three Service Boards, and a summation of the 2007 operating budget and capital program.

System Overview

The Regional Transportation Authority (RTA or the Agency) provides funding, planning and fiscal oversight for regional bus and rail operations in northeastern Illinois as set forth by *The RTA Act*. The *Act* designates the Agency as the primary public body in the region to secure funds for public transportation. The Agency is authorized to impose taxes in the region and issue debt. It is also responsible for the allocation of federal, state and local funds to finance both the operating and capital needs of public transportation in the region.

The RTA Board of Directors governs the Agency. Three independent Service

(1) State funds include public transportation funds, state financial assistance and reduced fare reimbursements. Service Board bus/rail revenue includes Pace CMAQ funds but excludes reduced fare reimbursements which are provided by state funds.

Boards, the Chicago Transit Authority (CTA), Metra commuter rail and Pace suburban bus, have operational responsibility (e.g., to set fares and provide service) for public transportation within the six-county region and are governed by their own boards of directors. The CTA provides bus and rapid transit rail service in the City of Chicago and neighboring suburbs. Metra provides commuter rail service throughout the six-county region. Pace provides bus service in the suburbs and between the suburbs and the City of Chicago. Effective July 1, 2006, Pace is responsible for all *ADA* paratransit service in the region (Exhibit 2-7).

Yearly, the RTA Board must adopt an annual budget, two-year financial plan and a five-year capital program for each Service Board. The principal features of this process are outlined in the following paragraphs. In September, the RTA Board approves the "marks" for each Service Board. The marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

The marks guide the Service Boards' budgetary process. Each Service Board prepares and publishes, for public hearing and comment, a comprehensive budget document that is to conform to the RTA marks. After considering public comment, the CTA, Metra and Pace boards of directors adopt their respective budgets.

In November, those budgets are forwarded to the RTA, which consolidates the Agency and the Service Board budgets into a proposed RTA budget document. The RTA Board distributes this document for public hearing and comment before adoption in December. This document reflects the 2007 budget, two-year financial plan, and five-year capital program adopted by the RTA Board on December 15, 2006 (Ordinance 2006-78). Exhibit 2-8 illustrates the principal responsibilities and interactions between the Agency and Service Boards in the annual budget and capital program process.

Service Characteristics

There are more than 8 million residents in the six-county northeastern Illinois region, an area that covers 3,749 square miles. The RTA system deploys more than 5,000 bus and rail cars on more than 400 routes. Last year, the regional

public transportation system provided 575 million trips and carried passengers roughly 3.6 billion miles.

The system represents a valuable investment, delivering a very positive impact on the region. It supports job creation and income growth while reducing traffic congestion, fuel consumption and air pollution. Likewise, the system provides mobility to the disabled and access to jobs for those without other means to get to work.

Operating Budget

The discussions that follow in this section compare the 2007 budget with estimated results for 2006 (Exhibit 2-9). A consolidated statement of revenue and expenditures from 2005 through 2009 is presented in the RTA section (Exhibit 3-1).

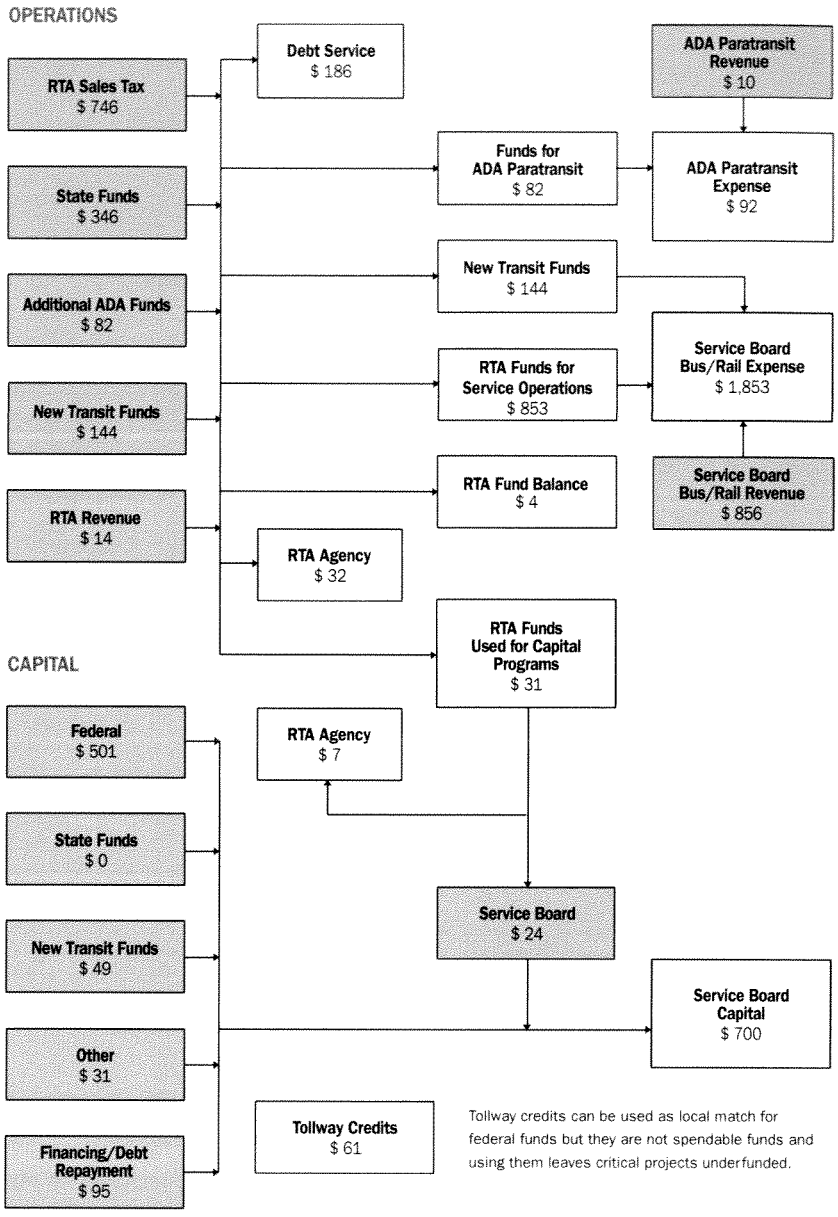
Total Revenue

As identified in Exhibit 2-9, total revenue is estimated to grow from $1,127.9 million in 2006 to $1,332.6 million in 2007. Of note are the unappropriated funding sources for *ADA* paratransit and New Transit Funding that are used to help fund the operating deficits of the Service Boards. For instance, in 2007, funding from these two sources totals $226.3 million or 17 percent of total revenue (Exhibit 2-10). Without these sources, which are discussed later in this section, the system will be smaller and service options curtailed.

Sales Tax

RTA Sales Tax is the primary source of revenue for the RTA. The tax is authorized by Illinois statute, imposed by the RTA in the six-county region of northeastern Illinois and collected by the State. Eighty-five percent of RTA Sales Tax receipts are apportioned to the Service Boards by statutory formula. Details of this apportionment can be found in the Region section of this document.

Exhibit 2-6: **Source and Use of Funds**—$ 2,198 million



The 2006 and 2007 sales tax estimates were determined after assessing state and regional economic data and national trends. Based on this information, the RTA's sales tax estimate for 2006 of $722.8 million is $2.9 million greater than the amount budgeted. Sales tax is estimated to grow from $722.8 million in 2006 to $745.9 million in 2007, an increase of $23.1 million or 3.2 percent.

Public Transportation Funds (PTF)

State Public Transportation Funds (PTF) are based on a formula tied to sales tax results and are, therefore, projected to increase at the same growth rate as the sales tax. For every four dollars that is collected in sales tax, the RTA receives an additional dollar in PTF. Estimated receipts in the 2007 budget are $186.5 million.

Exhibit 2-7: **RTA Organization Structure**

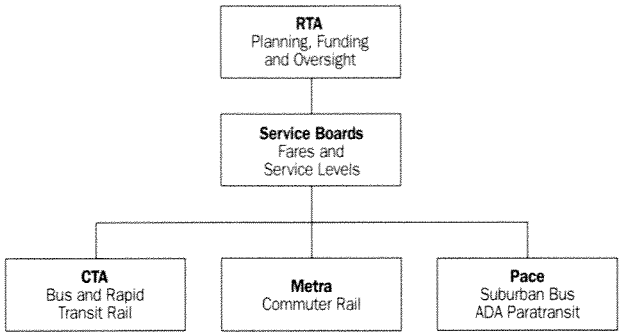


Exhibit 2-8: **Financial Relationship and Responsibilities of the RTA and Service Boards**

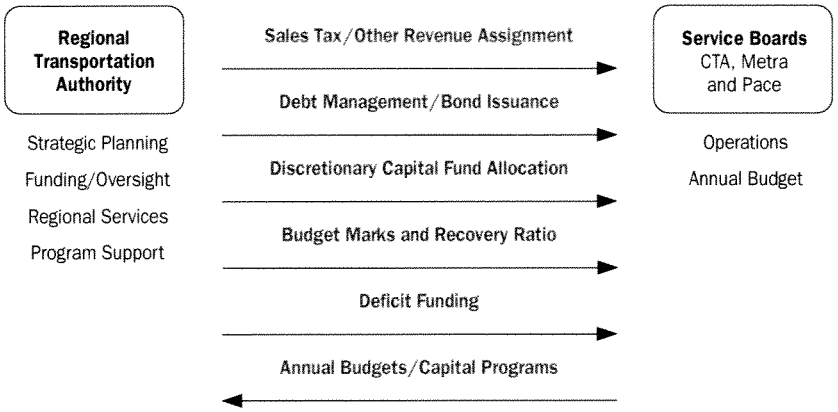

State Financial Assistance

This revenue source is state-authorized assistance to reimburse the debt service expenditures for RTA Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the state, the RTA will continue to be eligible to receive State Financial Assistance payments. Budgeted receipts for 2007 are $122.8 million.

Reduced Fare

This operating assistance is partial reimbursement from the state to the Service Boards for discounts (mandated by law) provided to students, elderly and disabled riders. The funds are distributed by the state through the RTA to the Service Boards.

In calendar year 2004, the RTA received $40 million in funds from the state. However, in recent years the state has reduced its fiscal year (July to June) amount and applied an administration fee to the fund. As a result, available funds are projected to be $36.3 million in 2006 and remain constant at that level in 2007.

Other Revenue

This revenue category includes sales tax interest, investment income, financial transaction receipts, miscellaneous revenue, and grant funds from state and local agencies for regional coordination and technology initiatives. Total receipts in 2007 are budgeted at $14.7 million.

New Transit Funding

The Service Board budgets and financial plans were prepared with the expectation that New Transit Funding would be made available through upcoming State legislation. However, there is no guarantee that such funds will be forthcoming. In that event, focus must shift to a constrained system which provides fewer service options. Unappropriated funds totaling $144 million, balance the Service Boards proposed 2007 budgets.

Additional Funding for ADA Paratransit

In 2005 and 2006, the State of Illinois appropriated additional funds to the RTA for *ADA* paratransit service and other costs and services. The appropriation for each year was $54.3 million. However, growing service demands and increased operating costs have out-paced this level of funding. The 2007 budget was developed envisioning continuance of state appropriations that fully fund the service deficit. Unappropriated funds in the amount of $81.8 million balance the proposed 2007 budget for *ADA* paratransit service.

Operating Expenditures

Total RTA operating expenditures for 2007 are estimated at $1,111.2 million. This amount is 23.5 percent or $211.2 million greater than the 2006 estimate of $900.0 million. Exhibit 2-11 illustrates the expenditure distribution budgeted for 2007.

RTA Operations Funding

The RTA's primary expenditure is the funding of Service Board operating deficits. The deficit is the difference between a Service Board's total system-generated revenue and its total operating expenditures. The sources of funds are Service Board formula sales tax receipts and/or RTA formula sales tax and PTF funds

Exhibit 2-9: **RTA Statement of Revenue and Expenditures** (dollars in thousands)

Revenue	2006 Estimate	2007 Budget
Sales Tax	$ 722,808	$ 745,937

Please reference the notes on Exhibit 3-1 in the Region section for more information regarding revenue, operating expenditures, debt service and capital expenditures.

(RTA discretionary funds). Additional information regarding Service Board deficits and the sources of public funding is located in the RTA section.

Total operations funding in 2006 is $786.1 million. The combined budget for operating funds to the Service Boards in 2007 totals $811.9 million which is 3.3 percent or $25.8 million greater than 2006 funding. RTA funding for each Service Board in 2007 is shown below.

CTA

The CTA's operations funding level from the RTA in 2007 is budgeted at $470.3 million, or 3.2 percent higher than the 2006 budget amount of $455.8 million.

Metra

Metra's operating funding level from the RTA in 2007 is budgeted at $257.4 million, or 3.5 percent higher than the 2006 budget amount of $248.7 million. Metra funding does not include any RTA discretionary funds.

Pace

Pace's operations funding from the RTA in 2007 is budgeted at $84.2 million, or 3.2 percent higher than the 2006 budget amount of $81.6 million. This amount does not include funds for *ADA* paratransit service.

RTA Discretionary Funds to Pace

The RTA continues to facilitate the integration of CTA and Pace fare media by using additional RTA discretionary funds to fund a portion of Pace's cost for providing service to riders using certain CTA passes. The amount of funding appropriated in 2006 was $2 million. The 2007 budget funds Pace $4 million for this service.

In July 2006, Pace became responsible of all *ADA* paratransit operations in the region. To assist Pace with pre-start-up transition costs the RTA provided Pace with additional funding of $1.6 million.

New Transit Funding

As discussed earlier, additional funding resources are needed to balance the operating budgets, and to maintain, enhance and expand the system to meet changing service needs across the region. The Service Board 2007 budgets were prepared with the expectation that New Transit Funding would be made available during upcoming legislative sessions. New Transit Funding totaling $144 million is used to fund the operating deficits of the CTA, Metra and Pace in the amounts of $110 million, $11 million and $23 million, respectively.

Additional Funding for ADA Paratransit

As previously discussed, the State of Illinois appropriated additional funds to the RTA in the amount of $54.3 million for *ADA* paratransit service and other costs and services in 2005 and 2006. In 2005, the CTA received the full appropriation. In 2006, the CTA and Pace shared the appropriation because Pace became responsible for all *ADA* paratransit service in the region beginning July 1, 2006. Although not yet appropriated by the State, Pace's 2007 budget deficit of $81.8 million was funded with the expectation that the State will continue to fully fund this service.

Exhibit 2-10: **2007 RTA Revenue Sources** — $1,333 million

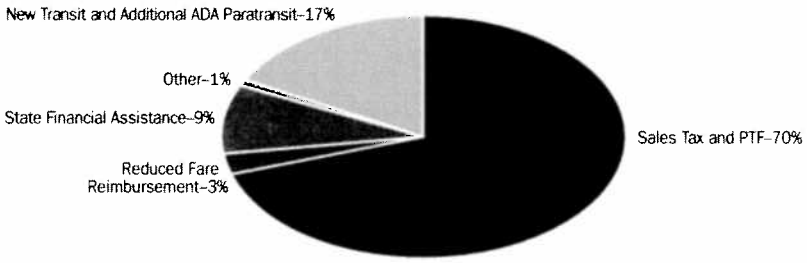

Exhibit 2-11: **2007 Operating Expenditures** — $1,111 million

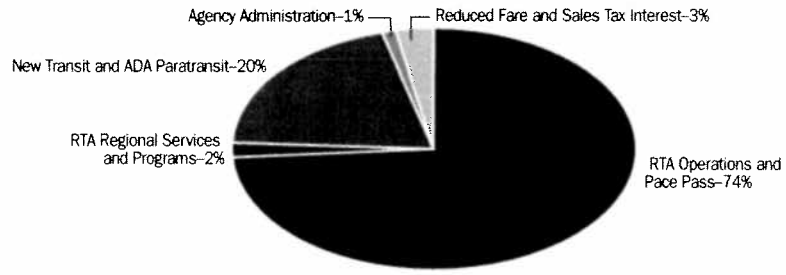


Reduced Fare and Sales Tax Interest

State reduced fare reimbursements are received as revenue by the RTA, as previously described, and flow directly to the Service Boards to help defray program costs. The 2007 budget level of $36.3 million remains unchanged from the 2006 reimbursement.

Since there is a lag between when the State collects the RTA Sales Tax and when it distributes the funds to the RTA, the RTA receives sales tax interest and disburses 85 percent of these funds to the Service Boards according to the same formula used for sales tax distribution. The sales tax interest distributed by the RTA has been favorably affected by rising sales tax receipts. Payments in 2006 and 2007 are estimated at $0.9 million.

Agency Administration

In 1985, a statutory cap for administrative spending was set at $5 million, with a growth rate of 5 percent per year. The 2006 and 2007 cap allowance is $13.9 million and $14.6 million respectively. The Agency's spending estimates for 2006 and 2007 in the respective amounts of $6.9 million and 7.4 million are significantly below the cap.

Information regarding Agency initiatives and spending for administration, as well as for regional services and coordination programs, regional technical assistance programs and regional technology and Agency capital programs, is summarized below and discussed in more detail in the RTA section.

Regional Services and Coordination Programs

The RTA coordinates and funds several region-wide initiatives that bring together public transportation services. These programs include system maps, local advertising, the transit benefit program, the Travel Information Center (TIC), *ADA* certification, Reduced Fare certification, and the Customer Service Center. The total budget for these programs in 2007 is $18.2 million, or $0.2 million more than 2006 spending.

Regional Technical Assistance Programs

The RTA supports the growing demand for technical assistance initiatives that encourage transit-oriented improvements in the region. Programs supported include the Regional Technical Assistance Program (RTAP) and regional corridor studies. The budget for 2007 is $6.2 million, an increase of $0.4 million compared to expenditures in 2006 of $5.8 million.

Through partnerships with other state and local agencies, the RTA receives external funds that defray part of the program costs. These programs are discussed in more detail in the RTA section.

Total Debt Service & Capital Expenditures

Total expenditures in 2007 of $217.5 million are projected to decline from the 2006 estimate of $223.4 million. This difference is discussed below.

Principal and Interest

Principal and interest expenditures increase by $4 million from $182.2 million in 2006 to $186.2 million in 2007. The RTA issued the remaining balance of bonds authorized by *Illinois FIRST* in 2006 increasing debt service costs.

Regional Technology and Agency Capital

The 2007 budget continues to fund region-wide capital-driven technology initiatives and Agency programs. Program expenditures include funds for Transit Signal Priority, RTAMS, MMIK, Transit Hub, ATSS expansion, Bus-Info programs, and information system enhancements for the Agency. The budget for 2007 is $7.5 million an increase of $0.2 million compared to expenditures in 2006 of $7.3 million.

Through partnerships with other state and local agencies, the RTA receives external funds that pay some portion of these program costs. The RTA section discusses these initiatives in more detail.

Transfer Capital—Additional Funding for ADA Paratransit

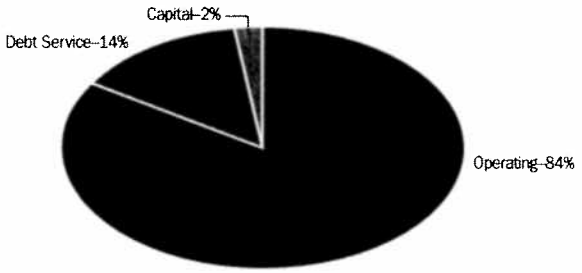
In 2006, the State of Illinois appropriated $54.3 million for *ADA* paratransit services and other costs and services. Of this amount, $42.5 million is used to fund operating expenditures and $11.8 million is appropriated for transfer capital. The $11.8 million is replaced by the transfer of an equal amount of Federal Section 5307 funds for operations. Funds are not appropriated in 2007.

Transfer Capital—RTA Funds

The amount of funds appropriated in 2006 and 2007 are $22.2 million and $23.8 million, respectively. Two funding sources cover this category of expenditure, statutory and RTA discretionary. If the statutory apportionment of sales tax to a Service Board exceeds its operating budget the funds are transferred to its capital program. Statutory transfers in 2007 are not appropriated because sales tax receipts are not expected to be sufficient to cover the operating deficits of the Service Boards. Year-end results may provide funds for Metra, and an amount of $0.7 million is included in the 2006 estimate.

Since 1995, the RTA has transferred a portion of its discretionary funds, available for region-wide capital or operating initiatives, to the CTA for capital investment. The funding to the CTA in 2006 for this program was $20.4 million and continues at that level for 2007. In 2006 and 2007, the RTA appropriated funds to assist Pace with the transition costs for *ADA* paratransit service in the respective amounts of $1.2 and $3.4 million.

Exhibit 2-12: **2007 Total RTA Expenditures** — $1,329 million



Total Expenditures

Total RTA expenditures (operating, debt service and capital) for 2007 are budgeted at $1,328.7 million. This amount is 18.3 percent greater than the 2006 estimate of $1,123.4 million. Operating expenditures are 84 percent of total expenditures, debt service is 14 percent, and capital is 2 percent (Exhibit 2-12).

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a 5 percent minimum level in the unreserved and undesignated fund balance. If the amount is below 5 percent, the financial plan must show full replenishment by the end of the current planning cycle.

The percentage is based on total operating expenditures for the year (as shown on Exhibit 2-9). The purpose of the ordinance was to formalize a practice of maintaining a level of available financial resources for funding during unfavorable economic periods. This policy has proved its value as economic growth in recent years has limited the increase of sales tax receipts.

The ending fund balance for 2006 is estimated to be $6.2 million, which is 0.7 percent of the total operating costs. The 2007 budget shows a year-end fund balance of $10.1 million or 0.9 percent of total operating expenditures. The balance at the end of 2009 is $67.4 million or 5.0 percent of total operating costs as shown on Exhibit 3-1 in the RTA section.

Beginning Fund Balance

The beginning balance is the amount of the (General Fund) undesignated and unreserved fund balance after the previous year's results have been audited and the accounting records are closed. All statements in this document reflect 2005 actual results for the 2006 beginning balance. This amount is $1.7 million.

Change in Fund Balance

Total RTA revenue less total RTA expenditures produce an annual change to the fund balance, when revenue exceeds expenditures, the remainder is added to the fund balance. If expenditures exceed revenue, the fund balance is reduced by the deficit amount. In 2006 and 2007, total revenue is expected to exceed total expenditures by $4.5 million and $3.9 million, respectively.

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal (calendar) year for each Service Board. *The RTA Act* further requires that the combined revenue from RTA operations cover at least 50 percent of the system operating cost. In meeting the 50 percent recovery ratio, *The RTA Act* requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50 percent requirement

Exhibit 2-13: **2007 Capital Program Budget** (dollars in millions)

Service Board (1)	
FTA (Federal) Capital Grants	501
State–IDOT Grants	—
New Transit Funds	49
Service Board/Other Funds	31
RTA Transfer Capital	24
Total Service Board Funding	**605**
CTA Financing and Debt Repayment	95
Total Service Board Capital Program	**700**
Tollway Credits Requested	61
RTA Regional Technology and Capital	7

(1) Service Board: Federal funds (FTA capital grants) require a local match of at least 20 percent. The State has traditionally provided capital funding for matching purposes but the State, at this time, has not provided local matching funds. Tollway credits can be used as local match but they are not spendable funds and using them leaves critical projects underfunded. New Transit Funding for Operations on Exhibit 2-1 excludes capital program funding needs. If additional capital (New Transit) funds are not secured, Metra may need to amend their capital program.

includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/leaseback transactions. The statutory calculations of 52.7 percent in 2006 and 50.4 percent in 2007 exceed the mandated 50 percent. A detailed breakdown of this calculation is provided in the RTA section (Exhibit 3-31).

The RTA Act does not require a recovery ratio calculation for the two-year planning period. The 2008 and 2009 financial plans do not include sufficient revenue to offset the level of operating cost increases to produce system-generated revenue recovery ratios of 50 percent. To achieve a 50 percent recovery ratio, a combination of further revenue and/or expenditure service standard enhancements, and/or additional recovery ratio operating expenditure exclusions, such as security and pension, are needed.

Statutory Compliance

The RTA Act requires that the CTA, Metra and Pace each have a balanced budget; the region's recovery ratio is at least 50 percent; and the RTA (Agency) administrative expenditures do not exceed an established statutory cap. *The Act* also requires that prudent fiscal practice be followed such as proper cash management, use of reasonable assumptions, and sound accounting and financial practices. Each Service Board, the Agency and the region as a whole have adopted budgets that comply with these stipulations.

Capital Program

The capital program marks set by the RTA Board in September include estimated figures that the Service Boards use in their program documents. When final federal appropriations numbers are determined, the RTA Board will consider these changes and any other local funding changes needed to bring the program in balance. The program will then be amended by RTA ordinance to align with the new marks. The five-year capital program of $2.8 billion is based on the funding sources available at this time and discussed in more detail in the Capital section of this document. Funds of $700 million are available for the 2007 capital program (Exhibit 2-13).

Capital Impact on Operations

Capital investments by the three Service Boards are intended to improve public transit service while reducing operating costs. Procurement of replacement vehicles for bus and rail fleets will improve service reliability, while reducing maintenance costs and fuel consumption. Similarly, investments in vehicle overhaul and preventive maintenance programs will reduce service failures and vehicle down time. Rail line expansion and infrastructure improvements will increase passenger capacity and travel speed, as well as improve safety. System-wide improvements, including upgrades in passenger and maintenance facilities, communications and computer equipment, and security systems, will improve employee productivity, operating efficiency and passenger safety.

CTA

Over the next five years, the CTA plans to spend over $141 million on low-floor, fully accessible air-conditioned buses to replace vehicles that entered service in 1991 and 1995. Some of these 40-foot buses will be replaced by heavy duty 30-foot buses that add flexibility for service in areas with narrow streets or extensive on-street parking. Purchase of replacement buses provides both a more reliable fleet and reduces expensive failure-based maintenance and fuel expenditures.

Also over the next five years, the CTA will invest $126 million in its bus vehicle overhaul program. Regular replacement of major mechanical components subject to extensive wear will reduce operating costs and improve service. Bus mid-life overhaul activities of $16.7 million in 2007 and $84.5 million between 2008 and 2011 will improve fleet reliability and reduce expensive breakdown-based repair expenditures. As more buses are overhauled, unscheduled maintenance will be significantly reduced.

The $319 million purchase of new rail cars will allow the CTA to replace vehicles that have been in service for more than 27 years and provide additional cars to meet the service requirements of projects such as the Brown Line capacity expansion. These replacement vehicles will help to lower the CTA's average car age of over 22 years and to reduce the proportion of vehicles that exceed the 25-year FTA standard life of a rapid transit car which now stands at approximately 29 percent at the CTA. The deteriorated condition of these older vehicles is evident from increased service failures and longer repair downtime which results in decreased availability for service.

Between 2007 and 2011, the CTA plans to spend $267 million to rebuild existing rail cars and improve rail car accessibility for customers. Systematic maintenance and upgrading of the fleet reduces operating costs and enhances reliability. The CTA has embarked on an aggressive program to schedule replacement of parts nearing the end of their useful life before they fail in service. Without quarter-life and mid-life overhauls, rail vehicle maintenance costs would be three times the current level averaged over the expected twenty-five year life of each car. Maintenance costs will stabilize as more rail cars are included in the preventive maintenance program.

Replacement and upgrading of signal and power distribution system must be accomplished in order to provide continued safe operation, decrease the possibility of power shutdowns and service disruptions, and eliminate slow zones. Repair of defective track and structure will help maintain safe and reliable service. Replacement of track components and ties will reduce the need to impose slow zones due to their deteriorating condition. Due to the age, usage, and structural condition of several rail stations, replacement or rehabilitation is required in order to maintain acceptable levels of service. Upon completion, these stations will be fully *ADA* compliant.

With a total budget of $530 million, the Brown Line capacity expansion is the CTA's largest capital construction project to date. Extending station platforms at 18 stations to accommodate eight-car trains will increase capacity by up to 33 percent. The Brown Line shares stations with both the Purple and Red lines.

Installation on 435 buses of automatic passenger counters that track where customers board and alight will assist the CTA in determining how best to improve service to meet customer needs.

Metra

The proposed $144 million Union Pacific Northwest (UP-NW) Line expansion project will upgrade the infrastructure, expand service, increase train speed, and lower maintenance costs on this 71-mile line. Extending service from McHenry to Johnsburg will provide access to employment centers and to residents of eastern McHenry and western Lake Counties. Rail yards in Woodstock and Johnsburg and infrastructure improvements along the route will increase reverse commuting options.

The $385 million Union Pacific West (UP-W) Line infrastructure improvements will increase the service capacity, speed, and reliability of the UP-W Line. A continuous three-track route between West Chicago and downtown Chicago, new rail crossovers, upgraded signal systems, and other track improvements will improve flexibility. The replacement and relocation of the A-2 crossing, the busiest rail crossing in northeastern Illinois, will ease bottlenecks and decrease travel times on the UP-W Line and enable Metra to expand daily service from 59 to as many as 80 trains and express service form 20 to as many as 30 trains per day. Restructuring the A-2 crossing will also ease congestion on Metra's BNSF Line.

The proposed $524 million, 33-mile South East Service (SES) Line connecting Will County, south suburban Cook County, and the Chicago Central Business District will stimulate economic development in communities along the south suburban corridor. By relieving automobile congestion, the SES Line will reduce annual construction and maintenance costs of nearby highways by $4 million. Construction of the SES Line is expected to generate 550 jobs, $262 million in wages, and $550 million in Illinois business sales over a ten-year period.

The 55-mile initial segment of the proposed $1.1 billion Suburban Transit Access Route (STAR) Line will link nearly 100 communities in the northwest, west, and southwest suburbs. Creating an inter-suburban transportation grid by connecting with existing rail routes, the STAR Line will attract new riders throughout the RTA transit network with improved access to more than half a million jobs in the Northwest Corridor.

Pace

The $18 million system-wide replacement radio system programmed over five years will reduce operating costs and improve communications coverage. Finding parts for the existing 13-year old system is increasingly difficult.

The $2.6 million continuation funding for the development and purchase of Transit Signal Priority (TSP) systems in major corridors will reduce operating costs and travel times for fixed route service.

Improvements to garages and facilities of $2.5 million include replacements of concrete, fire sprinklers, security systems, overhead doors, and other equipment. Safer and more secure facilities will improve productivity and reduced insurance and claims expenditure.

Purchases of garage tools, office equipment and furniture, and non-revenue vehicles totaling $1.5 million to replace outdated equipment will reduce maintenance and repair expenditures and other operating costs.

Continuation funding of $2.6 million for computer equipment and systems includes the HPe3000 Migration project and Phase I of the Interactive Voice Response (IVR) software. These information technology investments will provide both Pace personnel and passengers more current and accurate information on which to make decisions.

3 RTA Operating Plan

Region Operating Plan

Budget and Financial Plan

The RTA must prepare and publish a document every year that includes a one-year operating budget, a two-year financial plan, and a five-year capital program to meet specific statutory requirements.

This document fulfills the responsibility. Exhibit 3-1 provides a summary of the RTA's statement of revenue and expenditures for 2005-2009. Throughout this document, 2005 is actual data, 2006 is the estimate of year-end results, 2007 is the operating budget, and 2008-2009 is the two-year financial plan.

Revenue

Total revenue is projected to grow from $1.096 million in 2005 to $1.603 million in 2009 (Exhibit 3-1). This is an increase of $507 million over the four-year period, or a 10.0 percent compound annual growth rate.

The RTA Sales Tax is the primary source of revenue for the RTA. In 2005, RTA Sales Tax receipts of $700 million comprised 64 percent of the RTA's total revenue. Public Transportation Funds (PTF), State Financial Assistance (SFA), State Reduced Fare (RF), and other revenue provided the balance of RTA revenue, totaling $396 million, or 36 percent (Exhibit 3-2).

Sales Tax

The RTA Sales Tax is authorized by Illinois statute and imposed by the RTA in the six-county northeastern Illinois region. The RTA Sales Tax is collected by the Illinois Department of Revenue, paid to the Treasurer of the State of Illinois and held in trust for the RTA outside the State Treasury. Proceeds from the RTA Sales Tax are paid directly to the RTA on a monthly basis, without appropriation, by the State Treasury on the order of the State Comptroller.

The sales tax is the equivalent of 1 percent on sales in Cook County and 0.25 percent on sales in DuPage, Kane, Lake, McHenry and Will counties. The 1 percent sales tax in Cook County is comprised of 1 percent on food and drugs and 0.75 percent from all other sales, with the State then providing a "replacement" amount to the RTA equivalent to 0.25 percent of all other sales. The RTA retains 15 percent of the total sales tax and distributes the remaining 85 percent to the Service Boards according to the formula specified in the *RTA Act* (Exhibit 3-3).

Exhibit 3-4 breaks out the 2005 sales tax distribution by Service Board. In 2005, the $700 million in sales tax was broken out in the following manner: CTA 39 percent, Metra 35 percent, Pace 11 percent, and RTA 15 percent. Sales tax is projected to increase from $700 million in 2005 to $794 million in 2009, a compound growth rate of 3.2 percent (Exhibit 3-5).

The 2007 sales tax budget was developed after assessing the state and local economic trends. After reviewing this data, the RTA applied a growth rate of 3.2 percent to its 2006 estimate of $723 million producing revenue of $746 million for the 2007 budget.

From a geographic standpoint, the City of Chicago accounted for 30 percent of the sales tax collected in 2005, suburban Cook 55 percent, and the collar counties 15 percent (Exhibit 3-6).

Public Transportation Funds (PTF)

Revenue from this special fund may be paid to the RTA only upon state appropriation. In accordance with the *RTA Act*, the State Treasurer is authorized and required to transfer from the State's General Revenue Fund an amount equal to 25 percent of net revenue realized from sales taxes. These receipts are based on a formula tied to sales tax results and are, therefore, projected to increase at the sales tax growth rate. For every four dollars that is collected in sales tax, the RTA receives an additional dollar in PTF.

None of the PTF revenue is payable to the RTA until it certifies to the Governor, State Comptroller and Mayor of the City of Chicago that it has adopted a budget and financial plan as called for by the *RTA Act*. The amounts that each Service Board receives through the RTA from the PTF are allocated at the discretion of the RTA Board upon the review and approval of each Service Board's annual or revised budget.

State Financial Assistance (SFA)

This revenue source is state-authorized assistance to reimburse the debt service expenses for the RTA's Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the State, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. The RTA received $111.4 million in 2005 and estimates $119.0 million in 2006, $122.8 million in 2007, $125.2 million in 2008, and $127.5 million in 2009.

Reduced Fare (RF)

This operating assistance is partial reimbursement from the State to the Service Boards for discounts (mandated by law) provided to students, elderly and disabled riders. The funds are distributed by the State through the RTA and then to the Service Boards.

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the Service Boards for the cost of providing reduced fares for passengers in the above-mentioned categories. The fare reimbursement is included in revenue and became available in July 1989.

Exhibit 3-1: **RTA Statement of Revenues and Expenditures General and Agency Funds** (dollars in thousands)

System-Generated Revenue (1)	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Sales Tax	$ 700,395	$ 722,808	$ 745,937	$ 769,807	$ 794,440

Recovery Ratio %	**52.6**	**52.7**	**50.4**	N/A	N/A

Notes: (1) The amounts available to the Service Boards for operations in 2007 are predicated on securing additional funding ("New Transit Funding"), and to the extent that such New Transit Funding is not obtained, the Service Boards will have to take actions to balance their operating budgets that may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels, and adjusting fares. In 2006, the State of Illinois appropriated $54.3 million for *ADA* paratransit services and other costs and services. Of this amount, $42.5 million is used to fund operating expenses and $11.8 million is appropriated for Transfer Capital and the $11.8 million is replaced by transfer of Federal 5307 funds. The amount available to Pace for 2007 is predicated on the RTA continuing to receive funding from the State of Illinois or other sources for *ADA* paratransit services and other costs and services and are also predicated on securing additional funds and achieving cost savings, from funding sources and cost efficiencies that may have been identified in the RTA-Pace Memorandum of Understanding entered into in June 2006, or that may be identified by the paratransit plan now being developed by the RTA in cooperation with Pace, CTA and the Illinois Department of Transportation pursuant to Section 2.30(f) of the *RTA Act*. (2) Sales tax interest is $0.9 million. Appropriated Regional Technical Assistance program funds that remain unspent at the end of the year continue to be available for this purpose without subsequent appropriation action. (3) Principal and interest includes reserves/expense reclassifications for debt service/interest. Appropriated Regional Technology and Agency Capital program funds that remain unspent at the end of the year continue to be available for this purpose without subsequent appropriation action. (4) The change in fund balance for 2005 includes program expenditure de-obligations and/or re-obligations incurred during the year.

In the State's 2000 fiscal year budget, the reimbursement level was increased from $20 million to $40 million. In 2002, the State reduced its fiscal year funding to $36 million. In 2003, funding was returned to $40 million, less a 2 percent (or $0.8 million) administrative fee. In 2004, the State again reduced its fiscal year reimbursement. The amount was $38 million less a 2 percent administrative fee. As a result, available funds were $37.1 million in 2005 and remain constant at $36.3 million from 2006 through 2009.

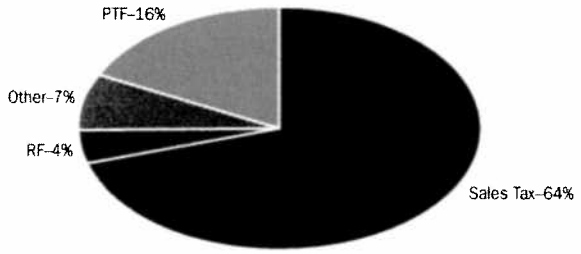
Other Revenue

The other revenue category consists of sales tax interest, investment income, and Agency revenue. Total receipts in 2007 are budgeted at $14.7 million.

The State pays interest on sales tax receipts to the RTA from the time of collection until it is disbursed to the RTA. The RTA then disburses this interest to the Service Boards based on the RTA Sales Tax formula. In 2007, sales tax interest is budgeted at $0.9 million. RTA investment income is dependent on available cash balances and prevailing market rates. The RTA's cash balance is primarily composed of funds reserved in prior years for various Service Board capital projects and associated RTA financial transaction proceeds. This revenue source is budgeted at $8.4 million for 2007.

Agency revenue of $5.4 million for 2007 includes the fees charged to employers for RTA Transit Checks. These fees offset the costs of administering this program. Also included in Agency revenue is matching funds obtained under

Exhibit 3-2: **2005 RTA Sources of Revenue**— $1,096 million



federal, state and local programs for regional planning, development and new technology efforts.

New Transit Funding

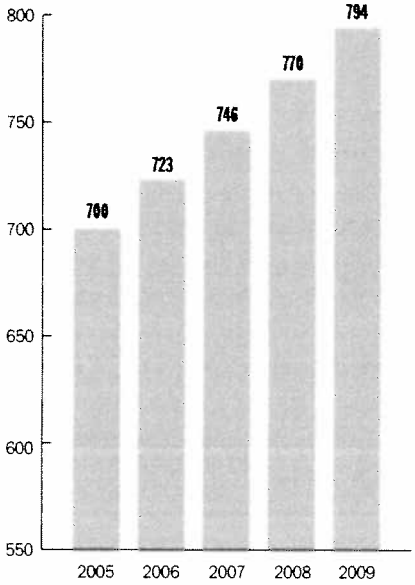
The Service Board budgets and financial plans were prepared with the expectation that New Transit Funding would be made available through upcoming State legislation. However, there is no guarantee that such funds will be forthcoming. In that event, focus must shift to a constrained system which provides fewer service options. Un-appropriated funds totaling $144.5 million balance the Service Boards proposed 2007 budgets.

To balance the two-year financial plan and achieve an unreserved/undesignated RTA fund balance that totals 5 percent of all operating expenditures by the end of the planning period requires New Transit funds of $225.7 million in 2008 and $331.9 million in 2009. The amount of funds that brings the RTA's fund balance to its required level by the end of 2009 totals $47.3 million which is equally divided in the 2008 and 2009 financial plan.

Additional State Funding for ADA Paratransit

In 2005 and 2006, the State of Illinois appropriated additional funds to the RTA for *ADA* paratransit service and other costs and services. The appropriation for each year was $54.3 million. However, growing service demands and increased operating costs have out-paced this level of funding. The 2007 budget and 2008-2009 financial plans were developed envisioning continuance of state appropriations that fully fund the service deficit. Un-appropriated funds in the amount of $81.8 million balance the proposed 2007 budget for *ADA* paratransit service. The amounts needed for 2008 and 2009 are $91.6 million and $99.9 million, respectively.

Exhibit 3-5: **RTA Sales Tax** (dollars in millions)



Operating Expenditures

Exhibit 3-1 provides a summary of the RTA's operating expenditures from 2005 through 2009. Total operating expenditures are projected to grow from $884 million in 2005 to $1.348 million in 2009. This is an increase of $464 million over the four-year period, or a 11.1 percent compound annual growth rate.

Exhibit 3-4: **2005 RTA Sales Tax Distribution by Service Board** — $700 million

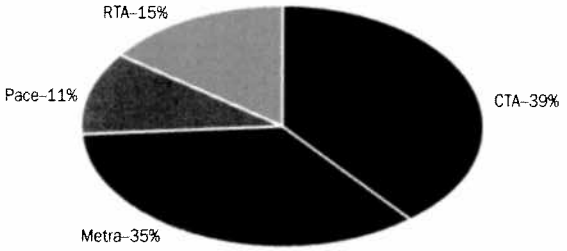


Exhibit 3-3: **RTA Sales Tax Collected** (in percent)

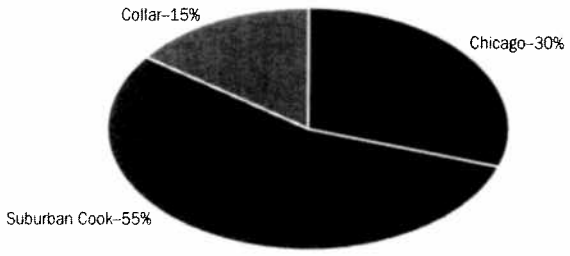
	CTA	Metra	Pace	Total
Chicago	100	0	0	100
Suburban Cook	30	55	15	100
Collar Counties	0	70	30	100

Exhibit 3-6: **2005 RTA Sales Tax Collection by Area** — $700 million

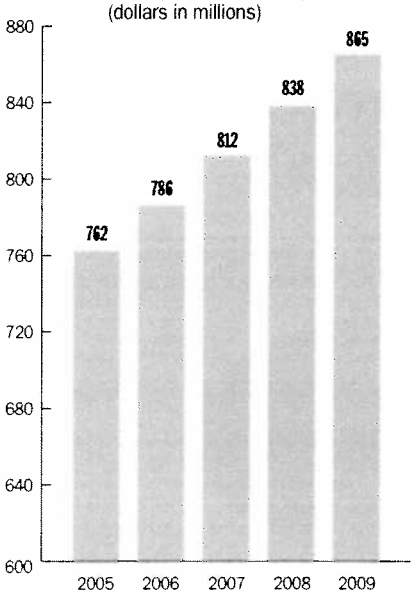


Operations Funding

The RTA's primary expenditure is the funding of the Service Boards' operating deficits. An operating deficit is the difference between a Service Board's system-generated revenue (fare box and other revenue) and system operating expenditures. Exhibit 3-7 presents the operations funding level for the three Service Boards. From 2005 to 2009, Service Board operations funding from the RTA is expected to increase from $762.4 million to $864.6 million. This $102.2 million increase represents a compound annual growth rate of 3.2 percent.

RTA operations funding to the Service Boards from 2007 through 2009 is as follows: The CTA's funding is $470.3 million, $485.4 million, and $500.9 million. Metra's amount during this period is set at $257.4 million, $265.6 million and $274.0 million. For Pace the amounts for the 2007 budget and 2008-2009 financial plan (which do not include *ADA* paratransit service funding) are $84.2 million, $86.9 million and $89.7 million. Total funding for the 2007 budget and 2008-2009 financial plan is provided in the Strategy section (Ordinance 2006-78, Schedule I-B).

Exhibit 3-7: **RTA Operations Funding**
(dollars in millions)



A detailed discussion of each Service Board's revenues and expenditures is provided in the CTA, Metra and Pace sections of this document.

RTA Discretionary Funds to Pace

The RTA continues to facilitate the integration of CTA and Pace fare media by using additional RTA discretionary funds to fund a portion of Pace's cost for providing service to riders using certain CTA passes. The amount of funding appropriated in 2005 and 2006 was $2 million. The 2007 budget and two-year financial plan funds Pace $4 million for this service.

In July 2006, Pace became responsible of all *ADA* paratransit operations in the region. To assist Pace with transition costs the RTA provided Pace with additional funding of $1.0 million in 2005 and $1.6 million in 2006.

New Transit Funding

As discussed earlier, additional funding resources are needed to balance the operating budgets and to maintain, enhance and expand the system to meet changing service needs across the region. The Service Board 2007 budgets and two-year financial plans were prepared with the expectation that New Transit Funding would be made available during upcoming legislative sessions. New Transit Funding in 2007 totaling $144.5 million is used to fund the operating deficits (excluding *ADA* paratransit service) of the Service Boards. This amount increases to $202.1 million in 2008 and to $308.3 million in 2009.

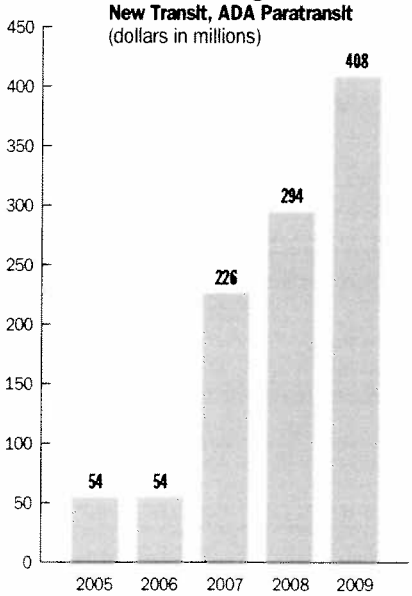
Additional State Funding–RTA Discretionary

As previously discussed, the State of Illinois appropriated additional funds to the RTA in the amount of $54.3 million for *ADA* paratransit service and other costs and services in 2005 and 2006. In 2005, the CTA received the full appropriation. In 2006, the CTA and Pace shared the appropriation because Pace became responsible for all *ADA* paratransit service in the region beginning July 1, 2006. Although not yet appropriated by the State, Pace's 2007 budget and two-year financial plan deficits were funded with the expectation that the State will fully fund this service. The amount of funds needed to balance the *ADA* paratransit service budget from 2007 through 2009 is $81.8 million, $91.6 million and $99.9 million, respectively. Exhibit 3-8 illustrates the combined amount of New Transit and *ADA* paratransit funds required to balance Service Board operations from 2005 through 2009. Combined funding from New Transit sources and for *ADA* paratransit service increases from $54 million in 2005 to $408 million in 2009 (Exhibit 3-8).

Reduced Fare and Sales Tax Interest

State reduced fare reimbursements are received as revenue by the RTA and flow directly to the Service Boards to help defray program costs. The reimbursement level of $36.3 million from 2006 through 2009 is not expected to fully cover the cost of this program. In 2005, the State's Reimbursement was $37.1 million.

Exhibit 3-8: **Additional Funding Needs—New Transit, ADA Paratransit**
(dollars in millions)



There is a lag between when the State collects the RTA Sales Tax and when the State transfers it to the RTA. The RTA receives interest on this sales tax, and then disburses 85 percent of the interest to the Service Boards according to the same formula used for sales tax distribution. In 2006, the estimate for sales tax interest is $0.9 million and is projected to remain flat from 2007 through 2009. The amount in 2005 was $0.8 million.

Agency Expenditures

Spending for Agency administration, regional services and coordination programs, and regional technical assistance programs is summarized below and discussed further in the Agency portion of this section. Agency capital expenditures for regional technology programs and internal needs are summarized later in this section.

Agency Administration

In 1985, a statutory cap for administrative spending was set at $5 million, with a growth rate of 5 percent per year. The 2006 cap allowance is $13.9 million. The Agency administration estimate in 2006 of $6.9 million is less than 50 percent of the cap. The cap allowance in 2007 is $14.6 million, and Agency spending of $7.4 million is significantly less than this amount, and this trend continues through the 2009 planning period.

Regional Services and Coordination Programs

The RTA coordinates and funds several region-wide initiatives that bring together public transportation services. These programs include system maps, local advertising, the transit benefit program, the Travel Information Center (TIC), *ADA* certification, Reduced Fare Certification, and the Customer Service Center. The budget for 2007 is $18.2 million. An increase of $0.2 million over the 2006 estimate. Expenses are projected to grow to $19.4 million in 2009.

Regional Technical Assistance Programs

The RTA supports the growing demand for technical assistance initiatives that encourage transit-oriented improvements in the region. Programs supported include the Regional Technical Assistance Program (RTAP) and regional corridor studies.

In partnership with other state and local agencies, the RTA receives external funds that defray part of the program costs. Estimated receipts of $1.6 million in 2006 cover program expenditures of $6.2 million with the remaining $4.4 million provided by the RTA. In 2007, the RTA budget shows expenditures of $6.4 million offset by $2.4 million in other revenue leaving a balance of $3.8 million funded by the RTA.

Debt Service and Capital Expenditures

Exhibit 3-1 provides a summary of the RTA's debt service and capital expenditures from 2005-2009. Total expenditures in this category are projected to grow from $224.1 million in 2005 to $224.6 million in 2009.

Principal and Interest

Principal and interest payments reflect the RTA's expenditures and projected expenditures from 2005 through 2009. Payments increase from $188.2 million in 2005 to $196.3 million in 2009. The RTA issued the remaining balance of bonds authorized by the *Illinois First* program in 2006, thereby increasing debt service costs. Projected State Financial Assistance (SFA) for the SCIP bond program helps defray about 62 percent of debt service cost. Additional bond information is provided at the end of this section.

Regional Technology and Agency Capital

The 2007 budget continues the RTA's commitment to region-wide capital-driven technology enhancements. Like regional technical assistance programs, the regional technology programs are coordinated efforts with other state and local agencies which help support these efforts. Program costs are projected at $5.1 million and are offset by state and local funds of $1.6 million. At the end of the year, any funds that have not been spent are reserved.

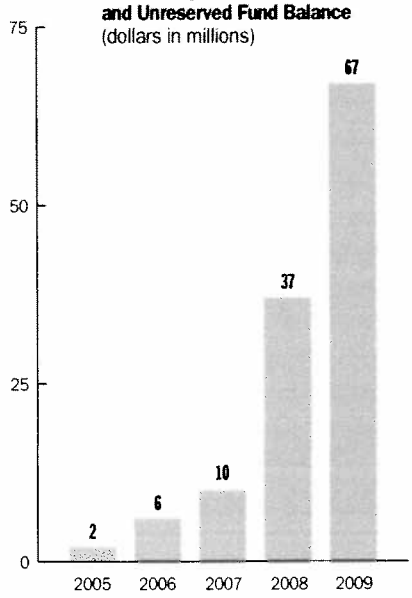
Included in this category are expenditures for the Agency's capital needs. The amount remains constant throughout the 2007-2009 planning period. These annual funds, which total $2.4 million per year, are used to enhance various information technology programs and leasehold improvements.

Transfer Capital

Two funding sources cover this category of expenditure, statutory and RTA discretionary. The statutory apportionment of sales tax to a Service Board can exceed its operating marks. When this occurs, the Service Board transfers these statutory funds to its capital program.

Since 1995, the RTA has transferred a portion of its discretionary funds, available for operations, to the CTA for capital investment. From 1995 through 1997, the program was funded at an annual level of $11 million. In 1998, CTA's funding for this program was increased to $16.5 million. The CTA transfer capital program was funded at $19.2 million in 1999 and increased to $20.4 million in 2000 and remains at this level through the 2009 planning period. In 2005, total transfer capital was $27.1 million. In 2006, total transfer capital is $34.0 million. The CTA and Pace receive RTA discretionary funds of $32.2 and $1.2 million, respectively. Metra's statutory portion, based on current sales tax trends, could reach 0.7 million.

Exhibit 3-9: **RTA Ending Unobligated and Unreserved Fund Balance** (dollars in millions)



For 2007,the total transfer capital is $23.8 million allocated to CTA in the amount of $20.4 million and Pace $3.4 million. From 2008 through 2009, the amount of $20.4 million is RTA discretionary funds to the CTA.

Total Expenditures

Total RTA expenditures include all operating, debt service and capital program costs. From 2005 through 2009, these expenses are projected to increase from $1.1 billion to $1.6 billion. This represents a compound growth rate of 9.2 percent.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level in the unreserved and undesignated fund balance of 5 percent of total operating expenditures. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods.

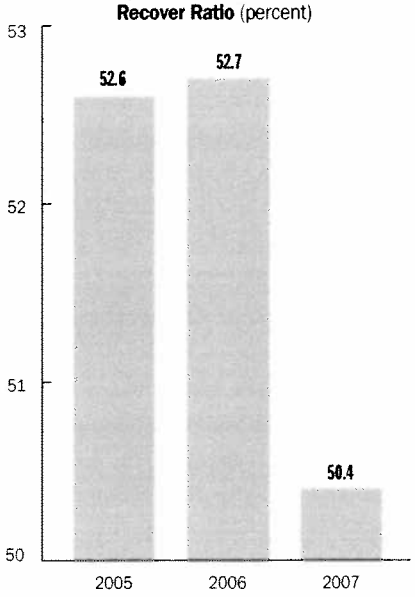
The RTA Board manages the expenditure of funds to arrive at a planned balance of unreserved and undesignated funds. The 2005 ending balance was $1.7 million. The estimated ending balance for 2006 is $6.2 million. The ending balances for the 2007 budget and two-year financial plan (2008 to 2009) are $10.1 million, $36.8 million, and $67.4 million, respectively (Exhibit 3-9). The unreserved and undesignated fund balance for the planning period meets the policy requirements by achieving a balance of 5.0 percent in 2009. Fund balance policy details are outlined at the Strategy section.

The ending balance is determined by increasing or decreasing the beginning fund balance by the annual difference between revenue and expenditures and the de-obligation and/or re-obligation of certain program funds.

Beginning Balance

The beginning balance is the amount of funds in the undesignated and unreserved fund balance after the previous year's results have been audited and the accounting books are closed. All statements in this document reflect 2004 actual results of $12.5 million as the 2005 beginning balance.

Exhibit 3-10: **System-Generated Revenue Recover Ratio** (percent)



Change In Fund Balance

Total RTA revenue less total RTA expenditures produces a change to the fund balance. When revenue exceeds expenditures, the gain is added to the fund balance. If expenditures exceed revenue, the deficit reduces the fund balance. The 2006 projection indicates a surplus amount of $4.5 million. From 2007 through 2009, revenue is estimated to exceed expenditures and increase the unreserved fund balance to 5.0 percent of total operating expenses by the end of the 2009. Changes in revenue over expenditures, other financing use, and capital grant expenditures on a GAAP versus budgetary basis are reconciled at the end of each year. The 2005 year-end reconciliations resulted in a change to the fund balance of $10.9 million (Exhibit 3-29).

Recovery Ratio

The *RTA Act* requires the RTA Board to set a recovery ratio for the next fiscal year for each Service Board. The *RTA Act* further requires that the combined revenue from RTA operations cover at least 50 percent of the system operating cost. The RTA's system-generated revenue recovery ratio in 2005 was 52.6 percent. This statutory calculation computes to more than 2.6 percentage points above the mandated 50 percent. The ratio is estimated to be 52.7 percent in 2006 and 50.4 percent in 2007.

In meeting the 50 percent recovery ratio, the *RTA Act* requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50 percent requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/lease-back transactions, and the 1989 Metra fare increase

which has been restricted for capital investment. Beginning in 2005, this revenue source is included in Metra's recovery ratio calculation. A detailed breakout of this calculation is provided in Exhibit 3-31 at the end of this section.

2006 Budget Versus 2006 Estimate

Total RTA revenue of $1,127.9 million is projected to be $3.6 million more than the 2006 budget of $1,124.3 million. Sales tax and associated PTF revenues are expected to be $3.6 million more than plan due to the recovering economic environment (Exhibit 3-11).

Total operations expenditures of $900 million are projected to be on par with budget.

Capital Program

At the present time, the 2007-2011 capital program funding marks total $2.8 billion. When federal, state or local appropriation figures change, the Service Boards' capital programs may not match the program marks.

When this occurs, the RTA Board considers ordinances that incorporate all changes and bring the Service Board programs in balance with the marks. Detailed Service Board program information is provided in the Capital section of this publication.

Exhibit 3-11: **RTA 2006 Statement of Revenues and Expenditures General and Agency Fund** (dollars in thousands)

Agency Operating Plan

Budget and Financial Plan by Category

The Agency budget and financial plan (Exhibit 3-12) encompasses four primary categories: Agency administration, regional services and coordination programs, regional technical assistance programs, and regional technology and Agency capital programs. Expenditures in 2005 totaling $35.1 million are expected to increase to $41.8 million by the end of the 2009 planning period, an annual growth rate of 4.5 percent. Combined Administrative and Capital program spending for the Agency increases 1.1 percent, while combined regional services and coordination programs and regional technical assistance programs spending increases 6.8 percent, as the Agency enhances efforts to coordinate and improve the region's public transit system.

The Agency's budget for 2007 is $39.3 million. Nineteen percent is for Agency administration, 46 percent is used for regional services and coordination programs, 16 percent covers regional technical assistance programs, and 19 percent is for regional technology and Agency programs (Exhibit 3-13).

Agency Administration

Agency administrative expenditures of $6.4 million in 2005 are expected to increase at an annual rate of 5.3 percent through 2009 producing costs of $7.8 million. Expenditures in 2007 of $7.4 million are 6.2 percent higher then the 2006 estimate.

Seventy-five percent of Agency administrative costs are for salaries and fringe benefits. Sixteen percent is used to cover office costs for rent, utilities, supplies, postage, equipment leases, telephone, and maintenance. Audit fees are 7 percent and the 2 percent balance covers other costs such as professional memberships and publications.

Fringe benefit expenditures, which are 46 percent of salaries, have been primarily affected by rising group life and medical insurance premiums and pension plan expenses in recent years. Seventy percent of fringe benefit expenditures are insurance and pension plan payments. The remaining 30 percent is primarily used to cover employer payroll taxes.

In 1985, a statutory cap for administrative spending was set at $5 million, with a growth rate of 5 percent per year. The 2007 cap allowance is $14.6 million. Agency spending of $7.4 million is well below the cap.

Regional Services and Coordination Programs

Expenditures for regional services and coordination programs were $15.5 million in 2005 and are projected to close just under budget in 2006 at $18.0 million. During the 2007-2009 planning period, expenditures are expected to average $18.8 million. Cost estimates for the 2007 budget are $18.2 million, apportioned by category as follows: salaries and fringes 26 percent, office services 12 percent, regional services and coordination programs 62 percent.

The split of regional services and coordination programs expenditure is as follows: Regional management costs totaling 35 percent are divided between regional service and coordination programs. Eighteen percent of the funds are used for region-wide coordination programs that work to increase ridership and system awareness, and 47 percent is for defined regional service programs (e.g. Travel Information Center, *Americans with Disabilities Act*, Reduced Fare, Customer Service Center and Transit Check). These Regional Services programs are discussed later in the section.

Regional Technical Assistance Programs

Regional technical assistance programs serve the entire region. Major program initiatives include: Strategic Planning, the Regional Technical Assistance Program (RTAP) and the Regional Transit Coordination Plan (RTCP). Program details are outlined later on in the section.

Through joint efforts with other state and local agencies, the RTA is able to offset a portion of a program's funding requirement with revenue from these entities. Receipts are posted as revenue in the general fund and are included in the "other revenue" line item figure shown on Exhibit 3-1.

Program costs in 2005 were $4.4 million and are projected to be $6.2 million in 2007. Reimbursements from state and local agencies, which cover 39 percent of total program costs, lower RTA's funding contribution. The state and local contribution projected in 2007 is $2.4 million leaving a net annual use of RTA funds of $3.8 million. At year-end, any unspent funds are reserved to cover the needs of longer-term projects.

Exhibit 3-12: **Agency Expenditures by Category** (dollars in thousands)

	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Agency Administration	$ 6,379	$ 6,932	$ 7,360	$ 7,596	$ 7,839
Regional Services and Coordination Programs	15,523	18,023	18,248	18,832	19,435
Regional Technical Assistance Programs	4,436	5,804	6,170	6,368	6,571
Regional Technology and Agency Programs	8,739	7,270	7,499	7,735	7,980
Total Expenditures	**$ 35,077**	**$ 38,029**	**$ 39,278**	**$ 40,531**	**$ 41,826**

Regional Technology and Agency Programs

Included in this category are expenditures for the Agency's capital needs. These annual funds, which total $2.4 million in 2007, are primarily set aside for leasehold improvements and finance and administrative system enhancements.

Like regional technical assistance programs, the regional technology programs are coordinated efforts with other state and local agencies and therefore receive funding, which reduces the RTA contribution. Program costs are projected to be $5.1 million in 2007 and are offset by state and local funds of $1.6 million. At the end of the year, any funds that have not been spent are reserved to cover the needs of longer-term projects. Major program initiatives are discussed later in this section.

Budget and Financial Plan by Functional Group

Agency functional groupings include Managing Services, Finance and Administration, Regional Services and Strategic Plan and Regional Programs. The Strategic Plan and Regional Programs area is subdivided into regional management, non-capital technical assistance programs, and capitalized technology programs. Exhibit 3-14 identifies the organizations and programs associated with each functional group. Exhibit 3-15 provides annual cost comparison for each group, and Exhibit 3-16 identifies the distribution by group of the 2007 budget.

Exhibit 3-13: **Agency Expenditures by Category** — $39.3 million

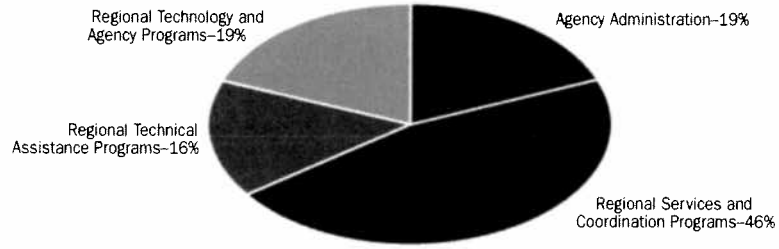

Exhibit 3-14: **2007 Agency Functional Groups**

Groups	Organizations and Programs
Managing Services	Board of Directors, Executive Director, Secretary to the Authority, Legal and Governmental Affairs, Research, Analysis and Policy Development, Communications.
Finance and Administration	Administrative Services: Human Resources, Information Technology and Procurement and Contracting; Finance: Financial Planning and Analysis, Controller, Audit and Review, Treasurer, Financial Development—Grants and Capital Program.
Regional Services	Regional Services Management, Travel Information Center, Americans with Disabilities Act, Reduced Fare, Customer Service Center, Transit Check.
Strategic Plan and Regional Programs	Corridor Studies, Regional Technical Assistant Program, Regional Transit Coordination Plan, Rail Safety Oversight, Project Management Oversight, Regional Transit Asset Management Systems, Intelligent Transportation System, Job Access Reverse Commute, Strategic Planning, Planning and Program Management.

Exhibit 3-15: **Agency Expenditure by Group** (dollars in thousands)

	Actual 2005	Estimate 2006	Budget 2007	Plan 2008	Plan 2009
Managing Services	$ 3,312	$ 4,614	$ 4,786	$ 4,939	$ 5,097
Finance and Administration	4,289	4,895	6,847	7,066	7,292
Regional Services	12,180	11,798	12,998	13,413	13,842
Strategic Plan and Regional Programs	15,296	16,723	14,648	14,814	14,985
Agency Total	**$ 35,077**	**$ 38,029**	**$ 39,278**	**$ 40,231**	**$ 41,215**

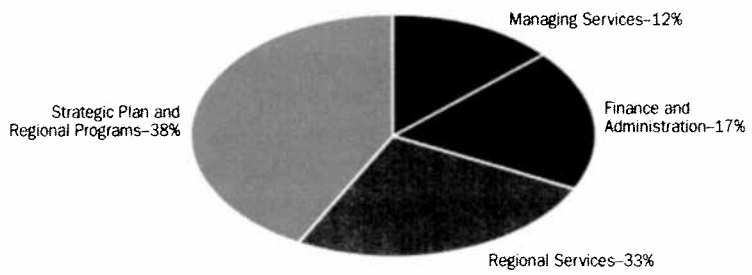
Managing Services

The Managing Services category includes the Agency's executive office, legal and governmental affairs, research, analysis, and policy development and communications functions. Managing Services expenditures are expected to average $4.9 million during the three-year 2007-2009 planning cycle. The change in cost compared to prior years primarily reflects this groups' emphasis on strategic planning, regional coordination and unified approaches for increased capital and operating funding at the federal, state and local levels.

Executive Office

The executive office includes the RTA Board of Directors, the RTA Executive Director and the Secretary to the Authority. The Executive Director executes the policy decisions of the Board and staffs the Agency to carry out its statutory mission. The Secretary of the Authority provides support functions to the Board by working with staff to ensure that the Board is supplied with the information and materials necessary to fulfill its statutory role. The Secretary also maintains the official records of the RTA Board and ensures compliance with the *Freedom of Information Act* and the *Open Meetings Act*.

Exhibit 3-16: **Agency Expenditures by Group**— $39.3 million



Legal and Governmental Affairs

The General Counsel ensures statutory and regulatory compliance, manages litigation, reviews all legal documents, manages the Joint Self-Insurance Fund (JSIF) and oversees the Agency's Equal Employment Opportunity and Disadvantaged Business Enterprise programs and compliance with applicable civil rights laws.

This division also oversees the Agency's governmental affairs functions. Governmental Affairs works with federal, state, and local governments, and with legislative consultants to address industry and regional concerns. Governmental Affairs also works on legislative issues with industry trade organizations such as the American Public Transit Association (APTA) and the Illinois Public Transit Association (IPTA).

In 2006, Governmental Affairs helped facilitate the Agency's participation in State activities as the Illinois Legislature continues to focus on public transportation issues, and the group worked to pursue the region's interests as *SAFETEA-LU* is implemented.

The RTA's legislative agenda for 2007 has two primary related components: *SAFETEA-LU* and FY 2007 and 2008 appropriations. RTA's primary issues in the *SAFETEA-LU* reauthorization debate include funding levels, criteria for New Start projects and the allocation of the Rail Modernization formula funds.

In 2007, the Legal and Governmental Affairs Department will continue to work with legislative offices on particular matters of concern to that office, work with the members of the Northeastern Illinois State delegation on transit issues, and work to secure State funding for capital investment and operations.

Research, Analysis and Policy Development

This new position will be responsible for ensuring that RTA staff has the finance, administrative and operations information needed to support the RTA in achieving a cost effective, cost efficient, and service effective seamless transit system.

Communications and External Affairs

The Communications Department manages the RTA's internal and external production of reports, speeches, presentations, videos, radio advertising, publications and promotional materials to publicize the Agency's programs and initiatives. The department also leads the Agency's public/media relations, external affairs and marketing initiatives.

In 2006, Communications worked primarily to create and distribute materials for the Agency's *Moving Beyond Congestion* Strategic Plan. The department also worked with the Service Boards to update the RTA System map. In addition, staff played the primary role in a regional effort to give commuters driving alternatives through the launch of the Drive Less. Live More public awareness campaign.

In 2007, staff will continue to promote the Moving Beyond Congestion Strategic Plan through various communications materials, press conferences and community outreach activities. Staff will also work to revamp the Agency's web site. Additionally, Communications will seek collaborative marketing opportunities with the Service Boards.

Finance and Administration

Finance and Administration includes the Agency's finance, human resources and administrative service functions. Expenditures are expected to average about $7.1 million from 2007 through 2009. The change from the 2006 projected expenditure is primarily attributable to general inflation of 3.2 percent, the Agency's financial information system upgrade of $1.1 million and leasehold improvements of $0.5 million that are part of the Agency's capital program.

Finance

The Finance Department executes the Agency's funding and oversight responsibilities outlined in the *RTA Act*. The Department works to maintain financial stability in the region and ensures the Agency, the CTA, Metra, and Pace execute their statutory requirements for fiscal responsibility.

The Finance Department's divisions are Financial Planning and Analysis, Controller, Audit and Review, Treasury, Financial Development, and Grants and Capital Program.

The Financial Planning and Analysis division is responsible for the development of the annual operating budget and two-year financial plan, as well as the subsequent analysis of performance against those plans. The division also provides analytical support to management and the RTA Board. In 2006, the division earned the Government Finance Officers Association (GFOA) distinguished bud-

get presentation award (the highest recognition in government budgeting) for the tenth consecutive year.

The Controller division is responsible for all RTA accounting functions, including monthly financial statements, annual reports, audit coordination, and grant accounting. Reporting covers the RTA entity (including "single audit"), the statutorily required combined RTA, CTA, Metra, and Pace presentation, RTA pension plan, and joint self-insurance fund. The division received a certificate of excellence in financial reporting (the highest recognition in government accounting) from GFOA for its Comprehensive Annual Financial Report (CAFR), its twelfth consecutive award.

Audit and Review examines agency-wide activities and functions. Operations deemed to have higher risk receive annual or more frequent reviews. Functions with less risk are examined on a rotational basis. The division also performs grant-related audits at the service boards. The RTA consistently receives a clean ("unqualified") opinion from its external auditors with no audit exceptions. In addition, the division performed a complete review of RTA internal controls similar to that required in the private sector by the Sarbanes-Oxley legislation.

The Treasury division's responsibilities include cash management, short-term and long-term financing, investments, debt service, banking relations, accounts payable, payroll, and service board funding.

The Financial Development and Grants and Capital Program division is responsible for the management of capital program grants as well as related ongoing analysis and status reporting. The division also manages federal, state, and local funding activity related to the RTA's planning initiatives

The Finance Department has worked to enhance project management through improvements such as electronic exchange of capital project data, systematic monitoring of technology and coordination project spending and funding, and better management reporting.

For 2007, the Finance Department intends to continue the reporting excellence that has enabled it to achieve consistent recognition for the CAFR and budget documents. The department will also continue to pursue the prudent fiscal practices in the management of its bond program that have enabled it to achieve a AA bond rating, which is the highest of any transit agency in the nation.

Administrative Services

The Administrative Services category includes three divisions, Human Resources (HR), Information Technology (IT) and Procurement and Contracting (PC). Responsibilities include recruitment and retention, performance management, benefits and compensation, employee relations, organizational development, technology consulting, help desk support, information systems management, training, purchasing, office supplies and facilities maintenance.

In 2006, HR introduced new benefits and investment options to all RTA employees. IT enhanced information technology security and implemented an online purchasing requisition form.

In 2007, HR will continue to address ways to offer a competitive total compensation package, identify methods to improve the recruitment and selection of qualified, diverse candidates. IT will work with the Communications staff to develop a centralized database of transportation and elected officials. PC will assist in implementing a new DBE program, and work with a purchasing consultant to fully comply with all regulations and to streamline purchasing policies and procedures.

Regional Services

Regional Services includes the following RTA-operated services and programs: Regional Services Management, the RTA Travel Information Center, ADA/Special Services Certification and RTA Certification Helpline; the RTA Reduced Fare program; the RTA Customer Service Center; and the RTA/CTA Transit Benefit program.

Expenditures for this group during the three-year planning cycle are expected to average $13.4 million. Thirteen percent covers regional services management, 49 percent funds the Travel Information Center, 24 percent supports the ADA Paratransit services, 7 percent is used for the Reduced Fare program and Customer Service Center, and 7 percent covers the Transit Check program.

RTA Travel Information Center

The RTA's Travel Information Center (TIC) is a telephone-based service providing route and scheduling information for the CTA, Metra and Pace. TIC operators, working 20 hours a day from 5:00 a.m. to 1:00 a.m., 365 days a year, accept close to 14,000 calls each day. The TIC phone number is 836-7000, and is accessible from every area code in the region.

The TIC's call volume of 4.8 million increased by 700 thousand in 2005 compared to 2004. Call volume is projected to be 5.1 million in 2006. The moderate increase in 2006 is attributable to the more popular RTA trip planner web site. The total visits on this site were 4.3 million in 2006.

The performance of the TIC is measured and reported on a daily basis. The most important measure is the call capture rate (calls answered/calls received) which indicates the efficiency of the service. In 2006, the call-capture rate averaged 92.0 percent (Exhibit 3-17).

Exhibit 3-17: **Travel Information Center**

	2002	2003	2004	2005	2006
Calls Accepted (in thousands)	2,931	3,484	4,109	4,800	5,100
Call Capture Rate (%)	96.6	95.6	94.0	93.4	92.2
Average Response Time (seconds)	26	25	31	33	41

Exhibit 3-18: **Transit Check Program**

	2002	2003	2004	2005	2006

Quantity (in thousands)	1,102	1,050	1,013	874	750
New Companies	375	289	186	195	149

Americans with Disabilities Act (ADA) Paratransit Certification

The RTA is responsible for the certification of riders who use special services, also known as *ADA* paratransit. Since July 1, 2006, Pace is responsible for all *ADA* paratransit operations in the region.

The *ADA* Certification program conducts interviews and does assessments for applicants requesting a determination for *ADA* paratransit certification as determined by guidelines established in the *Americans with Disabilities Act* (*ADA*). The interviews and assessments are completed at five sites operated under contract by Community Alternatives Unlimited (CAU), a not-for-profit social service agency. A video is shown at each of the assessment sites to introduce applicants to fixed-route accessibility features and to encourage increased use of fixed-route services by people with disabilities.

An accessibility specialist who reviews customer issues concerning mainline accessible transit services, paratransit accessible services and accessibility information, also provides support to these programs. The accessibility specialist represents the Agency on advisory committees established by the CTA, Metra, and Pace and chairs the Agency's Advisory Committee on Accessible Transportation and Mobility. Travel trainers train people with disabilities to use fixed route service instead of *ADA* paratransit.

The *ADA* paratransit certification program began operation in 1993 after the passage of the *Americans with Disabilities Act*. Originally a self-certification program, a revised program was implemented in 1999 and became fully operational in 2000. Applicants for *ADA* paratransit services now make appointments through the RTA for interviews and assessments at one of five sites located throughout the six-county region. Each applicant is interviewed by a trained professional. When necessary, applicants are provided a physical assessment to determine their functional abilities to use the fixed-route buses or trains and/or a cognitive assessment. The process helps ensure that applicants being certified for *ADA* paratransit services are truly in need of paratransit.

The number of applications submitted for *ADA* paratransit service decreased by nearly 1,000 in 2006 with 10,100 applications received. At the end of 2006, 40,047 individuals were eligible for paratransit services. For more information about *ADA* paratransit certification, contact the RTA's Certification Helpline at 312-663-HELP (4357/voice) or 312-913-3122 (TTY for the hearing or speech impaired).

RTA Reduced Fare Program

The RTA Reduced Fare program allows eligible senior citizens and qualified persons with disabilities to ride RTA services at a reduced fare. There are currently some 320,000 reduced fare permits issued in the six-county region.

A reduced fare smart card has been offered since 2000. About 3,000 smart cards are currently being used by reduced fare customers. The "smart card" provides easier access to the fare collection systems of the CTA and Pace for some people with disabilities. This initiative has been well received by many reduced fare riders.

RTA Customer Service Center

The RTA Customer Service Center, located on the second floor at 175 West Jackson Boulevard in downtown Chicago, provides walk-in customers with maps, timetables and schedules for the CTA, Metra and Pace without charge. The center also sells monthly passes for the CTA and Pace. The Customer Service Center has a telephone with a direct connection to the TIC providing customers with access to this service.

The Customer Service area currently uses electronic kiosks where customers can access and print CTA, Metra and Pace schedules as well as trip plans from the RTA's internet-based trip planner. In addition, RTA system maps, CTA maps, and miscellaneous brochures detailing various programs and seasonal services are available to the public. The center also sells CTA passes, transit cards, and Chicago Cards.

RTA/CTA Transit Benefit Program

The RTA/CTA Transit Benefit program markets and administers an employee benefit that reduces transit costs for employers and encourages ridership. The program distributes RTA Transit Checks, which are vouchers that are used to purchase transit passes for CTA, Metra, Pace, South Shore Railroad or Vanpool services, as well as CTA fare cards.

The Transportation Equity Act for the 21st Century (TEA-21), which was signed into law on June 9, 1998, expanded the applicability and acceptance of the RTA Transit Check program. By exempt-

ing their transit costs from federal, state and local payroll taxes, employees who regularly use public transportation can reduce their taxable income, while employers can reduce their payroll taxes. These changes make the program more attractive for employers and make using the mass transit system more attractive to commuters. As of January 1, 2007, employers can deduct from employees' salaries up to $110 a month ($1,320 a year) to pay commuting costs.

In an effort to extend the program's reach, the RTA joined forces with the CTA in July 1999 to jointly market the program as the RTA/CTA Transit Benefit program. The expanded program allows the region's employers to offer employees both RTA Transit Checks and CTA fare cards. In 2005, the program began to offer CTA Chicago Cards for those wishing to purchase CTA monthly passes. The Chicago Card enables participants to take advantage of the ability to automatically add value to the same card each month. The Chicago Card Plus is the CTA's premier electronic farecard that is managed through an online account and is accepted on all CTA rail and bus routes and Pace buses. The Chicago Card Plus cards are mailed to the employees directly.

The program has grown dramatically since the legislative changes initiated in June 1998 under *TEA-21.* In 1998, year-end sales were at just under $9 million. In 2006, total sales were more than $49 million (Exhibit 3-18). 2,057 companies currently participate in the program. The number of new companies and the number of issued transit checks by the RTA decreased in 2006 due to the increased popularity of the Chicago Card Plus, which is offered and administrated only by the CTA.

For more information about the transit benefit program, call 1-800-531-2828 between 7:00 a.m. and 4:00 p.m. weekdays.

Strategic Planning and Regional Programs

This group includes strategic planning and regional program management, planning and program management, regional technical assistance programs, and regional technology.

The Strategic Plan and Regional Programs group oversees the responsibilities of various planning activities. Expenditures for this group during the three-year planning cycle are expected to average $14.8 million. Twenty-four percent covers regional management, 42 percent supports regional technical assistance programs, and 34 percent funds regional technology programs. Additional information for each group is provided in the following sections.

Strategic Planning

Strategic Planning oversees the development and implementation of a Comprehensive Strategic Regional Transportation Plan *(The Moving Beyond Congestion Plan)* for public transit in the region, in cooperation with the CTA, Metra, Pace, counties and municipalities in northeastern Illinois, as well as local and regional planning agencies with assistance from a consulting team. The goal of this effort is to assess the regional transit system's preservation needs and determine how new investments can best improve the region's overall transportation system. The plan will set forth goals objectives and strategies to guide the RTA as it carries out the roles and responsibilities granted to it under the *RTA Act.*

Planning

Planning works to ensure an integrated regional public transit system through planning and coordination initiatives with the region's providers. The planning department develops, coordinates, and oversees regional technical assistance programs and regional technology (capital) programs to achieve this goal.

Regional Technical Assistance Program

Regional technical assistance initiatives include market development efforts such as station area planning and transit-oriented development planning through the Regional Technical Assistance Program (RTAP) and studies to promote and enable better coordination between transit agencies. In addition, funds will be used to develop and manage regional strategies to relieve congestion through corridor studies like the Cook-DuPage Corridor and the Southeast Rail Corridor. The RTA's focus is to help communities evaluate and develop policies and funding mechanisms that will support transit in a specific corridor.

Through RTAP, the RTA provides technical and/or financial assistance to various levels of local government for planning projects that support transit services. RTAP emphasizes a balanced, coordinated, and integrated approach to regional transit planning.

Station Area Plans / Transit-Supportive Land Use

Station area plans and local transit improvement projects, supported through RTAP, allow communities to pursue an integrated approach to transit and land use planning. Station area plans are based on the tenets of transit-supportive development—mixed land uses, higher density residential developments, and pedestrian-friendly environments—and often include complementary improvements and enhancements to the community's transit facilities. Local transit improvement projects focus on transit-supportive land use relative to bus operations or the development of new local transit services, such as reverse-commute oriented shuttle bus services and community circulators.

The RTA's 2007 RTAP program includes the addition of these new station area plans and local transit planning proj-

ects: Addison Advantage Transit Project, Bellwood 25th Avenue Corridor Transit Improvement Plan, Chicago Heights Central Business District Transportation Center Assessment and Circulation Plan, Greater Roseland Red Line Extension Study, Evanston Northeast Transit Coordination Study, Huntley Station Area Plan, Kane County–Randall Road Plan to Improve Access to Bus Service, Lake County Inter/Intra County Paratransit Transportation Study, Lake Forest Comprehensive Transit System Plan, Marengo Station Area Plan, Mount Prospect Public Transportation Study, and the Plainfield STAR Line Transit-Oriented Development District Plan.

County Transit Plans

County transit plans explore demographics and transit service options and support long-range planning. To date, transit plans have been developed through RTAP for DuPage, Kane, Lake and McHenry Counties. As a follow-up to the DuPage Area Transit Plan, the DuPage Mayors and Managers Conference and the city of Naperville are developing service plans for an inaugural set of community circulators. In addition, service was started on a first of its kind Pace connector bus route linking Naperville, Wheaton and the College of DuPage.

Corridor Planning

Corridor studies provide an opportunity for local officials, citizens and regional planning organizations to objectively explore a wide range of possible transportation improvements in large sections of the region that are experiencing mobility problems. The overall goal is to find the most effective and desired solutions that can then be built. Corridor studies also provide a means to update the Regional Transportation Plan.

RTA corridor studies integrate specialized technical analysis with local and regional decision making through a phased study process. A typical RTA corridor study is structured through three successive phases:

- **Travel market analysis**—a research phase to learn about travel patterns, the transportation system and how well it is working. The results are distilled into manageable themes or significant mobility issues.
- **Options feasibility**—a creative phase to look at new multi-modal networks/combinations of potential highway and transit improvements to address mobility issues.
- **Systems alternatives analysis**—determine demand and impact on local and regional systems of different combinations of improvements and different modes/technologies.

In conjunction with the three major study phases, local study components establish land use/community development opportunities, local financing strategies and corridor planning standards for mobility improvements in the corridor. These study elements are typically funded through the RTAP and led directly by local municipal sponsors.

The RTA is currently undertaking the Cook-DuPage Corridor study in partnership with the Illinois Department of Transportation to examine potential major transportation system improvements to meet pressing mobility needs in the western suburbs of Chicago. The first phase of study—the travel market analysis—identified critical mobility needs of the corridor. A broad range of improvement options, including proposals from the Regional Transportation Plan, are being developed and evaluated – leading to the selection of a preferred alternative. Elsewhere in our region, the North Shore Corridor study is undertaking a travel market analysis to explore the potential need for intermediate stations on the CTA Skokie Swift, and extension of the line to serve existing and emerging travel markets.

The RTA will lead a major multi-modal corridor study to identify the most effective and desired transportation investments to improve mobility in the southwest quadrant of the region – focusing on the Metra Heritage Corridor.

As part of these efforts, the RTA is working with local communities to develop corridor planning standards so that local values and perspectives are included in the planning and design of transportation improvements. Corridor Planning Standards is something new to our region and is akin to context sensitivity in the planning rather than design phase of project development.

The 52 communities of the Cook-DuPage Corridor have been working closely together to establish their own collective vision, goals, values and preferences for the corridor transportation system and its integration with their towns. Their Corridor Planning Standards will help ensure potential transportation solutions enhance community vitality, local character and values, and will provide a valuable framework for transportation investment decisions. These standards will subsequently be customized by other towns for application throughout the region.

Regional Transit Coordination Plan

The RTA emphasizes coordination and interconnection of the regional transit system through the Regional Transit Coordination Program (RTCP). The RTCP is a multi-year program to enhance regional mobility, with a goal of seamless travel on public transportation. In cooperation with the CTA, Metra and Pace, and other local planning entities, the RTCP addresses the four principal elements of transit coordination—information coordination, physical coordination, service coordination and fare coordination.

Information Coordination

Information coordination improves signs, maps and schedules to allow transit riders to confidently use the entire system, including transferring between transit modes. Improvements under development in 2007 include new products such as way-finding signs and local area maps for interagency transfer locations and a system-wide rail-to-rail transfer map. Existing information products, such as route maps and schedules, will also be refined to better indicate transfer opportunities. The RTA has obtained a federal CMAQ grant to develop standards for and implement prototypes of new and refined information products related to interagency travel. These products will be demonstrated at five key interagency locations in 2008.

Physical Coordination

Physical coordination addresses the relative ease of transferring between modes operated by the CTA, Metra, and Pace. Existing transit connections at approximately 300 locations throughout the region already serve most travel markets to some extent. The RTA has assessed opportunities for physical improvements at priority transfer locations that either have high rates of transfer activity, or provide critical local or regional connections. Through RTAP, various municipalities are exploring specific coordination improvements with RTA assistance.

Service Coordination

Service coordination explores options to better connect regional travel markets with components of the existing transit system. Cost effective ways to improve regional mobility include the use of buses between activity centers and nearby rail stations to serve both reverse commuters and suburb-to-suburb travel. Such improvements are typically developed through RTAP projects involving a combination of local agencies and the region's transit operators.

Fare Coordination

Fare coordination makes it easier for transit customers to pay for travel on different parts of the RTA system with a single transaction or fare instrument. Potential benefits of improved fare coordination include passenger convenience and enhanced operations. The RTA continues to work with the CTA, Metra and Pace to explore approaches for a universal fare card. The exploration of improvements is considering the cost of implementing and managing fare coordination relative to the benefits received.

Job Access Reverse Commute and New Freedom Programs

The *Safe, Accountable, Flexible, Efficient Transportation Equity Act-A Legacy for Users (SAFETEA-LU)* legislation continues the JARC program and introduces the New Freedom program under a formula funding agreement. The goal of the JARC program is to improve access to transportation services to employment and employment related activities for welfare recipients and eligible low-income individuals. The New Freedom program aims to provide additional tools for persons with disabilities to overcome existing barriers in accessing the work force. New Freedom projects must be "new" and "beyond" those required by the *Americans with Disabilities Act of 1990 (ADA)* and must assist individuals with disabilities.

The RTA is the locally designated recipient of JARC and New Freedom formula funds in northeastern Illinois. In this capacity the RTA acts both as a grantee and a grantor of designated funds on behalf of sub-recipients which in 2007 include the CTA, Metra, Pace, and DuPage County. As the designated recipient of JARC and New Freedom funds, the RTA initiated a collaborative planning process with the Chicago Area Transportation Study, the Service Boards, and region-wide stakeholders to identify projects for the 2006 program that would be implemented in 2007.

Projects developed through this collaborative planning process support the goals of the JARC and New Freedom programs. The program of projects adopted by the RTA Board of Directors include two countywide centralized call centers for improved paratransit efficiencies, new reverse express bus service to major regional employment centers, a reverse early morning commuter train to meet suburban start times along the Union Pacific North Line, a program to support 24/7 work trips for individuals with disabilities in DuPage County, and the enhancement of service on two CTA routes that serve Westside neighborhoods of the City of Chicago. These projects total over $5.1 million in JARC and New Freedom funding requests.

Regional Technology/Capital Programs

Regional technology funds are investment in technologies that seek to improve transit service and operational efficiency, and to enhance the customer's transit experience. Improvements include RTAMobile.com, Parking Management Guidance Systems (PMGS), Transit Signal Priority (TSP), Multi-Modal Trip Planning System (MMTPS) and the Regional Transportation Asset Management System (RTAMS)

Exhibit 3-19: **Agency 2006 Budget Versus 2006 Estimate** (dollars in thousands)

Expenditures by Category	Budget	2006 Estimate	Variance
Agency Administration	$ 6,697	$ 6,932	$ (235)
Regional Services and Coordination Programs	18,091	18,023	68
Regional Technical Assistance Programs	5,986	5,804	182
Regional Technology and Agency Programs	7,270	7,270	—
Total Expenditures	**$ 38,044**	**$ 38,029**	**$ 15**

Exhibit 3-20: **Agency Budgeted Positions**

Total	**90.2**	**96.8**	**99.5**	**99.5**	**99.5**
Board	12.0	12.0	12.0	12.0	12.0

Regional Transit Intelligent Transportation Systems Plan

The RTA established the Regional Transit Intelligent Transportation Systems (ITS) Program as a foundation for the coordinated development of technology solutions to traditional transit problems. The program ensures compliance with the regional and national ITS architectures and standards as required by the U.S. Department of Transportation (USDOT). Proven and promising ITS technologies can improve mobility and decrease congestion by facilitating information-sharing between transit and highway agencies, as well as police, fire, and emergency services. Benefits include operational efficiencies, service improvements, improved incident management, and expanded trip-planning options. As part of the RTA's program, a number of technologies are being evaluated and implemented to achieve the functional vision of the Illinois Transit Hub.

Illinois Transit Hub

The Illinois Transit Hub (ITH) is an internal and external communication system that centrally collects and distributes regional transit information. The transit hub utilizes technologies from vehicle location, scheduling and incident management systems implemented by the transit operators. The ITH facilitates dissemination of information through a variety of media.

Regional Transportation Asset Management System

The Regional Transportation Asset Management System (RTAMS) was developed by the RTA to improve access to, and the coordination of, the tremendous amount of transportation data gathered by the RTA and its Service Boards. Through RTAMS, users can quickly retrieve and cross-reference a wide variety of information about the northeastern Illinois transportation system. In addition to Service Board data, RTAMS content has been significantly expanded through partnerships with other agencies such as the Illinois and Chicago Departments of Transportation, the Illinois State Toll Highway Authority (ISTHA), the Illinois Commerce Commission (ICC), the Chicago Metropolitan Agency for Planning (CMAP), the Chicago Area Transportation Study (CATS) and the Northeastern Illinois Planning Commission (NIPC).

Traveler Information

The RTA launched RTAMobile.com, which provides wireless access to transit travel information via web-enabled cell phones and PDAs. The site provides access to the RTA's web based trip planner with enhanced functionality that includes bus and rail schedules.

The RTA and project partners have developed a kiosk information system that combines destination information from the Chicago Convention and Tourism Bureau with trip planning and transit information. Kiosks are accessible to the public at various locations, including the Chicago Cultural Center, Navy Pier, Shedd Aquarium, Palmer House Hilton, Union Station, Metra Randolph Street Station, and Midway Airport. The RTA is expanding the program to include sites in the suburbs with cooperation from Pace.

A tool providing enhanced trip planning options that include integrated ITH content, traffic information on highways and tollways, and dynamic mapping capabilities is under development by the RTA in conjunction with the Federal Transit Administration.

Operational Efficiency

Parking Management Guidance Systems (PMGS) provide real-time information about parking availability for transit facilities. Through the use of vehicle detection technologies, parking information and route guidance will be displayed on electronic variable message signs located on major arterials and expressways. A PMGS field demonstration is underway for the Tinley Park/Hickory Creek corridor of the Metra Rock Island District line.

Service Improvements

Transit Signal Priority (TSP) is a tool that can improve transit operating efficiency while complementing the region's ongoing efforts to reduce traffic congestion. TSP strategies move in-service transit vehicles, either buses or streetcars, through traffic signal-controlled intersections with significantly less queuing and delay, and minimal impacts on pedestrian safety and general purpose traffic.

The RTA has established a Regional TSP Integration Plan that includes both transit and traffic elements for a multi-jurisdictional system. The operational impacts of TSP were evaluated on various transit routes and roadway segments using a simulation model. Through RTAP, the RTA is coordinating TSP field deployments for the CTA and Pace. The TSP network being deployed will facilitate the Bus Rapid Transit (BRT) network of the future.

2006 Budget Versus 2006 Estimate

The total Agency expenditures of $38.0 million are expected to be close to budget for the year (Exhibit 3-19). The unfavorable variance in Agency Administration is mostly due to higher than budgeted office space taxes and increased professional services for pension plan consulting and annual audit fees. Favorable variances in Regional Services and Coordination Programs and Regional Technical Assistance Programs are attributed to programs that did not materialize as early as expected.

Organizational Structure

Budgeted positions for the Agency are summarized in Exhibit 3-20. The current organizational chart is presented in Exhibit 3-21. Budgeted positions in 2007 are 99.5 compared to last year's figure of 96.8. The increase from 2006 to 2007 includes a new director's position (Director, Research Analysis and Policy Development), a new position in the controller division, and transferring a part-time position to full-time in the Strategic Planning and Regional Services department. The RTA Board committee structure is unchanged and detailed in Exhibit 3-22.

Exhibit 3-21: **Agency Organization Chart—Summary by Operating Division**

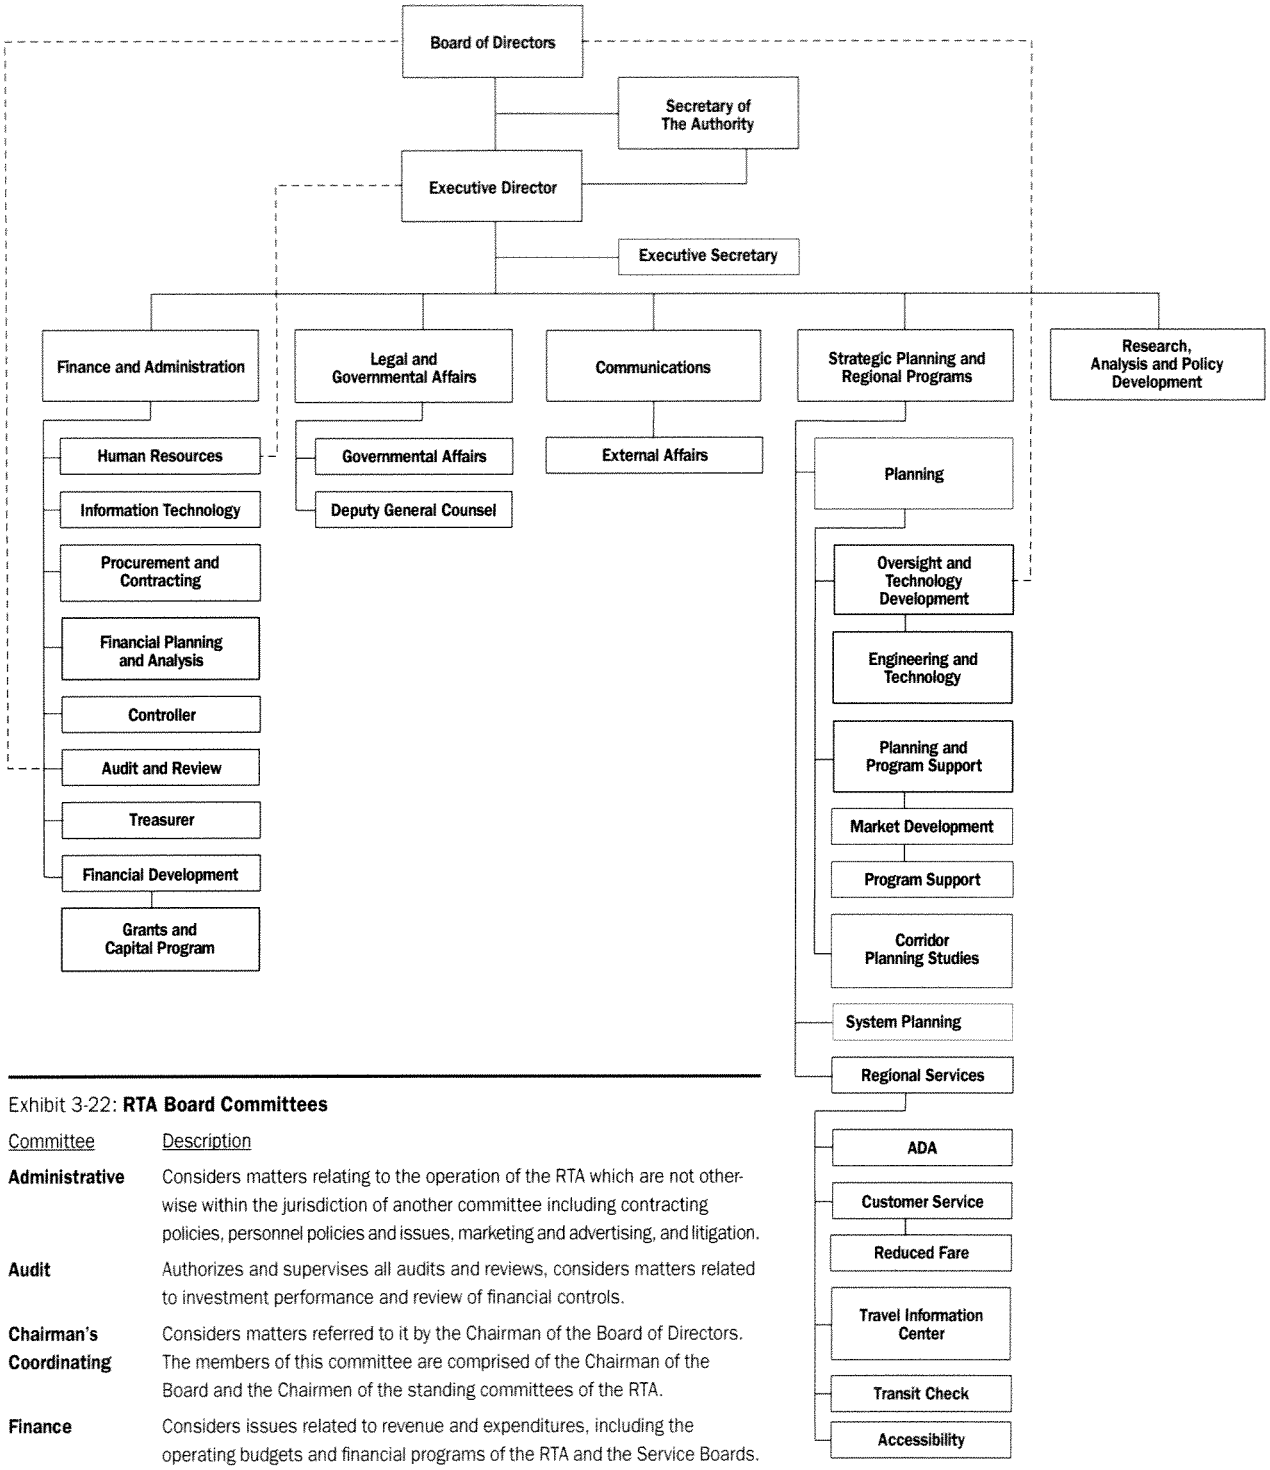

Exhibit 3-22: **RTA Board Committees**

Committee	Description
Administrative	Considers matters relating to the operation of the RTA which are not otherwise within the jurisdiction of another committee including contracting policies, personnel policies and issues, marketing and advertising, and litigation.
Audit	Authorizes and supervises all audits and reviews, considers matters related to investment performance and review of financial controls.
Chairman's Coordinating	Considers matters referred to it by the Chairman of the Board of Directors. The members of this committee are comprised of the Chairman of the Board and the Chairmen of the standing committees of the RTA.
Finance	Considers issues related to revenue and expenditures, including the operating budgets and financial programs of the RTA and the Service Boards.
Mobility Limited	Considers ADA Paratransit Certification and other issues relating to the provision of public transportation services to the elderly and persons with disabilities.
Planning	Considers system planning issues, which include the RTA and Service Board capital programs and plans, and special planning studies.

Reference

RTA Bonds

The bonds issued by the RTA carry a rating of "AAA" from Standard & Poor's and Fitch IBCA and "Aaa" from Moody's Investors Service, Inc., based on the RTA having the principal and interest guaranteed by an insurance policy. These rating agencies have indicated that they would have rated the bonds "AA," "AA," and "A1,"respectively, without such insurance. These represent strong investment grade ratings. The RTA has the distinction of being one of the highest rated public transportation agencies in the United States.

All bonds are general obligations of the RTA to which the full faith and credit of the RTA are pledged. These general obligation bonds, with a balance of $2,156.2 million as of December 31, 2005, are divided into two types: $1,425.5 million in Strategic Capital Improvement Program (SCIP) bonds and $730.7 million in RTA bonds (Exhibit 3-23 and Exhibit 3-24).

On June 21, 1993, the RTA issued an advance refunding of a portion of its 1990A Series general obligation bonds. The RTA issued $23,265,000 of general obligation refunding bonds (1993C Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On January 30, 1996, the RTA also issued an advance refunding of a portion of its 1994B and 1994D Series general obligation bond issues. The RTA issued $151,235,000 of general obligation refunding bonds (1996 Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On September 18, 1997, the RTA issued an advance refunding of a portion of its 1990A, 1991A, 1992B and 1993B Series general obligation bond issues. The RTA issued $98,385,000 of general obligation refunding bonds (1997 Series). Proceeds from the issuance amounted to $105,570,935, including a premium of $7,185,935. The proceeds are to fund an irrevocable trust for generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On August 10, 1999, the RTA made an advance refunding of a portion of its 1992A, 1993A, 1994A, and 1994C Series general obligation bond issues. The RTA issued $298,725,000 of general obligation (1999) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunded bonds are as follows: $113,895 of the 1992A Series, $9,720,000 1993A, $142,615,000 1994A, and $21,955,000 1994C. The refunding was undertaken to reduce debt service over the next 26 years by $22 million, an economic gain of $11.4 million, which represents a 3.9 percent savings on the previous debt service.

On February 1, 2001, the RTA defeased the remaining balance ($37,750,000) of

Exhibit 3-23: **RTA General Obligation Bonds Payable** (dollars in thousands)

Note: *Strategic Capital Improvement Program (SCIP) Bonds.

Exhibit 3-24: **RTA Debt Outstanding** (dollars in thousands)

	As of December 31, 2005	As of December 31, 2006
RTA Non-SCIP Debt Cap	$ 800,000	$ 800,000
Authorized But Unissued RTA Debt	69,335	94,865
Total Non-SCIP (RTA) Principal Outstanding	730,665	705,135
Total SCIP Principal Outstanding	1,425,490	1,646,260
Total Debt Outstanding	**$ 2,156,155**	**$ 2,351,395**

Series 1993A by issuing Series 2001B. As a result, the refunded bonds have been removed from the financial statements. The refunding was undertaken to reduce debt service through 2023 by $3.4 million (an economic gain of $2.1 million), which is a 4.7 percent savings on the previous debt service.

Effective January 1, 2000, the *RTA Act* was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 to 2004. In March 2001, the RTA issued $100 million in SCIP bonds.

During 2002, the RTA issued two bond offerings. The first issue was a $160 million SCIP bond offering. The second issue was a $200 million non-SCIP issue.

During 2003, the RTA issued three bond offerings. On January 1, the RTA issued $150,000,000 of general obligation (2003B) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. The second issue was a $260 million SCIP bond offering on April 1. On the same day, RTA refunded the remaining portion ($19,055,000) of its 1993C Series general obligation bond issue. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunding was undertaken to reduce debt service through 2009 by $ 1.6 million (an economic gain of $ 1.6 million), which is a 6.9 percent savings on the previous debt service.

On October 13, 2004, the RTA issued one bond offering (Series 2004A) for $260 million in SCIP bonds. The Series 2004A bonds are also secured by the Series 2004A debt service reserve account.

On May 2, 2005, the RTA issued $148,110,000 of general obligation bonds (2005B) to defease the remaining balance of the 1996 refunding. As a result, the 1996 refunding bonds have been removed from the financial statement.

Exhibit 3-25: **1996–2005 Debt Service Requirement Test** (dollars in thousands)

2006 A	Metra	Rehabilitate up to 20 Bi-Level Commuter Cars	944
		Total	$ **9,661**

RTA Sales Tax must be 2.5 times greater than the debt service requirement. As shown over the last ten years (Exhibit 3-25), the RTA meets this test. Any differences between debt service amounts presented and amounts shown in general purpose financial statements represent timing differences between payments made to trustees and payments made to bondholders. Also, investment income earned in the debt service accounts may lower actual cash transfers from the General Fund.

The RTA and its Service Boards have put an emphasis on making sure that the bond proceeds are spent in a timely and

efficient manner. Exhibit 3-26 highlights recent bond issues with the largest project-to-date expenditures.

Fund Accounting

The accounts of the RTA are organized on the basis of funds and account groups, each of which is considered a separate accounting entity. The operations of each fund are separated in its own set of accounts that comprise its assets, liabilities, fund equity, revenue and expenditures or expenditures, as appropriate. RTA resources are allocated to and accounted for in individual funds based upon the purposes for which they are to be utilized and the means by which spending activities are controlled.

Governmental Fund Types

The RTA's governmental fund types are the General Fund, Debt Service Fund and Capital Projects Fund (Exhibit 3-27).

General Fund

The General Fund is the general operating fund of the RTA. It is used to account for all financial transactions that are not specifically required to be accounted for in another fund such as the Agency Fund. Exhibit 3-1 shows the balance in the General Fund from 2005 through 2009. The General and the Agency Funds are the only two funds that have annual budgets. Exhibit 3-28 highlights the 2007 budget for these funds.

Debt Service Fund

The Debt Service Fund is used to account for the accumulation of resources for, and the payment of, general long-term debt principal, interest and related costs. The interest earned is generated from the funds being held for payment to the bondholders. The difference between the transfer and payment expenditures reflects the year-over-year timing variance.

Capital Projects Fund

In 1989, the Illinois General Assembly authorized the RTA to issue a maximum of $500 million of SCIP bonds, and to have a maximum of $500 million RTA bonds outstanding. The Capital Projects Fund is utilized for the receipt and disbursement of the proceeds of the bond issues. The first Capital Projects Fund was established in 1990 with the issue of $100 million of RTA bonds to fund capital projects at the Service Boards. The RTA allocated the proceeds from the bonds issued under the General Assembly's authorization as follows: 50 percent for CTA capital projects; 45 percent for Metra capital projects; and 5 percent for Pace capital projects. Projects included in approved five-year capital programs will be eligible for reimbursements from these proceeds by the RTA without further review or action by the RTA Board of Directors. Effective January 1, 2000,

the *RTA Act* was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 through 2004 and to issue and have outstanding an additional $300 million of non-SCIP Bonds. These amounts have been issued.

Proprietary Fund

Proprietary Funds are used for activities that are similar to those found in the private sector and to account for the financing of goods or services provided by a department or agency to other departments or agencies of the governmental unit, or to other governmental units on a cost-reimbursement basis. The RTA has one Proprietary (Enterprise) Fund—the Joint Self-Insurance Fund.

Joint Self-Insurance Fund

The Joint Self-Insurance Fund is used to finance claims incurred by the Service Boards and the RTA on a cost-reimbursement basis. This fund is reported as an enterprise fund since the predominant participants are outside of the RTA.

Fiduciary Fund Types

Fiduciary Funds account for assets held by a governmental entity in a trustee capacity or as an agent for others. The RTA's Fiduciary Funds consist of an Agency Fund and a Pension Trust Fund.

Agency Fund

The Agency Fund records the receipt and disbursement of amounts due to the CTA, Metra and Pace, including Retailers' Occupation and Use Tax (sales tax), interest on this tax, reduced fare reimbursement grants and federal operating assistance grants. Sales tax revenue is recorded in the fund and are equally offset by expenditures recording the pass through to the Service Boards.

Exhibit 3-28: **RTA Statement of Revenue and Expenditures 2007 Budget by Fund** (dollars in thousands)

Revenue	General Fund	Agency Fund	Total Budget
Sales Tax	$ 111,891	$ 634,046	$ 745,937

Net Change in Fund Balance	$ (**10,853**)

Pension Trust Fund

The Pension Trust Fund is used to account for all accumulation of resources for and payments of, retirement benefits to employees participating in the RTA Pension Plan and Trust.

Basis of Budgeting

The basis of budgeting refers to the conventions for the recognition of costs and revenue in budget development and in establishing and reporting appropriations. The RTA's annual budget and related appropriations are prepared on the modified accrual basis of accounting in conformity with generally accepted accounting principles except for capital grants/expenditures and debt service payments. Capital grants/expenditures are budgeted for on a project basis, which normally exceed one year. Debt service payments are budgeted as transfers from the General Fund.

Although appropriations are adopted for individual line items, the legal level of control is restricted to total appropriations/expenditures and total administration (statutory cap) appropriations/expenditures. Management has the authority to exceed any line appropriation without Board approval, provided it does not exceed the legal levels of control. It is the policy of the RTA to fund the budgets of the Service Boards up to the amount appropriated in the Budget Ordinance.

Budgetary reporting is balanced with accounting records on a monthly basis and is fully reconciled to the accounting system on an annual basis in the Comprehensive Annual Financial Report and for the annual Municipal Bond Disclosure Reports required by the Securities and Exchange Commission (Exhibit 3-29 and 3-30).

Recovery Ratio %	**52.6**	**52.7**	**50.4**

(1) Revenue: By policy, the gains made by a Service Board from leasing transactions are restricted for capital investment and therefore excluded from Service Board recovery ratio calculations. However, the receipts are used for the system-generated revenue recovery ratio calculation. Agency reflects investment earnings and grant project credits. (2) Expenditures: The *RTA Act* allows certain expenditures to be excluded from the recovery ratio calculation including security (a base and reduced fare amount), depreciation and facility leases. In addition, 2005 budget Ordinance 2005-06 authorized the exclusion of additional security costs (Security Exemption) from Service Board expenditures. The RTA Security Exemption amount that exceeds *RTA Act* allowances is added back to system-generated expenditures to calculate the System-Generated Revenue Recovery Ratio.

4 CTA Operating Plan

Overview

The Chicago Transit Authority (CTA) was created by the Illinois General Assembly in 1945 and began operations in 1947. It became the sole operator of Chicago transit in 1952 when it purchased the Chicago Motor Coach System. The CTA is the region's largest transit operator providing service on 154 bus routes and eight rapid transit routes. The CTA is governed by the seven-member Chicago Transit Board.

Service Characteristics

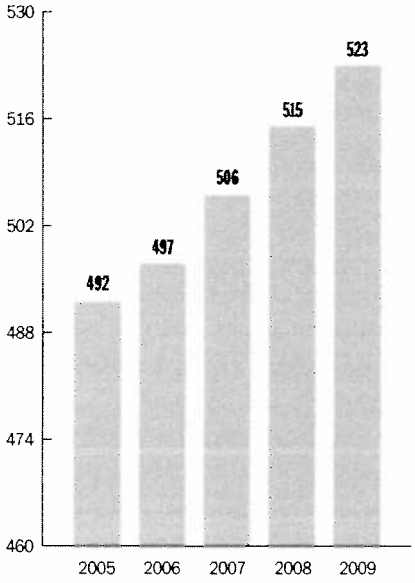
The CTA operates the second largest public transportation system in the U.S. Average weekday ridership on its bus and rail system is 1.6 million. The CTA's service area encompasses 220 square miles in the City of Chicago and 40 surrounding suburbs.

Bus operations provide 2,106 buses traveling over 154 routes covering 2,529 miles, with approximately 11,846 bus stops. Rail service on eight routes has 1,190 train cars traveling over 288 miles of track. The CTA transferred all paratransit service to Pace in July 2006. During the first half of 2006, CTA provided more than 1.2 million rides at a cost of about $26 per ride.

Ridership

Ridership is estimated at 497.4 million trips by the end of 2006 (Exhibit 4-1). This is 5.0 million trips, or 1.0 percent higher than 2005. Both weekday and weekend ridership experienced increased growth primarily attributable to higher gas prices. Bus ridership is forecasted at 299.2 million trips in 2006, which is 4.0 million trips lower, or 1.3 percent lower than 2005. Rail ridership is projected at 197.0 million in 2006 and is higher than the prior year by 10.2 million, or 5.5 percent (Exhibit 4-2). Ridership increases are tied to growing employment, higher gas prices, and bus and rail service improvements designed to speed service and provide greater customer convenience.

Exhibit 4-1: **CTA Ridership** (in millions)



Average weekday ridership on the CTA is 1.6 million, while Saturday and Sunday average ridership is 951,000 and 653, 000, respectively (Exhibit 4-3). The CTA expects its ridership levels to increase by a compound growth rate of 1.5 percent from 2005 through 2009. Total vehicle miles in 2006 and 2007 are expected to experience small growth over the previous year and then remain flat from 2007 through 2009 (Exhibit 4-4).

Service Quality

The CTA has continued to work at improving bus service and upgrading its bus and rail fleets. The ongoing effort includes purchasing 45 new 30-foot Optima buses that are shorter and narrower than the standard 40-foot buses in the CTA's fleet. Upgrading the bus fleet with these smaller buses allows service to better match ridership in neighborhoods where narrow streets and lower peak ridership call for smaller buses, and to realize cost efficiencies that come from operating smaller vehicles.

The entire bus fleet has been equipped with security cameras since 2003 and the CTA continues to purchase new buses equipped with these cameras. The cameras help to deter vandalism and graffiti, and assist law enforcement in investigating incidents and catch perpetrators. In addition, new rail cars will come equipped with seven security cameras per car.

In May 2006, the Chicago Transit Board approved a contract for the manufacture and purchase of 406 new rail cars, with options that could bring the total purchase to 706 cars. The rail cars will replace the 2200-series Budd cars that were purchased in 1969-70 and the 2400-series Boeing-Vertol cars purchased in 1976-78.

Exhibit 4-2: **CTA Annual Ridership By Mode** (in millions)

	2003	2004	2005	2006	2007
Bus	291.8	294.0	303.2	299.2	301.6
Rail	181.1	178.7	186.8	197.0	204.4
Paratransit/Taxi	1.9	2.2	2.4	1.2	—
Total Ridership	**474.8**	**474.9**	**492.4**	**497.4**	**506.0**

Exhibit 4-3: **CTA Average Daily Ridership** (in thousands)

	2003	2004	2005	2006	2007
Weekday	1,437	1,426	1,482	1,584	1,603
Saturday	855	870	899	951	972
Sunday	570	582	621	653	652

Exhibit 4-4: **CTA Ridership and Miles** (riders and miles in thousands)

	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Ridership	492,404	497,436	505,944	514,545	523,292
Vehicle Miles	135,733	137,000	137,460	137,460	137,460
Passengers Per Mile	3.6	3.6	3.7	3.7	3.8

Upgraded features such as security cameras, aisle facing seating, and alternating current (AC) traction motor propulsion are included in the specifications.

New Services

In June, the Pink Line made its debut as the CTA's eighth rail line and the first new rail line since the Orange Line opened in October 1993. The new service provides a faster trip for customers from the West Side and near west suburbs to the central business district. The line serves 22 stations and makes all stops along 54th/Cermak branch to Polk station. At Polk, Pink Line trains cross over the Eisenhower Expressway and travel north along the recently renovated connector track above Paulina Street to the Green Line elevated structure along Lake Street. Trains then continue eastbound stopping at Ashland and Clinton stations before proceeding to the Loop where they travel clockwise on the inner track, making stops at all elevated stations before returning to 54th/Cermak on the same route westbound.

As part of service enhancement in the West side and near west suburbs, five new bus routes were created (three express routes and two local routes), four existing bus routes were extended, and routing and schedule improvements were made to four additional bus routes. These service enhancements provide additional transit options to all customers and the surrounding communities, and contribute to continued ridership growth in the region.

Capital Investments

The CTA spent $403 million on capital programs in 2005. The CTA is expected to spend more than $1.0 billion on capital projects in 2006 and 2007, combined (Exhibit 4-5).

Exhibit 4-5: **CTA Capital Statistics** (dollars in thousands)

	2003	2004	2005	2006	2007
CTA Total Capital Expenditures	$ 484,062	$ 457,699	$ 402,951	$ 579,300	$ 434,697
CTA Bus Vehicles	1,991	2,017	2,033	2,106	2,106
Average Age of Buses (in years)	9.5	8.9	9.4	8.2	9.4
CTA Rail Cars	1,190	1,190	1,190	1,190	1,190
Average Age of Rail Cars (in years)	20.0	21.0	22.0	23.0	24.0
Bus Routes Offering Lift Service	131	148	150	154	154
ADA Accessible Stations	66	72	72	76	82

The Brown Line Capacity Expansion project of $529.9 million began in 2004 and continued to progress throughout 2006. In August 2006, the fully renovated Kedzie and Rockwell stations were re-opened to customers for service. The station boasts a new glass station houses, new platforms, brighter lighting and accessible features including ramps, tactile edging and accessible gates. The station is also *ADA* accessible which brings the total number of accessible CTA rail stations to 74 out of 144, or 51 percent of the system.

The rehabilitation of the Dan Ryan branch of the Red Line for $283 million will be completed by the end of 2006. The completion will bring more reliable and efficient rapid transit service to the South Side of the city with the construction of two new substations, the installation of new contact rail, and upgrades to two other substations that will boost power to the branch. Improving power reliability and the delivery of that power are the most significant aspects of the project. Currently, the Red Line serves 45,000 customers each day.

Plans for a new downtown transit station also advanced in 2006. The Chicago Transit Board entered into agreements with The Mills Corporation and the City of Chicago to finance and develop a transit center at 108 North State Street, also known as Block 37, and new tunnel track connections between the Red and Blue Line subway routes. Under the development agreement, the CTA would provide direct rail service to Midway and O'Hare Airports with opportunities for service improvements to be phased in as funding becomes available.

Bus System

The CTA's aggressive campaign to upgrade its bus fleet includes a $95 million contract to purchase 265 New Flyer buses which includes 20 diesel electric hybrid buses that are powered by both diesel engines and electric motors. By including 20 hybrid buses, the CTA will be able to evaluate bus performance against Chicago's extreme weather conditions and determine if hybrid buses are suitable additions to the CTA's fleet.

In 2006, the first of 265 40-foot, low-floor, accessible, air conditioned New Flyer buses arrived. The new buses replace existing 5300-series Flxble buses in CTA's fleet which was purchased in 1991. Each New Flyer bus produces 60 percent fewer emissions than the bus it replaces. The new buses are equipped with security cameras, bike racks, air conditioning, automated announcements and wheelchair ramps. An additional feature includes strap hangers for standing customers, a rear door easy-touch feature for exiting, and a new comfortable seat design.

The CTA launched the Bus Tracker pilot in the summer of 2006. The pilot program tracks CTA buses in real time and provides estimated bus arrival times for customers. Global positioning satellite (GPS) technology is used to identify bus locations and provides that information via a dedicated web site www.ctabustracker.com and a bus shelter display.

Currently, the CTA is testing the pilot program on the #20 Madison bus route and one bus shelter located on the westbound on Madison at Jefferson. The pilot is scheduled to end in December 2006. The results of the pilot and the availability of funding will determine whether the Bus Tracker system will be expanded to additional routes.

Rail System

Work continues on the track and signal renewal project at Clark Junction, the busy location where the Brown, Red and Purple Line trains converge just north of Belmont on the city's North Side. On a typical weekday, nearly 1,000 trains pass through the corridor with approximately one train every 50 seconds during rush periods. The upgrade to the 100 year old junction will bring new signals and additional connections between tracks to allow trains use all four tracks and to improve options for operating trains around construction sites, disabled trains or equipment problems.

Construction began in October to replace an aged viaduct on Church Street in Evanston. Located one block north of the Purple Line Davis station, the existing viaduct at Church Street has deteriorated over time with exposure to the elements. Due to its condition, Purple Line trains must reduce speed when crossing the overpass. In addition to replacing the viaduct, the project includes the installation of new abutments, retaining walls, foundations, and new waterproofing and drainage systems.

Delivery of prototype rail cars is expected in 2008. Production of the base order of 206 is expected to begin in 2009 with delivery beginning in 2010. The CTA's most recent purchase of new rail cars was in the 1990s when 3200-series cars were purchased for the opening of the Orange Line, and to replace older cars on the Brown and Yellow Lines.

System-Wide Improvements

The CTA continued to invest in new technology to further improve service and safety. Through technology, the CTA was able to complete the installation of the infrastructure necessary to enhance communication capability in the Red and Blue Line subway system. This past summer, the first commercial wireless provider activated its service in the subway tunnels. Although the main purpose is to improve emergency communications capabilities in the subway, minimally increasing the investment lets riders use their wireless devices enhancing security and convenience. Today, only U.S. Cellular riders are able to use their wireless devices in the subway, however, CTA is working to add service providers to the system.

In 2006, the CTA completed a system-wide fiber optic expansion. The new system allows the CTA to connect security cameras to its Control Center and to the City's 9-1-1 Center. The link between the CTA's Control Center and the City's 9-1-1 Center included in the Office of Emergency Management Communication's larger Homeland Security grid that is designed to expand the use of surveillance cameras throughout Chicago. CTA announced last fall that all 11 stations on the 54th/Cermak branch had been networked and included in the link between the CTA's Control Center and the City's 9-1-1 Center. Today, 464 security cameras at 27 stations are a part of the network. By the end of this year, the CTA will have 1,200 cameras at 45 stations hooked up to the network, and the numbers will continue to increase as all 144 rail stations are connected to the system.

The CTA received recertification of its International Standardization Organization (ISO) 9001:2000 registration. The CTA is one of only two transit agencies in the U.S. to be so certified.

Partnerships

The CTA works to maintain partnerships with many groups. The CTA's efforts to strengthen its relationship with its riders have been illustrated in previous sections. The CTA also works to create partnerships with its workforce, its security agencies and vendors, the mobility impaired, the City of Chicago, and the Illinois General Assembly.

Vendors

The CTA Purchasing Department pursues an aggressive Disadvantaged Business Enterprise (DBE) program to encourage minority participation in CTA contracts. The CTA has set a minimum level of 30 percent for minority participation for projects requiring outside vendors.

The CTA has also pursued cost savings in its purchasing practices by finding the best prices for the good and services procured. These efforts have saved the CTA several million dollars over the past few years.

City of Chicago

The CTA maintains a strong working relationship with the City of Chicago and various suburban entities. It continues to work with law enforcement agencies in both Chicago and the suburbs to reduce crime on its bus and rail systems. The CTA has also worked with the City of Chicago on various real estate matters, especially rail station construction. And it has worked with Chicago's Health and Human Services Department to reduce the number of homeless individuals using trains for shelter.

Over the past decade, the City of Chicago has provided the CTA $828.5 million in capital improvements. This substantial investment in the CTA's infrastructure includes the Roosevelt Connector project, replacement of the elevated span at Wacker Drive and Wells Street,

the renovated Chicago Avenue station on the Red Line, the elevated Library–State/Van Buren station, and the rehabilitation of the underground transfer tunnel that provides a pedway connection between the Red and Blue Line platforms at Jackson.

In 2007, Chicago Department of Transportation (CDOT) will begin renovation work on the Grand station on the Red Line. The renovation includes mezzanine expansion, platforms with glazed ceramic tile, and vaulted ceiling panels, additional turnstiles, and installation of new exit-only rotogates.

Legislators

State and federal funding has been crucial to the CTA's ability to rebuild its system. Specifically, Chicago Mayor Richard M. Daley, U.S. House Speaker Dennis Hastert, Governor Rod R. Blagojevich, the Illinois Congressional delegation, and the Illinois General Assembly have supported efforts to maintain and improve the infrastructure of CTA bus and rail systems. While federal legislators have made a financial commitment to the future of public transit, state and local legislators must identify the matching funds required to secure the federal funds. In 1999, the State established *Illinois FIRST*, a $12 billion matching program to improve the State's infrastructure, which included $2.1 billion for transit. The CTA received more than $1 billion of *Illinois FIRST* funding over four years for capital improvements to its rail and bus systems.

Budget and Financial Plan

The budget and financial plan submitted by the CTA for the current planning period, 2007 through 2009, conforms to the marks set by the RTA on September 15, 2006. The CTA's operating funding marks were set at $580.5 million for 2007, $654.9 million for 2008, and $771.9 million for 2009. Funds to balance the budget and two-year financial plan include securing additional funding ("New Transit Funding"). If this additional subsidy is not obtained, the CTA will have to take actions to balance its budget that may include, but are not limited to, transferring federal capital funds to operations and adjusting service levels and fares. The CTA's recovery ratio was set at 52.0 percent for 2007 by the RTA, which the CTA has met. The CTA's statement of revenue and expenditures, which includes the recovery ratio, is presented in Exhibit 4-6. The following section portrays the outlook for the 2007-2009 planning period.

System-Generated Revenue

Total system-generated revenue is expected to increase from $526 million in 2005 to $570 million in 2009. This is an increase of $44 million over the four-year period, or an average annual increase of 2.0 percent (Exhibit 4-7). System-generated revenue includes passenger revenue, reduced fare reimbursement, and other revenue. Passenger revenue comprises 85

Exhibit 4-6: **CTA 2007 Budget and 2008–2009 Financial Plan** (dollars in thousands)

System-Generated Revenue	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Passenger Revenue	$ 417,424	$ 463,808	$ 468,334	$ 475,524	$ 483,398

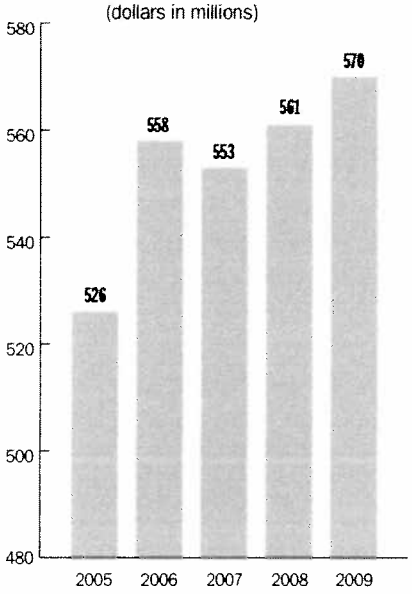
(1) The budget figure includes a budget adjustment of $108 thousand and lowers costs to achieve the RTA funding marks. (2) Items excluded from expenditures are for security. In-kind revenue and expenditures from the CPD of $22 million are included. Exhibit 3-31 in the RTA section provides the details for this calculation.

Exhibit 4-7: **CTA System-Generated Revenues** (dollars in millions)



percent of the CTA's total operating revenue. The reduced fare subsidy and other revenue account for the remaining 15 percent (Exhibit 4-8).

Passenger Revenue

Passenger revenue is expected to increase from $417 million in 2005 to $483 million by 2009, a $66 million increase or an annual growth rate of 3.7 percent (Exhibit 4-9).

Higher ridership and a fare increase accounts for the projected growth in fare revenue for 2006. It is estimated that an additional 5.0 million trips will be provided, which is a 1.0 percent increase over 2005 ridership. In January 2006, the CTA increased the base fare for cash riders (no transfer allowed) from $1.75 to $2.00 per ride. Fare revenue is estimated at $468.3 million in 2007, which is $4.5 million higher than the 2006 forecast. The CTA fare structure is shown in Exhibit 4-10.

(1) Reduced fares are for children 7 through 11 years old. Grade and high school students with CTA riding permit. Seniors age 65+ and riders with disabilities with RTA reduced fare riding permit.

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the CTA for the cost of providing reduced fares for the elderly, students, and the disabled. Fare reimbursement is included as revenue and became available in July 1989. In the State's 2007 fiscal year budget, the appropriation for reduced fare for the RTA region is $36.3 million. These funds are distributed to the Service Boards according to the percentage of reduced fare revenue that each has generated. The CTA estimates its share at $32.0 million per year from 2007 through 2009.

Other Revenue

This category includes advertising, charters, concessions, contributions from local governments, investment income, the funding for paratransit services under contract, and other revenue (Exhibit 4-11). Also included are essential contributions from the City of Chicago and Cook County. Annual funds provided by the City are $3 million and the County contributes an additional $2 million. Revenue for this category was approximately $76 million in 2005 and is expected at $55 million in 2009. Reasons for this decrease include a loss in the grant revenue that occurred when CTA paratransit operations transferred to Pace in 2006.

Operating Expenditures

Total operating expenditures are forecasted to increase from $1,021 million in 2005 to $1,342 million in 2009. This $321 million increase represents a 7.1 percent compound annual growth rate (Exhibit 4-12).

For 2006, operating expenditures are estimated at $1,082.2 million. This is 5.9 percent higher than 2005 actual expenditures of $1,021.4 million. The increase is due mainly to higher labor and pension costs, fuel, and a provision for damages and litigation.

Budgeted 2007 expenditures of $1,133.2 million are 4.7 percent higher than 2006 projections. The financial projections for 2008 and 2009 show operating expenditures of $1,215.9 million and $1,341.9 million, respectively. The 2008 financial projection represents an increase of 7.3 percent over the 2007 operating budget. The 2009 financial projection represents an increase of 10.4 percent over the 2008 financial plan.

Expenditure Elements

The 2007 operating expenditure elements include labor, material, fuel, power, insurance and claims, security, paratransit services, and other costs. Labor expenditures, including fringe benefits, represent 76 percent of the CTA's total expenditures. Base wages represent about two thirds of that total, while fringe benefits, which are primarily medical insurance and pension costs, represent the remaining one third. Materials, used primarily for maintenance, are 7 percent of total expenditures. Fuel and power represent 7 percent of the CTA's expenditures. Security, insurance and claims represent 5 percent of total spending. Other expenditures comprise the remaining 5 percent. The other expenditure category includes items such as lease, utility, and contractual services (Exhibit 4-13).

Exhibit 4-12: **CTA Total Operating Expenditures**
(dollars in millions)

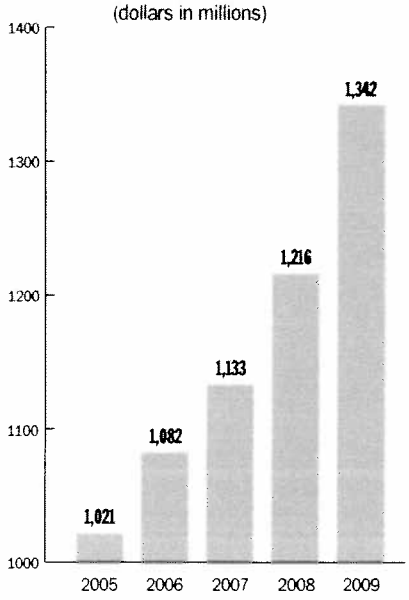

Exhibit 4-11: **All Other Revenue** (dollars in thousands)

All Other Revenue	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Advertising, Charter and Concessions	$ 23,963	$ 24,771	$ 24,990	$ 25,470	$ 25,970
Investment Income	5,432	11,018	12,120	12,726	13,362
Contribution from Local Government Units	5,000	5,000	5,000	5,000	5,000
All Other Revenue	42,024	21,545	10,250	10,250	10,250
Total All Other Revenue	**$ 76,419**	**$ 62,334**	**$ 52,360**	**$ 53,446**	**$ 54,582**

Labor Costs

Labor expenditures are expected to increase from $714 million in 2005 to $1,038 million in 2009. This is a $324 million increase, or a 9.8 percent compound annual growth rate (Exhibit 4-14). Labor expenditures for 2006 are estimated at $769.2 million, which is $54.9 million more, or 7.7 percent higher, than in the prior year. This increase is due to the rising costs of health care, workers compensation, and wages. Labor expenditures are forecasted to be $850.3 million in 2007, an in-

Exhibit 4-13: **2007 CTA Operating Expenditures** — $1,133 million

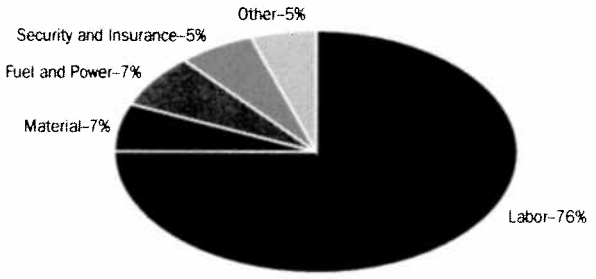

Exhibit 4-14: **CTA Labor Expenditure Growth** (in thousands)

	2005	2006	2007	2008	2009
Labor Expenditure	$ 714,336	$ 769,163	$ 850,332	$ 915,648	$ 1,037,780
% Change from Prior Year	5.0	7.7	10.6	7.7	13.3

crease of $81.1 million or 10.5 percent higher than 2006. This increase is due to higher wages and benefits such as health care, pension, and FICA. Healthcare costs continue to increase at a double-digit growth rate. In addition, the CTA pension plan is severely under funded. With a current funding ratio of 32.0 percent, actuarial projections show that the fund will deplete its assets by 2012 without additional funding and substantial changes to the plan. Changes to the plan require legislative intervention or union agreement. There are no changes in the number of budgeted positions for 2007 (Exhibit 4-15). Overall, labor expenditures of $915.6 million are projected to rise by 7.7 percent in 2008 and then increase to $1,037.8 million in 2009, a 13.3 percent change.

Material

The material category covers all repair parts for buses, trains, track, structure and signals in the system. Material expenditures are forecasted at approximately $75.3 million in 2006, $77.9 million in 2007, $79.0 million in 2008, and $80.0 million in 2009. The increase in material expenditures is mainly due to increased prices for petroleum-based products such as tires. To help manage these costs, a Maintenance Management Information System (MMIS) will be implemented. The system will track the life cycle of vehicle parts, warranties and collect other vehicle information that will improve internal management.

Fuel

Assuming 24.2 million gallons at $2.27 per gallon, the CTA estimates fuel expenditures at $55.0 million for 2006 (Exhibit 4-16). The cost per gallon is higher than 2005 actual results.

The CTA forecasts the need for 24.5 million gallons of diesel fuel in the 2007 budget. Due to the uncertainty surrounding energy prices, the CTA estimates that the cost of fuel will be about $2.50 per gallon. The 2008 and 2009 financial projections hold diesel fuel costs at $2.94 per gallon each year.

Power

Electric power expenditures for the rail system are forecasted at $21.6 million in 2006. This change largely reflects service increases throughout the system. Expenditures for power increase by $6.5 million in 2007, higher by $0.9 million in 2008 and higher by $1.0 million in 2009. The $6.5 million or 30 percent increase in 2007 reflects the newly deregulated electricity market in Illinois.

Insurance and Claims

The Provision for Injuries and Damages represents the expenditure for claims and litigation for injuries and damages that occur on CTA property, or with CTA vehicles.

As shown in Exhibit 4-17, the CTA expects fewer bus and rail accidents per 100,000 miles through 2007. The 2006 forecast is $53.0 million and is $21.5 million more than the prior year. The CTA utilized increased fare revenue to fully fund the reserve for injuries and damages as projected by the 2005 actuarial analysis. The 2007 funding is $25.0 million versus an estimate of $53.0 million for 2006. The higher funding level in 2006 allowed CTA to decrease the annual funding for 2007. In 2008 and 2009, the CTA projects these expenditures to be $28 million.

Purchase of Security Services

Security is strategically deployed throughout the CTA system to provide 24-hour coverage, seven days a week. Security services are provided by the Chicago, Evanston and Oak Park Police departments, the Wells Fargo Guard Service and National K-9 Security.

Exhibit 4-15: **CTA Budgeted Positions**
(in thousands)

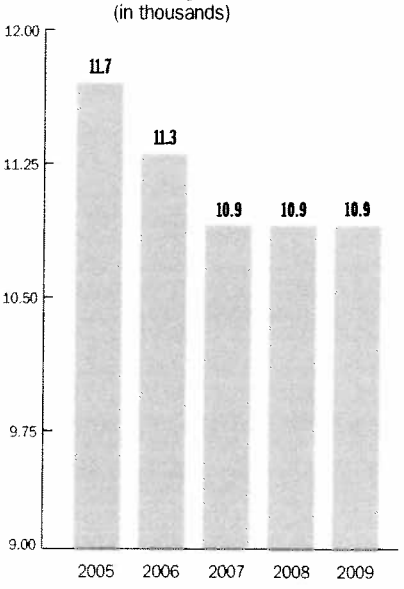

Exhibit 4-16: **CTA Fuel Cost Per Gallon** (cost and gallons in thousands)

	2005	2006	2007	2008	2009
Fuel Cost	$ 45,788	$ 55,003	$ 61,233	$ 72,000	$ 72,000
Gallons	24,517	24,200	24,500	24,500	24,500
Cost per Gallon	$ 1.868	$ 2.273	$ 2.499	$ 2.939	$ 2.939

Exhibit 4-17: **CTA Claims and Safety Statistics** (dollars in thousands)

	2005	2006	2007
Claims	$ 31,500	$ 53,000	$ 25,000
Bus Accidents per 100,000 Miles	6.29	6.20	6.00
Rail Accidents per 100,000 Miles	0.13	0.12	0.11

Expenditures are forecasted at $31.0 million in 2006, which is a slight decrease from prior year (Exhibit 4-18). The 2007 budget is $35.3 million and for 2008 and 2009, security expenditures are expected to increase $0.9 million. These increases are due to the heightened need for security since September 11, and the Madrid and London bombings.

Purchase of Paratransit Services

Until July 1, 2006, the CTA provided door-to-door paratransit service for passengers who are unable to use mainline transit services. This service was provided by three private carriers and various taxi companies. To use this service, a customer must be certified by the RTA. The CTA provided riders with disabilities two types of service: special services and the Taxi Access Program (TAP). Higher demand for the door-to-door service provided by three carriers and by taxicab companies in the CTA's paratransit program continued to increase this expenditure (Exhibit 4-19).

Exhibit 4-18: **CTA Purchase of Security Services** (dollars in millions)

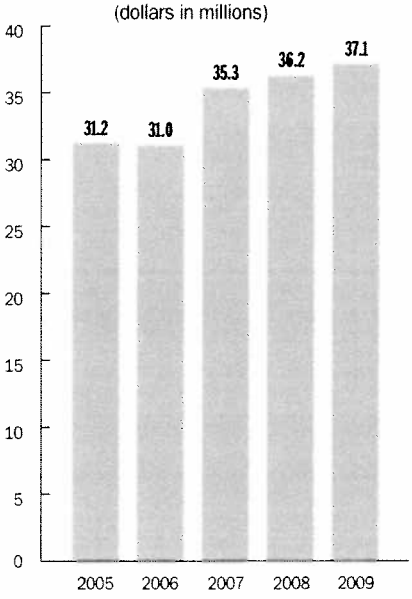

Exhibit 4-19: **CTA Paratransit Cost and Statistics**

	2005	2006
Total Cost of Paratransit Services (in thousands)		
Paratransit	$ 44,928	$ 23,585
Taxi	8,329	3,784
Average Cost per Trip	22.18	22.87
Number of Trips (in thousands)		
Paratransit	1,770	905
Taxi	631	291
Average Cost per Trip by Mode		
Paratransit	$ 25.38	$ 26.06
Taxi	13.20	13.00

Expenditures for paratransit service are projected at $27.4 million in 2006, which is $25.9 million lower than the prior year due to transfer of paratransit services to Pace on July 1, 2006. Therefore, no expenditures are budgeted from 2007 through 2009.

All Other Expenditures

All other expenditures include utilities, rents, maintenance and repair, advertising, commissions, consulting, insurance, and other general expenditures. For 2006, $49.7 million is forecasted, which is $1.3 million, or 2.6 percent less than the prior year (Exhibit 4-20).

The 2007 budget is $55.3 million, which is higher than the 2006 estimate by $5.6 million. The increase is primarily due to inflation and increases in contractual services. Expenditures are forecasted to increase from 2007 levels in 2008 and 2009 as a result of inflation, which is also true for 2008 and 2009.

Deficit

System-generated revenue (fares and other revenue) total more than half of the CTA's operating budget, with the remainder (operating deficit) covered by public funding. The operating deficits are derived from total system generated revenue minus total operating expenditures. The deficit for the budget and two-year financial plan is $580 million, $655 million and $772 million, respectively (Exhibit 4-6).

Funding

RTA Sales Tax and RTA discretionary funding represent the major sources of public funds to the CTA and are usually less than half of the CTA's operating budget. The RTA Sales Tax is a primary source of the CTA's operating funding. The RTA retains 15 percent of the sales tax revenue, and distributes the remaining 85 percent to the Service Boards. The CTA receives 100 percent of the RTA Sales Tax collected in Chicago and 30 percent of the sales tax collected in suburban Cook County. RTA discretionary funds for the CTA are expected to range between $164 million and $187 million from 2005 to 2009. Apportionments from the RTA's 15 percent share of the sales tax revenue and the State's public transportation fund (PTF) are the source of the RTA's discretionary funds.

Recovery Ratio

The CTA's recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2007, the CTA recovery ratio is 52.0 percent. The Region section provides the detailed recovery ratio calculation.

The following factors affect the recovery ratio for the 2006 estimate and 2007-2009 plans. First is the inclusion of $22 million of in-kind security services provided by the Chicago Police Department, which is included as both revenue and expenditure in the recovery ratio calculation. Second is the exclusion of additional security expenditures from the recovery ratio beginning in 2006. Finally, expenditures for paratransit are eliminated for 2007, 2008 and 2009 as all paratransit services were transferred to Pace effective July 1, 2006. The CTA's recovery ratio was 54.1 percent in 2005 and is expected to be 55.8 percent in 2006 (Exhibit 4-6).

2006 Budget Versus 2006 Estimate

The CTA expects a balanced budget in 2006.

Revenue

Revenue from fares is forecasted at $463.8 million and compares favorably to the budget by $37.3 million, or 8.7 percent (Exhibit 4-21). The higher fare revenue is due to increased ridership and the January 2006 base fare increase for cash paying customers. The average fare for 2006 is estimated at 93¢ or 5.6 percent higher than budget and is a result of the fare increase for customers paying cash.

The reduced fare subsidy is the State's reimbursement to the CTA for providing discounted fares to the disabled, the elderly, and students. The reduced fare reimbursement is $1.4 million favorable to budget. Ridership for reduced fare customers continues to exceed prior years.

Other revenue is expected to be $6.8 million favorable to plan. The categories listed below reflect this line item.

Contributions from local governments of $5 million are on par with budget. *The RTA Act* requires the City of Chicago to contribute $3 million and Cook County to contribute $2 million annually to the operations of CTA. Revenue from advertising, charter, and concessions is at par with budget.

Investment income is estimated at $11.0 million, which is $6.0 million more or 122.8 percent higher than budget. The CTA benchmarks its investments against the rates for the 90-day Treasury bond. Since the start of the year, interest rates for 90-day Treasury bonds have increased from 3.89 percent to 4.96 percent.

All other revenue is projected at $21.5 million, which is $0.8 million or 3.7 percent higher than budget. This is due to higher rental and parking revenue.

Expenditures

Calendar year 2006 operating expenditures are estimated at $1,082.2 million and are projected to be unfavorable to budget by $45.5 million or 4.4 percent. Expenditures for labor, material, fuel, and injuries and damages are expected to be over budget for the year. This is primarily due to higher energy and commodity prices that impacts the CTA's fuel and material expenditures. In addition, the CTA contributed an additional $20.0 million to the injuries and damages fund to meet the actuarial projection. Power, security, paratransit services and other expenditures are forecasted to finish under budget due to cost containment strategies implemented to ensure that the CTA balanced its budget in 2006.

Labor expenditures are projected at $769.2 million, which is $20.2 million or 2.7 percent above budget. The increase is related to the arbitration award. Wage rate increases under this award, when applied to all union employees, exceed amounts provided in the budget for three year period. Benefits (excluding paid time off) provided to the CTA's employees equal approximately 27 percent of the CTA's labor costs.

Material expenditures are forecasted at $75.3 million, which is higher than budget by $8.2 million. The increase in material expenditures is due to higher energy prices on building materials, vehicle replacement parts and other materials the CTA uses in day-to-day system maintenance.

Fuel expenditures for revenue equipment are expected to be $55.0 million at the end of 2006. This is $7.0 million

Exhibit 4-20: **CTA All Other Expenditures** (dollars in thousands)

All Other Expenditures	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan

Exhibit 4-21: **CTA 2006 Budget Versus 2006 Estimate** (dollars in thousands)

System-Generated Revenue	2006 Budget	2006 Estimate	Variance
Passenger Revenues	$ 426,522	$ 463,808	$ 37,286
Reduced Fare Subsidy	30,590	32,000	1,410
Other Revenue	55,517	62,334	6,817
Total Revenue	**$ 512,629**	**$ 558,142**	**$ 45,513**
Operating Expenditures			
Labor	$ 748,922	$ 769,163	$ (20,241)
Material	67,088	75,337	(8,249)
Fuel	48,000	55,003	(7,003)
Power	24,526	21,582	2,944
Insurance and Claims	33,000	53,000	(20,000)
Purchase of Security Services	35,335	31,000	4,335
Purchase of Paratransit Services	29,582	27,369	2,213
All Other	50,232	49,744	488
Total Operating Expenditures	**$ 1,036,685**	**$ 1,082,198**	**$ (45,513)**
Operating Deficit	**$ 524,056**	**$ 524,056**	—
Recovery Ratio %	**53.0**	**54.8**	**1.8** pts.

or 14.6 percent higher than budget. The 2006 budget assumed an average price of $2.00 per gallon for 24 million gallons. Fuel prices have been running above budget and are estimated to end the year at an average price of $2.27.

Electric power expenditures for the rail system are forecasted at $21.6 million or $2.9 million lower than budget. The decrease can be attributed to a warmer than average winter.

Expenditures for insurance, claims and litigation for injuries and damages that occur on CTA property or with CTA vehicles are forecasted at $53.0 million for 2006 which is $20.0 million more than budget. This is due to the CTA working to replenish its damage reserve fund. A 2005 actuarial report showed the fund to be under funded by approximately $20.0 million. Based on funding the reserve at the amount estimated by the actuaries during 2006, the CTA expects this expenditure to be lower in future years.

Security is deployed strategically throughout the system to provide 24-hour coverage, seven days a week. These services are provided by the Chicago, Evanston, and Oak Park Police departments and contracts with private security firms. Full year expenditures are estimated at $31.0 million, which is lower than budget. This lower spending level reflects the CTA's decision to utilize alternative security measures, such as increasing the number of CTA employees deployed to rail stations and the installation of additional surveillance cameras, to maintain a safe environment to riders. In addition to the services contracted by the CTA, the Mass Transit Unit of Chicago Police Department (CPD) continues to provide services to the CTA at an estimated cost of $22 million.

The purchase of paratransit services is estimated at $27.4 million and is $2.2 million less or 7.5 percent lower than budget. *ADA* paratransit trips are projected to finish the year at 1.2 million trips. This curbside service was provided by three carriers and taxicab companies. Effective July 1, 2006, all *ADA* paratransit services was transferred to Pace. Other services include utilities, rents, maintenance and repair, advertising, commissions, consulting, insurance, overhead allocated to capital jobs, and other general expenditures. The current forecast equals $49.7 million, which is slightly under budget.

Statutory Compliance

The *RTA Act* requires that each Service Board meet the six criterions detailed in the Region section for their budgets to be approved. The CTA budget, as submitted, meets all criteria.

Organizational Structure

The CTA organization chart is shown in Exhibit 4-22 and consists of the following divisions.

CTA Board

The CTA's governing arm is the Chicago Transit Board consisting of seven board members. The Mayor of Chicago appoints four board members who are subject to the approval of the City Council and the Governor. The Governor appoints three board members who are subject to the approval of the State Senate and the Mayor of Chicago.

The Citizens Advisory Board, the CTA Board Members, the Chief of Staff to the Chairman, and the Secretary of the CTA Board report to the Chairman of the Board.

General Counsel

The General Counsel handles appellate matters, claims and tort litigation, and workers compensation matters.

President

The President is the CTA's chief executive and is charged with executing the policy decisions made by the CTA Board of Directors and providing direction to the CTA staff as they work to fulfill the mission and goals of the Service Board.

Treasurer

The Treasurer manages cash and handles investment.

Office of Inspector General

The Office of Inspector General reviews and analyzes the integrity of financial, operating, and computer system activities and any other organizational activity that management requires. This office is also responsible for financial and general investigations.

Security and System Safety

Security and System Safety administers the Destination Safety program with aims to reduce employee and third party accidents and injuries.

Management and Performance

Communications and Marketing is responsible for marketing, media relations, identity development, and publications.

Employee Relations department is responsible in maintaining a high level of employee satisfaction and ensuring labor-management effectiveness. The department also administers labor contracts and grievances.

Finance is responsible for budgeting, general accounting, investment support, program development, and the management and control of property, grants, and funding.

The Government and Community Relations and Affirmative Action department monitors transit legislation that affects the CTA on both regional and national levels.

The Human Resources department includes recruiting, hiring, benefit services, medical services, and program compliance.

The Property and Real Estate Asset Management is responsible for the management of the CTA headquarters, the CTA's control center, and for the management of all properties leased by the CTA.

The Purchasing/Warehousing department includes inventory management.

The Technology Management department includes management information systems.

Transit Operations

Transit Operations, which represents the largest percentage of CTA employees, is responsible for bus and train operations, customer and paratransit services (prior to July 1, 2006), planning, security, control center, and training.

Bus and Rail Operations manages a fleet of 2,106 buses and 1,190 rail cars that cover 188,000 bus miles and 189,000 rail miles driven every day. They employ approximately 4,200 full-time equivalent bus operators and 1,300 rail operators that provide service to the customers.

The Control Center monitors passenger and facility security and maintains accident statistics and monitors environmental affairs. The Control Center operates 24 hours a day, 7 days a week.

The Planning department is responsible for developing routes and schedules that best synchronize the CTA capabilities with customer demand. Planning ensures that the highest level of service is attained.

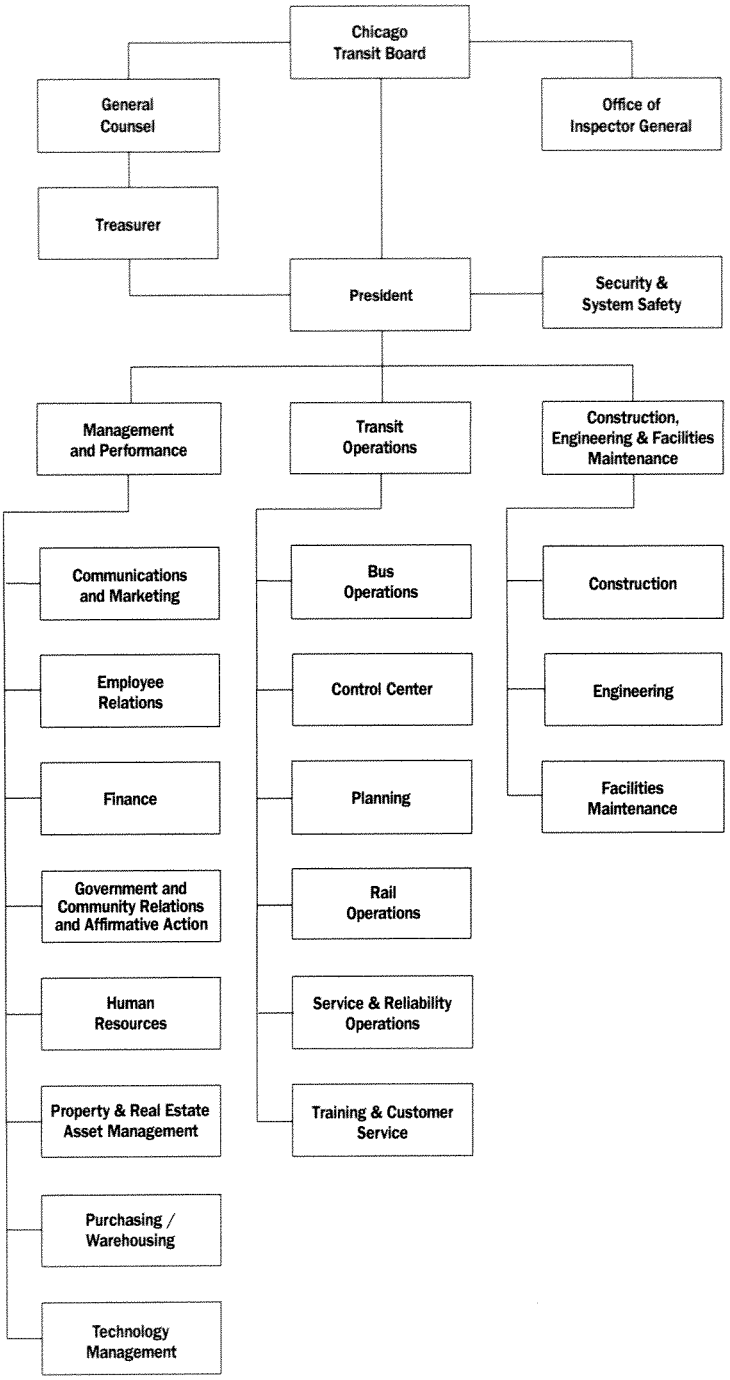
The Service and Reliability Operations provide preventive and corrective maintenance in accordance with the CTA's maintenance program.

The Training and Customer Service department provides employee training and customer information, researches ways to increase customer satisfaction, and forges business relationships.

Construction, Engineering and Facilities Maintenance

The Construction, Engineering and Facilities Maintenance department includes system maintenance support, power and way maintenance, rail station appearance, and facility maintenance.

Exhibit 4-22: **CTA Organization Chart**



5 Metra Operating Plan

Overview

Metra was formed in November 1983 as part of the reorganization of the RTA by the State of Illinois. Metra (the commuter rail division) is responsible for the day-to-day operations of the region's commuter rail system including fare and service levels, capital improvements, finances, passenger services, safety, and systems planning. Service is operated by private carriers under contract to Metra and by Metra directly.

Metra is governed by a seven-member board of directors; three of the directors are appointed by the suburban members of the Cook County Board. The County Board Chairmen of Kane, Lake, McHenry, and Will counties appoint two directors and the County Board Chairman of DuPage County appoints one director. The Mayor of the City of Chicago, subject to City Council approval, also appoints one director. The Chairman of Metra's board of directors must be one of the seven directors, and is appointed by the concurrence of five directors.

Service Characteristics

The Metra rail system is comprised of 11 separate lines, which run north, west, and south of the Chicago central business district. The system extends 565 route-miles to the limits of the six-county area and serves 237 local rail stations in more than 100 communities. Metra provides safe, reliable commuter rail service with an average weekday ridership of 310,800. Peak period ridership represents 78 percent of the total average weekday trips.

Metra operates 60 percent of its trains on weekdays, 25 percent on Saturdays and 15 percent on Sundays and holidays. The trains' operating speeds are 8 percent higher during a weekday peak period than during off-peak hours.

Metra serves the region on routes owned by Metra or freight carriers and through the purchase of service agreements with Union Pacific and Burlington Northern Santa Fe, the two largest freight carriers in the nation. The South Shore Line, operated by the Northern Indiana Commuter Transportation District (NICTD), is another Metra partner providing service between Chicago and South Bend, Indiana.

Metra's hub is the downtown Chicago business district. Four downtown terminals feed service to all of Metra's 11 lines. Today, approximately one-half of all commuter trips from the suburbs to downtown Chicago are made on Metra.

Ridership

Metra's ridership, excluding South Shore service outside Illinois, for the year 2005 totaled 77.0 million passenger trips (Exhibit 5-1). In 2006, Metra's ridership continues to grow with projected passenger trips of 82.3 million, exceeding the record ridership in 2001 of 79.2 million. For the January to October period, ridership in 2006 increased 5.4 percent over the comparable period in 2005. The completion of three New Start projects: the Union Pacific West, the SouthWest Service and the North Central Service expansions resulted in higher overall ridership in 2006. Ridership on these three lines increased by a total of 12.1 percent through October 2006. Ridership and service projections are summarized in Exhibit 5-2.

Metra has successfully marketed off-peak and reverse commute trips. However, Metra's primary customer base is work trips serving the Chicago downtown market. Surveys indicate that although an increased number of riders are using Metra for non-work related purpos-

Exhibit 5-1: **Metra Ridership** (in millions)

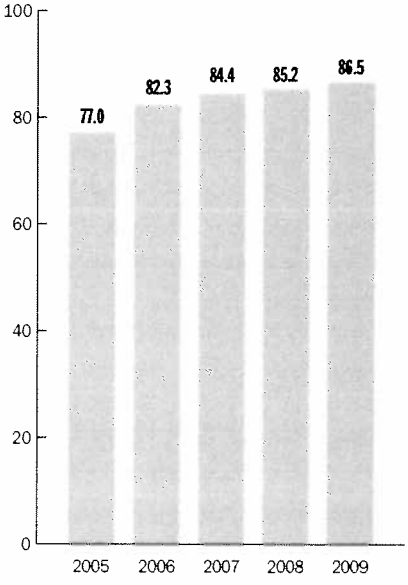


Exhibit 5-2: **Riders and Miles** (in thousands)

	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Total Riders	80,135	85,938	88,055	88,936	90,270
South Shore Elimination (1)	(3,151)	(3,605)	(3,668)	(3,705)	(3,760)
Total Metra Riders	**76,984**	**82,333**	**84,387**	**85,231**	**86,510**
Total Revenue Car Miles	33,319	35,824	35,920	36,047	36,003
South Shore Elimination (1)	(2,631)	(2,747)	(2,752)	(2,761)	(2,756)
Total Metra Revenue Car Miles	**30,688**	**33,077**	**33,168**	**33,286**	**33,247**
Total Passenger Miles	1,835,419	2,006,074	2,055,665	2,076,221	2,107,365
South Shore Elimination (1)	(96,751)	(110,960)	(112,902)	(114,031)	(115,742)
Total Metra Passenger Miles	**1,738,668**	**1,895,114**	**1,942,763**	**1,962,190**	**1,991,623**

(1) Ridership outside the Illinois service area is excluded from the South Shore operating statistics. 79 percent of South Shore ridership occurs outside the Illinois service area.

Exhibit 5-3: **Average Daily Passenger Loads by Service Period** (in thousands)

Service Period	July 2001–June 2002	July 2005–June 2006	Change	% Change
Peak Direction	242	243	1	0.4
Reverse Peak	13	16	3	19.4
Midday	30	34	4	13.2
Evening	16	18	2	9.1
Total Weekday	**302**	**311**	**9**	**3.0**
Saturday	55	67	12	22.6
Sunday	32	39	8	24.3

es, work trips still account for more than 90 percent of all trips. Exhibit 5-3 compares 2001 and 2006 average daily load counts by service period.

Trains operating in the reverse-peak direction, during midday, and weekend periods have realized the greatest percentage gains. These gains are attributable to efforts taken by Metra to broaden its ridership base. Such efforts include Metra's weekend ticket, enhanced off-peak service, targeted promotion of service to suburban employers, marketing the service for travel to cultural and entertainment attractions, and Metra's *Bikes on Train* program. This program was implemented on June 1, 2005. In 2006, the program was expanded to allow three bikes in each diesel rail accessible car and two in each electric rail car.

Passenger loads on peak period, peak direction trains have realized a slight increase of 0.4 percent during the five-year period. For the January–October 2006 period, average monthly regional employment was up 2.0 percent from the same period of 2005. However, Metra's primary travel market is downtown Chicago and there are indications that downtown is not performing as well as the region as a whole. For example, downtown office occupancy rates averaged 83.4 percent for the third quarter of 2006, a decrease of one percentage point from 2005 and a decrease of 8.6 percent points from 2001.

Exhibit 5-4: **On-Time Performance**

Year	Delays	% On-Time
2001	6,287	96.8
2002	6,809	96.5
2003	5,627	97.1
2004	6,027	96.9
2005	7,260	96.3

Service Quality

To deliver on its objective, to provide service that is customer-driven, flexible and personalized, Metra knows that it must understand the needs and interests of its customers. Metra periodically conducts on-board surveys to measure various service attributes. Metra not only measures general rider satisfaction, but also collects information on what service attributes are considered the most valuable to attract and retain riders. This data provides direction for planning, scheduling and marketing activities. For example, Metra's goal to provide safe, reliable, clean and on-time service is directly derived from the most important service characteristics identified through these customer surveys.

Metra measures service reliability by on-time performance. A train delay is recorded if the train is more than five minutes late at the final destination compared to the schedule. Exhibit 5-4 presents system-wide annual on-time performance since 2001. Metra's on-time performance in 2005 was 96.3 percent.

To be responsive to changing customer needs, Metra continuously looks for ways to expand and improve its service within financial constraints.

Matching the supply of service to the demand is one means of maintaining system efficiency. Metra measures capacity utilization train-by-train, which allows it to track average daily passenger loadings by service period (see Exhibit 5-3) by line and to analyze trends. In addition, Metra monitors and reports trains with occupancy rates exceeding 95 percent. This information is valuable support for service change decisions.

Another more general measurement of system-wide effectiveness is made by relating the number of passengers to the number of miles of service, thereby calculating passengers per mile. Metra's passengers per revenue car mile ratio decreased from 2.76 in 2000 to 2.51 in 2005. In the case of a new service, the number of miles increases faster than ridership, thereby decreasing the passenger per mile ratio.

Metra strives to strike a balance between mile increases due to service expansions and passenger growth. The passenger per mile ratio in 2005 of 2.51 shows a decrease to 2.49 compared to the 2006 estimate. According to its 2007 budget, Metra estimates a ratio of 2.54, which is expected to increase to 2.60 by 2009 (Exhibit 5-5).

Another measurement, used to calculate whether costs are being contained and efficiency maintained, is cost per revenue car mile. This measure recognizes that costs tend to vary with the amount of service provided. As seen in Exhibit 5-6, this measurement shows that Metra has efficiently held expenditures in-line with cost increases, when compared to the Consumer Price Index (CPI).

The cost per passenger ratio measures cost effectiveness and is designed to examine how well vehicles are deployed to serve riders. As Exhibit 5-6 illustrates, Metra's cost per passenger ratio has outperformed the CPI.

Service Expansion

January 2006 marked the largest expansion of rail service in Illinois in decades with Metra's completion of three New Start projects. Metra completed these projects one year ahead of schedule and $50 million under budget.

The extension of the Union Pacific West (UP-W) Line to Elburn, and the expansion and extension of the SouthWest Service (SWS) to Manhattan, as well as the expansion of the North Central Service (NCS) resulted in a combined ridership increase of 12.1 percent through October on these three lines.

Metra currently has $2.5 billion in unfunded capital projects, including $880 million in local matching funds for four New Start projects that are authorized under the most recent Federal Transportation Act: the *Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU).* Transit in northeastern Illinois has had no major capital program since 2004, when money was available through the *Illinois FIRST* bond program. The state has yet to authorize a new bonding program to replace *Illinois FIRST.*

Metra Connects program includes the four projects authorized under *SAFETEA-LU:* the extension and capacity expansion of the UP-Northwest, the capacity expansion and upgrade of the UP-West, the creation of the SouthEast Service line, and the creation of the suburb-to-suburb STAR line. If funding is secured, Metra will expand even farther into the region, create better suburb-to-suburb connections and improve service efficiency through key infrastructure improvements.

Maintenance and Modernization

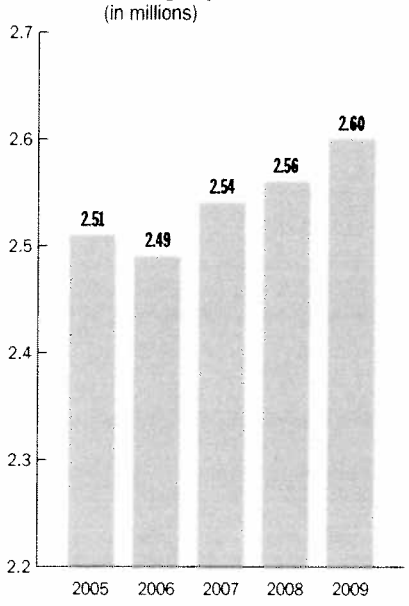
Since Metra was formed in 1984, Metra has replaced more than one million rail ties throughout the system, and replaced bolted rail with continuous welded rail, so that 93 percent of the Metra system has a smoother ride. Metra has also replaced 80 of the system's 132 interlockers and control points. Metra completed work on 69 percent of the system's crossings signals and spent more than $45 million upgrading highway/rail crossing signal interconnects.

Since 1984, Metra has expended more than $410.5 million on projects to renew and rebuild its yards, shops, and facilities. This figure does not include yard projects related to the three New Start projects.

Through two state bond programs passed in 1989 and 1999, Metra was able to purchase 56 new locomotives, rehabilitate 140 electric district passenger cars, and acquire 476 new bi-level cars and 26 new Highliner cars for the Metra Electric District. In addition, the funds enabled the rehabilitation of 27 locomotives and 75 other rail cars.

Since Metra began providing service in northeastern Illinois, Metra has rehabbed or rebuilt more than 85 percent of the system's stations and constructed 22 new stations. Parking throughout the system has been expanded by nearly 33,000 spaces for a total of more than 85,500 spaces.

Exhibit 5-5: **Passengers per Revenue Car Mile**
(in millions)



More than $70.8 million has been spent on station construction and improvement projects since 1983.

Safety and Security

Metra provides employee incentives to those regularly meeting goals. Key among these goals is workplace safety. A safe workplace correlates into a safe environment for Metra employees and Metra commuters.

Metra's investments in staff training programs and incentive plans have resulted in substantial dividends, including commuter satisfaction and industry recognition.

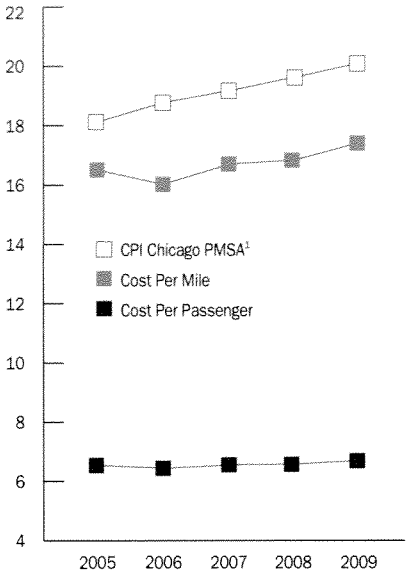
In addition to routine workplace safety training, Metra employees have also been trained to recognize and observe potential safety hazards in and around trains, stations and tracks. Metra is the only railroad organization in the nation to train all of its 4,000 employees in terrorism awareness and emergency procedures. As part of these investments, security cameras are being installed at several downtown train stations. Metra is also installing emergency signage involving LED technology in strategic locations throughout Metra's downtown terminals. The signs will alert commuters in advance to emergency situations and can display pre-programmed or free form messages to assist Metra in communicating with customers.

In addition, Metra installed a train tracking system using Global Positioning System (GPS) technology in 2001. GPS monitors the real time position and movement of all trains on Metra's routes.

GPS offers Metra's operations professionals a snapshot that details the performance of every train during an operational day. The real-time information supports and delivers a more effective response to any service disruptions or emergencies and leads to enhanced overall safety.

Metra also encourages and provides safety training and education opportunities within the community.

Exhibit 5-6: **Cost Efficiency** (in dollars)



(1) CPI (Consumer Price Index); PMSA (Primary Metropolitan Statistical Area).

Strategic Planning

Metra has joined with the RTA, the CTA and Pace suburban bus in the development of a strategic plan for public transit in the region. As part of this effort, the *Moving Beyond Congestion* project will team the region's transit providers with business, government, tourism and community groups to gather regional consensus on what resources the region requires over the next decade.

The strategic plan will examine the need for more public transit services to address the region's congestion problems; the lack of funding for capital projects; operating funding that has not kept pace with skyrocketing costs of fuel, electricity, security, and health care; and the diversion of capital funds to operating budgets by the region's transit operators.

Through a strategic plan, the RTA, Metra, CTA, and Pace hope to shape the region's future transit system by developing a set of practical steps that will allow each Service Board to achieve their goals. This includes pricing out each step and determining logical funding sources.

The ultimate goal of the Strategic Plan is to provide more quality travel choices and reduce the region's dependence on the automobile. At the same time, Metra plans to identify the actions and funding necessary to maintain the current system, while growing to meet future needs.

Budget and Financial Plan

Metra's 2007 operating budget was built with the expectation that New Transit Funding will be forthcoming. However, because there is no guarantee such funding will be available for operations next year, Metra identified specific capital projects that will be deferred if such funds are not provided. Although Metra does plan to defer capital projects if it does not receive this new source of funds, there are no plans for service cuts or fare increases in 2007.

Exhibit 5-7: **Metra 2007 Budget and 2008–2009 Financial Plan** (dollars in thousands)

System-Generated Revenue	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan
Passenger Revenue	$ 198,494	$ 219,300	$ 224,800	$ 227,048	$ 230,454

Link-Up	58.4	73.1	14.7	25.2
PlusBus	13.8	14.5	0.7	5.1

System-Generated Revenue

Total system-generated revenue is expected to increase from $261.1 million in 2005 to $297.9 million in 2009. This represents an increase of $36.8 million or a compound annual growth rate of 3.3 percent (Exhibits 5-7 and 5-8).

Metra's system-generated revenue has three major components: passenger revenue, reduced fare subsidy, and other revenue. Passenger revenue of $224.8 million comprises 79 percent of the total revenue budgeted for 2007 (Exhibit 5-9), which is 2.5 percent higher than the forecast for 2006 and 3.6 percent higher than the 2006 budget.

Passenger Revenue

Passenger revenue, or farebox revenue, is estimated to increase from $198.5 million in 2005 to $230.5 million by 2009. This increase of $32.0 million represents a 3.8 percent annual growth rate. Metra's passenger revenue increase is the result of continued strength in the local economy, the higher cost of gasoline, continued major road reconstruction projects, such as the Dan Ryan Expressway reconstruction project, and continued growth for the lines which had service expansions or extensions in 2006, such as North Central Service, Union Pacific West, and SouthWest Service Lines. Through October of 2006, ridership on the two lines most impacted by the Dan Ryan construction project increased 8.6 percent; the three New Start services increased 12.1 percent.

Changing rider and ticket trends, such as longer trip length and increased one-way conductor and weekend ticket sales (Exhibit 5-10), also contribute to the higher passenger revenue. The average trip length for the January–October period was 22.6 miles in 2006, which was 0.5 percent higher than for the same period in 2005.

Metra's fare structure is presented at the end of this section (Exhibit 5-14).

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 providing funds to reimburse Metra for the cost of providing reduced fares for the elderly, students, and persons with disabilities. The fare reimbursement is included in revenue and is contingent upon annual approval by the State. In 1999, the Assembly passed new reduced fare legislation, which doubled the reimbursement level of previous years. This aid, which totals approximately $3.1 million in 2007, is expected to stay constant during this planning cycle.

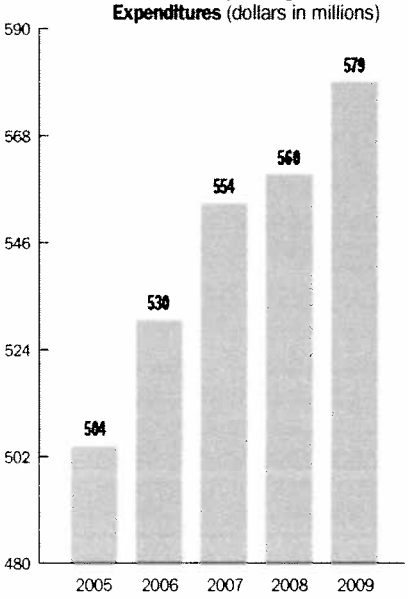
Other Revenue

The other revenue category represents 20 percent of Metra's total revenue for 2007. The components of this category are investment income, joint facility and lease revenue, advertising income, capital credits, and miscellaneous non fare-generated income. The total other revenue category is expected to grow from $59.8 million in 2005 to $64.3 million in 2009, which is a 1.8 percent annual growth rate

Operating Expenditures

Total operating expenditures are forecast to increase from $503.6 million in 2005 to $578.5 million in 2009. This $75.0 million increase represents a 3.5 percent compound annual growth rate (Exhibit 5-11).

Exhibit 5-11: **Metra Total Operating Expenditures** (dollars in millions)



Metra's 2007 operating expenditures of $554.0 million are projected to grow by 4.5 percent from the 2006 estimate.

In 2008 and 2009, total expenditures will increase by 1.1 percent and 3.3 percent respectively, compared to the previous year (Exhibit 5-7). Inflation is the major contributing factor.

Expenditure Elements

The components of operating expenditures are transportation, maintenance, administration and pension, diesel fuel and electricity, security, health insurance and all other, including claims and risk management, regional services and downtown stations. Metra's 2007 total expenditures breakdown is transportation 26 percent, maintenance 33 percent, administration and RTA pension 7 percent, fuel and electricity 14 percent, security 3 percent, health insurance 9 percent, and all other 8 percent. (Exhibit 5-12).

Transportation

This category includes the functions and activities directly responsible for the operation of the commuter trains. The major functions include train and engine crew work, dispatching, tower operations, ticket sales, police and security services, employee safety, and supervisory support. The main objective of this area is to run service consistent with the published train schedules in a safe and efficient manner and in accordance with federal and state regulations.

Transportation expenditures are expected to increase from $137.7 million in 2005 to $151.7 million in 2009. This increase of $14.0 million represents a 2.4 percent compound annual growth rate (Exhibit 5-7).

Maintenance

This category includes two types of activities: maintenance of way and maintenance of equipment. Maintenance of way activities include the maintenance of track, structures, communications and facilities to preserve operational safety, reduce travel times and service interruptions, and increase passenger comfort. Maintenance work is concentrated on safety inspections and short-term projects to safeguard overall track and structure conditions.

Maintenance of equipment activities includes regular repairs, inspection and preventive maintenance on passenger train equipment to ensure that this equipment is safe and in good working order to meet train schedules and passenger demand for seating.

Maintenance expenditures are expected to increase from $176.1 million in 2005 to $193.6 million in 2009. This $17.5 million increase represents a compound annual growth rate of 2.4 percent (Exhibit 5-7).

Maintenance programs are being expanded to meet the needs of Metra's growing rail car fleet, as well as to satisfy increased federal safety requirements.

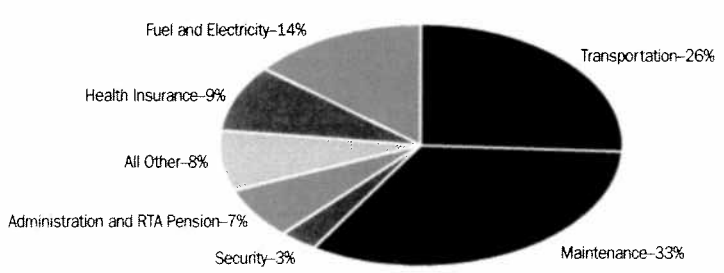
Administration and Pension

Administration activities include general support functions for the organization to ensure overall corporate goals and regulations are met. Administrative activities include human resources, labor management committee, information systems, training, accounting and other support areas. Management of the Metra owned and operated rail services are also included in this category.

Administration expenditures are expected to increase from $32.2 million in 2005 to $34.1 million in 2009. The $1.9 million increase represents a compound annual growth of 1.4 percent.

Pension expenditures are projected to increase from $3.5 million in 2005 to $5.6 million in 2009. This $2.1 million increase represents a compound annual growth rate of 12.7 percent. The Metra contribution to the RTA pension of $4.8 million for 2007 is $1.1 million higher than for 2006 (Exhibit 5-7).

Exhibit 5-12: **2007 Metra Expenditures** — $554.0 million



Diesel Fuel and Electricity

Diesel fuel is one of the most volatile components of the operating expenditures. Diesel fuel averaged $1.69 per gallon in 2005 totaling to $40.8 million and was budgeted at $1.90 per gallon in 2006 to total $49.2 million. Metra is estimating an average price of $2.17 per gallon in 2006 for a total cost of $55.2 million, $6.0 million more than the 2006 budget. Metra is projecting an average price of $2.30 per gallon for 2007 for a total of $59.6 million or 21 percent over the 2006 budget. Metra is projecting diesel fuel prices to decline to $2.00 per gallon on average in 2008, then rise to $2.10 per gallon in 2009.

Diesel fuel costs are expected to increase from $40.8 million in 2005 to $54.4 million by 2009. This $13.6 million increase represents a compound annual growth rate of 7.4 percent.

In 2007, electric power will be deregulated, and Metra estimated motive power and electric utility costs to increase by $5.6 million or 39 percent over the 2006 estimate. Cost increases are expected to moderate in 2008 as costs of $20.5 million are 2 percent higher than the 2007 budget. Expenditures of $21.7 million in 2009 are up 6 percent compared to the previous year.

Electric power is projected to increase from $12.2 million in 2005 to $21.7 million in 2009. This $9.5 million increase represents a compound annual growth of 15.4 percent (Exhibit 5-7).

Security

Security has become a significant concern for Metra as it seeks to safeguard riders and employees alike. This expenditure category includes police and contract security services as well as planning, coordination, and training with other agencies. For 2007, the budget is $17.0 million, which is 22 percent above the 2006 estimate of $14.0 million. Security expenditures are not expected to exceed 2007 levels in 2008 and 2009 (Exhibit 5-7).

Health Insurance

Metra's health insurance costs for 2006 were lower than budgeted due to lower cost plans and lower than anticipated premiums. Health insurance costs for 2007 of $52.1 million are assumed to increase significantly (6.4 percent) over 2006, with more moderate annual growth in 2008 and 2009 (Exhibit 5-7).

All Other

This expenditure category includes risk management and claims, regional services and downtown stations.

Expenditures for risk management and claims are expected to increase from $16.7 million in 2005 to $17.6 million by 2009. This $0.9 million increase represents a compound annual growth rate of 1.3 percent.

Metra is also responsible for setting fare and service levels, capital improvement planning and oversight, and service planning. Expenditures for these functions are included in the regional services and downtown stations category.

Expenditures in this category are expected to increase from $22.9 million in 2005 to $26.5 million by 2009. This $3.6 million increase represents a compound annual growth rate of 3.7 percent (Exhibit 5-7).

Deficit

The operating deficit is derived from total system-generated revenue minus total operating expenditures. Metra's 2007 budget deficit is $268.9 million (Exhibit 5-7). This deficit is offset by public funding to reach a balanced budget.

Funding

The RTA Sales Tax is the major source of public funds used to cover the budgeted operating deficit. By statute, the RTA retains 15 percent of the sales tax receipts and passes the remaining balance of 85 percent to the Service Boards. Of this remaining amount, Metra receives 55 percent of the RTA Sales Tax dollars collected in suburban Cook County, and 70 percent of the RTA Sales Tax collected in the collar counties. Metra's budgeted statutory sales tax receipts in 2007 are $257.4 million (Exhibit 5-7).

Exhibit 5-13: **Metra 2006 Budget Versus 2006 Estimate** (dollars in thousands)

System-Generated Revenue	2006 Budget	2006 Estimate	Variance
Passenger Revenue	$ 217,092	$ 219,300	$ 2,208
Reduced Fare Subsidy	2,998	3,000	2
Other Revenue	53,330	51,405	(1,925)
Total Revenue	**$ 273,420**	**$ 273,705**	**$ 285**
Operating Expenditures			
Transportation	$ 140,674	$ 140,637	$ 37
Maintenance	180,112	179,718	394
Administration	32,033	31,997	36
Risk Management and Claims	17,321	16,510	811
Regional Services and Downtown Stations	24,127	24,708	(581)
Diesel Fuel	49,222	55,200	(5,978)
Security	21,000	13,970	7,030
Health Insurance	54,053	49,011	5,042
Pension	3,736	3,736	—
Electricity	13,501	14,470	(969)
Total Expenditures	**$ 535,779**	**$ 529,957**	**$ 5,822**
Operating Deficit	**$ 262,359**	**$ 256,252**	**$ 6,107**
Recovery Ratio %	**55.0**	**55.0**	—

Recovery Ratio

Metra's recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2007 Metra's recovery ratio is 55.0 percent. The RTA section provides a detailed recovery ratio calculation (Exhibit 3-31).

Statutory Compliance

The *RTA Act* requires that each Service Board meet six criteria, which are detailed in the Strategy section, for Board approval of its budget. The Metra budget meets each of these criteria.

2006 Budget Versus 2006 Estimate

Total revenue is expected to finish $0.3 million favorable to budget for 2006. Passenger revenue is projected to be favorable to budget by $2.2 million or 1.0 percent due to higher ridership. Other revenue is expected to be unfavorable to budget by $1.9 million due mostly to lower capital credits.

Expenditures are forecast to finish $5.8 million, or 1.1 percent favorable to budget for 2006. Expenditures such as transportation, maintenance, and administration were close to budget. However, fuel exceeded budget by $6 million or 12.1 percent, while security was $7 million or 33.5 percent under budget. Exhibit 5-13 details the variance between the 2006 budget and 2006 estimate.

Fare Structure

Commuter rail fares are based upon travel between designated fare zones. These zones are set at five-mile intervals beginning at each rail line's downtown Chicago station. The zone system does not apply to the South Shore fares, set by the Northern Indiana Commuter Transportation District (NICTD).

A uniform base fare is charged for travel within a zone and increments are added to this base fare as fare zone boundaries are crossed. The base fare is $1.95 for a one-way trip. The incremental charge is 40¢ or 45¢ for additional zones (Exhibit 5-14).

Organizational Structure

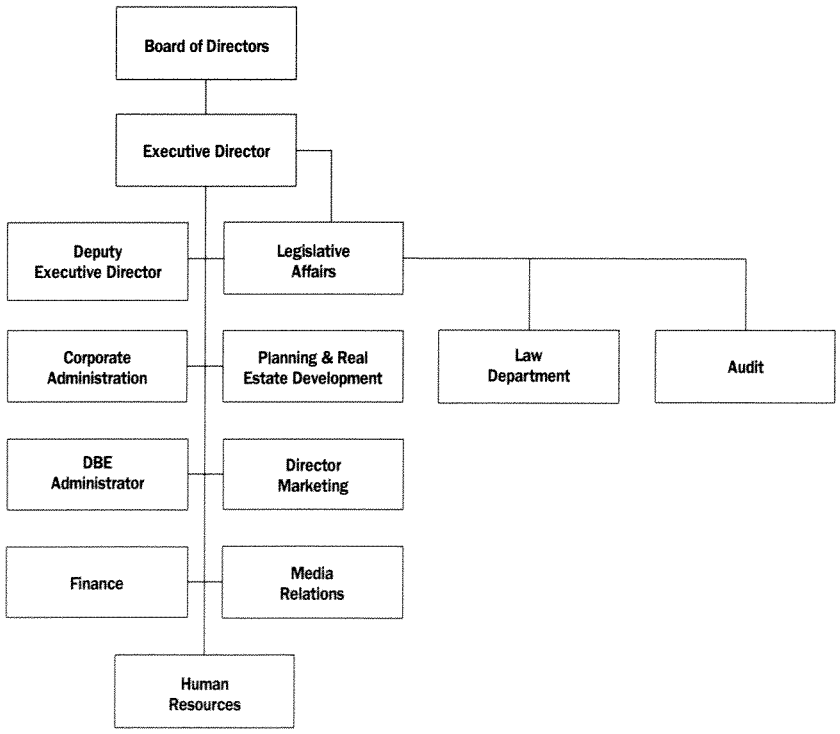
Metra's administrative organization chart is presented in Exhibit 5-15.

Exhibit 5-14: **Metra Ticket Pricing Formula**

Ticket Type	Period of Validity	Number of Rides	Pricing Basis
Monthly*	Calendar Month	Unlimited	27.0 times one-way fare
10-Ride*	One Year	Ten	8.5 times one-way fare
One-Way*	One Year	One	Base fare plus increments
Weekend	Saturday/Sunday	Unlimited	Flat rate—$5

(*) These ticket types are offered at a reduced rate to senior citizens, persons with disabilities, children, and students through high school traveling to and from school. Military personnel in uniform are entitled to reduced one-way ticket rates. The base fare for a one-way ticket is $1.95.

Exhibit 5-15: **Metra's Organization Chart**



6 Pace Operating Plan

Suburban Service

Overview

Pace was formed in 1983 as part of the reorganization of the Regional Transportation Authority (RTA), and began service in 1984. A 12-member board of directors, made up of current and former village presidents and mayors, governs Pace.

Beginning July 1, 2006, Pace assumed operating responsibility for all paratransit service in the RTA region. Pace's regional *ADA* paratransit service is discussed separately later in this section.

Service Characteristics

Pace's mission is to provide efficient well-integrated transportation services that meet the travel needs of the suburban Chicago area. Effective suburban mobility supplies line-haul and community-based services that provide access between both nearby and distant origins and destinations. To attract riders in an automobile-oriented market requires coordination of infrastructure, service, information, and travel demand. Achieving this mission will also require the continued restructuring of Pace's current fixed-route service.

Pace's suburban service area measures 3,446 square miles. The suburban area is divided among the six counties and incorporates 270 municipalities. Transportation needs in this broad area are as unique as the individual communities Pace serves. Pace service includes approximately 160 regular routes, 55 feeder routes, 630 vanpool vehicles, 365 Pace-owned Dial-A-Ride paratransit vehicles, and various subscription, seasonal, and shuttle routes. The suburb-to-suburb travel market is the largest service area in the region and is primarily served by the automobile.

Employment and residential shifts outward from central business districts have resulted in longer commutes, greater single-occupant automobile use, increased traffic congestion, and declining air quality. Changing travel needs are the result of the growing suburban job market, welfare-to-work initiatives, and greater work-hour, workday, and work-location flexibility. However, increased support for smart growth, transit-oriented development, and environmental concerns have accompanied these trends. In light of these factors, Pace is working to better serve various suburban travel markets.

To attract more riders, Pace will need to gain consensus among a diverse group of stakeholders, communities, and organizations interested in transportation and smart growth; create viable community and regional partnerships; develop service plans for specific communities and groups of communities; and gain funding from local, regional, state and federal sources.

In April 2002, Pace unveiled a new long range comprehensive operating plan called *Vision 2020*. The plan outlines the goals and overall direction for Pace for the 21st century and a strategy to create a true suburban transportation network through route restructuring. *Vision 2020* also includes plans for transit signal priority, bus-only lanes, localized flexible transit services and regional transportation centers that provide coordinated links between the region's transit services.

Pace already works with 210 communities to plan, design, and deliver services. *Vision 2020* identifies nearly 100 service areas for further study in partnership with communities. To better support a service area that spans walkable suburban neighborhoods, satellite cities, and rural communities, Pace will expand its current offerings (e.g., fixed-route, commuter rail feeder, employer shuttle, and route-deviation services) and further customize the mix of tailored, flexible community-based services (e.g., demand response, curb-to-curb van service, and subscription routes) based on detailed studies of travel markets and local interests and conditions. *Vision 2020* addresses three service levels—low, medium, and high—which reflect the spectrum of population and employment density found in Pace's service area. To achieve high service levels at low cost, Pace will apply Bus Rapid Transit (BRT) features, limited stops, simple routes, frequent service, off-board fare payment, electronic next-stop announcements, traffic signal priority, and bus lanes on expressway/tollway and arterial line haul routes.

To develop an effective regional arterial and community-based transit system, Pace began route-restructuring initiatives in 2000. Consistent with *Vision 2020*, the goals of route restructuring include faster, more efficient, and more effective service, as well as an enhanced image of transit as an alternative to the automobile. Pace restructured routes in Elgin, along the Halsted Corridor, and in the vicinity of Orland Square Mall. In 2005, Pace completed its restructuring of eleven routes in North Shore communities to serve new trip generators, reduce transfers, and eliminate unproductive segments and route duplication.

Late in 2005, Pace implemented an initial round of service changes in the Aurora area as part of its restructuring efforts in the Fox Valley/Southwest DuPage region. Pace is investigating shuttle service options for employers located near Metra's North Central Service stations. Pace is redesigning service in southern and southwestern Cook County and all of Will County. In the next few years,

Pace plans restructuring initiatives in West Cook County/Elgin, North Lake County/McHenry County, and North/Northwest Cook County.

Pace is seeking to implement a regional Transit Signal Priority (TSP) program along major arterial routes. Implementation of the Harvey Transportation Center TSP initiative will improve the operation of the transit terminal and increase the reliability of Pace routes traveling along nearby 154th Street, US 6, and Halsted Street. Initially focusing on expanding Pace's existing express bus service, implementation of a suburban expressway/tollway service express bus network will connect major regional activity centers and park-n-ride lots. Pace's Bus Rapid Transit (BRT) Corridor Implementation will develop Pace's Arterial Rapid Transit Network for the Region (PARTNER) program. Integrated with Pace's express bus service, the PARTNER program will operate on major east-west and north-south arterials and utilize TSP and queue jump lanes to increase travel speed and route reliability.

Exhibit 6-1: **Pace Ridership** (in millions)

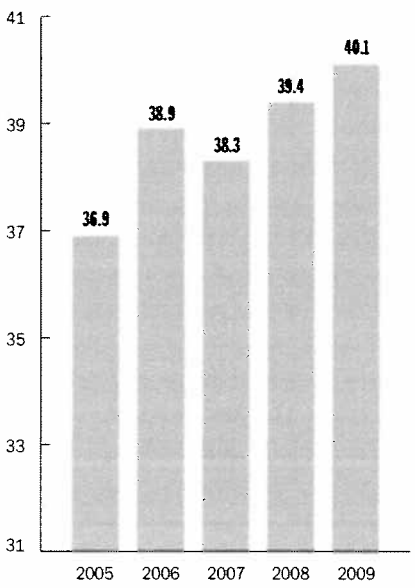


Exhibit 6-2: **Pace Suburban Service Passengers Per Mile**

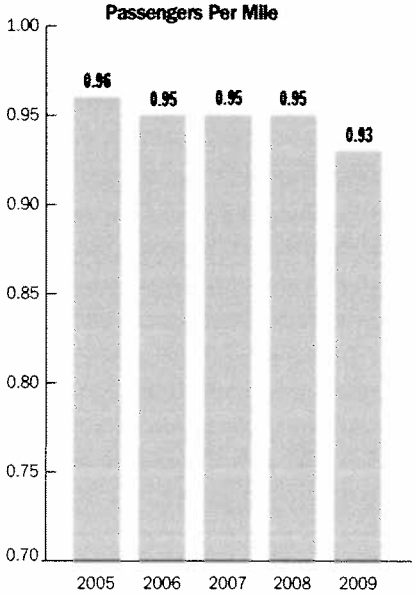


Note: In 2005 and 2006, ridership includes ADA paratransit service.

Ridership

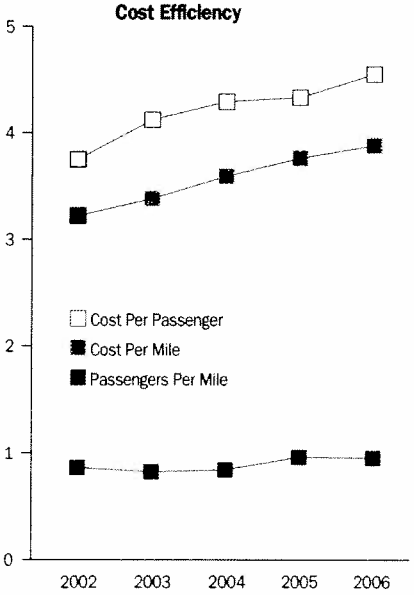
In 2005, Pace ridership of 36.9 million comprised suburban service ridership of 36.4 million and *ADA* paratransit ridership in Pace's suburban service area of 0.5 million. Pace expects 2006 ridership of 38.9 million, including suburban service ridership of 37.1 million, *ADA* paratransit ridership in Pace's suburban service area of 0.5 million, and *ADA* paratransit ridership in the CTA service area during the second half of 2006 of 1.2 million. Beginning in September 2004, the RTA provides additional funding to Pace to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes.

Pace expects suburban service ridership of 38.3 million in 2007. Pace projects suburban service ridership to increase to 39.4 million in 2008 and 40.1 million in 2009. These 1.1 million and 0.7 million increases in ridership correspond to 2.9 percent and 1.7 percent, respectively (Exhibit 6-1).

Marketing Strategies

Pace's 2007 marketing strategy implementation will continue to take the form of tactical local awareness campaigns. Initiatives will educate the public about the availability of Pace services and the value of public transportation to both riders and non-riders. After categorizing riders and potential riders based on their commuting, demographic, and psychographic characteristics, campaigns will promote the features and benefits of Pace services to these sub-groups on a local or county level.

Exhibit 6-3: **Pace Suburban Service Cost Efficiency**



Note: In 2005 and 2006, cost per mile and cost per passenger include *ADA* paratransit.

Cost Efficiency

Matching the service supply to demand is one means of achieving system effectiveness. One way to measure supply versus demand is to relate the number of passengers to the number of miles serviced. Pace's passengers per mile ratio for suburban service is expected to remain near 0.95 through 2009 (Exhibit 6-2).

The cost per mile measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-3). Cost per mile has increased from $3.22 in 2002 to $3.76 in 2005, and is projected to rise to $3.88 in 2006 with

Exhibit 6-4: **Pace Suburban Service 2007 Budget and 2008–2009 Financial Plan*** (dollars in thousands)

System-Generated Revenue	2005 Actual	2006 Estimate	2007 Budget	2008 Plan	2009 Plan

Recovery Ratio % (7)	**39.7**	**34.2**	**36.4**	—	—

(*) 2005 Actual includes both suburban service and suburban *ADA* paratransit service. 2006 Estimate includes suburban service and suburban *ADA* paratransit service during all of 2006 and *ADA* paratransit service in the CTA service area provided by Pace during the second half of 2006. (1) Suburban service includes vanpool, municipal vanpool, Ride DuPage, and other services. (2) Excludes ADvAntage Program—in-kind revenue and expenditure (of equal amount) that are included in Pace's recovery ratio calculation. The amount in 2005 was $4.7 million. The figure for 2006, 2007, 2008, and 2009 is $4.8 million. (3) Includes additional RTA operating funds for *ADA* paratransit of $1.6 million.(4) Since the capital-related costs of paratransit service under contract are characterized as operating expenditures under GAAP, this funding is recognized as operating revenue. In 2005 and 2006, this amount is divided between funding for Suburban Service (Dial-A-Ride) and funding for *ADA* paratransit. The amounts applied to the recovery ratio calculation were $4.8 million in 2005, $4.0 million for Suburban Service in 2006, and $5.9 million for Regional *ADA* paratransit service in 2006. (5) Federal Section 5307 funding (preventive maintenance and *ADA* complimentary) transferred from the capital program to operations. (6) If these funds do not materialize, actions to balance Pace's budget may include, but are not limited to, using capital funds for operations, adjusting service levels, and adjusting fares. (7) The recovery ratio in 2007 exceeds the 36 percent "Mark" set for Pace by the RTA Board on September 14, 2006.

the addition of CTA service area *ADA* paratransit during the second half of the year. Similarly, Pace's cost per passenger has increased from $3.75 in 2002 to $4.33 in 2005, and is projected to rise to $4.55 in 2006.

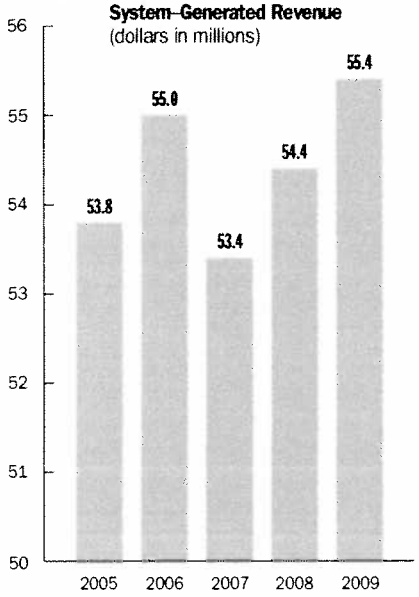
Capital Investment

The capital program funds the purchase and maintenance of rolling stock, support facilities and equipment (including new technologies), and project management.

Rolling Stock

In 2006, Pace intends to replace 38 fixed-route buses which have exceeded their useful life. The new vehicles will be 30-foot vehicles. Pace will also purchase two buses for local municipal service in the Village of Oak Park.

Exhibit 6-5: **Pace Suburban Service System-Generated Revenue**
(dollars in millions)



Notes: In 2005 and 2006, system-generated revenue includes *ADA* paratransit revenue. System-generated revenue excludes RTA pass reimbursement, funding for *ADA* Dial-A-Ride paratransit services, and ADvAntage program in-kind revenue.

Pace plans to purchase 35 paratransit replacement vehicles which have exceeded their useful life. These vehicles, a combination of buses and vans, will be operated to provide Dial-A-Ride services in Pace's suburban service area.

Pace plans to purchase 58 Vanpool vehicles for program expansion and to replace vehicles which have exceeded their useful life. Pace's 2007 goals for the Vanpool program include carrying 2.1 million passengers, which is a ridership increase of 13.3 percent over the 2006 estimate. The recovery performance of the vanpool programs in 2006 is expected to range from 80.2 percent for the ADvAntage program to 194.4 percent for the Corporate Shuttle Program. Pace plans to increase the number of vans in service from 660 at the end of 2006 to 790 by the end of 2007.

Electrical, Signal and Communications

The program contains funds to begin the replacement of the 13-year old fleet-wide radio system. The program also includes funds for the continued development and purchase of transit signal priority (TSP) systems in major corridors.

Support Facilities and Equipment

The program includes funds to replace non-revenue vehicles and purchase miscellaneous garage and office equipment. The program also contains funds to continue the HPe3000 Migration project and for the first phase of the Interactive Voice Response software that customers will be able to call for "next bus" arrival times.

Budget and Financial Plan

The Pace suburban service budget and financial plan presented in Exhibit 6-4 does not exceed the marks set by the RTA on September 14, 2006. RTA funds to Pace also include up to $4 million in each year (2007–2009) to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes. The RTA set Pace's 2007 recovery ratio mark for suburban service operations at 36.0 percent. Pace's budget reflecting a recovery ratio of 36.4 percent was adopted by the RTA Board on December 15, 2006. Beginning in 2007, Pace's revenue, expenditures, and funding are separated into suburban service and regional *ADA* paratransit service. Pace's budget and financial plan for suburban service is presented in Exhibit 6-4. Revenue, expenditures, and funding for regional *ADA* paratransit service beginning in 2007 are discussed later in this section.

System-Generated Revenue

In 2005, Pace's suburban service and suburban *ADA* paratransit service system-generated revenue totaled $53.8 million. Pace expects that in 2006 suburban service, suburban *ADA* paratransit service, and *ADA* paratransit service in the CTA service area during the second half of the year will result in system-generated revenue of $55.0 million. Pace projects suburban service system-generated revenue of $53.4 million in 2007, $54.4 million in 2008, and $55.4 million in 2009, corresponding to a compound annual growth rate of 1.8 percent from 2007 through 2009 (Exhibit 6-5). In 2007, farebox revenue is expected to account for 56 percent, local share/other 28 percent, advertising/investment revenue 10 percent, and reduced fare subsidy 6 percent of total suburban service revenue (Exhibit 6-6).

Farebox Revenue and Local Share

In 2005, Pace's suburban service and suburban *ADA* paratransit service passenger or farebox revenue totaled $31.7 million. Pace expects that in 2006 suburban service, suburban *ADA* paratransit service, and *ADA* paratransit service in the CTA service area during the second half of the year will result in farebox revenue of $32.0 million. Suburban service farebox revenue of $29.8 million is projected in 2007 (Exhibit 6-7). Suburban service passenger revenue is expected to

Exhibit 6-6: **2007 Pace Suburban Service Revenue** — $53.4 million

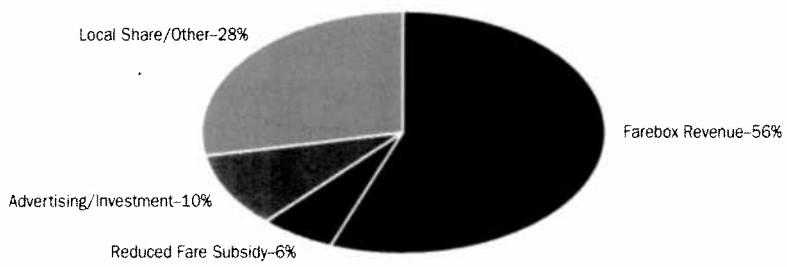


Exhibit 6-7: **Pace Suburban Service Farebox Revenue** (dollars in millions)

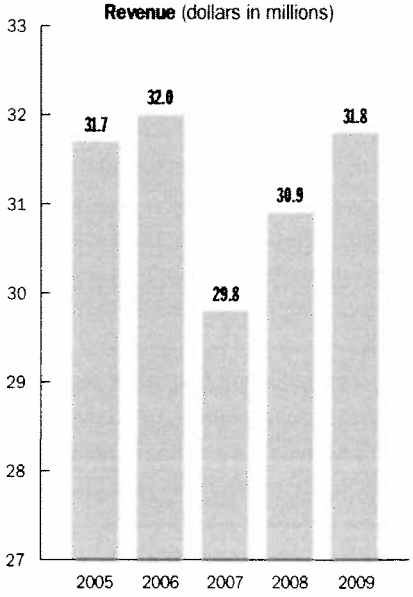


Note: In 2005 and 2006, farebox revenue includes ADA paratransit farebox revenue.

increase from $29.8 million in 2007 to $31.8 million by 2009, a $2.0 million increase that corresponds to a 3.3 percent compound annual growth rate. Passenger revenue includes farebox (cash, pass, and card revenue), Vanpool, and other services. Other services are Congestion Mitigation Air Quality (CMAQ) receipts, Job Access Reverse Commute (JARC) receipts, and shuttle service.

In 2005, Pace's suburban service and suburban *ADA* paratransit service local share contributions and other revenue totaled $13.7 million. Pace expects that in 2006 suburban service and suburban *ADA* paratransit service will result in local share contributions and other revenue of $14.2 million. Suburban service local share contributions and other revenue are expected to increase from $14.8 million in 2007 to $15.2 million in 2009, a $0.4 million increase that corresponds to a 1.2 percent compound annual growth rate.

Pace's suburban service fare structure is presented at the end of this section (Exhibit 6-10). Despite the CTA's decision to raise its cash fare for bus and rail and its transit pass fare for rail to $2.00 and to stop issuing transfers for cash fares or accepting cash fare transfers from Pace on January 1, 2006, Pace has not increased its base fare. At this time, Pace has no plans to raise its suburban service fares in 2007 other than a $3.00 increase in the monthly Vanpool fares which will range from $60 to $144.

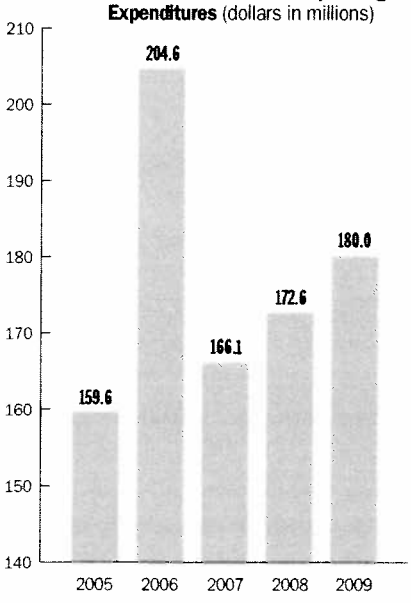
Reduced Fare Subsidy

The reduced fare subsidy is expected to decline from $3.4 million in 2006 to $3.3 million in 2007 and remain stable through 2009. In 1999, the subsidy essentially doubled due to the implementation of the *Illinois FIRST* program.

Advertising/Investment

Advertising and investment revenue is expected to increase from $5.0 million in 2005 to $5.5 million in 2007 and then decline to $5.1 million by 2009. In September 2003, the Pace Board of Directors approved a revenue-generating multi-year contract with Transit Television Network (TTN) of Orlando for the installation of on-board broadcasting monitors. The television screens broadcast informational programming on fixed-route buses. Fully funded by TTN, the project provides Pace with a minimum of $0.5 million during the five-year agreement. Investment revenue includes income from investments of cash balances.

Exhibit 6-8: **Pace Suburban Service Operating Expenditures** (dollars in millions)



Notes: In 2005 and 2006, operating expenditures include *ADA* paratransit. Beginning in 2007, operating expenditures are calculated with a regional *ADA* support credit. Operating expenditures exclude ADvAntage program in-kind expenditures.

Operating Expenditures

Total Pace operating expenditures of $159.6 million in 2005 comprised both suburban *ADA* paratransit service and suburban service. In 2006, Pace projects operating expenditures for suburban service, suburban *ADA* paratransit service, and CTA service area *ADA* paratransit service during the second half of the year to total $204.6 million. Pace projects suburban service operating expenditures of $166.1 million, $172.6 million, and $180.0 million in 2007, 2008, and 2009, respectively, corresponding to a compound annual growth rate of 4.1 percent (Exhibit 6-8). These expenditure totals include a regional *ADA* support credit of approximately $1.6 million annually that reflects many of the administrative and overhead cost to be incurred throughout Pace in support of *ADA* paratransit. Growth of labor, fringes and health care costs is the primary factor behind the increases in suburban service operating expenditures.

Expenditure Elements

Operating expenditure elements include labor and fringes, health insurance, parts and supplies, utilities, fuel, insurance and claims, other, public and private contracts, Dial-A-Ride, Vanpool, Ride DuPage, restructuring initiatives, and *ADA* paratransit (Exhibit 6-4).

Labor, Fringe and Health Insurance Costs

Labor, fringe, and health insurance expenditures, which accounted for 54.1 percent of total operating expenditures in 2005, are expected to account for 45.5 percent of total operating expenditures in 2006 and 58.0 percent of suburban service operating expenditures in 2007. Labor, fringe, and health insurance expenditures for suburban service are projected to increase from $96.3 million in 2007 to $105.6 million in 2009, a $9.3 million increase that corresponds to a 4.7 percent compound annual growth rate.

Parts and Supplies

Parts and supplies expenditures, which accounted for 2.8 percent of total operating expenditures in 2005, are expected to account for 2.3 percent of total operating expenditures in 2006 and 3.0 percent of suburban service operating expenditures in 2007. Parts and supplies expenditures for suburban service are projected to increase from $5.0 million in 2007 to $5.3 million in 2009, a $0.3 million increase that corresponds to a 3.2 percent compound annual growth rate.

Utilities

Utilities expenditures, which accounted for 1.0 percent of total operating expenditures in 2005, are expected to account for 0.9 percent of total operating expenditures in 2006 and 1.1 percent of suburban service operating expenditures in 2007. Utilities expenditures for suburban service are projected to increase from $1.9 million in 2007 to $2.0 million in 2009, a $0.1 million increase that corresponds to a 2.2 percent compound annual growth rate.

Fuel

Fuel expenditures, which accounted for 7.4 percent of total operating expenditures in 2005, are expected to account for 7.0 percent of total operating expenditures in 2006 and 9.0 percent of suburban service operating expenditures in 2007. Fuel expenditures for suburban service are projected to increase from $15.0 million in 2007 to $16.0 million in 2009, a $1.0 million increase that corresponds to a 3.3 percent compound annual growth rate.

Insurance and Claims

Insurance and claims expenditures, which accounted for 6.0 percent of total operating expenditures in 2005, are expected to account for 4.8 percent of total operating expenditures in 2006 and 6.0 percent of suburban service operating expenditures in 2009. Insurance and claims expenditures for suburban service are projected to remain near $9.9 million from 2007 to 2009.

Other

Other expenditures, which accounted for 5.0 percent of total operating expenditures in 2005, are expected to account for 4.6 percent of total operating expenditures in 2006 and 5.8 percent of suburban service operating expenditures in 2007. Other expenditures for suburban service are projected to increase from $9.7 million in 2007 to $10.9 million in 2009, a $1.2 million increase that corresponds to a 6.1 percent compound annual growth rate.

Public/Private Contract

Public/private contract expenditures, which accounted for 5.8 percent of total operating expenditures in 2005, are expected to account for 4.7 percent of total operating expenditures in 2006 and 6.2 percent of suburban service operating expenditures in 2007. Public/private contract expenditures for suburban service are projected to increase from $10.3 million in 2007 to $11.2 million in 2009, a $0.9 million increase that corresponds to a 4.4 percent compound annual growth rate.

Shuttle services were implemented in Schaumburg and Downers Grove in 2001. The Downers Grove service feeds passengers to the Metra/Burlington Northern rail station in Downers Grove. In 2007, expenditures of $0.7 million are expected to be offset by revenue of $0.6 million including local subsidy. In Schaumburg, a shopper's trolley service operates in the Woodfield Mall area. In 2007, the cost of this shuttle is expected to be $0.5 million, all of which will continue to be funded by the Village of Schaumburg. During the academic year, the Northwestern University Shuttle provides service between the campus and several transit stops in Evanston. In 2007, approximately 90 percent of the $0.1 million expenditure is expected to be offset by revenue including local subsidy.

Pace provides fixed-route service in 31 communities by contracting directly with four private transit companies: Academy Coach Lines, Colonial Coach Lines, Laidlaw, and M. V. Transportation. In 2007, $9.0 million of private contract carrier expenditures are projected to be offset by revenue of $2.8 million. This $6.2 million funding requirement corresponds to a recovery ratio of 30.6 percent.

Dial-A-Ride

Dial-A-Ride (DAR) expenditures, which accounted for 7.7 percent of total operating expenditures in 2005, are expected to account for 6.2 percent of total operating expenditures in 2006 and 8.0 percent of suburban service operating expenditures in 2007. DAR expenditures for suburban service are projected to increase from $13.3 million in 2007 to $14.5 million in 2009, a $1.2 million increase that corresponds to a 4.4 percent compound annual growth rate.

Pace contracts with private operators to provide service for 31 DAR projects. The communities served cover a portion of the costs through 41 local share agree-

ments. Pace also has service agreements with local governments for the operation of 31 other DAR projects. Generally, the village or township, under contract with Pace, operates these services. Pace subsidizes these services based on a funding formula.

Vanpool

Vanpool expenditures, which accounted for 1.6 percent of total operating expenditures in 2005, are expected to account for 1.5 percent of total operating expenditures in 2006 and 2.1 percent of suburban service operating expenditures in 2007. Vanpool expenditures for suburban service are projected to increase from $3.6 million in 2007 to $4.5 million in 2009, a $0.9 million increase that corresponds to a 12.0 percent compound annual growth rate.

Pace's Vanpool program, which provides passenger vans to groups of 5 to 15 commuters, continues to grow. In 2007, Pace expects to have in service nearly 800 vans carrying 2.1 million riders, an increase of 130 vans (19.7 percent) and 242,000 riders (13.3 percent) from 2006.

The program is comprised of four elements: the Vanpool Incentive Program (VIP), the Corporate Shuttle, the ADvAntage program, and the Municipal Vanpool program. The VIP service, the core element of the program, is projected to achieve ridership of 1,006,000 with 270 vans by the end of 2007. Pace estimates that by the end of 2007 the Corporate Shuttle program will have 28 vans transporting employees between suburban employers and nearby CTA, Metra and Pace facilities. By the end of 2007, the ADvAntage element of the Vanpool program is expected to have 337 vans transporting individuals with disabilities to work sites or rehabilitative workshops. Pace projects that the Municipal Vanpool program, which allows local municipalities to provide public transportation within their communities, will have 155 vans in service in 2007.

Ride DuPage

Launched in mid 2004, Ride DuPage consolidates all scheduling and dispatching and provides a single point of contact for (non-*ADA*) paratransit riders in this county. Ride DuPage expenditures, which accounted for 0.9 percent of total operating expenditures in 2005, are expected to account for 0.7 percent of total operating expenditures in 2006 and 0.9 percent of suburban service operating expenditures in 2007. During 2005, Ride DuPage expenditures were $1.4 million. Program expenditures are expected to reach $1.9 million by 2009, a $0.5 million increase that corresponds to a 8.3 percent compound annual growth rate.

Restructuring Initiative

Pace's restructuring initiative includes both on-going improvements to its fixed-route service and the integration of the CTA service area *ADA* paratransit service in 2006. In 2005, Pace incurred restructuring expenditures of $0.2 million. Pace expects to incur restructuring expenditures of $1.1 and $1.2 million in 2006 and 2007, respectively.

ADA Paratransit

In 2005, Pace incurred *ADA* paratransit expenditures of $12.3 million to provide curb-to-curb service to 0.5 million riders in Pace's suburban service area. In 2006, Pace expects to incur *ADA* paratransit expenditures of $43.6 million to provide service to 1.7 million riders in Pace's suburban service area during the entire year and in the CTA service area during the second half of the year. *ADA* paratransit expenditures for 2007 through 2009 are discussed separately later in this section.

Regional ADA Support Credit

In 2007, Pace will also begin deducting approximately $1.6 million of its administrative and overhead expenditures from its suburban service budget. Pace will charge this amount to its regional *ADA* paratransit budget.

Deficit

The operating deficits are derived from total system-generated revenue minus total operating expenditures. In 2005, Pace ended the year with a net funding surplus of $0.7 million that increased its funding balance (cumulative positive budget variance) from $12.2 million to $12.9 million. In 2006, Pace projects a net funding deficit of $9.3 million. From 2007 to 2009, Pace projects deficit funding to match the operating deficit, and, therefore, no changes to the fund balance.

Funding

The RTA Sales Tax is the primary source of funding for Pace suburban service. The RTA retains 15 percent of the sales tax funds for discretionary funding and allocates the remainder to the service boards by statutory formula. Of this remaining amount, Pace receives 15 percent of the sales tax collected within suburban Cook County and 30 percent of the sales tax collected in the collar counties. In 2005, Pace's portion of RTA Sales Tax and discretionary funding totaled $79.1 million. This amount is expected to grow 3.2 percent per year to $89.7 million in 2009. In 2005, the RTA Board provided Pace with an additional $1.0 million to assist with the cost of start-up activities related to the transition to Pace of all of the *ADA* paratransit services in the RTA region. In both 2005 and 2006, the RTA funded Pace $2 million to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes. In 2007 through 2009, the RTA plans fund Pace up to $4 million in each of these years to accept these passes. The

Pace suburban service budget and financial plan presented in Exhibit 6-4 satisfy the funding marks set by the RTA on September 14, 2006.

Recovery Ratio

The recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. With the inclusion of the revenue for the funding of *ADA* and Dial-A-Ride paratransit service under contract of $7.8 million and $4.7 million of ADvAntage Program in-kind revenue and expenditure, Pace achieved a recovery ratio of 39.7 percent in 2005. With the inclusion of revenue for the funding of Dial-A-Ride paratransit service under contract of $4.0 million in 2006 and $4.8 million of ADvAntage program in-kind revenue and expenditure, Pace expects to achieve a recovery ratio for its suburban service of 34.2 percent in 2006. Exhibit 6-4 provides the detail used in this calculation. With the inclusion as revenue of $4.0 million of reimbursement from the RTA to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes and $4.8 million of ADvAntage program in-kind revenue and expenditure, Pace's 2007 budgeted suburban service recovery ratio of 36.4 percent exceeds the 36 percent recovery ratio mark set by the RTA.

Exhibit 6-9: **Pace 2006 Budget Versus 2006 Estimate*** (dollars in thousands)

	Amended 2006 Budget	2006 Estimate	Variance

Recovery Ratio %	**35.2**	**34.2**	**(1.0)**

(*) 2006 Budget and 2006 Estimate includes suburban service and suburban *ADA* paratransit service during all of 2006 and *ADA* paratransit service in the CTA service area provided by Pace during the second half of 2006. (1) Passenger revenue includes Fixed Route, Van Pool, Municipal Van Pool, Dial-A-Ride, Ride DuPage, *ADA* paratransit, and Other Services. (2) Since the capital-related costs of paratransit service under contract are characterized as operating expenses under GAAP, this funding is recognized as operating revenue. In 2006, this amount is divided between funding for Suburban Service (Dial-A-Ride) and funding for *ADA* paratransit. In 2006, the amounts applied to the recovery ratio calculation were $4.0 million for suburban service and $5.9 million for *ADA* Paratransit Service. (3) The ADvAntage Program—in-kind revenue and expenditure (of equal amount) is included in the recovery ratio calculation.

2006 Budget Versus 2006 Estimate

Pace projects 2006 operating revenue for suburban service, suburban *ADA* paratransit service, and CTA service area *ADA* paratransit service during the second half of the year to be $3.0 million or 5.2 percent unfavorable to budget. Passenger revenue is expected to finish the year $3.9 million or 11.0 percent unfavorable, while Local share/other revenue is expected to finish the year $0.5 million or 3.4 percent favorable. Advertising/investment revenue is projected to finish the year $0.3 million or 5.1 percent favorable. The reduced fare subsidy is projected to finish the year $0.2 million favorable to budget.

Total expenditures are expected to finish the year $2.3 million unfavorable to budget. Expenditures for fuel, labor, and insurance are expected to be $1.9, $1.9, and $0.8 million unfavorable to budget, respectively. Expenditures for health insurance, other, *ADA* paratransit, parts/supplies, and restructuring initiative are expected to be $0.9, $0.5, $0.3, $0.2, and $0.1 million favorable to budget.

From a funding perspective, Pace expects an unfavorable variance of $7.0 million in 2006 (Exhibit 6-9).

Statutory Compliance

Pace's proposed 2007 budget, 2008-2009 plan, and 2007 recovery ratio submitted to the RTA complies with the operating marks set by the RTA Board. However, Pace's 2007 budget and 2008-2009 plan assume unidentified future new transit funding of $22.9, $26.2, and $30.7 million, respectively. If additional public subsidies are not obtained, other steps will need to be taken to balance the budget and financial plan, which may include, but are not limited to, utilizing federal formula capital funds to cover operating expenditures, adjusting service levels and adjusting fares.

Organizational Structure

Pace's organizational structure is comprised of three primary elements: administration, central support, and Pace-owned divisions. Within each element, employees are classified into four areas: operations, maintenance, non-vehicle maintenance and administration. These activity areas are defined by the Federal Transit Administration Section 15 reporting requirements, which apply to all public transit operators.

Pace is organized into three main areas: Internal Services, Revenue Services, and Strategic Services (Exhibit 6-11).

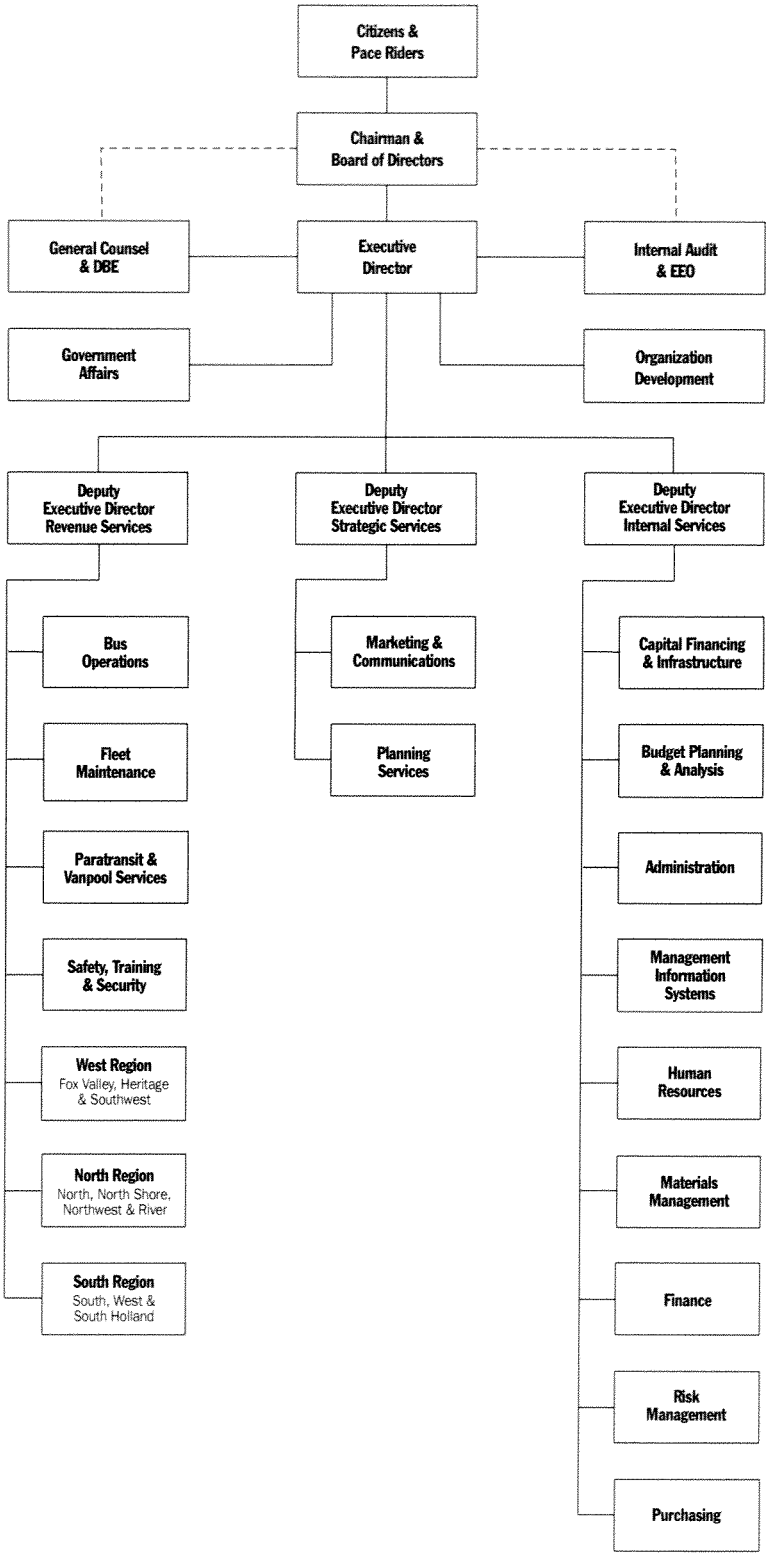
Vanpool

Monthly VIP and other van pool services fares range from $60 to $144 depending on the daily round trip van miles and the number of passengers. This range represents a $3 increase from 2006.

*Effective January 1, 2006, the CTA discontinued issuing or accepting cash transfers.

Exhibit 6-11: **Pace Organizational Structure**



ADA Paratransit

Overview

Effective July 1, 2006, Pace has provided all *ADA* paratransit service in the RTA region. Beginning in 2007, Pace's revenue and expenditures are separated into suburban service and regional *ADA* paratransit service.

Service Characteristics

The RTA administers a regional certification program that determines if individuals with physical or cognitive disabilities are eligible for *ADA* paratransit service. If eligible, passengers can arrange for travel within three quarters of a mile of Pace or CTA bus routes or CTA or Metra rail stations, as described in the *Americans with Disabilities Act (ADA).*

In the suburban area where Pace provides fixed route service, Pace contracts with private operators to provide *ADA* paratransit service. These operators use Pace-owned lift-equipped vehicles to provide curb-to-curb service to *ADA*-certified passengers within a portion of the suburban area of the RTA region.

In the CTA service area, Pace contracts with three private operators (Cook-DuPage Transportation (CDT), SCR Transportation and Art's Transportation) to provide *ADA* paratransit service. The operators use contractor-owned vehicles to provide service to *ADA*-certified passengers throughout the City of Chicago and the suburban communities served by CTA bus and rail operations. Pace also administers two subsidized taxi programs in the City of Chicago (the Taxi Access Program (TAP) and the Mobility Direct program) for *ADA*-certified passengers, although these programs are not required by the *ADA*.

The CTA and Pace fixed route services are described in section 4 and earlier in section 6, respectively.

Ridership

In 2005, Pace's *ADA* paratransit ridership in Pace's suburban service area totaled 0.5 million. Pace expects 2006 *ADA* paratransit ridership of 0.5 million in Pace's suburban service area and 1.2 million in the CTA service area during the second half of 2006, totaling 1.7 million. In 2007, Pace projects regional *ADA* paratransit ridership of 3.3 million. Consistent with the Regional *ADA* Paratransit Plan jointly prepared by the RTA, CTA, and Pace and submitted to the Federal Transportation Administration in January 2006, Pace projects *ADA* Paratransit ridership to grow 10 percent annually in the CTA service area and 6 percent annually in the Pace suburban service area from 2007 through 2009. Regional *ADA* paratransit ridership is projected to increase 0.3 million or 9.4 percent to 3.6 million in 2008, and 0.3 million or 9.4 percent to 3.9 million in 2009 (Exhibit 6-12).

Cost Efficiency

The cost per passenger measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-13). Cost per passenger for Regional *ADA* paratransit service is projected to increase from $28.12 in 2007 to $29.40 in 2009. This $1.38 increase corresponds to a compound annual growth rate of 2.3 percent.

Budget and Financial Plan

The Pace *ADA* paratransit service budget and financial plan presented in Exhibit 6-14 meets the funding marks and exceeds the recovery ratio mark set by the RTA on September 14, 2006. The marks set funding for *ADA* paratransit at $81.8 million for 2007, $91.6 million for 2008, and $99.9 million for 2009. In

Recovery Ratio % (2)	**10.6**	—	—

(1) As required by the 2005 amendment to the *RTA Act*, Pace assumed operating responsibility for *ADA* paratransit service throughout the RTA region on July 1, 2006. The 2006 Estimate includes revenue and expenditure estimates for the full year of service, including service provided by the CTA during the first half of the year. (2) The recovery ratio in 2007 exceeds the mark set for Pace by the RTA Board on September 14, 2006. The *RTA Act* requires a 10 percent recovery ratio for regional *ADA* paratransit service in 2007.

Exhibit 6-15: **Pace ADA Paratransit Service System-Generated Revenue** (in millions)

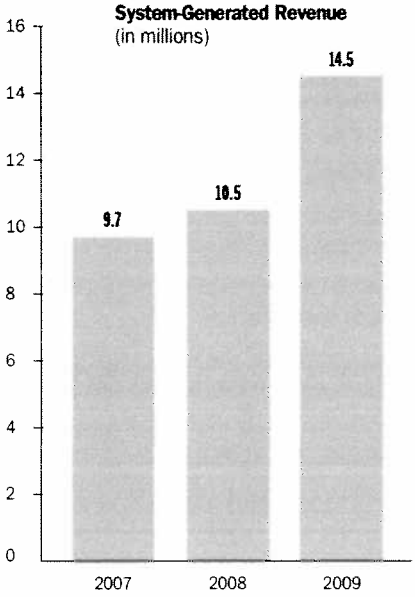

Exhibit 6-16: **Pace ADA Paratransit Service Farebox Revenue** (in millions)

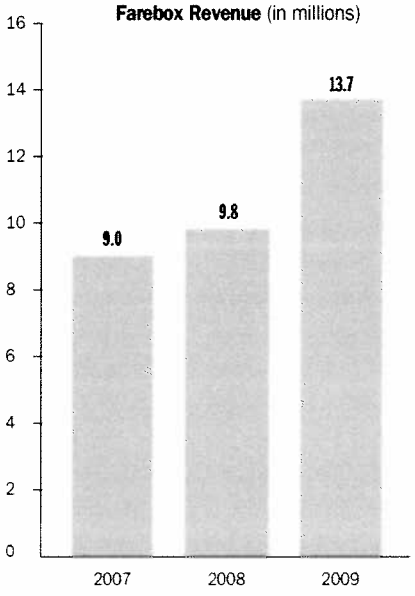

compliance with the *RTA Act*, the RTA set the *ADA* paratransit recovery ratio for 2007 at 10.0 percent.

System-Generated Revenue

Pace projects total *ADA* paratransit system-generated revenue of $9.7 million in 2007 (Exhibit 6-15). Farebox revenue is expected to account for $9.0 million or 93 percent of total revenue and local share/reimbursement $0.7 million or 7 percent of total regional *ADA* paratransit service revenue (Exhibits 6-16 and 6-17). To meet the 10 percent recovery ratio required by the *RTA Act* for *ADA* paratransit service in 2007, the Pace Board voted to increase the *ADA* paratransit fare in the CTA service area and the fare for the Mobility Direct program from $1.75 to $2.25 and the fare for the Taxi Access Program (TAP) from $1.75 to $5.00 effective January 1, 2007 (Exhibit 6-19). Pace projects total *ADA* paratransit revenue of $10.5 million in 2008, an increase of 9.3 percent. The *RTA Act* also requires that regional *ADA* paratransit service meet a recovery ratio of 12 percent beginning in 2009. To meet this requirement, Pace projects total *ADA* paratransit revenue of $14.5 million in 2009, an increase of 37.5 percent over the prior year.

Operating Expenditures

Pace projects Regional *ADA* paratransit service operating expenditures of 91.5 million, $102.2 million and $114.4 million in 2007, 2008 and 2009, respectively, corresponding to a compound annual growth rate of 11.8 percent (Exhibit 6-18). Growth in purchased transportation costs is the primary factor behind these increases in operating expenditures.

Expenditure Elements

Operating expenditure elements include labor and fringes, health insurance, administrative expense, fuel, insurance and claims, RTA certification, suburban *ADA* purchased transportation, CTA service area *ADA* purchased transportation, and indirect overhead allocation (Exhibit 6-14).

Exhibit 6-17: **2007 Pace ADA Paratransit Revenue** — $9.7 million

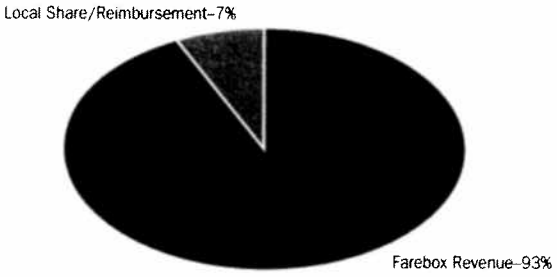

Exhibit 6-18: **Pace Total Operating Expenditures** (in millions)

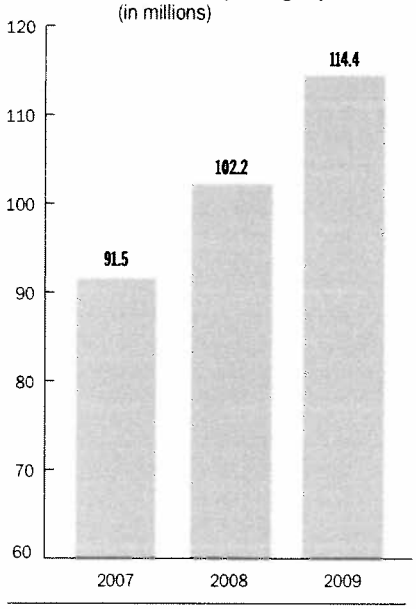


Labor, Fringe and Health Insurance Costs

To administer *ADA* paratransit service in the CTA service area, Pace hired 31 additional administrative support staff to supplement the six staff members who were responsible for administering the suburban *ADA* paratransit service. Labor, fringe, and health insurance expenditures, are expected to account for 2.7 percent of regional ADA paratransit service operating expenditures in 2007. Labor, fringe, and health insurance expenditures are projected to increase from $2.5 million in 2007 to $2.8 million in 2009, a $0.3 million increase that corresponds to a 5.2 percent compound annual growth rate.

Administration

Administration expenditures are expected to account for 1.1 percent of regional *ADA* paratransit service operating expenditures in 2007. Pace leases its operations center for *ADA* paratransit services in Metra's downtown Chicago headquarters at 547 W. Jackson Blvd. Administrative expenditures are projected to remain at $1.0 million from 2007 to 2009.

Fuel

Fuel expenditures are expected to account for 1.6 percent of regional *ADA* paratransit service operating expenditures in 2007. Fuel expenditures are projected to increase from $1.5 million in 2007 to $1.6 million in 2009, a $0.1 million increase that corresponds to a 2.8 percent compound annual growth rate.

Insurance and Claims

Insurance and claims expenditures are expected to account for 0.7 percent of regional *ADA* paratransit service operating expenditures in 2007. Insurance and claims expenditures are projected to remain near $0.6 million from 2007 to 2009.

Exhibit 6-19: **2007 Fare Structure**

CTA Service Area	Fare
ADA Paratransit	$ 2.25
Mobility Direct	2.25
Taxi Access Program	5.00
Pace Service Area	
Regular Route Analog	$ 3.00
Local Route Analog	2.50

RTA Certification

RTA certification expenditures are expected to account for 0.7 percent of regional *ADA* paratransit service operating expenditures in 2007. These expenditures comprise the cost of transporting applicants for *ADA* certification to and from assessment centers. RTA certification expenditures are projected to increase from $0.7 million in 2007 to $0.8 million in 2009, a $0.1 million increase that corresponds to a compound annual growth rate of 8.7 percent.

Suburban ADA Purchased Transportation

Suburban *ADA* purchased transportation expenditures are expected to account for 16.1 percent of regional *ADA* paratransit service operating expenditures in 2007. These expenditures are projected to increase from $14.8 million in 2007 to $18.0 million in 2009, a $3.2 million increase that corresponds to a 10.3 percent compound annual growth rate. Demand for suburban *ADA* paratransit service is projected to increase 6.0 percent in both 2008 and 2009.

CTA Service Area
ADA Purchased Transportation

CTA service area *ADA* purchased transportation expenditures are expected to account for 75.3 percent of regional *ADA* paratransit service operating expenditures in 2007. These expenditures are projected to increase from $68.9 million in 2007 to $88.0 million in 2009, a $19.1 million increase that corresponds to a 13.0 percent compound annual growth rate. Demand for CTA service area *ADA* paratransit service is projected to increase 10.0 percent in both 2008 and 2009.

Regional ADA Support Allocation

In 2007, Pace will also begin charging approximately $1.6 million of its administrative and overhead expenses to the regional *ADA* paratransit budget.

Deficit and Funding

The annual operating deficits are derived from total system-generated revenue minus total operating expenditures. From 2007 to 2009, Pace projects that public funding from the RTA and the Sate of Illinois will match the corresponding operating deficits. The Pace budget and financial plan for *ADA* paratransit service presented in Exhibit 6-14 meets the funding marks set by the RTA on September 14, 2006. The marks set the total funding levels at $81.8 million for 2007, $91.6 million for 2008, and $99.9 million for 2009.

Recovery Ratio

The recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. The *RTA Act* requires that regional *ADA* paratransit service meet a recovery ratio of 10 percent in 2007 and 2008 and 12 percent beginning in 2009. In 2007, Pace's projected recovery ratio for regional *ADA* paratransit service is 10.6 percent. Exhibit 6-14 provides the detail used in this calculation.

Statutory Compliance

Pace's proposed 2007 budget, 2008-2009 plan, and 2007 recovery ratio for *ADA* paratransit service submitted to the RTA comply with the operating marks set by the RTA Board. However, Pace's 2007 budget and 2008-2009 plan for regional *ADA* paratransit service assume unidentified future new transit funding of $81.8, $91.6, and $99.9 million, respectively, the full amount of each year's deficit and funding mark. If additional public subsidies are not obtained, other steps will need to be taken to balance the budget and financial plan, which may include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, adjusting service levels and adjusting fares.

7 Capital Program

Regional Overview

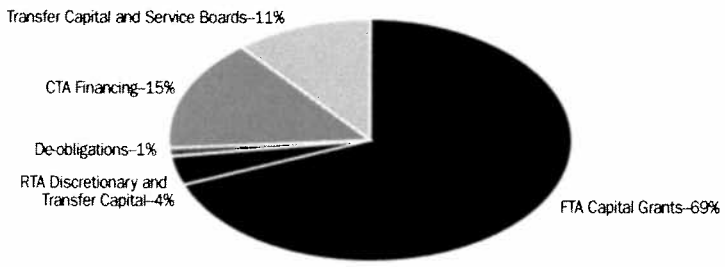
The *RTA Act* requires that the capital expenditures of the CTA, Metra and Pace be subjected to continuing review so that the RTA may budget and expend funds available to the region with maximum efficiency. The RTA Board must adopt a five-year capital program every year. The RTA's five-year capital program describes the nature, location, and budget by project and by fiscal year of all anticipated Service Board capital improvements. Public hearings are held in each county in the northeastern Illinois region to inform the public and government officials of the Authority's capital development plans.

The RTA emphasizes the need to preserve and enhance the RTA system's valuable infrastructure. This includes bringing the system's $27 billion in assets (as measured in terms of replacement value) to good condition and extending or expanding service when demand is justified and funding available. This translates into a need of approximately $1 billion per year just to maintain and preserve the existing system.

In 2005, Congress passed a reauthorization of federal funding for transportation projects. Although this legislation provided an increase over previous levels of funding, it will still leave a substantial shortfall.

The region still requires more than $500 million per year in additional funding to properly maintain our resources.

Exhibit 7-1: **2007–2011 Capital Program Marks**



With funding needs for capital improvements and rehabilitation greatly exceeding expected resources, the RTA and the Service Boards must actively pursue additional funding opportunities to preserve and enhance the economic viability of the RTA system. It is critical that the RTA allocate our available capital resources consistent with long-range plans and short-range needs.

2007–2011 Capital Program Marks Issues

Continued financial support for public transportation is vital to the region's economic health. However, the region's current transit needs, which are based upon bringing the entire system to a state of good repair, continue to outpace projected funding levels. For the 2007 budget, we face a large operating and capital shortfall, because there has not been any new state capital funding for transit since *Illinois FIRST,* and because operating funding has not kept pace with 21st century demand. The $27 billion asset of trains, buses, vans, stations and tracks belongs to the people of Northeastern Illinois. And together, we all need to decide whether we are going to invest in this asset or shrink it.

Source of Funds

The funding sources for the RTA capital program include the U.S. Department of Transportation's Federal Transit Administration (FTA), the RTA, and the Service Boards. The total estimated new capital funds available for 2007 are projected at $704.0 million. After deducting $30.3 million to provide for the CTA's repayment of principal and interest and adding the CTA and Metra de-obligations of $26.5 million, $700.2 million is available for capital projects. At this time, the final federal appropriation figures for 2007 have not been determined. Once this amount is established, the capital program will be adjusted to reflect the available funding.

On September 14, 2006, the RTA adopted preliminary capital funding marks. Since then, the RTA received proposals to change the estimates for funds controlled by the Service Boards. The RTA budget adopted on December 14, 2006, incorporated various federal and local funding source changes proposed by the Service Boards and the RTA (Exhibits 7-1 and 7-2). Of the estimated $700.2 million of new and de-obligated funding sources for 2007, federal funding after reduction for the CTA repayment of principal and interest, accounts for $471 million or 67 percent, RTA funds account for $23.8 million or 3 percent, Service Board and

Exhibit 7-2: **RTA 2007–2011 Capital Program Marks** (dollars in millions)

Service Board Capital Funding	CTA	Metra	Pace	Total

other funds account for $53.9 million or 8 percent, de-obligations account for $26.5 million or 4 percent, and CTA financing funds account for $125 million or 18 percent (Exhibits 7-3 and 7-4).

Federal

The RTA receives federal funds authorized under federal sections 5307, 5340 and 5309 of the *Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). SAFETEA-LU* provides funding for federal surface transportation programs, including transit through federal fiscal year 2009. For planning purposes, the RTA preliminary marks assume the continued availability of federal funds in 2010 and 2011. On June 14, 2006, the House passed its version of the FFY 2007 Transportation Appropriations bill; and, on July 20, 2006, the Senate Committee on Appropriations approved its version of the FFY 2007 Transportation, Treasury, and Housing and Urban Development, the Judiciary, and Related Agencies Appropriations bill. The Senate bill funds Federal Transit Administration (FTA) programs at an $8.875 billion level, a 4.4 percent increase over the final amount appropriated for FFY 2006. At present, Congress has not approved a FFY2007 Transportation Appropriation bill for the fiscal year starting October 1st. The Federal Transit Administration is currently operating under a continuing resolution. Once federal 2007 funds are appropriated and local funding decisions are finalized, the 2007-2011 capital program marks will be revised.

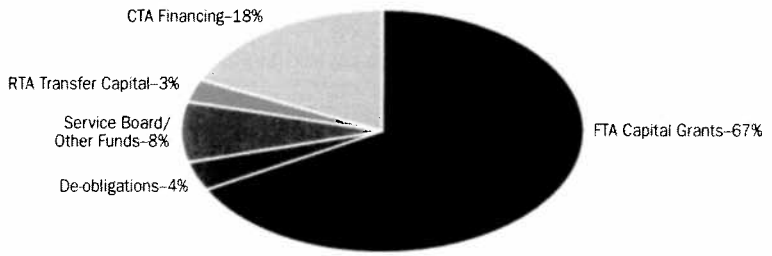
Certain federal funding programs are allocated to urbanized areas based on legislatively defined formulas. The RTA region receives federal Section 5307 Urbanized Area Formula funds and federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds in this fashion. *SAFETEA-LU* included a new program, the federal Section 5340 Growing and High Density States, also distributed by formula that will provide funds to northeastern Illinois.

Other federal funds are available to the region on a competitive basis. The RTA, with substantial input from the Service Boards, estimates annual funding levels based on internal analysis of national funding levels, past performance, project readiness and existing legislative or contractual commitments. The federal Section 5309 (m)(2)(A) New Start and Section 5309 (m)(2)(C) Bus and Bus Facility capital funding are often earmarked in federal legislation. The RTA 2007-2011 federal Section 5309 (m)(2)(A) New Starts funding marks includes monies to complete the two CTA projects currently underway as earmarked in *SAFETEA-LU*. The RTA marks includes federal 2007 Section 5309 New Start funding of $41.6 million for the CTA's Douglas and Ravenswood lines; and $105.9 million for the completion of the CTA's Ravenswood project in 2008 and 2009. Further, the CTA and Metra marks include $23.4 million and $49 million respectively in 2007 for future New Start capital projects consistent with their earmark requests for 2007 federal funds.

It is expected that the Federal New Starts monies for system expansion will be available in 2008-2011. However, without matching funds, the region will not be able to access these funds. Therefore, no additional New Start funding is programmed in 2008-2011.

In addition, flexible funds are another source of federal funding for the RTA 2007-2011 capital program. Flexible funds are certain legislatively-specified funds that may be used either for transit or highway purposes. This provision was first included in the *Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA)* and continued with *SAFETEA-LU*. Flexible funds include the Federal Highway Administration (FHWA) Surface Transportation Program (STP) and the Congestion Mitigation and Air Quality (CMAQ) improvement program. These funds are sought by the Service Boards through a regional competitive process.

Exhibit 7-4: **2007 Capital Funding**—$700,223 million



The idea behind flexible funds is to enable a local area to choose to use certain federal surface transportation funds based on local planning priorities, not on a restrictive definition of program eligibility. Since the enactment of *ISTEA,* FHWA funds transferred to the FTA have provided a substantial new funding source for transit projects. These funds can be used for a variety of transit improvements such as new Fixed Guideway projects; bus purchases; construction and rehabilitation of rail stations; maintenance facility construction and renovations; alternative-fuel bus purchases; bus transfer facilities; multi-modal transportation centers; and technologically advanced fare collection systems. FHWA funds are transferred to the FTA to one of the following three programs: Urbanized Area Formula program (federal Section 5307), Non-urbanized Area Formula program (federal Section 5311), and Elderly and Persons with Disabilities program (federal Section 5310).

Once transferred to the FTA for a transit project, the funds are administered as FTA funds subject to all the FTA requirements. These transferred funds may use the same non-federal matching share as if they were used for highway purposes and administered by FHWA.

In urbanized areas of more than 200,000 population, the Metropolitan Planning Organization (MPO) decides the transfer of flexible funds. In the RTA region, the MPO is the Chicago Area Transportation Study (CATS) Policy Committee. The Service Boards' proposed capital programs include projects that could be funded by these flexible programs.

All of these federal funds must be matched by local funding sources. The federal government provides 80 percent of the cost of capital projects funded with federal Section 5307 combined with Section 5340 along with federal Section 5309 funds. Local funding sources provide the remaining 20 percent match. However, due to the lack of Strategic Capital Improvement Program (SCIP) funding and Illinois Department of Transportation (IDOT) Bonds, the Service Boards are left with no local funds available to provide a local match for federal funding in 2007. Therefore, the Service Boards, as a temporary solution, will exercise the toll revenue credit provision established in the *ISTEA,* incorporated in *Transportation Equity Act for the 21st Century (TEA-21)* and continued in *SAFETEA-LU.* The toll revenue credit provision permits states to use certain expenditures of toll revenue as a "credit" toward the required local match for certain highway and transit programs. These credits are not actually funds that can be used; rather they are a mechanism to count toll revenue already spent for tollway capital projects as local matching dollars for federal capital funds for transit.

In addition, other federal funds made available to the region by formula will be allocated among a variety of agencies including transit operators on a competitive basis. These programs include the federal Section 5316-Job Access and Reverse Commute (JARC) program and the federal Section 5317-New Freedom program (for services supplemental to *ADA* requirements). Since projects using funds for these programs will be selected in 2007 based on a competitive selection process coordinated by the RTA and CATS, no funding marks are proposed at this time. The RTA capital program marks will be amended to include JARC and New Freedom funding available to the Service Boards for capital projects only.

In summary, the 2007 RTA preliminary federal estimates reflecting the *SAFETEA-LU* legislation are $150.7 million for federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds, $211.9 million for federal Section 5307 Urbanized Area Formula funds combined with Section 5340 Growing and High Density States, $114 million for federal Section 5309 (m)(2)(A) New Start funds, $7 million for federal Section 5309 (m)(2)(C) Bus and Bus Facility funds, $15.3 million for federal Section 5339 Alternative Analysis funds, and $2.4 million for federal flexible and other funds. Furthermore, the CTA requested to reduce its federal funding by $30.3 million for the payment of debt principal and interest for 2007 and $354.7 million for this purpose in the out years.

The RTA

In 1999, the *RTA Act* was amended as part of the *Illinois FIRST* legislation. The legislation increased the RTA borrowing authority by $1.6 billion for capital infrastructure improvements. This amount included $1.3 billion in authorization for SCIP bonds. The State of Illinois reimburses the RTA for the principal and interest expenditures on these bonds. The remaining $300 million represented the RTA bonds for which the RTA does not receive state reimbursement. All of these funds (SCIP and RTA bonds) were programmed to the Service Boards since 2004. Also, since the RTA bond authorization represents a cap on outstanding bonds, additional bonds can be programmed when existing bonds are retired.

The RTA's five-year capital marks contain no additional SCIP or RTA bond funds since there is no legislation passed to extend the RTA's bond programs. Note that any additional bonding authority would require State legislation, as well as a funding source to pay the debt service on any additional bonds authorized to be issued.

In 1995, the RTA began funding a new Transfer Capital (TC) program that utilizes funds available for operations to be used for capital investments. The 2007-2011

capital program includes $101.8 million for the CTA from Transfer Capital funds.

The RTA discretionary funds are yet another source of capital funding. Discretionary funds can be used to match federal funds or to fully fund Service Board projects. In the past, the RTA has used these discretionary funds to address the backlog of unfunded capital needs. In the last few years, due to limited RTA receipts, the RTA deferred an allocation of any discretionary funds to the Service Boards for capital projects. For 2007, the RTA allocated $3.4 million in discretionary capital funds to Pace to purchase 46 replacement paratransit vehicles.

State

State funds historically are awarded to the Service Boards on a discretionary basis and are used primarily for federal match purposes to ensure sufficient local funds are made available for critical transit projects in the region. No additional state funds for capital projects were included in State Fiscal Year (SFY) 2007 appropriations. Therefore, no IDOT funding is included in the capital marks for 2007 and beyond.

Service Boards

In addition to the funding sources described above, the 2007 capital program submitted by Metra includes $48.8 million of Transfer Capital funds. Transfer Capital funds are monies that can be used for operations but have, through cost containment, been reallocated for use on capital improvement projects. Also, five-year funding for this category includes $5.1 million of local community and other funding, primarily Homeland Security monies, to be secured by Metra.

CTA Financing

The CTA is proposing to borrow funds of $125 million in 2007 and $300 million in the out-years. These funds will enable the acceleration of rail car and bus purchases, the construction of the Washington Intermodal Stations and the timely repair of track and structure by the CTA. The CTA will secure all funds and pay for all borrowings from their federal Section 5307 formula funds and federal Section 5309 Fixed Guideway Modernization funds.

Transfer to Operating

The capital marks were not reduced to reflect the Service Boards' use of Section 5307 Urbanized Area Formula and Section 5309 Fixed Guideway Modernization funds for their operating budgets. However, these funds may have to be reduced in the future if additional operations funding or deficit reductions are not obtained.

Use of Funds

The RTA capital program increased dramatically in 2000 primarily as a result of the increased funding included in the *Illinois FIRST* program. The 1999 program totaled $552.7 million. The average funding level of 2000 through the 2004 programs was $918.8 million, a 60 percent increase. The CTA, Metra and Pace have responded by significantly increasing their project implementation performance. An average of $418 million was obligated annually by the Service Boards from 1995 thru 1999. From 2000 through 2006 (projected), the Service Boards awarded an annual average of $807 million in contracts. Project spending also increased substantially from an average of $420 million per year from 1995 through 1999 to $795 million from 2000 through 2006 (projected). Exhibits 7-5 and 7-6 illustrate these trends. These results show that the Service Boards are putting the monies available to good use, providing benefits to public transportation riders.

The primary emphasis of the 2007 capital program is to continue efforts to

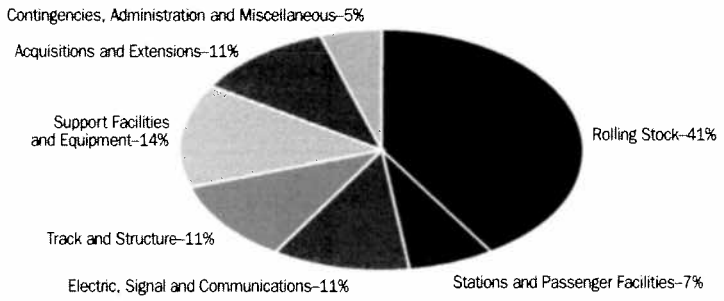
Exhibit 7-8: **Regional Five-Year Assets by Category**—$2,822 million



bring the system's assets to a state of good repair. When replacing worn out items, it is imperative to utilize modern technologies that often result in improved functionalities of equipment, facilities and rolling stock. In addition, a balanced capital program is responsive to customer needs and shifting markets by including investment in system expansion.

Investments in the capital program can also be broken down into various asset categories. Exhibits 7-7 and 7-8 show that $1.4 million, or 48 percent, of the program is spent on rolling stock and stations and passenger facilities which are considered to have the greatest direct impact on transit users. Substantial investment in other infrastructure is also critical to maintaining safe, reliable transportation services.

The 2007-2011 capital programs for the CTA, Metra, and Pace are presented by major asset category in Exhibits 7-9 through 7-12. Some of the more significant projects included in the proposed 2007-2011 capital program include the following:

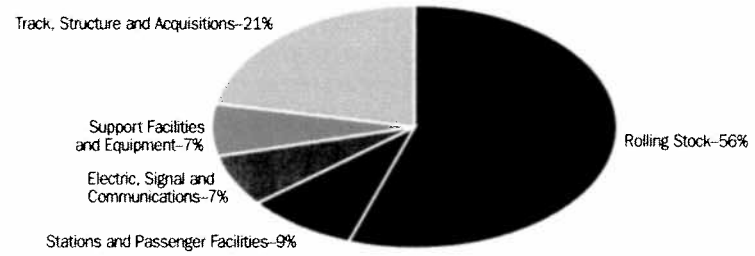
- $319.1 million toward the purchase of 406 CTA rail cars;
- $267.6 million for the rehabilitation and overhaul of the CTA rapid transit cars;
- $217.8 million for the expansion of the CTA's Ravenswood Brown Line;
- $141.1 million toward the purchase of 426 CTA buses;
- $127.9 million for the rehabilitation and overhaul of the CTA buses;
- $106.2 million for the replacement and upgrade of the CTA power distribution and signals;
- $37.5 million for the alternative analysis, preliminary engineering and construction for four proposed CTA New Start projects;
- $143.6 million for the construction of new Metra yards and shops;
- $97.0 million for the rehabilitation and improvement of Metra locomotives;
- $110.8 million for bridge rehabilitation and renewal;
- $55.5 million for the rehabilitation of Metra commuter rail cars;
- $78.8 million for the upgrade of signal systems and installation of Communication-Based Train control systems;
- $49.0. million for the New Start alternative analysis, engineering and construction;
- $61.6 million for the purchase of 176 Pace buses;
- $16.6 million for the purchase of 460 Pace vans and community vehicles;
- $14.7 million for the purchase of 183 Pace paratransit vehicles;
- $18.1 million for the purchase of a replacement fixed route radio system;
- $23.0 million for the purchase of a replacement farebox system;
- $15.4 million for the purchase of the replacement for the HPe3000 computer system;
- $14.6 million for the construction, expansion and improvements to Pace garages; and
- $4.4 million for the implementation of Transit Signal Priority projects.

CTA Overview

The proposed projects in the CTA's portion of the 2007-2011 capital program total $1.5 billion. The CTA's portion of the capital program continues the rehabilitation and replacement of capital assets. The percentage for the general categories of capital improvements of the total program are rolling stock at 56 percent; track and structure at 21 percent; electric, signal and communications at 7 percent; support facilities and equipment at 7 percent; and stations and passenger facilities at 9 percent. The general categories of capital improvements comprising the CTA's portion of the capital program are illustrated in Exhibit 7-9.

Highlights of the CTA's portion of the 2007-2011 capital program are as follows:

Exhibit 7-9: **CTA Five-Year Assets by Category**—$1,524 million



Rolling Stock

The CTA's portion of the 2007-2011 capital program includes $269.2 million in the bus rolling stock category. The CTA's bus fleet consists of 2,106 buses. The five-year program contains $141.1 million for replacement of over-age buses. These buses will have reached the industry standard retirement age of 12 years by the end of the five-year program. Continued operation of these buses imposes unnecessarily high maintenance and operating costs and reduces service reliability for the CTA's customers. All new buses will be air conditioned, low-floor and fully accessible to persons with disabilities. In 2007, on-going bus purchases totaling $29.9 million are planned.

In addition, $127.9 million is budgeted for capital-eligible bus maintenance activities and life extending overhauls over the five-year program with $23.1 million planned in 2007. The CTA will continue its aggressive Bus Preventive Maintenance Program to schedule the replacement of parts nearing the end of their useful life. This program will improve the comfort, quality and reliability of the CTA's bus service and will reduce operating expenditures by avoiding service disruptions and unscheduled maintenance of buses.

The rail rolling stock category includes $586.7 million in 2007-2011 to rehabilitate or purchase CTA rail cars. The CTA's rail fleet consists of 1,190 train cars. The five-year program includes $319.1 million for the replacement of 2200 and 2400 Series rail cars and the purchase of additional cars to meet the service requirements associated with the Brown Line capacity expansion. The CTA is proposing $57.5 million for the purchase of new rail cars in 2007. Also, this capital program contains $267.6 million for the CTA systematic maintenance and upgrade of rapid transit rolling stock including the overhaul and mid-life rehabilitation for the 2200 and 2400 Series rail cars. This mid-life rehabilitation will enable the cars to reach original useful life estimates of 25 years.

Track and Structure/ Acquisitions and Extensions

The track and structure category includes $319.6 million in 2007-2011 to rehabilitate and expand existing rail lines with $144.1 million programmed in 2007. The CTA rail system contains 287.8 total track miles, including yard track. Of these, 63.2 miles are at grade, with exclusive right-of-way; 32.1 miles are at grade with cross traffic; 111.1 miles are on elevated structure; 55.2 elevated miles are on fill; 2.9 are open cut miles; and 23.3 miles are subway.

The highlights of the CTA's five-year track and structure program include the following:

1) The final funding of $1.6 million in 2007 for the reconstruction of the Douglas Branch of the Blue Line from 54th and Cermak in Cicero through the incline connection to the Congress Branch completed in 2005;

2) The capacity expansion of the Ravenswood Brown Line from Kimball Terminal to Tower 18 in the Loop by extending platforms to accommodate eight-car trains and making selected yard improvements, at a cost of $217.8 million over the next five years, with $64 million programmed in 2007;

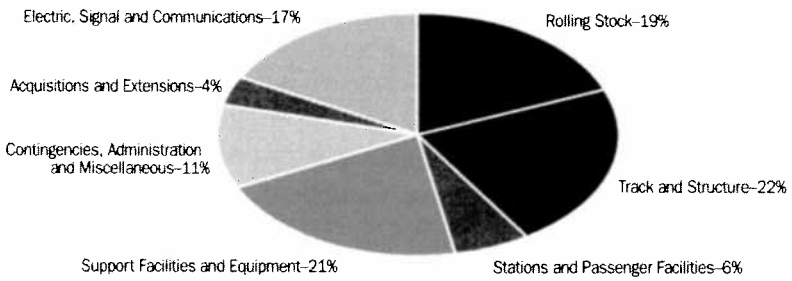
3) The repair of track and structure, at a cost of $62.7 million, with $41.1 million programmed in 2007; and

4) New Start projects to extend and expand the CTA rail system at a cost of $37.5 million in 2007 for engineering, construction and alternative analysis. This includes extending the Red Line from the 95th Street Station to 130th Street, extending the Orange Line from Midway Airport to the Ford City Mall, and extending the Yellow Line from the Dempster Station to Old Orchard Mall. It also includes funds for the expansions of the Circle Line that would link all of the CTA's rail lines in the City of Chicago to Metra rail lines and for the Ogden Avenue Transitway project from central Chicago to the North Riverside Park shopping center. The CTA has requested earmarks for these projects in the pending federal FY 2007 budget.

Electrical, Signal and Communications

The electrical, signal and communications category totals $106.2 million for the CTA's portion of the proposed five-year program, with $37.6 million programmed in 2007. The CTA's five-year plan includes the replacement and upgrade of the train control and track interlocking on the Loop Elevated Line with modern equipment providing increased reliability for customers at a cost of $15.4 million. It also includes the upgrade and replacement of the signal system for the entire Dearborn Subway, the Congress Branch and a portion of the O'Hare Branch on the Blue Line at a cost of $90.8 million.

Exhibit 7-10: **Metra Five-Year Assets by Category**—$1,108 million



Support Facilities and Equipment

The CTA's portion of the 2007-2011 capital program includes $108.8 million in the support facilities and equipment category with 2007 funding of $19.4 million.

The CTA's five-year program includes upgrades and improvements to various CTA facilities that need repair and require security enhancements, upgrades to bus turnarounds, rail stations and bus garages, and the rehabilitation of elevators and escalators. Various escalators and elevators throughout the system are beyond their service life, require continual maintenance work and need to be replaced. Other escalators and elevators are in poor condition and need to be rehabilitated.

Stations and Passenger Facilities

The stations and passenger facilities category totals $133.8 million for the CTA's portion of the proposed five-year program with $50.3 million programmed for 2007. The CTA operates 144 rapid transit stations serving eight routes. Sixty-five of these stations are wheelchair accessible via elevator or ramp. The CTA will use the funding in the capital program to reconstruct the Howard Station on the Red Line including the reconstruction of the bus terminal and parking lot. The station will be made fully compliant with the *ADA*. The CTA proposes to program funds in the five-year capital program to complete the design and begin construction of the Wilson Station on the Howard Branch of the Red Line and continue construction of the Washington Street Station/Block 37 project connecting the State Street and Dearborn subways in downtown Chicago.

Metra Overview

The Metra's portion of the proposed 2007-2011 capital program totals $1.1 billion. During this five-year period, Metra will continue the process of renewing its extensive commuter rail infrastructure, while preparing to expand its system. The percentage for the general categories of capital improvements of the total program are rolling stock at 19 percent; track and structure at 22 percent; electric, signal, and communications at 17 percent; support facilities and equipment at 21 percent; stations and passenger facilities at 6 percent; acquisitions, extensions and expansions at 4 percent; and miscellaneous at 11 percent (Exhibit 7-10).

Highlights of Metra's 2007-2011 capital program are as follows:

Rolling Stock

The five-year rolling stock program totals $207.9 million, with $61.5 million planned for 2007. Metra's fleet includes 144 locomotives, 821 non-electric cars and 191 self-propelled electric cars. The 2007-2011 capital program includes $97 million for the rehabilitation and improvement of locomotives, $62.3 million for the rehabilitation and improvement of commuter cars, and $39.6 million for the overhaul of rolling stock fleet components.

Track and Structure

The track and structure category totals $239.4 million over the five years of the program, with $33.3 million planned for 2007.

The Metra system operates on approximately 475 route miles with over 1,100 miles of track and 800 bridges. Metra is continuing a program of system-wide rehabilitation and preventive maintenance that includes bridge rehabilitation, grade separation, retaining wall rehabilitation, continuous-welded rail installation, ties and ballast replacement, rail grinding, fence installation, grade crossing replacement, and track undercutting.

Bridge rehabilitation and replacement projects, totaling $110.8 million, are planned over the five-year program and include $46 million on the Milwaukee District-West Line, $24.5 million for the Metra Electric Line, $17.1 million for the Rock Island Line, $13.5 million for the Milwaukee District-North Line, $3.5 million for the BNSF Railway, $1 million for the Union Pacific West Line, and $1.5 million for the Union Pacific Northwest Line.

Electrical, Signal and Communications

A total of $183.4 million is planned for the five-year program for electric, signal and communications projects that include upgrades and improvements to existing facilities such as interlockers, switches, signal systems, and electrical power control facilities. The 2007 program provides $27.8 million for numerous projects throughout the system.

Improvements to the Lake Street interlocker, located at Lake and Clinton Streets in Chicago, are planned at a cost of $2 million in 2007 and $17 million in the program's out years. As part of this project, a new interlocking control machine will be purchased and installed at the Lake Street Tower.

Metra has also programmed $7 million in 2007 for the renewal of the Gresham interlocker on the Rock Island District. Metra's portion of the out-year capital program also includes $5 million for the completion of this renewal. The capital program contains $4.6 million in 2007 with $14 million in the out-years for the installation of fiber optic cable on the BNSF Railway, to increase the effectiveness and reliability of signal and control system communications at interlockers and crossings. In addition, Metra is proposing $28 million in the out-year program to install a communications-based train control system on the Metra Electric District and the Milwaukee District lines.

Support Facilities and Equipment

The support facilities and equipment category totals $229.7 million for the 2007-2011 planning period, with $32.8 million in the 2007 capital program. Support facilities and equipment includes rail car and locomotive maintenance buildings, storage yards, work crew headquarters, maintenance vehicles and equipment, office buildings, and associated computer hardware and software.

Metra's portion of 2007 capital program includes $1.5 million toward land acquisition for a new coach yard on the Metra Electric District and two new coach yards on the Union Pacific Northwest Line. One of these new yards on the Union Pacific Northwest Line will be in Woodstock and the other new yard will be in Johnsburg. Metra is proposing $14.9 million in 2007 with $113.2 million in the out-years for engineering, construction and right-of-way purchases for new coach yards and support facilities as well as various capacity upgrades planned for the Chicago Regional Environmental and Transportation Efficiency (CREATE) project. Metra also proposes $14 million in the five-year capital program to expand the Joliet Yard on the Rock Island District.

Over the life of the five-year program, Metra plans to spend $86.2 million on support facilities, yards, shops, and substations.

Stations and Passenger Facilities

There are 231 stations in the Metra system, including four major terminals in downtown Chicago. In Metra's portion of the five-year capital program, a total of $65.1 million is programmed for stations and parking. In 2007, $21.2 million is programmed for these projects.

The 2007 program contains several major station projects:

1) $3.4 million for the improvements to the concourse of Ogilvie Transportation Center serving the Union Pacific Lines in downtown Chicago;

2) $2.3 million for the rehabilitation of the Winnetka Station on the Union Pacific North Line;

3) $1.5 million for the replacement of the Bartlett Station on the Milwaukee District West Line;

4) $1 million for the construction of the 35th Street Intermodal Station on the Rock Island District;

5) $0.5 million for rehabilitation of the 99th Street Beverly Station on the Rock Island District; and

6) $0.5 million to the replace the Robbins Station facilities on the Rock Island District.

Furthermore, the 2007-2011 capital program includes $15.2 million to improve platforms and ramps at Metra stations for compliance with the *ADA*, $14.2 million for engineering for stations and parking, $8.3 million for commuter parking lots, and $5.4 million to construct commuter parking decks in Geneva and St. Charles.

Acquisitions, Extensions and Expansions

For the 2007 capital program, Metra is proposing to spend $49 million for engineering for four proposed new start projects. These projects include two new lines: the Suburban Transit Access Route (STAR) Line and Southeast Service. In addition, these new start projects also include upgrades to the Union Pacific West and Northwest lines. All of these projects are eligible for federal funding under the *SAFETEA-LU* legislation. Metra has requested earmarks for these projects in the pending federal FY 2007 budget.

Miscellaneous, Contingencies and Administration

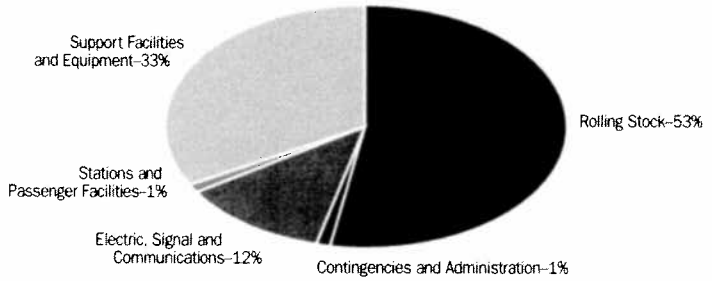
Metra's portion of 2007-2011 capital program includes $133.2 million for station studies, project management and oversight, security improvements, advertising, material additives, insurance, support engineering, unanticipated capital, administration and contingencies, with $30.7 million programmed in 2007.

Pace Overview

Pace's portion of the 2007-2011 capital program includes $190.1 million. This funding primarily provides for the replacement and expansion of rolling stock. The percentage for the general categories of capital improvements of the total program are rolling stock at 53 percent; electric, signal and communications at 12 percent; support facilities and equipment at 33 percent; and stations and passenger facilities at 1 percent; and contingencies and miscellaneous at 1 percent. These allocations are illustrated in Exhibit 7-11.

Highlights of Pace's 2007-2011 capital program are as follows:

Exhibit 7-11: **Pace Five-Year Assets by Category**—$190 million



Rolling Stock

In the five-year capital program, Pace plans to purchase up to 771 transit vehicles for replacement and expansion at a cost of $89.5 million. Pace's fleet consists of 680 fixed-route buses, 364 paratransit vehicles and 719 vanpool vehicles. Pace's 2007 fixed route bus purchase budget of $13.3 million includes the replacement of 38 fixed route buses purchased in 1992 and 1993. All the buses to be replaced have exceeded their useful life; and the new vehicles will be 30 feet in length.

In 2007, Pace also plans to spend $6.2 million to purchase up to 81 paratransit vehicles to replace vehicles that have exceeded their useful lives. These vehicles will be a combination of buses and vans.

In addition to other rolling stock purchases, Pace's portion of 2007 capital program includes $2.2 million for the purchase of two buses for Oak Park and 58 vans for Vanpool services throughout Pace's territory. The funds for the Vanpool programs are for the replacement of the vanpool vehicles which have exceeded their useful life and for the expansion of service. Pace's Vanpool program is composed of the Vanpool Incentive Program (VIP), the Corporate Shuttle Program and the ADvAntage Program in addition to the Municipal Vehicle Program.

This program includes a bus overhaul program including the replacement of bus components such as air conditioning condensers, alternators, regulators, drive shafts, transmission coolers, fan motors, steering shafts, and other items. Under the rolling stock category, Pace proposes $1 million for bus overhaul in 2007, with $4 million programmed in the out-years. In addition, the 2007 program includes the $1.5 million for the purchase and installation of associated capital items such as engines, transmissions and other parts for fixed route and paratransit vehicles. The 2008-2011 capital program includes $3.8 million for associated capital purchases.

Electrical, Signal and Communications

Pace's portion of the 2007 capital program includes $2.6 million to implement seven Transit Signal Priority (TSP) projects contained in the federal *Safe, Accountable, Flexible, and Efficient Transportation Equity Act—A Legacy for Users (SAFETEA-LU)* legislation. These projects contain funding for the development and purchase of the TSP system in major corridors. These TSP corridors are Cermak Road, Rand Road, Cicero Avenue, South Suburban, Grand Avenue, Lincoln Highway and Roosevelt Road. Additional funding is included in *SAFETEA-LU* for some of the TSP projects through 2009.

Also, Pace proposes $18.1 million in the five-year capital program for the purchase and installation of a new system-wide radio system to replace Pace's existing radio system with $2.5 million planned for 2007. The existing system is 13 years old and has exceeded its useful life, and parts are becoming difficult to find. The new radio system will not only save operating money, the technology will provide Pace with better communication coverage.

Support Facilities and Equipment

Pace proposes to program $61.8 million over five years for support facilities and equipment. Of the $8.6 million for support facilities and equipment projects planned in 2007, Pace's portion of the capital program includes $3.5 million for improvements to garages and facilities. The 2007 plan includes funds to make critical improvements to its facilities such as the replacement of concrete, fire sprinklers, security systems and overhead doors. The out-year plan includes $12.1 million for improvements and upgrades at various garages. The capital program also includes $15.4 million in 2007-2011 for the purchase and installation of a replacement computer system for the HPe3000 system. This program provides for the continuation of funding for the HPe3000 migration project, an integrated system of financial, purchasing and other business processes.

The 2007 program includes $0.5 million for the purchase of miscellaneous maintenance and office equipment and replacement of non-revenue vehicles with $1.6 million programmed through 2011. Also, $2.2 million is programmed in the out-years for office equipment and furniture.

Pace's out-year program provides $23.0 million for a system-wide farebox replacement project. The existing farebox system was installed in 1994. In addition, Pace's out-year program includes $2.9 million for the purchase of software and hardware and associated design and installation services for computers, printers, computer systems, network, communications, and presentation needs. Additionally, in 2007, Pace's capital pro-

gram proposes $250,000 for the purchase and installation of the Interactive Voice Response System (Phase I) software to permit Pace customers to get next bus arrival times and $400,000 to purchase 200 Mobile Data Terminals (MDT) for *ADA* paratransit vehicles.

Stations and Passenger Facilities

The five-year program includes $1.4 million for Pace stations and passenger facilities. This funding will provide for upgrades of numerous passenger facilities as well as the purchase of bus stop signs, shelters and other passenger amenities.

Administration

This category provides funding for project administration associated with capital projects. A total of $1.2 million is proposed for 2008 through 2010. Pace project administration covers the in-house staff salaries associated with undertaking and completing capital projects.

8 Appendices

Exhibit 8-1: **2007 Budget Call Calendar** (dates listed are for 2006)

June 22
Finance Committee meeting; 2007 budget call release.

August 1
Deadline for Service Board capital program and critical issue submittals to the RTA.

August 1 – September 1
RTA analysis of the Service Board's preliminary five-year capital program. RTA and Service Board staff discuss issues. RTA staff prepares the preliminary capital program marks.

August 15
Service Boards submit macro budget and two-year financial plan to the RTA.

August 16 – September 1
RTA staff analysis of each Service Board's macro budget and two-year financial plan. RTA and Service Board staffs discuss business issues. RTA staff prepares the budget, the two-year financial plan, and the preliminary five-year capital program summaries for management review. RTA staff submits for management review the finance and ordinance information required to: (1) set the operating funding marks for the 2007 budget and the 2008–2009 financial plan of each Service Board, (2) set the 2007 budget recovery ratio for each Service Board, and (3) set the preliminary 2007-2011 five-year capital program marks.

September 14
RTA Planning Committee and Finance Committee meetings to review and discuss the preliminary five-year capital program marks. Finance Committee meeting to review each Service Board's budget and two-year financial plan and to discuss the ordinance setting the operating funding marks and recovery ratio. RTA Board meeting to discuss and adopt the ordinance which sets the operating funding marks from 2007 through 2009, the 2007 recovery ratio and the preliminary five-year capital program marks for each Service Board.

September 15 – October 13
Service Boards develop detailed budgets, two-year financial plans, and preliminary five-year capital programs. Staff of the RTA and Service Boards meet to review issues.

October 2 – December 8
FTA releases Federal Fiscal Year 2007 Apportionments in the Federal Register.

October 2 – December 8
RTA and NIRPC renegotiate Letters of Understanding regarding the FTA Sections 5309 and 5307 allocations between NE Illinois and NW Indiana; and RTA and SEWRPC renegotiate Letter of Understanding regarding the FTA Section 5307 allocation between NE Illinois and SE Wisconsin.

October 16 – November 10
Service Boards release their budgets, two-year financial plans, and preliminary five-year capital program documents to the public, and present these documents to County Boards.

November 2
RTA Board Committees and the RTA Board review the RTA Agency budget.

November 6 – December 8
RTA Board Members and staff present highlight summaries of the regions proposed budget, two-year financial plan, and preliminary five-year capital program to County Committees and their Boards.

November 10 – 22
RTA staff consolidates the proposed budgets, financial plans, and revised capital programs of the Service Boards and Agency into the RTA's proposed 2007 annual budget and five-year capital program document.

November 15
Service Boards submit proposed budgets, two-year financial plans, and revised five-year capital programs to the RTA.

November 17
CATS Work Program Committee meets to recommend the FTA allocations between NE Illinois, NW Indiana, and SE Wisconsin.

December 1
The RTA's proposed 2007 budget, 2008-2009 financial plan, and five-year capital program document is available for public inspection.

December 12
RTA holds public hearings on the proposed consolidated 2007 budget, 2008-2009 financial plan, and 2007-2011 capital program.

December 4 – December 14
RTA Planning Committee, Finance Committee and RTA Board meet to review and adopt an ordinance for the 2007 budget, the 2008-2009 financial plan, and the revised five-year capital program.

Exhibit 8-2: **RTA Community Meetings/Budget Hearings Schedule**

The RTA is seeking public input regarding the Moving Beyond Congestion strategic planning process, and regarding the proposed operating and capital program and budget for public transportation in the region. Meetings are open to the general public. No RSVP necessary. All locations are *ADA* accessible. For questions, call the RTA at 312-913-3200.

Public Hearing Overview

Section 4.01 of the *RTA Act* directs the RTA to hold public hearings on its annual consolidated budget and financial plan, prior to Board consideration of the ordinance adopting the budget and plan. This year the RTA held its public hearings between December 4 and 14, 2006 in thirteen locations throughout the six-county region. The location of these hearings is detailed in Exhibit 8-2. Court reporters recorded testimony and transcripts of this testimony are on file at the RTA.

At these meetings, the public was briefed on the proposed RTA 2007 Budget and the *Moving Beyond Congestion* strategic plan. In partnership with the Service Boards, the strategic planning process will address the region's long-term public transportation needs and implement innovative approaches to funding, planning, service coordination and system growth. A true community dialogue and discussion was conducted and all who wanted to make public statements were accommodated. Nearly 400 people attended these meetings. Members of the general public, State and local elected officials, representatives of municipalities, transit advocacy groups, community organizations and religious leaders from across the region participated in the meetings. In addition, written comments and suggestions were collected. This unprecedented level of public input produced a broad range of opinions and suggestions.

Testimony about the 2007 budget addressed concerns about the roles and responsibilities of the RTA and the Service Boards; the need for more frequent and reliable public transit service; the process of identifying, evaluating, and funding capital project proposals; service and fare integration among the Service Boards; and better integration of transit planning and land development in the RTA region.

Glossary

Accessible—As defined by FTA, a site, building, facility, or portion thereof that complies with defined standards and that can be approached, entered, and used by persons with disabilities.

Accessible Service—A term used to describe service that is accessible to non-ambulatory riders with disabilities. This includes fixed-route bus service with wheelchair-lifts or Dial-A-Ride service with wheelchair lift-equipped vehicles.

ADA (The Americans with Disabilities Act of 1990)—This federal act requires many changes to transit vehicles, operations and facilities to ensure that people with disabilities have access to jobs, public accommodations, telecommunications, and public services, including public transit. Many capital projects described in this document are being implemented to comply with the *ADA*.

ADA Paratransit Service—Non-fixed-route paratransit service utilizing vans and small buses to provide pre-arranged trips to and from specific locations within the service area to certified participants in the program.

Administration Expenditure—Expenditures for labor, materials and fees associated with general office functions, insurance, safety, legal services, and other services.

Agency Fund—This fiduciary fund accounts for the assets held by the RTA in a trustee capacity or as an agent for the CTA, Metra, and Pace, rather than for the RTA's own programs. Of the four types of fiduciary funds (Agency funds, pension and other employee benefit funds, investment trust funds, and private-purpose funds) the RTA uses only the first two.

Ambulatory Disabled—A person with a disability that does not require the use of a wheelchair. This would describe individuals who use a mobility aid other than a wheelchair or have a visual or hearing impairment.

Appropriation—A legal procedure that permits a specified amount of funds for a given operating or capital purpose to be expended; the RTA appropriates funds for expenditures.

Balanced Budget—A budget in which expected revenues equal expected expenses during a fiscal period.

Balanced Scorecard (BSC)—A balanced scorecard translates an organization's vision and strategy into a comprehensive set of objectives and performance measures that provides the framework for a strategic measurement and management system. The BSC encompasses four distinct perspectives-financial, customer, internal, and learning and growth. The name reflects the balance provided between short- and long-term objectives, financial and non-financial measures, past and future-oriented indicators, and external (shareholder and customer) and internal performance perspectives.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds to obtain better interest rates and/or bond conditions which results in the defeasance of the old debt.

Budget—Funds allocated by the RTA Board for a particular purpose; each year the RTA Board approves a budget document for the following year. Funds are allocated either by "programming" them or by "appropriating" them.

Budget Marks—The Regional Transportation Authority Act, as amended in 1983, requires the RTA to advise each of its Service Boards by September 15 of each year of its required revenue recovery ratio for the subsequent year, and the public funding to be available. These figures are referred to as budget marks.

Bus Bunching—A traffic scenario in which more than one bus arrives at the same time. This phenomenon is a subject of several CTA initiatives aimed at reducing service problems.

Bus Rapid Transit (BRT)—BRT combines the quality of rail transit and the flexibility of buses. It can operate on exclusive transitways, High Occupancy Vehicle (HOV) lanes, expressways, or ordinary streets. A BRT system combines intelligent transportation systems technologies, priority for transit, cleaner and quieter vehicles, rapid and convenient fare collection, and integration with land use policies.

Capacity Utilization—The percentage of seats occupied in a train or bus at a given point in time.

Capital—Funds which finance construction, renovation, and major repair projects or the purchase of machinery, equipment, buildings, and land.

Capital Expenditure—Expenditures that acquire, improve, or extend the useful life of any item with an expected life of three or more years and a value of more than $5,000, e.g., rolling stock, track and structure, support facilities and equipment, and stations and passenger facilities.

Car Mile or Vehicle Mile—A single bus, rapid transit car, or commuter rail car traveling one mile.

CATS (The Chicago Area Transportation Study)—The CATS Policy Committee is designated by federal, state and local officials as the Metropolitan Planning Organization (MPO) for the northeastern Illinois region. Together with the State of Illinois, the MPO is responsible for carrying out the urban transportation planning process in this region. The northeastern Illinois region includes: Cook, DuPage, Kane, Lake, McHenry and Will counties and a portion of Kendall County. CATS was formed in 1955 to develop the first comprehensive long-range transportation plan for the region. This plan, completed in 1962, had a horizon year of 1980 and included many recommendations that were to become part of the present highway and transit networks. The success of that planning effort led to CATS being made a permanent agency.

CTA (Chicago Transit Authority)—The CTA operates bus and rapid transit service in the City of Chicago and several suburbs. The CTA was created by state legislation and began operations in 1947.

CMAQ (Congestion Mitigation/Air Quality) Grant—A federal grant program designed to support transportation projects that reduce traffic congestion.

Cost-Per-Mile—Operating expense divided by vehicle miles for a particular program or in total.

Cost-Per-Passenger—Operating expense divided by ridership for a particular program or in total.

Chicago Area Transportation Study (CATS)—the Metropolitan Planning Organization (MPO) for northeastern Illinois responsible, in cooperation with the State, for planning and developing a safe, efficient and affordable transportation system for the northeastern Illinois region. The CATS committee structure ensures that citizens, interest groups, elected officials, and public and private agencies are included in the transportation planning process.

Chicago Metropolitan Agency for Planning (CMAP)—combined the previously separate transportation and land-use planning agencies (Chicago Area Transportation Study [CATS] and the Northeastern Illinois Planning Commission [NIPC]) for northeastern Illinois into a single entity designed to protect natural resources and minimize traffic congestion as the region plans for the 21st century and beyond.

Dead-Head—The time when a transit vehicle is traveling toward a yard, shop, or the start of a run but is not in revenue service. Car miles include dead-head miles.

Debt Service—The payment of interest on and the repayment of principal on long-term borrowed funds according to a predetermined payment schedule.

Defeasance of Bonds—a technique used to discharge older high-rate debt prior to maturity with new securities bearing lower interest rates.

Deficit—For a particular Service Board, the difference between system-generated revenues and system operating expenses. The deficit is sometimes referred to as the "public funding requirement." The RTA's current practice is to provide operating funds to each Service Board equivalent to their budgeted deficit for the year as opposed to the actual deficit. For the RTA, its deficit or surplus equals total revenues (sales tax, PTF, interest, and other income) less operating funding, debt service, technology, and capital funding (RTA capital and RTA discretionary funding of Service Board capital).

Depreciation—Expiration in the service life of fixed assets, other than wasting assets, attributable to wear and tear, deterioration, action of the physical elements, inadequacy, and obsolescence. The portion of the cost of a fixed asset, other than a wasting asset, charged to expense during a particular period.

Dial-A-Ride Service—Paratransit service that requires the user to call ahead and schedule service.

Discretionary Funds—Funds that the RTA allocates, at its discretion, to the Service Boards. These funds include the PTF and a portion of the 15 percent of the RTA Sales Tax.

Elderly—A term used to describe individuals who are 65 years of age or older. This age is used to qualify for the RTA Senior Citizen Reduced Fare Card. Note that some paratransit services define elderly individuals at an age other than 65.

Express Bus (or route)—A suburban or intercity bus that operates a portion of its route without stops or with a limited number of stops.

Favorable Performance—In a comparison of actual results to budgeted levels, favorable performance describes the situation in which expenditures are less than budget or revenue exceeds budget.

Farebox Revenue—Revenue obtained from passengers and other fare subsidies except the state reduced fare subsidy program. Also referred to as "passenger" revenue.

Fares—The amount charged to passengers for use of various services.

Feeder Bus Services—Pace bus routes which serve Metra stations.

Financial Plan—In addition to an annual budget, the *RTA Act,* as amended in 1983, requires the RTA and its Service Boards to develop a financial plan for the two years subsequent to the upcoming budget year. In combination with the annual budget, this provides a three-year projection of expenses, revenues, and public funding requirements.

Fiscal Year—The calendar year is the fiscal year for the RTA, CTA, Metra, and Pace. The fiscal year of the State of Illinois extends from July 1 through June 30 of the following year. The fiscal year of the federal government extends from October 1 through September 30 of the following year.

Fixed-Route Service—Buses that operate according to fixed schedules and routes.

Flexible Funds—Federal funds made available by *TEA-21* that can be used for various transportation projects, including both highway and mass transit projects. Allocation of these funds is at the discretion of state and local agencies.

Fringes (Fringe Benefit Expenditures)—Pay or expenditures to or on behalf of employees in addition to salaries and wages, including sick pay, vacation pay, pension contributions, life and health insurance, unemployment and workers' compensation, social security costs, and other programs.

FTA (Federal Transit Administration)—The FTA is the federal agency which helps cities and communities provide mobility to their citizens. Through its grant programs, FTA provides financial and planning assistance to help plan, build, and operate rail, bus, and paratransit systems. Since 1988, the only FTA funding available to the RTA has been for capital projects.

Full Funding Grant Agreement (FFGA)—The FTA is required to use a FFGA to prove financial assistance for new start projects. The FTA also has the discretion to use an FFGA in awarding federal assistance for other major capital projects. The FFGA defines the project, including cost and schedule; commits to a maximum level of federal financial assistance (subject to appropriation); establishes the terms and conditions of federal financial participation; covers the period of time for completion of the project; and helps to manage the project in accordance with federal law. The FFGA assures the grantee of predictable federal financial support for the project (subject to appropriation) while placing a ceiling on the amount of that federal support.

Full-Time Equivalent Position (FTE)—A measurement equal to one staff person working a full-time work schedule for 1 year.

Fund Balance—The cumulative difference between revenues and expenses over the life of a fund.

Funding Formula—A specific formula used to determine a subsidy level.

Fund Balance—The excess of funding over deficit for a given period of time. In this document, the fund balance refers to the unreserved/undesignated funds in the Agency and general fund.

General Long Term Debt Account Group (GLTDAG)—This account group is not a fund but a separate list of certain long-term liabilities of the general government. Debt normally is recorded at its face value, without premium or discount. Additions to and deletions from GLTDAG are disclosed in the notes to the financial statements.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

General Fund—The operating fund that is used to account for all financial resources and normal recurring activities except for those required to be accounted for in another fund.

General Obligation Bonds (GO Bonds)— are bonds that are legally backed by the full faith, and credit of the issuing government. The government is legally obligated to use its full taxing power, if necessary, to repay the debt.

Gross Domestic Product (GDP)—Reported by the Bureau of Economic Analysis, this measure of economic activity is the sum of the market values of all of the final goods and services produced in the United States in a year.

Grants—Moneys received from local, federal, and state governments to provide capital or operating assistance.

Headway—The time span between service vehicles (bus or rail) on a specified route.

Illinois FIRST—A group of legislation passed by the Illinois General Assembly to fund capital improvements for the state's infrastructure, roads, schools and transit.

Infrastructure—The physical assets of the RTA system, e.g., rail lines and yards, power distribution, signaling, switching, and communications equipment, passenger stations, information systems, and roadways, upon which the continuance and growth of transit depend.

In-Kind Service—These services are provided at no cost to a Service Board. For example, the City of Chicago provides free of charge dedicated security forces to the CTA.

Intelligent Bus System (IBS)—A bus communications system that uses advanced technology to monitor and improve performance on various levels. Pace's new bus communications system includes radio voice and data communications, Computer-Aided Dispatching (CAD) and Global Positioning Satellite (GPS)-based Automatic Vehicle Location (AVL) functions.

Intelligent Transportation Systems (ITS)—The application of advanced sensor, computer, electronics, and communication technologies and management strategies in an integrated manner to increase the safety and efficiency of the surface transportation system. ITS is a national effort designed to promote the use of advanced technologies in multimodal transportation.

Interest—The charge for borrowing money, typically expressed as an annual percentage rate.

ISTEA (Intermodel Surface Transportation Efficiency Act of 1991)—*ISTEA* amended the *Federal Transit Act* introducing new sources of flexible funds and increasing the funding authorized for public transit.

Joint Self Insurance Fund (JSIF)—The RTA provides excess liability insurance to protect the self-insurance programs maintained by the CTA, Metra, and Pace. The service boards are obligated to reimburse the JSIF for any damages paid plus a floating interest rate.

Labor Expenditure—The cost of wages and salaries (including overtime) to employees for the performance of their work.

Line Item—An appropriation that is itemized on a separate line in a budget.

Linked Trip—A single, one-way trip without regard for the number of vehicles boarded to make the trip (i.e., a home-to-work trip taken by boarding a bus, to a train, to another bus represents one linked trip or three unlinked trips)

Maintenance Expenditure—Expenditures for labor, materials, services, and equipment used to repair and service transit and service vehicles and facilities.

Mobility Limited—An individual who has a physical impairment, including impaired sensory, manual, or speaking abilities that result in functional limitations.

Modified Accrual Basis—A type of accounting whereby revenue and other financial resource increments (e.g., bond issue proceeds) is recognized when they become both "measurable" and "available" for finance expenditures of the current period. "Available" means collectible in the current period or soon enough thereafter to be used to pay liabilities of the current period. Similarly, expenditures (e.g., debt service payments and a number of specific accrued liabilities) are only recognized when payment is due because it is only at that time that they normally are liquidated with expendable available financial resources.

Moving Beyond Congestion (MBC)—Jointly with the Chicago Transit Authority, Metra and Pace, the Regional Transportation Authority is leading a strategic planning effort to maintain, enhance and expand the northeastern Illinois region's transit system and to solve the current transit funding challenge, ensure financial viability and accountability, and meet the region's growing and changing transportation needs.

New Initiative—A new program or service that the RTA may approve separately from the Agency's or a Service Board's regular budget. The RTA may attach special criteria to measure the success of a new initiative.

Non-Ambulatory Disabled—A person who has a disability that requires use of a wheelchair.

Northeastern Illinois Planning Commission (NIPC)—NIPC is the official comprehensive planning agency for the six-county Chicago metropolitan area. NIPC was created by the Illinois General Assembly in 1957 and assigned three broad responsibilities: to conduct research required for planning for the region; to prepare comprehensive plans and policies to guide the development of the region; and to advise and assist local governments.

Operating Assistance—Financial assistance for transit operations (as opposed to capital) expenditures. Such aid may originate with federal, state, or local governments.

Operating Budget—The planning of revenue and expenditures for a given period of time to maintain daily operations.

Off-Peak—Non-rush hour time periods.

Paratransit Service—Any transit service that is not conventional fixed-route bus or rail service, including Dial-A-Ride, fixed-route deviation, shared-ride taxicab, and vanpool services.

Passenger Mile—A single passenger traveling one mile.

Peak Period—Morning or evening rush hour.

Principal—The amount borrowed or the amount still owed on a loan, separate from the interest.

Positive Budget Variance (PBV)—Calculated as the difference between a Service Board's budgeted and actual deficit, a positive budget variance results when the actual deficit is less than budgeted. Since the RTA funds the budgeted deficit, a PBV represents available funds for the Service Boards.

Program *(verb)*—To commit funds, for a given capital purpose, without necessarily appropriating these funds for expenditure. When the RTA Board passes its official budget document, certain funds are "programmed" so that they may be obligated (i.e., contracts signed) during the upcoming year; these funds may be expended during the upcoming or subsequent years.

Program *(noun)*—Groupings of expenditure accounts with related expenditures (i.e., operations, maintenance, administration, and capital program).

Public Transportation Fund(s) (PTF)—Each month the state transfers from its General Revenue Fund into the Public Transportation Fund an amount equal to 25 percent of the RTA Sales Tax collected in the previous month. All funds deposited in the Public Transportation Fund are allocated to the RTA to be used at its discretion for the benefit of the Service Boards.

Public Funding—Funding received from the RTA. Generally refers to funding for operating expenditures.

Purchase of Paratransit Service—The amount of money paid to contractors to provide door-to-door transportation to certified participants in the *ADA* paratransit Service program.

Recovery Ratio—System-generated revenues divided by system operating expenditures as allowed by the *RTA Act.* This ratio is calculated for each of the Service Boards and for the RTA region as a whole. The *RTA Act* mandates that the RTA region must attain an annual recovery ratio of at least 50 percent.

Reduced Fares—Discounted fares for children age 7-11, grade and high school students (with CTA ID), seniors 65 and older (with RTA ID), and riders with disabilities (with RTA ID) except paratransit riders.

Revenue Car Mile—Car mile during which the vehicle is in revenue service (i.e., picking up and/or dropping off passengers).

Reverse Commute—City-to-suburb commute. This phrase refers to the fact that most riders commute from the suburbs to the city.

Ridership (unlinked passenger trips)—Each passenger counted each time that person boards a vehicle.

Rolling Stock—Public transportation vehicles including commuter rail cars, locomotives, rapid transit cars, buses, and vans.

RTA Sales Tax—1 percent in Cook County, 0.25 percent in the collar counties of DuPage, Kane, Lake, McHenry and Will. 85 percent of the sales tax is fully distributed to the Service Boards by the RTA according to formulas established by the *RTA Act.* 15 percent of the Sales Tax is retained by the RTA, a portion of which is distributed to the Service Boards at the RTA's discretion.

SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users)—Signed into law on August 10, 2005, this legislation provides $286.4 billion in guaranteed funding for federal surface transportation programs through federal fiscal year (FFY) 2009 of which $52.6 billion is for federal transit programs over six years.

Sales Tax Designated for Capital or Transfer Capital-Statutory—The difference between a Service Board's entitlement (from the 85 percent of the RTA Sales Tax) and its budgeted or actual deficit, whichever is greater. These funds, which are over and above operating needs, are generally used for capital purposes.

Strategic Capital Improvement Program (SCIP) Bonds—The RTA was authorized under the *RTA Act* to issue $500 million of bonds for public transportation projects approved by the Governor of the State as part of the RTA's SCIP. Effective January 1, 2000, the *Act* was amended to authorize the RTA to issue an additional $260 million of SCIP bonds in each year for the period of 2000 through 2004.

Series B Bonds—State Transportation Bonds used as all or a portion of the local share required to match federal funds for public transportation capital projects.

Service Boards—The term refers to the region's three transit operators: CTA, Metra and Pace.

Signal Priority—Transit signal priority either gives or extends a green signal to transit buses under certain circumstances to reduce passenger travel times, improve bus schedule adherence, and reduce bus operating costs.

Special Service—A transportation service, as defined by the FTA, specifically designed to serve the needs of persons who, by reason of disability, are unable to use mass transit systems designed for the use of the general public.

Subscription Service—Special services for users who ride on a frequent and regular basis and follow a prescribed schedule (a minimum of three times per week between the same origin and destination).

Subsidy—Funds received from another source that are used to cover the cost of a service or program that is not self-supporting.

System-Generated Revenue (total operating revenue)—Total revenue generated from operations includes farebox revenue, local subsidies, state fare subsidies, advertising, interest and all other income (excludes RTA and federal subsidies).

Taxi Access Program—Certified participants in the ADA paratransit service program can purchase taxi vouchers valued at up to $13.50 at a reduced price to pay for one-way taxi rides that originate within the City of Chicago.

TEA-21 (The Transportation Equity Act for the 21st Century)— Signed into law on June 9, 1998. this legislation provided a six-year reauthorization of the federal transit program and the necessary contract authority needed to fully fund the fiscal year 1998 obligation limitations contained in the fiscal year 1998 Department of Transportation Appropriations Act.

T-FLEx (Transit Finance Learning Exchange)—A strategic alliance of transit agencies formed to leverage mutual strengths and continuously improve transit finance leadership, development, training practices, and information sharing. Its purpose is to transform the finance function into a value-added business partner within each transit authority. Members meet twice annually in a facilitated workshop environment to develop and share best practices in active roundtable work sessions.

Total Vehicle Miles—The sum of all miles operating by passenger vehicles, including mileage when no passengers are carried.

Unreserved Fund Balance—The balance of funds that have not been reserved, designated or programmed into the budget, financial plan, or capital program.

Vanpool—Pace's VIP (Vanpool Incentive Program) is a service where a group of 5 to 15 people commute to and from work together in a Pace-owned van.

Supplemental Data

National Economic Projections

During the third quarter of 2006, the Gross Domestic Product (GDP) grew at an annual rate of 2.2 percent, following 5.6 percent and 2.6 percent annual growth rates during the first and second quarters of 2006, respectively. The GDP is the value of the output of goods and services produced by labor and property located in the U.S. Exhibit 8-3 highlights the annual real GDP growth from 2002 through 2007. The GDP climbed consistently from 1.6 percent in 2002 to 3.9 percent in 2004, before declining to 3.2 percent in 2005. GDP growth is expected to increase to 3.5 percent in 2006, but then fall to 3.0 percent in 2007.

In 2006, the national unemployment rate declined from 4.6 percent in September to a five year low of 4.4 percent in October before rising to 4.5 percent in November. Exhibit 8-4 shows the U.S. annual unemployment rate from 2002 through 2007. The unemployment rate grew from 5.8 percent in 2002 to 6.0 percent in 2003, before declining to 5.5 percent and 5.1 percent in 2004 and 2005, respectively. The national unemployment rate is expected to continue to decline to an annual average of 4.7 percent in 2006 before increasing slightly to 4.8 percent in 2007.

Exhibit 8-5 shows the annual trend in the growth of the U.S. Consumer Price Index (CPI) from 2002 through 2007. CPI annual growth of 1.6 percent in 2002 tied 1998 for the smallest CPI increase in more than 35 years. Improving overall economic activity resulted in a consistent CPI annual growth from 1.6 percent 2002 to 3.4 percent in 2005. CPI growth is expected to peak at 3.5 percent in 2006 before declining to 2.5 percent in 2007.

RTA Region

The following sections summarize population and employment trends in the six-county RTA region. These trends have a significant impact on public transportation ridership, as well as sales tax revenue.

Population

As shown in Exhibit 8-6, the population of the RTA region grew by 3.4 percent (from 8.1 million to 8.4 million) between 2000 and 2005. Population growth in the RTA region grew at a slightly slower pace than the overall population of the U.S., which increased by 5.3 percent during this period.

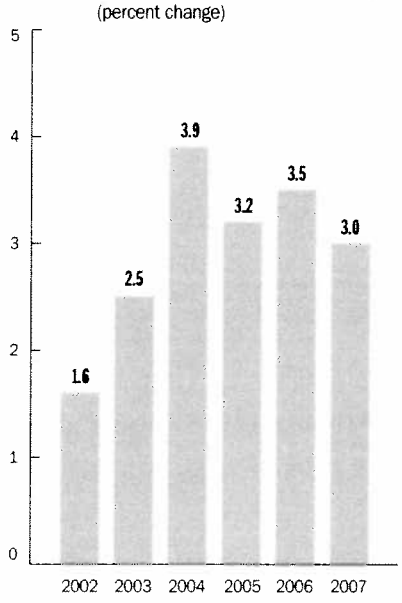
Since 1990, most of the region's population growth has occurred in the suburbs. Exhibit 8-7 illustrates the annualized population growth rates for each of the region's six counties from 2000 to 2005. The highest growth rate occurred in Will County, where the population increased at annual rate of 5.1 percent. The populations of Kane and McHenry counties grew at annual rates of 3.6 percent and 3.2 percent, respectively, while the populations of Lake and DuPage counties increased at annual rates of 1.8 percent and 0.5 percent, respectively. Cook County experienced a population decline at an annual rate of 0.3 percent. During this period, the population of the entire RTA region grew at an annual rate of 0.7 percent.

In 2005, Cook County accounted for 63 percent of the 8.4 million people living in the RTA region. DuPage County's population comprised 11 percent of the region, followed by Lake County and Will County (8 percent each), Kane County (6 percent), and McHenry County (4 percent). The population distribution for 2005 is illustrated in Exhibit 8-8.

Employment

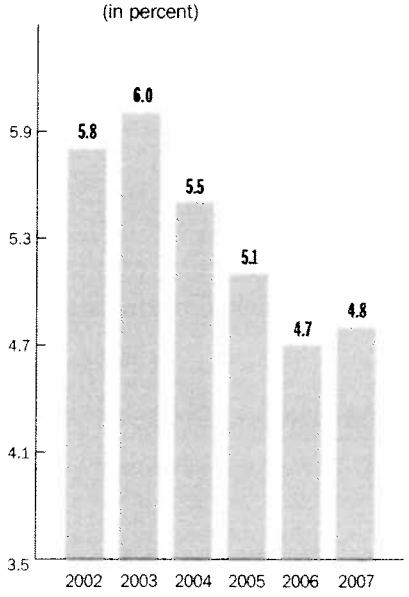
Exhibit 8-9 provides a comparison between the national unemployment rate, the unemployment rate in the State of Illinois, and the unemployment rates in each of the counties of the RTA region between 2002 and 2006. During this period, the unemployment rate in each county of

Exhibit 8-3: **U.S. Real Gross Domestic Product**[1]
(percent change)



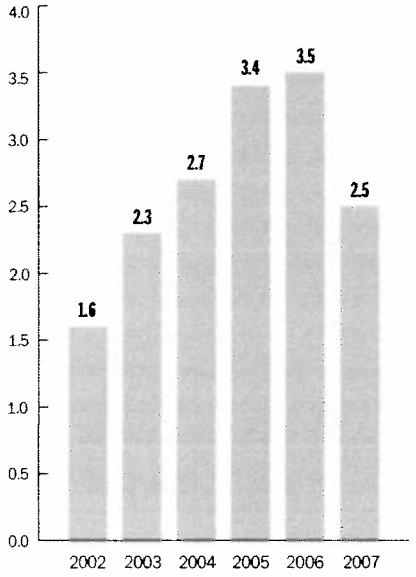
(1) U.S. Dept. of Commerce, Congressional Budget Office

Exhibit 8-4: **U.S. Unemployment Rate**[1]
(in percent)



(1) U.S. Dept. of Commerce, Congressional Budget Office

Exhibit 8-5: **U.S. Consumer Price Index**[1] (percent change)



(1) U.S. Dept. of Commerce, Congressional Budget Office

the RTA region except Cook was typically lower than that of the State of Illinois. Through 2005, the unemployment rate in Illinois was consistently higher than the national rate. In October 2006, the statewide unemployment rate was lower than the national unemployment rate.

From 2002 to 2003, the unemployment rate worsened on a national, regional, and local level. Between 2002 and 2005 the gap between Illinois and U.S. unemployment rates remained nearly steady at seven tenths of a percentage point. Among the six counties in the RTA region, DuPage and McHenry counties' October 2006 unemployment rates of 2.7 percent and 2.8 percent, respectively were the lowest in the region, while Cook County's rate of 3.9 percent was the highest in the region. Cook County's October 2005 unemployment rate of 3.9 percent was 0.3percentage points higher than that of the state of Illinois but 0.2 percentage points lower than the national figure.

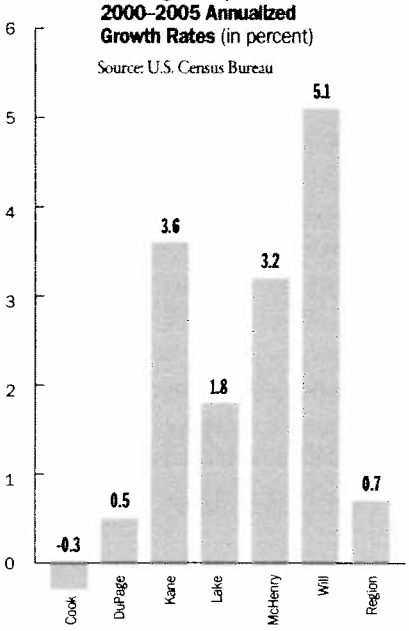
Suburban jurisdictions have led the region in employment growth since 1980. In 2000, employment in the five collar counties accounted for one-third of the RTA region's total. Cook County, which in 1980 accounted for 79 percent of the region's employment, accounted for only two-thirds of employment in 2000. Regional employment has increased from 3.7 million in 1980 to 4.3 million in 1990 and to 5.0 million in 2000 (Exhibit 8-10).

The trends in employment by economic sector in the RTA region are illustrated in Exhibit 8-11. Between 1980 and 2000, the greatest growth has occurred in the service sector. The manufacturing sector experienced the highest loss during this period. In 2000, services comprised 34 percent of employment, retail trade 15 percent, manufacturing 13 percent, government 11 percent, and finance, insurance, and real estate 10 percent. Combined, wholesale, transportation and public utilities, construction, and other comprised the remaining 17 percent.

The RTA region experienced steady growth in per capita income from 1980 to 2000. Within the region, per capita income was highest in DuPage and Lake Counties in 2000 and lowest in Kane and Will counties, as illustrated in Exhibit 8-12.

Exhibit 8-7: **RTA Region Population 2000–2005 Annualized Growth Rates** (in percent)

Source: U.S. Census Bureau



Sales Tax Trends

The RTA Sales Tax is the equivalent of one percent on sales in Cook County and one quarter percent on retail sales in the collar counties. Sales tax collections grew at a healthy pace from $532 million in 1996 to $650 million in 2000. However, between 2000 and 2003, sales tax collections fluctuated between $648 and $655 million. In 2004, sales tax collections increased $21 million to $676 million. In 2005, sales tax collections increased 25 million, the largest annual increase since 2000. Over the ten-year period, growth in sales tax collections has been greatest in the collar counties followed by Suburban Cook County and the City of Chicago. More recently, however, growth in sales tax collections in the City of Chicago has exceeded that of Suburban Cook County. Collections in Suburban Cook County continue to account for more than half of total collections, while collections in the City of Chicago account for slightly less than one third of the total. (Exhibit 8-13).

Ridership Trends

Total RTA ridership fell from 535 million in 1996 to 529 million in 1997 resulting from significant declines in CTA ridership. Total RTA ridership increased annually from 1997 to 2001 despite a decline in Pace ridership during this period. Reflecting the overall downturn in the economy, total RTA ridership declined in both 2002 and 2003. Metra and Pace lost riders in 2002, while the CTA lost riders in 2003. Regional ridership changed little from 2003 to 2004 reflecting stagnant ridership on all three Service Boards. In 2005, however, the CTA, Metra, and Pace achieved significant ridership gains as the economy rebounded and gas prices climbed. (Exhibit 8-14).

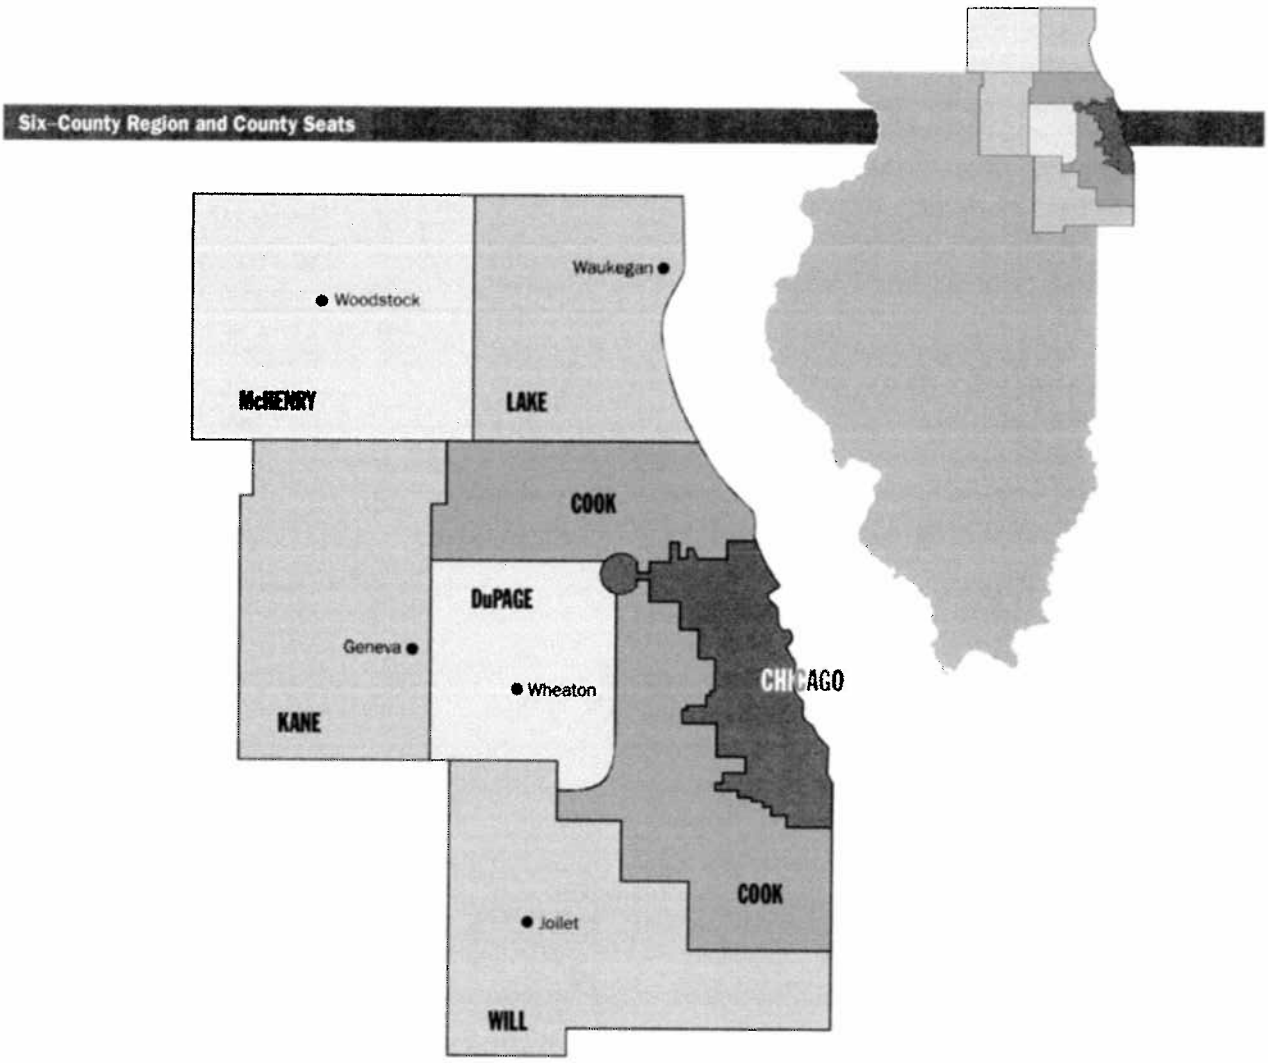
Six-County Region and County Seats



The GFOA Distinguished Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) present a Distinguished Budget Presentation Award to the Regional Transportation Authority, Illinois for its annual budget for the fiscal year beginning January 1, 2006. In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan, and as a communications device.

This award is valid for a period of one year only. We believe our current budget book continues to conform to program requirements, and we are submitting it to the GFOA to determine its eligibility for another award.

Letter from the Executive Director

The mass transit system has faced significant challenges over the past year. Insufficient operating and capital funding have forced the Regional Transportation Authority and its partners at the Chicago Transit Authority, Metra and Pace to make tough decisions in order to maintain vital transportation services for millions of riders throughout northeastern Illinois. Despite these challenges, the system was able to fulfill its critical responsibility throughout 2007 to the people, businesses and institutions of the nation's third largest metropolitan region.

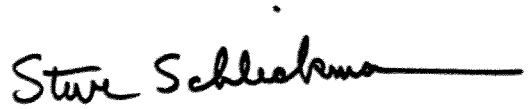
Great challenges remain for 2008. Without a comprehensive, long-term operating and capital funding plan approved by the Illinois General Assembly, the transit agencies will be forced to address budget shortfalls by cutting services, raising fares and laying off employees. Reducing service and increasing costs for riders are not actions any agency wants to pursue. But we are required by law to implement a balanced budget. Without additional resources, we have no choice but to reduce the size of the system. This could not happen at a worse time, as demand for transit is increasing and traffic congestion is worsening throughout the region.

The enclosed 2008 budget contains the financial outlook for the RTA, CTA, Metra and Pace. Unlike previous years, the transit agencies' 2008 budgets do not include significant transfers of capital funds to operations. Shifting dollars from construction, maintenance and capital budgets has allowed day-to-day operations to continue, but it has undermined our ability to repair, replace and upgrade vital components of the transit network.

We must reinvest in the buses, trains, tracks, bridges and other infrastructure in order to maintain a viable, efficient and safe system as called for in our *Moving Beyond Congestion* strategic plan. Over 700 organizations and over 20,000 individuals have signed up in support as we work to create a world class, convenient, affordable, reliable and safe transit system that is the keystone of the regions' growing business opportunities, thriving job market, clean air and livable communities.

As we move forward and are faced with the possibility of shrinking the transit system due to the lack of funding, we will look to our strategic plan for direction as we maximize the funding we do have, and how we can best serve the transit needs for the people of northeastern Illinois.

We will continue to work with state and local elected officials, the business community, civic and labor groups, the education community, our Partners for Transit and, most importantly, our riders, to achieve a comprehensive funding and reform for mass transit. We thank you for your continued support and look forward to working together in 2008 to improve our transit system, our region and our quality of life.



Stephen E. Schlickman
Executive Director, Regional Transportation Authority

Guide

The outline below is presented as a guide to the organization of the RTA 2008 Budget, Two-Year Financial Plan, and Five-Year Capital Plan. The book is divided into eight sections.

1. Introduction provides the guide, list of the members of the RTA Board of Directors, a letter from the RTA Executive Director explaining the key points of the 2008 budget, Budget Issues, a Legislative Update, RTA Vision Statement and Strategic Plan, Governance, Budget Process, Financial Policies, Budget Ordinance 2007-63, and the 2007 GFOA Distinguished Budget Presentation Award.

2. Budget in Brief provides a snapshot of the RTA's role and summarizes the key elements of the 2008 budget.

3. RTA section is divided into four major categories: Region Operating Plan (RTA, CTA, Metra, and Pace consolidated budget and financial plan); Agency Operating Plan (budget and financial plan); Goals and Performance Measures (Estimates vs. Plan); and Reference (RTA bonds and fund types).

4. CTA information includes service characteristics, operating plans, budget and financial plan details, and organizational structure.

5. Metra section includes service characteristics, operating plans, budget and financial plan details, and organizational structure.

6. Pace information is divided into two operations – Suburban Bus Service and ADA Paratransit Service. Information about both operations includes service characteristics, operating plan, budget and financial plan details, and organizational structure.

7. Capital provides an overview and details of the capital program of each of the Service Boards (CTA, Metra, and Pace) and issues concerning bringing the system into the state of good repair.

8. Appendices include the Budget Call Calendar, Budget Hearing Schedule, Glossary, and Supplemental Ridership and Sales tax data.

Budget Issues

- The primary concern facing the RTA and the Service Boards (CTA, Metra, and Pace) is the lack of both operating and capital program funding. In recent years, to cover the growth in operating expenses, the Service Boards have transferred capital funds to operations as allowed by federal regulations. This amount has grown from almost $27 million in 2003 to more than $102 million in 2006. A transfer of nearly $90 million is expected in 2007. The Agency's predominant goal in 2007 was to obtain additional funding for operations.

- The main reason the Service Boards have had to use capital funds for operating purposes is the disproportionate increase in operating costs, driven by healthcare, fuel, power, security, and ADA paratransit expenditures, compared to the growth in sales tax funding, the major source of funding for Service Board deficits. The transfer of capital funds to operations has significantly reduced investments in rolling stock, track and structure, and passenger facilities. The RTA is not able to augment its capital program with additional borrowing because it has insufficient revenue to service any new bond offering debt.

- The CTA's 2008 budget reflects a $158 million funding shortfall. Without additional public funding the CTA will need to increase fares and reduce service to balance its budget. The CTA's 2008 budget reflects a new fare structure, the elimination of 43 bus routes, the closing of three bus garages, and the elimination of nearly 1,800 positions.

- Metra's 2008 budget includes a 10% fare increase in 2008, 2009, and 2010, which will have an adverse effect on ridership. Shifting capital funds to operations at Metra delays infrastructure projects, equipment overhauls, and new rolling stock purchases, making it more difficult for Metra to maintain existing service levels.

- Pace's 2008 suburban service budget reflects the elimination of 58 regular bus routes, 56 feeder/shuttle bus routes, weekend service on 53 bus routes, evening weekday service, and other services, together comprising 30% of Pace fixed route ridership base. These service reductions are accompanied a 33% base fare increase and the loss of 224 positions.

- Pace's 2008 ADA paratransit budget depends on reducing service to the minimum required by the ADA Act and a region-wide increase in ADA paratransit fares to $4.00, the maximum permitted by the ADA Act.

State Representative Julie Hamos, Chair of the House Committee on Mass Transit, and RTA Chairman Jim Reilly speak at a rally for additional funding for public transit

Legislative Update

In reading this document it is important to note that the information provided reflects the Region's funding and service conditions when the RTA Board adopted Ordinance 2007-63 on December 14, 2007, which approved the 2008 budgets and 2009-2010 plans of the Service Boards, the Agency, and Regions as a whole.

During the weeks that followed the adoption of the 2008-2010 budget and financial plans the General Assembly continued to work on legislation that addressed the regions funding shortfall. In January, new legislation was adopted preventing implementation of service cuts, fare increases and layoffs identified in this document. A brief summary of the legislation and proceedings the RTA must take in the first and second quarter of 2008 are presented below.

New law provides increased operating funds. System-wide fare increases and service cuts avoided.

On January 18, 2008 Illinois lawmaker approved and the Governor signed into law, through an amendatory veto process House Bill 656 (Public Law 95-0708) that provides $530 million in new annual operating funds to the regions public transportation system. The new law also includes reforms recommended by the Illinois Auditor General to enhance coordination and efficiency and makes landmark reforms to the CTA pension and retiree health care plans. The Governor's amendatory veto provides free rides to seniors 65 and older living in the RTA's service area. Other provisions of the bill include:

- A one-quarter percent increase in sales tax across the region.
- An additional one-quarter percent increase in sales tax in the collar counties (DuPage, Kane, Lake, McHenry, and Will) controlled by each county board and used for public safety and transportation projects (roads and public transit).
- Authorizes the City of Chicago to increase the real estate transfer tax that provides additional funding for the CTA.
- Expands the RTA Board from 13 to 16 members
- Expands Metra's Board from 7 to 11 members.

As noted above, the law prevents system-wide fare increases and service cuts and the RTA will now initiate an amendatory budget process which includes:

- RTA Board adoption of amended operating funding marks for each Service Board.
- Service Board preparation and adoption of revised operating budgets.
- RTA review of each Service Board's revised budget.
- RTA Board adoption of each Service Board's amended budget.

Vision Statement & Strategic Plan

In 2007, the Regional Transportation Authority released its five-year strategic plan, *Moving Beyond Congestion* that presented the RTA's 30-year vision for maintaining, enhancing, and expanding public transit system in northeastern Illinois. With assets valued at $31 billion dollars, the system provides two million rides each weekday and hundreds of thousands more on weekends.

Vision

The RTA, CTA, Metra, and Pace vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities.

Goals

I. Provide Transportation Option
II. Ensure Financial Viability
III. Enhance Livability and Economic Vitality
IV. Demonstrate Value

Governance

Overview

The RTA was established in 1974 upon approval of a referendum in its six-county northeastern Illinois region. The operating responsibilities of the RTA are set forth in the RTA Act. The RTA is a unit of local government, body politic, political subdivision and Municipal Corporation of the State of Illinois.

As initially established, the RTA was an operating entity responsible for providing day-to-day bus and rail transportation services as well as a planning and funding agency. However, in 1983, the Illinois General Assembly reorganized the structure and funding of the RTA. The reorganization placed all operating responsibilities with three Service Boards—the Chicago Transit Authority (CTA) and two operating divisions of the RTA, a Commuter Rail Division (Metra) and a Suburban Bus Division (Pace)—each having its own independent board of directors. These divisions conduct operations and deal with subsidized carriers. The RTA became exclusively responsible for financial oversight and regional planning issues.

The Service Boards maintain separate management, exercise control over all operations including the passenger fare structure

The Service Boards operate within the RTA's region, but are separate legal entities. The Board of Directors of each Service Board is completely independent of the RTA Board. The RTA Board has control neither in the selection nor in the appointment of any Service Board director or its management. Further, directors of the CTA, Metra and Pace are excluded from serving on more than one entity's board of directors, including that of the RTA, except for the Chair of the CTA Board, who is also an RTA Board member.

The corporate authority and governing body of the RTA is the 13-member RTA Board of Directors. Twelve directors are appointed from within the six-county region: four directors by the Mayor of the City of Chicago, and a fifth director who is the chairman of the CTA; four directors by the suburban members of the Cook County Board; two directors by the Chairmen of the County Boards of Kane, Lake, McHenry, and Will counties; and one director by the Chairman of the DuPage County Board. The Chairman of the Board, its 13th member, is elected by at least nine of the 12 appointed members.

To administer the Agency's statutory requirements, the Board hires officers and staff. One of its officers, who must be approved by the Board, is the Executive Director. The Executive Director executes the Board's policy decisions and staffs the Agency to carry out its mission and goals.

The RTA Act sets forth detailed provisions for the allocation of receipts by the RTA to the various Service Boards, and imposes a requirement that the RTA's system as a whole achieves an annual "system-generated revenue recovery ratio" (i.e., aggregate income for transportation services provided) of at least 50 percent of the cost of the operation of transportation services. The Service Boards achieve their required recovery ratios by establishing fares and related revenue to cover the required proportion of their proposed expenditures. The RTA is responsible for supervising the budgets and financial performance of the CTA, Metra, and Pace.

The Service Boards are considered fiscally independent of the RTA. Although the RTA reviews the budgets of the CTA, Metra and Pace, approval of the budgets is mandated by State statute if such budgets meet specified recovery ratios.

The Service Boards maintain separate management, exercise control over all operations (including the passenger fare structure), and are accountable for fiscal matters including ownership of assets, relations with federal and state transportation funding agencies, and the preparation of their operating budgets. They are also responsible for the purchase of services and approval of contracts relating to their operations.

The CTA, Metra and Pace provide services to different geographic areas within the six-county region. The CTA provides rail and bus service to the City of Chicago and 38 neighboring suburbs within Cook County. Metra provides transit service to the six-county area, with the majority of the transit riders residing in the suburbs and commuting to the City of Chicago. Pace's primary bus service area is suburbs in the six-county region, with service to areas within the City of Chicago. Pace is also responsible for region-wide ADA paratransit service.

The RTA Act establishes the RTA as the primary public body with authority to apply for and receive grants, loans, and other funds from the state or the federal government for public transportation programs in Cook, DuPage, Kane, Lake, McHenry and Will counties ("northeastern Illinois"). The RTA is responsible for the allocation of certain federal, state and local funds to finance both the operating and capital needs of public transit in the six-county region.

The Act confers upon the RTA Board powers to prescribe regulations requiring that the Service Boards submit to the RTA such information as the RTA may require. The Board has statutory authority to establish by rule or regulation financial, budgetary, or fiscal requirements for the system.

In addition to its annual budget and financial plan responsibilities, the RTA, each year, is required to prepare and adopt a five-year capital program. The Service Boards are prohibited from undertaking any capital project in excess of $250,000 unless the project has been approved by the RTA Board and incorporated into the RTA capital program. The RTA also conducts market research and coordinates planning for public transportation in northeastern Illinois. The RTA funds the development of new types of service, both in the suburbs and in the City of Chicago, on a demonstration basis.

Budget Process

As previously discussed, the Act requires that the RTA Board of Directors approve an annual budget, a two-year financial plan, and a five-year capital program. The budget calendar and statutory oversight and amendment requirements govern this process. The essential aspects of the budget calendar are outlined below. A detailed calendar is provided in the Appendices (Exhibit 8-1).

Budget Calendar

By July 1 of each year, the Office of Management and Budget (OMB)is to submit to the RTA an estimate of revenue to be collected from taxes for the next fiscal year.

Based upon the estimate of tax receipts and revenue from other sources, "the Board shall, not later than September 15 prior to the beginning of the Authority's next fiscal year" advise each Service Board of the amounts estimated to be available during the upcoming fiscal year and following two years. The Board is also required to advise the Service Boards of the times when the amounts will be available and the next year's cost recovery ratio.

Between September 15 and November 15, each Service Board must prepare and publish a comprehensive annual budget, program document and a two-year financial plan. "The proposed budget and financial plan shall be based on the RTA's estimate of funds to be available to the Service Boards, by or through the Authority, and shall conform in all respects to the requirements established by the Authority." Before submitting the budget to the RTA, the Service Boards must hold at least one public hearing in each of the counties in which it provides service and must hold at least one meeting with the affiliated county boards. After considering the comments from these meetings, it must formally adopt the budget prior to submitting it to the RTA on November 15. The RTA Act requires that the budgets submitted by each Service Board not project or assume receipt

of revenue greater than that set in the estimates provided by the RTA.

The RTA Board must then hold at least one public hearing in the metropolitan region and one meeting with each county board on the proposed budget. Twenty days prior notice is required for the public hearing. The public hearing notice for the 2008 budget may be reviewed in the Appendices Section (Exhibit 8-2).

After conducting these hearings and taking into consideration the comments, the RTA Board must adopt a budget that meets the statutory criteria. Unless the Board can pass (by nine votes) a budget and financial plan for a Service Board that meets these criteria, the Act states that "the Board shall not release to that service board any funds for the periods covered by such budget and financial plan" except for the 85 percent of sales tax proceeds which are directly allocated to the Service Boards.

Also, if the RTA does not find that a Service Board budget meets the criteria set forth under the Act, the Board shall, five working days after the start of the Service Board's fiscal year, adopt a budget and financial plan meeting these criteria. The RTA, CTA, Metra, and Pace all report on a calendar-year basis.

Statutory Requirements

The RTA Act sets forth six statutory criteria for Board approval of the budget and financial plan of each Service Board. These six criteria are:

Balanced Budget

Such budget and plan shall show a balance between (a) anticipated revenue from all sources, including operating subsidies, and (b) the costs of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness.

Cash Flow

Such budget and plan shall show cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenditures as incurred.

Recovery Ratio

Such budget and plan shall provide for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board which allow the Service Board to meet its required recovery ratio.

Assumptions

Such budget and plan are based upon and use assumptions and projections, which are reasonable and prudent.

Financial Practices

Such budget and plan shall be prepared in accordance with sound financial practices as determined by the RTA Board.

Other Requirements

Such budget and plan shall meet such other financial, budgetary, or fiscal requirements that the RTA Board may by rule or regulation establish.

Oversight

After adoption of the operating budget, the RTA Board has continuing oversight powers concerning the budget and the financial condition of each Service Board and region as a whole. The RTA monitors the budgetary and operations performance of the Service Boards on a monthly basis to ensure compliance with their budget and recovery ratio. On a quarterly basis, the following oversight is conducted:

- After the end of each fiscal quarter, each Service Board must report to the RTA "it's financial condition and results of operations and the financial condition and results of operations of the public

transportation services subject to its jurisdiction" for that quarter. If in compliance, the RTA Board so states and approves each Service Board's compliance by adopted resolution.

- If "in the judgment of the Board" these results are not substantially in accordance with the Service Board's budget for that period, "the Board shall so advise the Service Board" and it "shall, within the period specified by the Board, submit a revised budget incorporating such results."
- Once a Service Board submits the revised budget plan, the RTA must determine if it meets the six statutory budget criteria necessary to pass an annual budget. If not, the RTA does not release any moneys to the Service Board(s) except for the statutory allocation of taxes.
- If a Service Board submits a revised budget and plan which shows that the statutory budget criteria will be met "within a four quarter period," the RTA "shall continue to release funds to the Service Board." The RTA may require the Service Board to submit a revised budget and plan that shows that the budget criteria "will be met in a time period less than four quarters."

Amendment

When prudent, the operating budget is amended due to shifts in the economic climate, governmental funding programs or new projects. Depending on the type of request, the proposed amendment may be presented to one or more of the RTA Board Committees for approval. However, the Board's Finance Committee must approve all proposed amendments before they are recommended to the RTA Board. The RTA Board ultimately approves or disapproves all proposals. If approved, the RTA and Service Board budgets are amended to include all changes and actual results and are then monitored against the amended budget.

Operations Funding

The RTA provides operating funds to each Service Board equivalent to its budgeted deficit for the year as opposed to funding the actual deficit. This policy encourages cost efficiencies by the Service Boards and allows them to retain any budgeted funds that are not expended. Such funds are generally referred to as a positive budget variance, or PBV.

Fund balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level on the unreserved and undesignated fund balance. The ordinance affirms that the annual budget adopted by the RTA each year will reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for that year. If actual sales tax receipts or other RTA revenue falls short of the amounts reflected in the annual budget, then the succeeding year's annual budget and two-year financial plan will provide for the replacement of any shortfall in the unreserved and undesignated balance of the RTA general fund, by no later than the end of the three-year planning period.

The RTA established this policy to maintain financial stability in order to carry out the RTA's legislative mandates to plan, fund and oversee public transportation in the region. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods.

Financial Policies

Capital Expenditure Policies

The RTA Five-Year Capital Program is adopted by the RTA after affirmative vote of at least 12 RTA Directors, after consultation with the Service Boards, and after holding a minimum of 3 public hearings in Cook County and one public hearing in each of the other counties in the metropolitan region. Preparation of the RTA's capital budget is guided by the

following policies found in the RTA Act.

- A five-year program for capital improvements is updated annually.
- Each capital improvement to be undertaken or on behalf of a Service Board should meet the criteria set in the Strategic Plan, and is not inconsistent with any sub-regional or corridor plan adopted by the RTA.
- In reviewing proposals for improvements to be included in a Five Year Capital Program, the RTA may give priority to improvements that are intended to bring public transportation facilities into a state of good repair.
- The Five Year Capital Program shall also identify capital improvements to be undertaken by a Service Board, a transportation agency, or a unit of local government and funded by the Authority from amounts in the Innovation, Coordination, and Enhancement Fund, provided that no improvement that is included in the Five Year Capital Program as of the effective date of this amendatory Act of the 95th General Assembly may receive funding from the Innovation, Coordination, and Enhancement Fund.

Fixed Assets Policies

The RTA's sets a fixed asset capitalization threshold of no less than $5,000 for any capital item(s). Capital assets are recorded at historical cost (or fair market value at the time of donation, if donated) and have a useful life of at least two years following the date of acquisition. Any acquisitions during the year are considered acquired at the beginning of that year for the purpose of computing depreciation.

Description	Useful life
Furniture and Equipment	5 years
Computer Equipment	5 years
Leasehold improvements	Life of the lease

General Obligation Bond Policies

The RTA's policy states that bonds should be payable from all revenue and all other funds received or held by the RTA that lawfully may be used for retiring the debt. Exceptions to this are amounts in the Joint Self-Insurance Fund (JSIF) and amounts required to be held or used with respect to separate ordinance obligations. The bonds are secured by an assignment of a lien on the sales taxes imposed by the RTA. All sales tax receipts are to be paid directly to the trustee by officials of the State of Illinois. In addition, RTA Sales Tax must be 2.5 times greater than the debt service requirement. If, for any reason, the RTA has not made the required monthly debt service payment, the trustee is to deduct it from the receipts. If all payments have been made, the funds are made available to the RTA for regular use. Under the Act, the CTA, Metra and Pace fare box receipts and funds on hand will not be used for payment of debt service.

Investment Policies

The RTA's policy complies with Illinois law, addresses safety of principal, liquidity of funds, rate of return, public trust, and Investments in Local and Disadvantaged Institutions. It further permits investments and prescribes safekeeping, collateralization, and reporting requirements.

The RTA policy establishes the following objectives:

- **Safety of Principal** – Every investment will be made with safety as the primary and overriding concern. Each investment transaction shall ensure that loss of capital, whether from credit or market risk, is minimized.
- **Liquidity** – Maturity and marketability aspects of investments should be coordinated with the anticipated cash flow needs of the RTA
- **Rate of Return** – A secondary objective is to seek the highest return on investments consistent with preservation of principal and prudent investment principles.
- **Public Trust** – The RTA and its officers should avoid any investment transaction or practice

which in appearance may impair public confidence in its stewardship of public funds.

- **Investments in Local and Disadvantaged Institutions** – Locally owned and disadvantaged business financial institutions contribute to economic development of the RTA service area. The RTA recognizes its interest in the vitality of the local economy by investing in local, minority, and female (if any) owned financial institutions.

Operating Budget Policies

The RTA Operating budget and two-year financial plan follows the guidelines below:

- Adoption requires an affirmative vote of at least 12 RTA Directors and hold at least one public hearing in the metropolitan region, and meet with the county board or its designee of each of the several counties in the metropolitan region.
- The Service Boards (CTA, Metra, and PACE) prepare and publish, for public hearing and comment, a comprehensive budget document that is to conform to the RTA "marks". RTA marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.
- All funds are required to balance. The total budgeted revenues must equal the sum of budgeted expenditures for each fund. Revenue sources include sales tax, state funds (e.g. PTF, SFA, and reduced Fare) and other revenue.
- The adopted budget should reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for the year. If the amount is below 5 percent, the financial plan must show full replenishment by the end of the current planning cycle.
- The combined revenue from RTA operations should cover at least 50 percent of the system operating costs.

Pension Funding Policies

The RTA, Metra, and Pace are required to contribute the amounts necessary to fund the benefits of their respective employees in the Plan using the projected unit credit actuarial method. Employer contribution and the income it earns through investments are used to operate the Plan and to pay benefits. Assets are valued recognizing a portion of both realized and unrealized gains and losses in order to avoid wide swings in actuarially determined funding requirements from year to year.

ORDINANCE NO. 2007-63

APPROVING THE 2008 BUDGETS AND 2009 - 2010 FINANCIAL PLANS OF THE SERVICE BOARDS, ADOPTING THE 2008 BUDGET AND PROGRAM OF THE AUTHORITY, APPROPRIATING FUNDS FOR THE 2008 BUDGETS, ADOPTING THE FIVE-YEAR PROGRAM, ALLOCATING CERTAIN REVENUES OF THE RTA TO THE RESPECTIVE SERVICE BOARDS, AND TAKING CERTAIN OTHER ACTIONS WITH RESPECT TO THE BUDGET AND PROGRAM FOR FISCAL YEAR 2008

WHEREAS, Section 4.01 of the Regional Transportation Authority Act (the "Act") directs the Board of Directors of the Regional Transportation Authority (the "RTA") to appropriate money for the expenses and obligations of the RTA, including payment of certain public funds to the Service Boards, and to prepare and adopt a comprehensive budget and program document for fiscal year 2008; and

WHEREAS, Section 4.02 of the Act establishes certain requirements with respect to the allocation and payment of funds appropriated by the RTA to the Service Boards; and

WHEREAS, Section 2.01 of the Act authorizes and directs the RTA to adopt a Five-Year Program with respect to the operations and capital projects of the RTA and the Service Boards; and

WHEREAS, Section 4.11 of the Act authorizes and directs the RTA to review the budgets and financial plans of the Service Boards for fiscal year 2008; and

WHEREAS, pursuant to Section 4.11 of the Act, the RTA has taken certain action by ordinance identifying the amounts estimated to be available for expenditure by each Service Board during fiscal year 2008 and the two following fiscal years and the times at which such amounts will be available; and

WHEREAS, pursuant to Section 4.11 of the Act, each Service Board has presented its proposed fiscal year 2008 budget and proposed 2009-2010 financial plan to the RTA for its review and the RTA has conducted public hearings with respect to its Proposed Annual Budget and Five-Year Program, and considered the proposed budgets and financial plans of the Service Boards and the public comments with respect to those budgets and financial plans; and

WHEREAS, the amounts available to the Service Boards for 2008-2010 are predicated on the RTA receiving from the State of Illinois funding for Reduced Fare Reimbursement; and

WHEREAS, the amounts available to Pace for 2008 - 2010 are predicated on the RTA receiving funding from the State of Illinois for ADA paratransit services; and are also predicated on achieving additional cost savings and efficiencies; and

WHEREAS, the budget for ADA paratransit service adopted by Pace does not presume the receipt of public subsidies in excess of the amounts identified by the RTA, but it does identify operating costs that exceed the revenues available for such services by $12.2 million; and

WHEREAS, the amounts available to the Service Boards for operations in 2008 - 2010 are not predicated on securing additional funding from the State, and to the extent that such additional funding has not been obtained, the Service Boards have developed actions to operate within available funds and have balanced their operating budgets with actions that include, but are not limited to, utilizing federal formula capital funds to cover operating expenses, employee layoffs, adjusting service levels, and adjusting fares; and

WHEREAS, the RTA adopted estimates of the amounts available to the Service Boards for 2008-2010 ("funding marks") in Ordinance 2007-48, and subsequently amended the estimates of amounts available to Pace for 2008 in Ordinance 2007-51; and

WHEREAS, pursuant to the RTA's policy regarding Service Board Financing Transactions ("Funding Policy") the RTA Board must approve the Service Boards' use of the proceeds from any Financing Transaction, as such term is defined in the Funding Policy, before such proceeds are used, and the primary use of such proceeds should be for capital programs; and further, such proceeds are excluded from the Service Boards' System-Generated Revenues Recovery Ratios; and

WHEREAS, Pace's 2008 proposed ADA paratransit service budget does not comply with the operating funding marks set by the RTA Board in Ordinance 2007-51 adopted on October 4, 2007 because it established operating costs higher than available funding; and

WHEREAS, the RTA recognizes that the CTA and Metra have taken measures to protect their operations from terrorism and consequently have incurred additional security costs, and moreover the RTA has determined that it is in the best interests of public transportation in the region to exclude certain amounts of security costs for purposes of calculating the CTA and Metra recovery ratios, thereby providing the CTA and Metra with a period of time to balance such higher security costs within their respective budgets; and

WHEREAS, the Five-Year Capital Program included with this Ordinance is based on capital program submittals from the Service Boards, and after the RTA Board makes any amendments to the estimates of capital funding available based on subsequent Federal or State action, the Service Boards will be required to adjust their capital programs to reflect such revised estimates; and

WHEREAS, on December 14, 2007, the RTA Board deferred action on an ordinance amending the 2008-2012 capital program marks, but the Five-Year Capital Program included as Schedule II to this Ordinance was predicated on those amendments being made to such capital program marks, including but not limited to adding federal New Start funding in 2008, recognizing the CTA's plan for debt issuance of $150 million in 2010 and $175 million in 2011, and Pace's transfer of federal capital funds to cover operating costs, and therefore Schedule II does not conform to the capital program marks last adopted by the RTA Board, so the RTA Board's approval of such Five-Year Capital Program is contingent on subsequent action being taken by the RTA Board to revise such capital program marks and/or the Service Boards taking action to adjust their capital programs to conform with the capital program marks adopted by the RTA Board; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take the following actions in order to carry out its powers and duties under the Act.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY that:

ARTICLE I - APPROVAL OF BUDGETS AND PROGRAMS

Section One:

Service Board Budgets and Financial Plans

1.1 In compliance with the Act, the RTA has received and reviewed proposed budgets for 2008, and financial plans for 2009 and 2010, of the Chicago Transit Authority (the "CTA"), the Commuter Rail Division ("Metra") and the Suburban Bus Division ("Pace") (each a "Service Board").

1.2 With respect to the proposed budgets and financial plans of the CTA, Metra and Pace's Suburban Bus Service (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior

periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board sufficient to allow the Service Board to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices; and

(f) Provided that each Service Board acts in conformity with the provisions of this Ordinance, each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established.

1.3 With respect to the proposed budget and financial plan submitted by Pace for ADA paratransit service, the RTA finds as follows:

(a) The budget and plan submitted by Pace established operating costs materially higher than available funding, and therefore does not meet the criteria established in Section 4.11 of the RTA Act.

1.4 With respect to the revised budget and financial plan for ADA paratransit service (as summarized in Schedule I-B), the RTA finds as follows:

(a) Such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board sufficient to allow the Service Board to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Such budget and plan has been prepared in accordance with sound financial practices; and

(f) Provided that Pace acts in conformity with the provisions of this Ordinance, such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established.

1.5 Pursuant to Section 4.11 of the Act, the budgets for 2008 and financial plans for 2009 and 2010, for the CTA, Metra and Pace, as presented in the attached Schedule I-B, are hereby approved provided, however, in the event that a budget or financial plan is inconsistent with the provisions of this Ordinance, the provisions of this Ordinance shall govern.

1.6 Pursuant to Section 4.11 of the Act, no more than 30 days after each fiscal quarter, each Service Board is directed to report to the RTA its financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction, as of the end of and for such quarter, for review by the RTA for conformity with the approved budget for such period.

Section Two:

RTA Annual Budget and Program

2.1 The RTA has received and reviewed the 2008 Annual Budget and Program of the Regional Transportation Authority as summarized in Schedule I-A. The 2008 Annual Budget and Program is hereby approved and the Board finds as follows:

(a) The 2008 Annual Budget and Program shows a balance between anticipated revenues from all sources and anticipated expenses, including the funding of operating deficits and the discharge of encumbrances incurred in prior periods and payment of principal and interest on outstanding indebtedness when due, as summarized in Schedule I-A.

(b) The 2008 Annual Budget and Program shows cash balances sufficient to pay with reasonable promptness all obligations and expenses as incurred, as summarized in Schedule I-F.

(c) The 2008 Annual Budget and Program shows that the level of fares and charges for public transportation provided by, or under grant or purchase of service contracts of, the Service Boards is sufficient to cause the aggregate of all projected system-generated revenues from such fares and charges received in 2008 apart from ADA paratransit to equal at least 50 percent of the aggregate cost of providing such public transportation in 2008, and at least 10 percent for ADA paratransit service in 2008, as required by the Act, and as summarized in Schedule I-C.

(d) The 2008 Annual Budget and Program is based on and employs assumptions and projections which are reasonable and prudent.

(e) The budgeted "administrative expenses" of the RTA for 2008, as defined in Section 4.01(c) of the Act, do not exceed the maximum administrative expenses (Statutory Cap) permitted for 2008 of $15,357,618.

Section Three:

Five-Year Program

3.1 The Five-Year Program of the RTA for the fiscal years beginning January 1, 2008, and ending December 31, 2012, has been the subject of public hearings in each county in the metropolitan region as required by Section 2.01 of the Act. The RTA has considered public comments on the proposed Five-Year Program. The RTA hereby adopts the Five-Year Program attached as Schedule II, subject to continuing review by the RTA. In accordance with Section 2.01(c) and Section 4.02(b) of the Act, no Service Board shall apply for or receive any capital grant or loan unless it is identified in the RTA Five-Year Program.

ARTICLE II - APPROPRIATION OF FUNDS AND CERTAIN OTHER ACTIONS

Section One:

Appropriation for each Service Board

The following amounts for 2008 are appropriated for payment to each Service Board from the enumerated sources of funds and for the specified objects and purposes. The total appropriations as shown on Schedule I-A for RTA Operations Funding to Service Boards represents the legal level of budgetary control.

1.1 Statutory RTA Taxes

There is appropriated, for expenditure by each Service Board pursuant to the 2008 Budget approved in Article I, 85% of the RTA receipts from taxes imposed pursuant to Section 4.03 of the Act and allocated according to the percentages listed below and specified in Section 4.01(d) of the Act, and from the State and Local Sales Tax Reform Fund pursuant to Section 4.01(e) of the Act. The estimated amount of the appropriation is specified as "85% Sales Tax" on Schedule I-E.

	Collected within Chicago	Collected within Suburban Cook County	Collected in DuPage, Kane, Lake, McHenry and Will Counties
CTA	100%	30%	-
Metra	-	55%	70%
Pace	-	15%	30%
Total	**100%**	**100%**	**100%**

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified proportionate share of such proceeds.

1.2 Reduced Fare Reimbursement

There is appropriated, for expenditure by each Service Board pursuant to the 2008 Budget approved in Article I, amounts received from the State of Illinois Reduced Fare Reimbursement Program. The estimated amount of the appropriation is included within the Service Board "System Generated Revenue" on Schedule I-B.

After receipt by the RTA of funds from the State of Illinois Reduced Fare Reimbursement Program, the Executive Director shall provide for the payment to each Service Board its proportionate share of the proceeds estimated to be received from the State as identified on Schedule I-A.

1.3 Discretionary Funds of the RTA -- Public Transportation Fund, 15% Sales Tax, Other RTA Revenues, Additional Funding for ADA Paratransit

(a) Operating Programs: There is appropriated, for expenditure by each Service Board pursuant to the 2008 Budget approved in Article I, the amounts specified as "RTA Discretionary Funds" and the amounts specified as "Additional State Funding" on Schedule I-B from other receipts and revenues of the RTA, or so much as may be necessary such that the actual amounts appropriated for each Service Board under paragraphs 1.1, 1.2, and 1.3(a) of this section equal the amounts specified as "Total RTA Operations Funding" on Schedule I-B.

The Executive Director is hereby directed to provide for the payment of such funds as soon as may be practicable upon their receipt provided that each Service Board is in compliance with the requirements of Section 4.11 of the Act and this Ordinance.

(b) Capital Programs: There is appropriated, for expenditure by the Service Boards for projects, as specified on Schedule II, and pursuant to the first year of the Five-Year Program approved in Article I, the amounts specified as Transfer Capital – RTA Funds on Schedule I -D from other receipts and revenues of the RTA.

The Executive Director is hereby directed to provide for payment of such funds pursuant to grant or intergovernmental agreements with each Service Board.

Section Two:

Appropriation to the Regional Transportation Authority

In 2008 there is appropriated, for expenditure for the operating purposes of the RTA (the "Agency") the amounts specified on Schedule I-A as Agency Administration and Regional Initiatives, and Regional Technology and Agency Capital, pursuant to the 2008 Budget approved in Article I, from other receipts and revenues of the RTA.

The total appropriations as shown in Schedule I-A for 2008 Agency Administration and Regional Initiatives, and Regional Technology and Agency Capital represent the legal level of budgetary control. The Executive Director is authorized to transfer up to 10% from and among each of these items.

ARTICLE III - IMPLEMENTATION

The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance and to prepare and disseminate the 2008 Annual Budget and Program of the RTA in accordance with the Act and the policies established herein.

Nothing in this Ordinance estimating amounts available to the Service Boards is intended to or shall have the effect of waiving any discretion the RTA may have under law to appropriate amounts available to the Service Boards, subject to compliance by the Service Boards with terms and conditions established by the RTA. Furthermore, nothing in this Ordinance is intended to or shall have the effect of waiving any discretion the RTA may have under law to subject to review the determinations made in this Ordinance, including, but not limited to, setting recovery ratios for the Service Boards, establishing exclusions or inclusions of certain revenues or expenditures from the calculation of such recovery ratios, or determining the allowable uses of federal, state or local funds.

The Executive Director is authorized and directed to execute and file applications on behalf of the RTA with the United States Department of Transportation (USDOT), Federal Transit Administration (FTA), the Illinois Department of Transportation (IDOT), and any other funding agency (collectively the "funding agencies") for any monies available for funding of the RTA Annual Budget and Five-Year Program. The Executive Director is authorized to furnish such additional information, assurances, certifications and amendments as the funding agencies may require in connection with such applications or the projects. The Executive Director is authorized and directed on behalf of the RTA to execute and deliver grant agreements and all subsequent amendments thereto between the RTA and the funding agencies. Further, the Executive Director is authorized and directed to take such action as the Executive Director deems necessary or appropriate to implement, administer, and enforce said agreements and all subsequent amendments thereto on behalf of the RTA.

The Executive Director is authorized and directed to file the 2008 Budget and Program and a copy of this Ordinance with the Governor of Illinois, the Illinois General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago and the Auditor General of the State of Illinois, along with an appropriate certification that this budget and program meet the requirements of the Act.

Schedule I-A: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in thousands)

	2008 Budget	2009 Plan	2010 Plan
System-Generated Revenue			
Sales Tax	$ 766,077	$ 786,761	$ 808,004
Public Transportation Fund	191,519	196,690	202,001
State Financial Assistance	116,477	116,692	116,983
Reduced Fare Reimbursement	36,800	36,275	36,275
Other Revenue	17,500	17,500	17,700
Additional Funding for ADA Paratransit	54,252	54,252	54,252
Total Revenue	**$ 1,182,625**	**$ 1,208,170**	**$ 1,235,215**
Operating Expenditures			
RTA Operations Funding to Service Boards	$ 820,521	$ 832,384	$ 845,753
RTA Discretionary Funds for ADA Paratransit	11,670	31,576	40,105
Additional State Funding - RTA Discretionary	54,252	54,252	54,252
Reduced Fare Reimbursement/Sales Tax Interest (1)	37,700	37,175	37,175
Agency Administration and Regional Initiatives (2)	29,952	30,222	30,554
Total Operating Expenditures	**$ 954,095**	**$ 985,609**	**$ 1,007,839**
Debt Service & Capital Expenditures			
Principal and Interest	$ 184,318	$ 186,328	$ 190,711
Regional Technology and Agency Capital (2)	1,900	1,917	1,938
Transfer Capital	20,353	20,353	20,353
Total Debt Service and Capital Expenditures	**$ 206,571**	**$ 208,598**	**$ 213,002**
Total Expenditures	**$ 1,160,666**	**$ 1,194,207**	**$ 1,220,841**
Fund Balance (undesignated/unreserved)			
Beginning Balance	227	22,186	36,149
Change in Fund Balance	21,959	13,963	14,374
Ending Unreserved/Undesignated Fund Balance (3)	**$ 22,186**	**$ 36,149**	**$ 50,523**
Total Operating Expenditures %	2.3%	3.7%	5.0%
Recovery Ratio % (4)	**51.0%**	**N/A**	**N/A**
ADA paratransit Recovery Ratio % (5)	**10.0%**	**12.0%**	**12.0%**

(1) Includes sales tax interest of $900 thousand (2008-2010). (2) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action. (3) The 2010 fund balance is 5% of total operating expenditures meeting the fund balance policy adopted by the RTA Board in 1998. (4) The 2008 total system-generated revenue recovery ratio of 51% exceeds the statutory requirement of 50%. The calculation does not include ADA paratransit service. (5) The ADA paratransit recovery ratio is the level set by the RTA Act.

Schedule I-B: **Service Board Deficit Funding - 2008 Budget and 2009-2010 Financial Plan** (dollars in thousands)

	2008 Budget	2009 Plan	2010 Plan
CTA			
Total System-Generated Revenue	$ 562,008	$ 518,209	$ 512,333
Total Operating Expenses	1,033,836	992,697	990,742
Total Deficit	471,828	474,488	478,409

Total Funding	**$ 89,260**	**$ 95,497**	**$ 101,590**
Summary			
Total System-Generated Revenue	$ 927,207	$ 896,315	$ 908,472
Total Operating Expenses	1,752,392	1,757,296	1,796,544
Total Deficit	825,185	860,981	888,072
RTA Sales Tax	651,166	668,747	686,803
RTA Discretionary Funds	169,355	163,637	158,950
Total RTA Operations Funding	820,521	832,384	845,753
Total Other Funding (2)	4,664	28,598	42,319
Total Funding	**$ 825,185**	**$ 860,982**	**$ 888,072**
Pace ADA Paratransit			
Total System-Generated Revenue (3)	$ 9,834	$ 12,266	$ 12,980
Total Operating Expenses (3)	78,235	101,408	111,579
Total Deficit	68,401	89,142	98,599
RTA Discretionalry Funds (Additional State Funding)	54,252	54,252	54,252
RTA Discretionary Funds	11,670	31,576	40,105
Total RTA Operations Funding	65,922	85,828	94,357
Metra Capital Funds (4)	2,479	3,314	4,242
Total Funding	**$ 68,401**	**$ 89,142**	**$ 98,599**

(1) Includes undetermined service and/or other operating modifications to achieve balanced financial plans in 2009 and 2010. (2) Includes Metra's undetermined modifications and Pace's federal funds. (3) 2008 Budget figures reflect a reduction in revenue and expenses in the amounts of $1.8 million and $14.0 million, respectively, below the budget submitted by Pace. (4) Federal Funds transferred from Metra's capital program to Pace for ADA paratransit operations.

Schedule I-C: **Recovery Ratio %**

	2008 Budget
CTA	52.0%
Metra	55.0%
Pace Suburban Service	36.0%
Total System-Generated Revenue Recovery Ratio %	**51.0%**
Pace ADA Paratransit	10.0%

The RTA Act allows certain expenditures to be excluded form the recovery ratio calculation including security, depreciation, and facility leases. RTA Ordinance 2005-06 authorized further security exclusion for Service Board recovery ratios. The amount of these additional exclusion are added back to regional expenditures to calculate the statutory system-generated revenue recovery ratio.

Schedule I-D: **Service Board and RTA Capital Funding** (dollars in thousands)

	2008 Capital Program Budget				
Service Board Capital Funding	CTA	Metra	Pace	RTA	Total
FTA Capital Grants	$ 272,500	$ 141,298	$ 39,217	-	$ 453,016

The GFOA Distinguished Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) present a Distinguished Budget Presentation Award to the Regional Transportation Authority, Illinois for its annual budget for the fiscal year beginning January 1, 2007.

In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan, and as a communications device.

This award is valid for a period of one year only. We believe our current budget book continues to conform to program requirements, and we are submitting it to the GFOA to determine its eligibility for another award.

GOVERNMENT FINANCE OFFICERS ASSOCIATION

Distinguished Budget Presentation Award

PRESENTED TO

Regional Transportation Authority

Illinois

For the Fiscal Year Beginning

January 1, 2007

President Executive Director

The Government Finance Officers Association of the United States and Canada

presents this

CERTIFICATE OF RECOGNITION FOR BUDGET PREPARATION

to

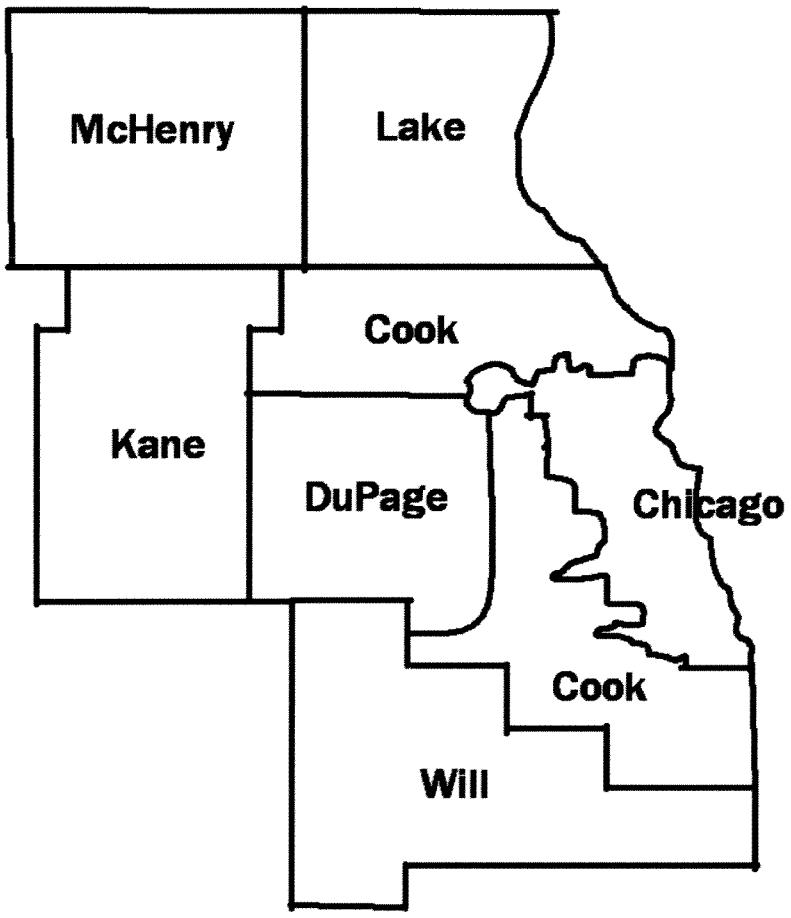
Financial Planning & Analysis Division
Regional Transportation Authority, Illinois

The Certificate of Recognition for Budget Preparation is presented by the Government Finance Officers Association to those individuals who have been instrumental in their government unit achieving a Distinguished Budget Presentation Award. The Distinguished Budget Presentation Award, which is the highest award in governmental budgeting, is presented to those government units whose budgets are judged to adhere to program standards.

Executive Director

Date July 9, 2007

2 Budget in Brief



Overview

The Regional Transportation Authority (RTA/Agency) provides funding, planning and fiscal oversight for regional bus and rail operations in the six-county northeastern Illinois region as set forth by the RTA Act. The Act designates the Agency as the primary public body in the region to secure funds for public transportation. The Agency is authorized to impose taxes in the region, issue debt, and is responsible for the allocation of federal, state and local funds to finance both the operating and capital needs of public transportation in the region.

The RTA Board of Directors governs the Agency. Three independent Service Boards, the Chicago Transit Authority (CTA), Metra commuter rail and Pace bus, have operational responsibility for public transportation within the six-county region and are governed by their own boards of directors. The CTA provides bus and rapid transit rail service in the City of Chicago and neighboring suburbs. Metra provides commuter rail service throughout the six-county region. Pace provides bus service in the suburbs and between the suburbs and the City of Chicago, and Pace provides ADA Paratransit service for the entire region (Exhibit 2-1).

Yearly, the RTA Board must adopt an annual budget, two-year financial plan and a five-year capital program for each Service Board. The principal features of this process are outlined in the following paragraphs. In September, the RTA Board approves the "marks" for each Service Board. The marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

Exhibit 2-1: **RTA Organization Structure**

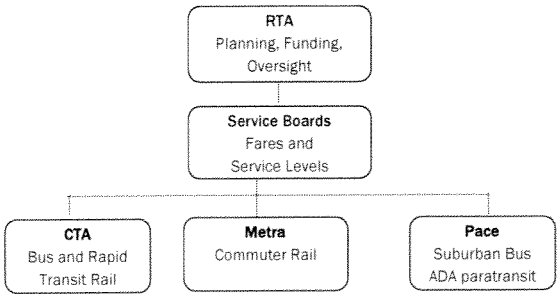


Exhibit 2-2: **Financial Relationship and Responsibilities of the RTA and Service Boards**

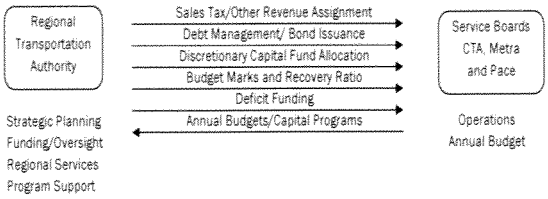

The marks guide the Service Boards' budgetary process. Each Service Board prepares and publishes, for public hearing and comment, a comprehensive budget document that is to conform to the RTA marks. After considering public comment, the CTA, Metra and Pace board members adopt their respective budgets.

In November, those budgets are forwarded to the RTA, which consolidates the Agency and the Service Board budgets into a proposed RTA budget document. The RTA Board distributes this document for public hearing and comment before adoption in December.

Exhibit 2-2 illustrates the principal responsibilities and interactions between the Agency and Service Boards in the annual budget and capital program process.

Service Characteristics

There are more than 8 million residents in the six-county northeastern Illinois region, an area that covers 3,749 square miles. The RTA system deploys over 5,000 bus and rail cars on more than 400 routes to service its customers. In 2006, the regional public transportation system provided 614 million trips.

The system has a replacement value of more than $31 billion (i.e., the asset value of the system's existing infrastructures). With an average asset life of approximately 20 years, the RTA system needs over

$1 billion in capital funds each year just to keep the existing infrastructure in good repair.

Operating Budget

A statement of revenues and expenditures for the 2007 estimate and the 2008 budget is presented in Exhibit 2-3. The statement of RTA revenues and expenditures from 2006 through 2010 is shown in the Region section (Exhibit 3-1).

Total Revenues

In 2008, total RTA revenues are projected at $1,183 million. This represents an increase of $23 million or 2.0 percent over the 2007 estimate of $1,160 million. $766 million, or 64 percent, of these revenues will be generated from RTA Sales Tax, and Public Transportation Fund (PTF) receipts of $192 million are 16% of the total. State financial assistance (SFA) of $116 million provides 10 percent of revenues. State reduced fare reimbursement (RF) programs equal 3 percent of total revenues, or $37 million, additional State funding for ADA paratransit (ADA) is $54, or 5 percent, and other RTA revenues account for the remaining balance of $18 million, or 2 percent. Exhibit 2-4 illustrates this distribution.

Sales Tax

RTA Sales Tax is the primary source of revenue for the RTA. The tax is authorized by Illinois statute, imposed by the RTA in the six-county region of northeastern Illinois and collected by the state. Eighty-five percent of RTA sales tax receipts are apportioned

to the Service Boards by statutory formula. Details of this apportionment can be found in the Region section of this document.

The 2007 sales tax estimate and the 2008 budget year sales tax projections were established after assessing state and regional economic data and national forecasts. Based on this information, the RTA estimated sales tax receipts for 2007 and 2008 to be $746 million and $766 million respectively. This year-on-year change corresponds to an increase of $20 million or 2.7 percent in 2008.

Public Transportation Funds

State Public Transportation Funds (PTF) are based on a formula tied to sales tax results and are, therefore, projected to increase at the same growth rate as the sales tax. For every four dollars that is collected in sales tax, the RTA receives an additional dollar for PTF. Estimated receipts in 2008 are $192 million.

State Financial Assistance

This revenue source is state-authorized assistance to reimburse the debt service expenses for RTA Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the state, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. Projected receipts for 2008 are $116 million.

Reduced Fare

This operating assistance is partial reimbursement from the state to the Service Boards for discounts (mandated by law) provided to students, elderly and disabled riders. The funds are distributed by the state through the RTA and then to the Service Boards. Receipts for 2008 are budgeted at $37 million, an amount slightly higher than 2007 funding level.

Exhibit 2-4: **2008 RTA Revenue** - $1,183 million

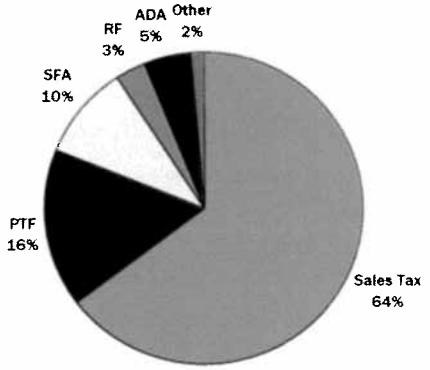

Exhibit 2-5: **2008 RTA Expenditures** - $1,161 million

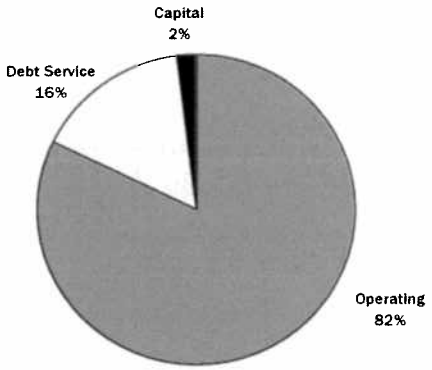


Other Revenue

This RTA revenue category includes sales tax interest, investment income, fare check program revenue, and grant funds from state and local agencies for regional coordination and technology initiatives. Total receipts in 2008 are budgeted at $18 million.

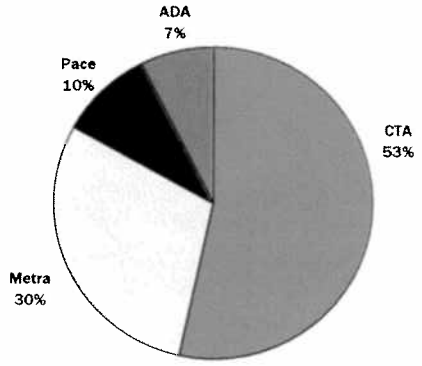
ADA Paratransit Funds

In 2005, the State of Illinois appropriated additional funds to the RTA for ADA paratransit service and other costs and services; the appropriation was $54 million. This level of funding continued in 2006 and 2007 and is expected to remain at this level in 2008.

Total Expenditures

Total RTA expenditures (operating, debt service and capital) for 2008 are budgeted at $1,161 million. This amount is $8 million less than the 2007

Exhibit 2-6: **RTA Funding of Service Operations** - $887 million



estimate of $1,169 million. Exhibit 2-5 illustrates the expense distribution budgeted for 2008.

Operations Funding

The RTA's primary expenditure is the funding of Service Board operating deficits.

The RTA Board establishes "marks" for each Service Board to use in its proposed budget and program. The marks are set in September for the next fiscal (calendar year) period. Operating marks include a recovery ratio for the next budget year and operating funds for the budget and following two-year financial planning period. Operating funds are disbursed as budgeted unless amended by the RTA Board (Exhibit 2-6).

In 2008, the CTA will receive 53 percent of RTA funds for service operations, Metra picks up 30 percent, and Pace receives 17 percent (10% for suburban bus service and 7% for regional ADA paratransit service). The amount of funds distributed to each Service Board is outlined below.

CTA

The CTA's operations funding level from the RTA in 2008 is budgeted at $472 million or 1.6 percent higher than the 2007 budgeted amount of $464 million.

Metra

Metra's operating funding level from the RTA in 2008 is budgeted at $264 million or 2.6 percent higher than the 2007 funding amount of $257 million.

Pace Suburban Service

Pace's operations funding from the RTA in 2008 is budgeted at $85 million. To balance their 2008 deficit of $89 million Pace will transfer close to $3 million in federal capital funds (Section 5307 funds that can be used for operations as provided for by federal regulations) to operations and they will receive $2 million for federal Job Access Reverse Commute (JARC) and Congestion Mitigation Air Quality (CMAQ) initiatives.

Pace ADA paratransit service

RTA funding for ADA paratransit service in 2008 is budgeted at $66 million. Funding sources include discretionary RTA funds of $12 million (RTA sales tax formula funds, and PTF), and State funds of $54 million. The remaining balance is provided by Metra capital funds of $2 million transferred to Pace (Federal Section 5307 funds that can be used for operations).

Reduced Fare

State reduced fare reimbursements are received as revenue by the RTA, as previously described, and flow directly to the Service Boards to help defray program costs. The 2008 budgeted reimbursement level of $37 million remains at par with the 2007 funding amount.

Sales Tax Interest

There is a lag in time between when the state collects the RTA sales tax and when it distributes the funds to the RTA. The RTA receives interest on this sales tax, and then disburses 85 percent of these funds to the Service Boards using the same formula as the sales tax distribution. Payments in 2008 are budgeted at $1 million, level with the estimate for 2007.

Exhibit 2-7: **2008 Source and Use of Funds** (dollars in millions)

Source of Funds (1)	Total
RTA Sales Tax	$ 766
State Funds	399
RTA Revenue	18
Total Service Board	907
Total Sources	**$ 2,090**

(1) State funds include PTF, SFA, RF and ADA. Service Board revenue/ funds includes Capital for Operations, Pace CMAQ/JARC funds but excludes RF which are provided by the State.

Use of Funds	Total
Service Board	$ 1,832
Debt Service	184
Capital Programs	22
RTA Agency	30
RTA Fund Balance	22
Total Uses	**$ 2,090**

Exhibit 2-8: **Source of Funds** - $2,090 million

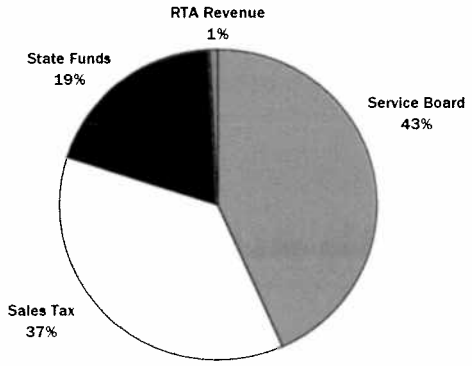


Exhibit 2-9: **2008 Use of Funds** - $2,090 million

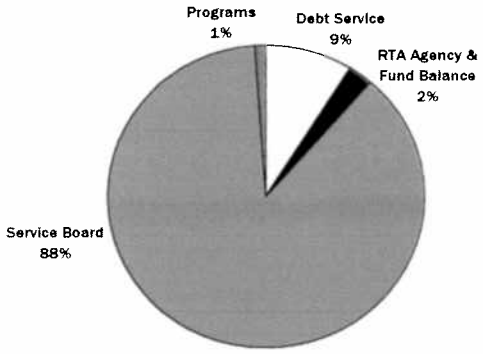


Agency and Regional Initiatives

Agency administration represents on-going RTA functions to execute its funding and financial oversight responsibilities. Budgeted 2008 administrative expenses totaling $8 million are significantly below the 2008 statutory cap of $15 million permitted by the RTA Act.

The RTA coordinates and funds several region-wide initiatives that bring together public transportation services. These programs include system maps, local advertising, the transit benefit program, the Travel Information Center (TIC), ADA certification, Reduced Fare, and the Customer Information Center. In addition, the RTA supports continued demands for technical assistance initiatives and coordination programs that encourage transit oriented improvements in the region. Programs supported include the Regional Technical Assistance Program (RTAP), regional corridor studies, and the American Public Transportation Association (APTA).

Through partnership efforts with other state and local agencies, the RTA receives external funds that defray part of the program costs. Estimated receipts of more than $1 million in 2008 will cover 35 percent of the program costs leaving a balance of just over $2 million to be funded by the RTA.

Debt Service and Capital Expenditures

Total expenditures in this category are projected to decline from $214 million in 2007 to $207 million in 2008 a decrease of 3.3 percent. This change reflects the overall reduction in RTA funds available for capital initiatives.

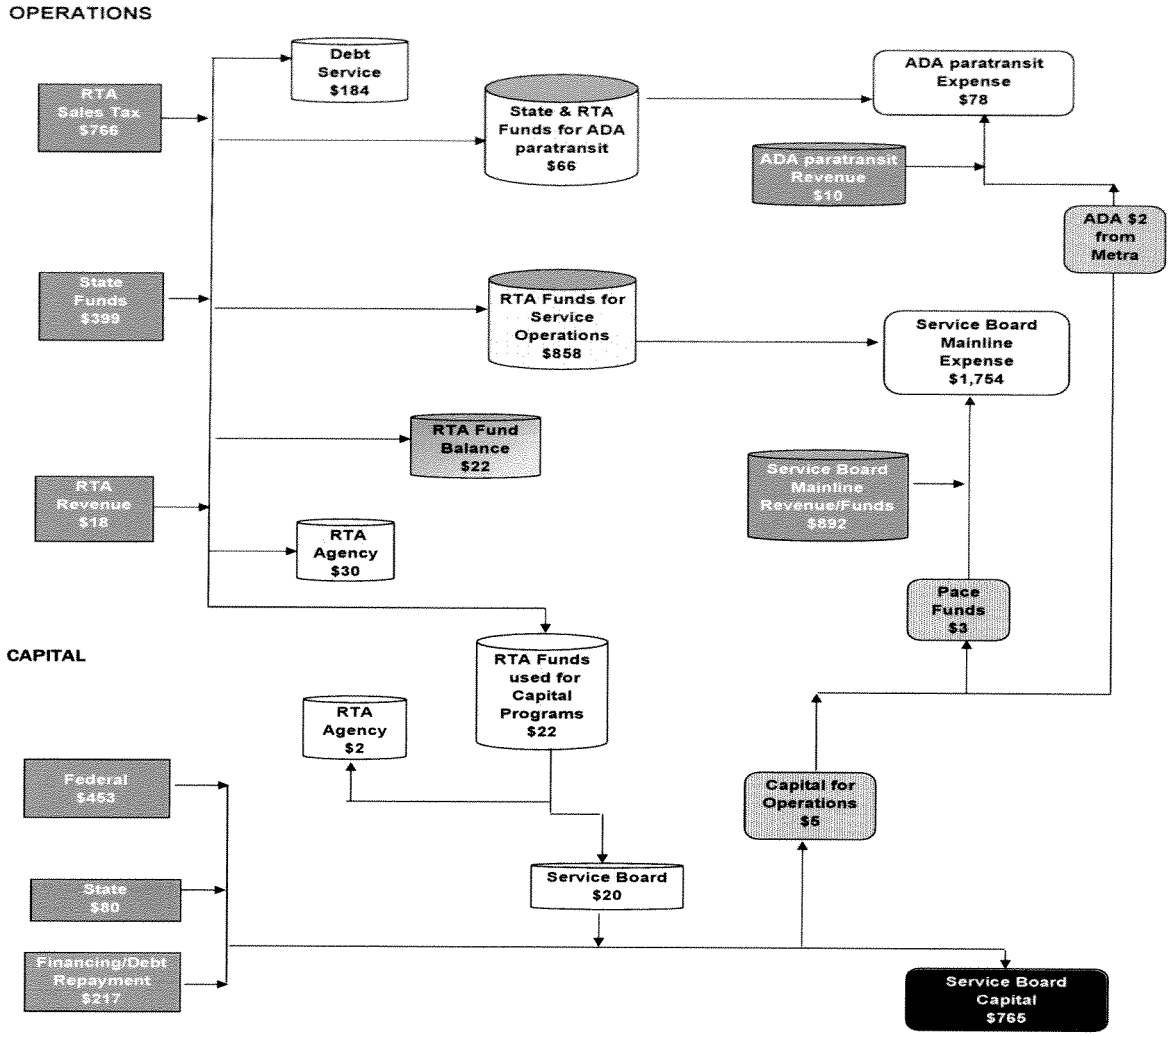
Principal and Interest

Principal and interest (debt service) expenditures decrease from $186 million in 2007 to $184 million in 2008. Payments cover the issuance of bonds, authorized by the state, which help fund Service Board capital projects. State SCIP funding (SFA) covers roughly 62% of the RTA's debt service costs with the remaining balance paid from RTA funds.

Regional Technology and Agency Programs

The 2008 budget continues the RTA's commitment to fund region-wide capital driven technology initiatives and Agency programs. However; initiatives

Exhibit 2-10: **2008 Source and Use of Regional Transportation Funds** - $2,090 million (dollars in millions)



were scaled down with diminished funding. The RTA also receives reimbursement (revenue) from federal programs and local initiatives that help offset part of these expenditures. In 2008, receipts of more than $1 million will cover 91 percent of the program costs.

Transfer Capital

Since 1995, the RTA has transferred a portion of its discretionary funds, available for region-wide capital or operating initiatives, to the CTA for capital investment. Annual funding for this program during the next three-year financial planning period continues at over $20 million.

In 2007, the RTA also provided funds to Pace to purchase additional ADA paratransit vehicles.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a 5 percent minimum level in the unreserved and undesignated fund balance. If the amount is below 5 percent the financial plan must show full replenishment by the end of the current planning cycle.

The percentage is based on total operating expenditures for the year (as shown on Exhibit 2-3). The purpose of the ordinance was to formalize a practice of maintaining a level of available financial

resources for funding during unfavorable economic periods. This policy has proved its value as a sluggish economy over the past several years' limited growth of sales tax receipts.

The ending fund balance for 2007 is estimated to be less than $1 million compared to total operating costs of close to $1 billion. The 2008 budget shows a year-end fund balance of $22 million or 2.3 percent of total operating expenditures. To bring the reserve back to the 5 percent policy level by the end of the financial planning period (2010) means the RTA must hold funding to growth levels on par with sales tax increases for the planning period.

Beginning Balance

The beginning fund balance is the amount of funds in the undesignated and unreserved (General Fund) fund balance after the previous year's results have been audited and the accounting records are closed. All statements in this document reflect 2006 actual results for the 2007 beginning balance.

Total RTA revenues less total RTA expenses produce an annual change to the fund balance.

Change in Fund Balance

Total RTA revenues less total RTA expenses produce an annual change to the fund balance. When revenue exceeds expense, the remainder or surplus is added to the fund balance. If expenses exceed revenues, the fund balance is reduced by the deficit amount. Projections indicate that revenues will exceed expenditures in 2008 by $22 million.

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal (calendar) year for each Service Board. The RTA Act further requires that the combined revenues from RTA operations cover at least 50 percent (apart from ADA paratransit service) of the system operating cost. The RTA's system-generated revenue recovery ratio for 2008 is 51 percent. The Service Boards presented budgets that exceed this percentage (Exhibit 3-1 and 3-32).

In meeting the 50 percent recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50 percent requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/leaseback transactions. The Act further requires a recovery ratio for ADA paratransit service of 10 percent, the 2008 budget for this service meets this stipulation.

Statutory Compliance

The RTA Act requires that the CTA, Metra and Pace each have a balanced budget; the region's recovery ratio is at least 50 percent; and the RTA's (Agency's) administrative expenses do not exceed an established statutory cap (CAP). The CAP is over $15 million, and the Agency's administrative expenses of slightly more than $8 million are well below the statutory amount. The Act also requires that prudent fiscal practice be followed such as proper cash management, use of reasonable assumptions, and sound accounting and financial practices. Each Service Board, the Agency and the region as a whole have budgets presented in this document that comply with these stipulations.

Source and Use of Funds

Each section of the 2008 Program and Budget Book presents the source of funds (public funding and/or operating revenues) and the use (expenditure) of funds for the respective operation. The subsequent paragraphs and exhibits summarize the source and use of these funds for the 2008 budget.

In 2008, total revenue estimates of $2,090 million include: $766 million in receipts from RTA sales tax; State funding totaling $399 million from PTF,

financial assistance, reduced fare reimbursement, and for ADA paratransit; $18 million from Other RTA revenues; $10 million in ADA operating revenue; CTA, Metra and Pace mainline operating receipts of $892 million; and the use of federal capital funds for operations totaling $5 million.

The use of $2,090 million in funds includes $1,832 for service operations (ADA paratransit $78 million, and mainline CTA, Metra and Pace Suburban Bus service $1,754 million; $184 million for debt service; $22 million for capital programs; $30 million for agency administration and regional initiatives; and $22 million to replenish the RTA fund balance. (Exhibits 2-7 through 2-10).

Capital Program

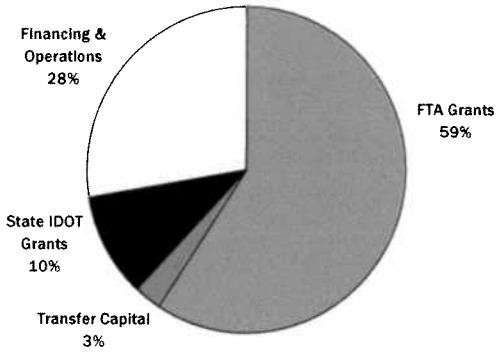
The capital program "marks" set by the RTA Board in September (Capital section) include estimated figures that the Service Boards use in the budget and program documents that they present for public hearing. When final federal appropriations numbers are determined and local funds revised, the RTA Board will consider ordinances that incorporate all changes and bring the marks and program in balance. The 2008 budget shown in Exhibit 2-11 and 2-12 reflects the amount adopted by the RTA Board in December 2007.

Exhibit 2-11: **2007 Capital Program Budget** (dollars in millions)

Service Board (1)	
FTA (Federal) Capital Grants	$ 453
State -IDOT Grants	80
RTA Transfer Capital	20
Financing	217
Federal Funds for Operations	(5)
Total Service Board Capital Program	**$ 765**

(1) Federal funds (FTA Capital Grants) require a local match of at least 20%. The State has traditionally provided capital funding for matching purposes but the State, at this time, has not provided local matching funds (IDOT Grants). Tollway credits can be used as local match but they are not spendable funds and using them leaves critical projects under-funded.

Exhibit 2-12: **2008 Capital Program** - $765 million



For additional details and trends regarding system characteristics, sales tax, ridership, Service Boards operating expense, and farebox revenue see Appendices Exhibit 8-13 through 8-21.

3 RTA

Region Operating Plan

Budget and Financial Plan

The RTA must prepare and publish a document every year that includes a one-year operating budget, a two-year financial plan, and a five-year capital program that meets specific statutory requirements.

This document fulfills the responsibility. Exhibit 3-1 provides a summary of the RTA's statement of revenue and expenditures for 2006-2010. Throughout this document, 2006 is actual data, 2007 is the estimate of year-end results, 2008 is the operating budget, and 2009-2010 is the two-year financial plan.

Revenue

Total revenue is projected to grow from $1.155 billion in 2006 to $1.235 billion in 2010 (Exhibit 3-1). This is an increase of $80.3 million over the four-year period, or a 1.7 percent compound annual growth rate.

The RTA Sales Tax is the primary source of revenue for the RTA. In 2006, RTA Sales Tax receipts of $746.8 million comprised 65 percent of the RTA's total revenue. Public Transportation Funds (PTF), State Financial Assistance (SFA), State Reduced Fare (RF), and other revenue provided the balance of RTA revenue, totaling $408.1 million, or 35 percent (Exhibit 3-2).

The RTA retains 15 percent of the total sales tax and distributes the remaining 85 percent to the Service Boards

Sales Tax

The RTA Sales Tax is authorized by Illinois statute and imposed by the RTA in the six-county northeastern Illinois region. The RTA Sales Tax is collected by the Illinois Department of Revenue, paid to the Treasurer of the State of Illinois and held in trust for the RTA outside the State Treasury. Proceeds from the RTA Sales Tax are paid directly to the RTA on a monthly basis, without appropriation, by the State Treasury on the order of the State Comptroller.

The sales tax is the equivalent of 1 percent on sales in Cook County and 0.25 percent on sales in DuPage, Kane, Lake, McHenry and Will counties. The 1 percent sales tax in Cook County is comprised of 1 percent on food and drugs and 0.75 percent from all other sales, with the State then providing a "replacement" amount to the RTA equivalent to 0.25 percent of all other sales. The RTA retains 15 percent of the total sales tax and distributes the remaining 85 percent to the Service Boards according to the formula specified in the RTA Act (Exhibit 3-3).

Exhibit 3-4 breaks out the 2006 sales tax distribution by Service Board. In 2006, the $746.8 million in sales tax was broken out in the following manner; CTA 39 percent, Metra 35 percent, Pace 11 percent, and RTA 15 percent. Sales tax is projected to increase from $746.8 million in 2006 to $808.0 million in 2010, a compound growth rate of 2.0 percent (Exhibit 3-5).

The 2008 sales tax budget was developed after assessing the state and local economic trends. After reviewing this data, the RTA applied a growth rate of 3.2 percent to its 2006 estimate of $722.8 million producing revenue of $745.9 million for the 2007 budget.

From a geographic standpoint, the City of Chicago accounted for 30 percent of the sales tax collected in 2005, suburban Cook 55 percent, and the collar counties 15 percent (Exhibit 3-6).

Public Transportation Funds (PTF)

Revenue from this special fund may be paid to the RTA only upon state appropriation. In accordance with the RTA Act, the State Treasurer is authorized and required to transfer from the State's General Revenue Fund an amount equal to 25 percent of net revenue realized from sales taxes. These receipts are based on a formula tied to sales tax results and are, therefore, projected to increase at the sales tax growth rate. For every four dollars that is collected in sales tax, the RTA receives an additional dollar in PTF.

None of the PTF revenue is payable to the RTA

Exhibit 3-1: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan

Notes: (1) Includes sales tax interest of $900 thousand (2008-2010). (2) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action. (3) The 2010 fund balance is 5% of total operating expenditures meeting the fund balance policy adopted by the RTA Board in 1998. (4) The 2008 total system-generated revenue recovery ratio of 51% exceeds the statutory requirement of 50%. The calculation does not include ADA paratransit service. (5) The ADA paratransit recovery ratio is the level set by the RTA Act.

until it certifies to the Governor, State Comptroller and Mayor of the City of Chicago that it has adopted a budget and financial plan as called for by the RTA Act. The amounts that each Service Board receives through the RTA from the PTF are allocated at the discretion of the RTA Board upon the review and approval of each Service Board's annual or revised budget.

State Financial Assistance (SFA)

This revenue source is state-authorized assistance to reimburse the debt service expenses for the RTA's Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the State, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. The RTA received $112.7 million in 2006 and estimates $122.8 million in 2007, $116.5 million in 2008, $116.7 million in 2009, and $117.0 million in 2010.

Reduced Fare (RF)

This operating assistance is partial reimbursement from the State to the Service Boards for discounts (mandated by law) provided to students, elderly and disabled riders. The funds are distributed by the State through the RTA and then to the Service Boards.

Exhibit 3-2: **2006 RTA Sources of Revenue** - $1,155 million

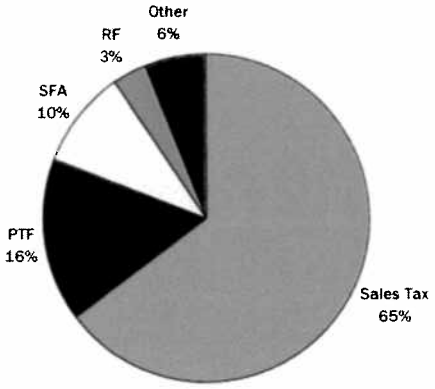

Exhibit 3-3: **RTA Sales Tax Collected** (in percent)

	CTA	Metra	Pace	Total
Chicago	100	-	-	100
Suburban Cook	30	55	15	100
Collar Counties	-	70	30	100

Exhibit 3-4: **2006 RTA Sales Tax Distribution by Service Board**- $747 million

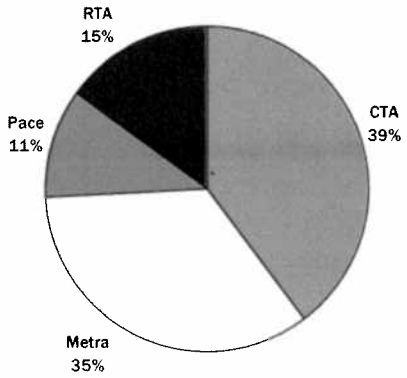

Exhibit 3-5: **RTA Sales Tax** (dollars in millions)

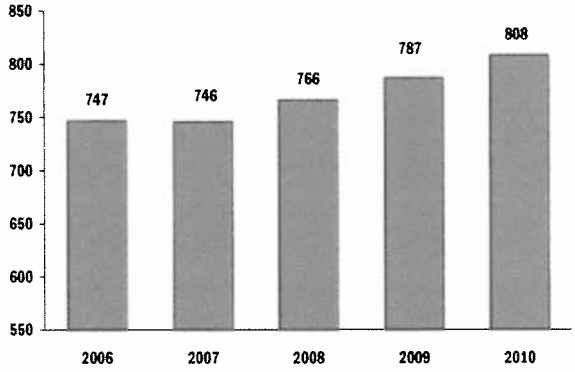

Exhibit 3-6: **2006 RTA Sales Tax Collection by Area** - $747 million

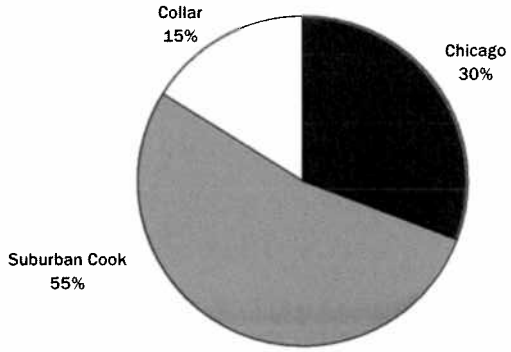

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the Service Boards for the cost of providing reduced fares for the above-mentioned categories. The fare reimbursement is included in revenue and became available in July 1989.

In the State's 2000 fiscal year budget, the reimbursement level was increased from $20 million to $40 million. In 2002, the State reduced its fiscal year funding to $36 million. In 2003, funding was returned to $40 million, less a 2 percent (or $0.8 million) administrative fee. In 2004, the State again reduced its fiscal year reimbursement. The amount was $38 million less a 2 percent administrative fee. As a result, available funds were $37.3 million in 2006 and are expected to average $36.4 million from 2007 through 2010.

Other Revenue

The other revenue category consists of sales tax interest, investment income, and Agency revenue. Total receipts in 2008 are budgeted at $17.5 million.

The State pays interest on sales tax receipts to the RTA from the time of collection until it is disbursed to the RTA. The RTA then disburses this interest to the Service Boards based on the RTA Sales Tax formula. In 2008, sales tax interest is budgeted at $1.1 million. RTA investment income is dependent on available cash balances and prevailing market rates. The RTA's cash balance is primarily

composed of funds reserved in prior years for various Service Board capital projects and associated RTA financial transaction proceeds. This revenue source is budgeted at $10.8 million for 2008.

Agency revenue of $5.6 million for 2008 includes the fees charged to employers for RTA Transit Checks. These fees offset the costs of administering this program. Also included in Agency revenue are matching funds obtained under federal, state and local programs for regional planning, development and new technology efforts.

Additional State Funding for ADA Paratransit

In 2005, 2006 and 2007, the State of Illinois appropriated additional funds to the RTA for ADA paratransit service and other costs and services. The appropriation for each year was $54.3 million. The 2008 budget and 2009-2010 financial plans were developed envisioning continuance of state appropriations of $54.3 million.

Operating Expenditures

Exhibit 3-1 provides a summary of the RTA's operating expenditures from 2006 through 2010. Total operating expenditures are projected to grow from $923.2 million in 2006 to $1.008 billion in 2010. This is an increase of $84.7 million over the four-year period, or a 2.2 percent compound annual growth rate.

Operations Funding

The RTA's primary expenditure is the funding of the Service Boards' operating deficits. An operating deficit is the difference between a Service Board's system-generated revenue (fare box and other revenue) and system operating expenditures. Exhibit 3-7 presents the operations funding level for the three Service Boards. From 2006-2010, Service Board operations funding from the RTA is expected to increase from $797.2 million to $845.8 million. This $48.5 million increase represents a compound annual growth rate of 1.5 percent.

Exhibit 3-7: **RTA Operations Funding** (dollars in millions)

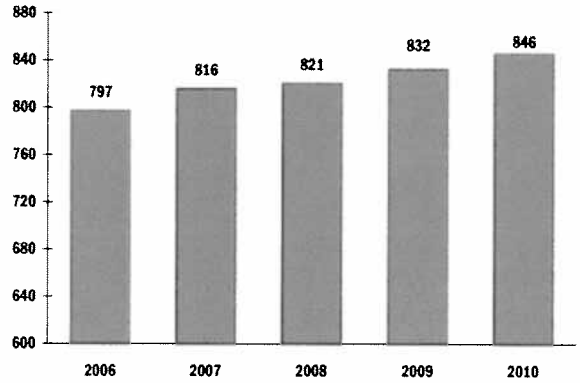

Exhibit 3-8: **Additional Funding Needs - ADA Paratransit** (dollars in millions)

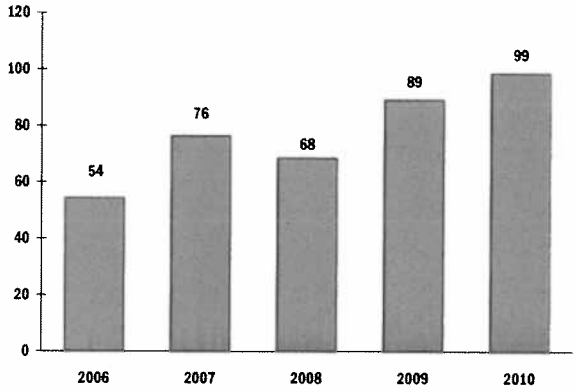


RTA operations funding to the Service Boards from 2008 through 2010 is as follows.

- The CTA's funding is $471.8 million, $474.5 million, and $478.4 million.
- Metra's amount during this period is set at $264.1 million, $271.0 million and $278.1 million.
- For Pace the amounts for the 2008 budget and 2009-2010 financial plan (which do not include ADA paratransit service funding) are $84.6 million, $86.9 million and $89.3 million.

Total funding for the 2008 budget and 2009-2010 financial plan is provided in the Strategy section (Ordinance 2007-63, Schedule I-B).

A detailed discussion of each Service Board's revenues and expenditures is provided in the CTA, Metra and Pace sections of this document.

Additional State Funding – RTA Discretionary

As previously discussed, the State of Illinois appropriated additional funds to the RTA in the amount of $54.3 million for ADA paratransit service and other costs and services in 2005, 2006, and 2007.

- In 2005, the CTA received the full appropriation.
- In 2006, the CTA and Pace shared the appropriation because Pace acquired responsibility for all ADA paratransit service in the RTA region effective July 1, 2006.
- In 2007, Pace received the full appropriation from the State. Because of growing service demands and increased operating costs, Pace also received $19.8 million of RTA Discretionary Funds for ADA Paratransit in 2007.
- Although not yet appropriated by the State, Pace's ADA Paratransit 2008 budget and two-year financial plan deficit funding reflect State funding of $54.3 million annually. As this amount is not sufficient to fully fund ADA paratransit services, the RTA expects to provide Discretionary Funds for ADA Paratransit in the amount of $11.7 million, $31.6 million, and $40.1 million in 2008 through 2010, respectively. To support ADA paratransit operations, federal funds from Metra's capital program will also be transferred to Pace in the amounts of $2.5 million $3.3 million, and $4.2 million in 2008, 2009, and 2010, respectively.

Exhibit 3-8 illustrates the combined amount of State funding, RTA discretionary funding, and federal funds required to support ADA paratransit operations from 2006 through 2010. Combined funding from these sources increases from $54 million in 2006 to $99 million in 2010 (Exhibit 3-8).

Reduced Fare and Sales Tax Interest

State reduced fare reimbursements are received as revenue by the RTA and flow directly to the Service Boards to help defray program costs. In 2006, the State's Reimbursement was $37.3 million. In 2007 and 2008, the reimbursement was $36.3 million and $36.8 million. The reimbursement level of $36.3 million from 2009 and 2010 is not expected to fully cover the cost of this program.

There is a lag between when the State collects the RTA Sales Tax and when the State transfers it to the RTA. The RTA receives interest on this sales tax, and then disburses 85 percent of the interest to the Service Boards according to the same formula used for sales tax distribution. In 2007, the estimate for sales tax interest is $1.0 million and is projected to remain flat from 2008 through 2010. The amount in 2006 was $0.9 million.

Agency Expenditures

Spending for Agency administration, regional services and regional programs is summarized below and discussed further in the Agency portion of this section. Agency capital expenditures for regional technology programs and internal needs are summarized later in this section.

Agency Administration and Regional Initiatives

Expenditures for Agency Administration and Regional Program are projected to decrease from $32.5 million in 2006 to $30.6 million in 2010. Details about the primary components of these expenditures can be found in the Agency Operating Plan which appears later in this section.

Debt Service and Capital Expenditures

Exhibit 3-1 provides a summary of the RTA's debt service and capital expenditures from 2006-2010. Total expenditures in this category are projected to decrease from $224.9 million in 2006 to $213.0 million in 2010. The RTA has not issued new bonds since 2006. Because operating expenditures have increased faster than operating revenues and public funding, operating expenditures have taken priority over capital investments.

Principal and Interest

Principal and interest payments reflect the RTA's expenditures and projected expenditures from 2006 through 2010. Payments are expected to increase from $189.5 million in 2006 to $190.7 million in 2010. In 2008, projected State Financial Assistance (SFA) for the SCIP bond program is expected to defray about 63 percent of the total Principal and Interest expenditures. Additional bond information is provided at the end of this section.

Regional Technology and Agency Capital

The 2008 budget continues to fund region-wide capital-driven technology enhancements. Like regional technical assistance programs, the regional technology programs are coordinated efforts with other state and local agencies, reducing RTA funding. Program costs are projected at $1.5 million and are offset by state and local funds of $1.3 million. At the end of the year, any funds that have not been spent are reserved.

Included in this category are expenditures for the Agency's capital needs. The amount remains constant throughout the 2008-2010 planning period. These annual funds, which total $0.4 million, are used to enhance various information technology programs and preserve the office environment.

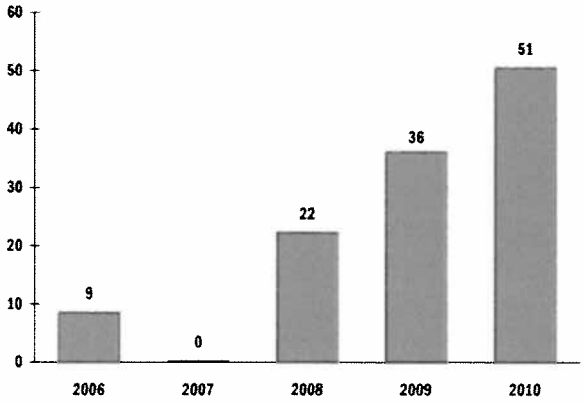
Transfer Capital

Two funding sources cover this category of expenditure, statutory and RTA discretionary. The statutory apportionment of sales tax to a Service Board can exceed its operating marks. When this occurs, the Service Board transfers these statutory funds to its capital program.

Since 1995, the RTA has transferred a portion of its discretionary funds, available for operations, to the CTA for capital investment. From 1995 through 1997, the program was funded at an annual level of $11.0 million. In 1998, CTA's funding for this program was increased to $16.5 million. The CTA transfer capital program was funded at $19.2 million in 1999 and increased to $20.4 million and remains at this level through the 2010 planning period. In 2006, total transfer capital was $21.5 million. The CTA and Pace receive RTA discretionary funds of $20.4 and $1.2 million, respectively. Metra's statutory portion, based on current sales tax trends, could reach $6.7 million. Furthermore, in 2007, the total transfer capital is $23.8 million allocated to CTA in the amount of $20.4 million and Pace $3.4 million.

For 2008, the total transfer capital is $20.4 million allocated to CTA and remains flat from 2009 through 2010.

Exhibit 3-9: **RTA Ending Unobligated and Unreserved Fund Balance** (dollars in millions)



Total Expenditures

Total RTA expenditures include all operating, debt service and capital program costs. From 2006 through 2010, these expenses are projected to increase from $1.148 billion to $1.221 billion. This represents a compound growth rate of 1.5 percent.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level in the unreserved and undesignated fund balance of 5 percent of total operating expenditures. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods.

The RTA Board manages the expenditure of

funds to arrive at a planned balance of unreserved and undesignated funds. The 2006 ending balance was $8.5 million. The estimated ending balance for 2007 is $0.2 million. The ending balances for the 2008 budget and two-year financial plan (2009 to 2010) are $22.2 million, $36.2 million, and $50.5 million, respectively (Exhibit 3-9). The unreserved and undesignated fund balance for the planning period meets the policy requirements by achieving a balance of 5.0 percent in 2010. Fund balance policy details are outlined at the Strategy section.

The ending balance is determined by increasing or decreasing the beginning fund balance by the annual difference between revenue and expenditures and the de-obligation and/or re-obligation of certain program funds.

Beginning Balance

The beginning balance is the amount of funds in the undesignated and unreserved fund balance after the previous year's results have been audited and the accounting books are closed. All statements in this document reflect 2005 actual results of $1.7 million as the 2006 beginning balance.

Change In Fund Balance

Total RTA revenue less total RTA expenditures produces a change to the fund balance. When revenue exceeds expenditures, the gain is added to the fund balance. If expenditures exceed revenue, the deficit reduces the fund balance. The 2007 projection indicates a deficit amount of $8.3 million. From 2008 through 2010, revenue is estimated to exceed expenditures and increase the unreserved fund balance to 5.0 percent of total operating expenses by the end of the 2010. Changes in revenue over expenditures, other financing use, and capital grant expenditures on a GAAP versus budgetary basis are reconciled at the end of each year. The 2006 year-end reconciliations resulted in a change to the fund balance of $6.9 million (Exhibit 3-1).

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal year for each Service Board. The RTA Act further requires that the combined revenue from RTA operations cover at least 50 percent of the system operating cost. The RTA's system-generated revenue recovery ratio in 2006 was 52.0 percent. This statutory calculation computes to 2.0 percentage points above the mandated 50 percent. The ratio is estimated to be 51.6 percent in 2007 and 51.0 percent in 2008.

In meeting the 50 percent recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50 percent requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/lease-back transactions, and the 1989 Metra fare increase—which has been restricted for capital investment. Beginning in 2005, this revenue source is included in Metra's recovery ratio calculation. A detailed breakout of this calculation is provided in Exhibit 3-32 later in this section.

Exhibit 3-10: **System Generated Revenue Recovery Ratio** (percent)

1) Budget (Ordinance #2006-78) was last revised on October 4, 2007 (Ordinance #2007-50 & #2007-58) and therefore reflects the year end estimates. (2) The original beginning fund balance is based on estimates and the amended beginning fund balance is based on audited financial results.

2007 Budget versus 2007 Estimate

Total RTA revenue of $1,161 million is projected to be $172 million less than the 2007 budget of $1,333 million. The 2007 original budget was predicated on receiving $82 million in state funds for ADA paratransit service and $145 million was predicated on securing additional public funding for the region's public transportation system, but these funding did not materialized (Exhibit 3-11).

Total operating expenditures of $955 million is favorable by $156 million because anticipated additional funding was not received and therefore not disbursed to the Service Boards.

Capital Program

At the present time, the 2008-2012 capital program funding marks total $2.575 billion. When federal, state or local appropriation figures change, the Service Boards' capital programs may not match the program marks.

When this occurs, the RTA Board considers ordinances that incorporate all changes and bring the Service Board programs in balance with the marks. Detailed Service Board program information is provided in the Capital Section of this publication.

Agency Operating Plan

Budget and Financial Plan

Beginning in 2006 and moving forward throughout all of 2007 agency-wide activities were fundamentally concentrated on increasing and expanding funding for the regional transit system. As 2007 unfolded it was clear that legislative adoption of new funding sources might not evolve in time to avoid region-wide service reductions. To minimize the impact of such events the RTA tightened its belt and took actions to defer budgeted expenditures and administration activities by $7.5 million (19 percent), and redirected the funds to service operations. Deferred and reduced expenditures included the following:

Agency tightens belt to minimize service cuts.

- A hiring freeze and suspension of all non-urgent travel
- Delayed system-wide technology upgrades
- Deferred relocation of the Travel Information Center
- Postponed planning projects totaling $3.6 million, including the universal farecard
- Reduced transit marketing and public education outreach

These types of belt tightening measures carried forward in the development of the 2008 budget. Of the total expenses ($31.9 million) budgeted in 2008 (Exhibit 3-12), human resource costs (compensation, benefits, other personnel) represent 37 percent, professional services and management fees 24 percent, office services 10 percent, with the balance of 25 percent comprising regional programs and technology and agency capital programs (Exhibits 3-13). A general description of the type of expense charged to each category is illustrated in Exhibit 3-14. A summary of each expense category follows.

Compensation

Estimated 2007 expenditures of $6.7 million are $0.2 million higher than 2006 actual results of $6.5 million. The variance is primarily attributable to salary administration changes. The 2008 budget calls for staffing to carry out increased research, analysis, and policy strategy in the development of more comprehensive short and long-term business planning practices for regional service operations.

Benefits

From 2008 to 2010, benefits are expected to average about $3.7 million. The increase over prior periods reflects continued cost escalations for pension and healthcare, and the change in human resource needs to improve business planning and oversight for region-wide mass transportation services.

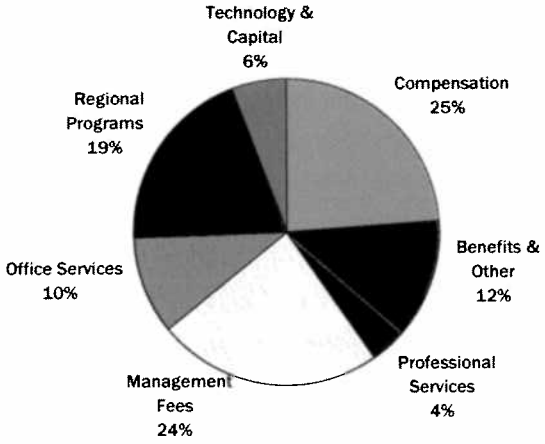
Other Personnel

These expenses represent less than one percent of the agency's overall budget and average roughly $0.3 million each year. Business meetings and travel, human resource development, and professional

Exhibit 3-12: **Agency Expenditures by Category** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Compensation	$ 6,514	$ 6,667	$ 7,579	$ 7,647	$ 7,731
Benefits	2,774	3,052	3,650	3,683	3,723
Other Personnel	195	205	329	332	336
Professional Services	1,137	1,065	1,262	1,273	1,287
Management Fees	7,232	7,600	7,653	7,722	7,807
Office Services	3,334	3,169	3,275	3,305	3,341
Regional Programs	11,356	6,760	6,204	6,260	6,329
Technology & Capital	7,270	3,226	1,900	1,917	1,938
Total Expenditures	**$ 39,812**	**$ 31,744**	**$ 31,852**	**$ 32,139**	**$ 32,492**

Exhibit 3-13: **2008 Agency Expenses by Category** - $31.9 million



organization memberships are the primary components of this expenditure category.

Professional Services

From 2008 to 2010, professional services (consulting and legal fees) are expected to remain constant at $1.3 million.

Management Fees

From 2008 to 2010, management fees are expected to average $7.7 million annually. The agency contracts with outside management companies to provide ADA certification, to run the Fare Check program, to issue reduced fare cards and to operate the Travel Information Center. Call Center activity has increased 64 percent in the past five years as interest in public transportation continues to grow.

Office Services

Office services are expected to remain constant during the 2008-2010 planning period at $3.3 million, essentially on par with prior year results. Major expenditures include office leases, utilities, telephone service, and office supplies.

Regional Programs

Initiatives benefiting the region include the following:

- ADA certification and appeals
- Market communication initiatives, e.g., maps, public outreach programs, and media and legislative relations
- Regional planning programs, e.g., strategic planning, corridor and sub-regional planning studies, service planning tools, job access, and regional coordination initiatives
- Technology and capital program initiatives, e.g., signal priority, and bus and travel information projects

Agency Statutory Cap

The statutory cap for administrative spending was set at $5 million in 1985, with a growth rate of 5 percent per year. The 2008 cap allowance is $15.4 million. Agency spending of $8.3 million is significantly below the statutory maximum.

Exhibit 3-14: **2008 Agency Expense Descriptions**

Expense	General Description
Compensation	Salaries, Overtime, and Temporary Help
Benefits	FICA, Health Insurance, Pension, Unemployment Compensation and Workers Compensation
Other personnel	Business Expense, Travel, Training, and Membership
Professional services	Consulting and Legal fees
Management Fees	Outsourced Operational Fees for Reduced Fare Card Production, Fare Check Program, ADA and the Travel Information Center
Office services	Printing, Photography, Equipment Maintenance, Office Supplies, Office Rental, Utilities, Telephone, and Publications
Regional programs	ADA Applicant Appeals and Paratransit Trips, RTA Map, TIC Advertising, Marketing, Outreach Program, and Legislative Consulting. Regional Technical Assistance Program and Regional Corridor and Coordination Initiatives
Technology & Agency Capital	Transit Signal Priority, Bus Information, Wireless Communications and Agency Capital (Office Furniture, Equipment, and Information Systems)

2007 Budget versus 2007 Estimate

In 2007, Agency expenditures were budgeted at $31.7 million and are expected to balance with that level of appropriation at year end (Exhibit 3-15).

Exhibit 3-15: **Agency 2007 Budget versus 2007 Estimate**
(dollars in thousands)

Expense Categories	2007 Budget	2007 Estimate	Variance
Compensation	$ 6,670	$ 6,667	$ (3)
Benefits	3,056	3,052	(4)
Other Personnel	207	205	(2)
Professional Services	1,065	1,065	-
Management Fees	7,594	7,600	6
Office Services	3,170	3,169	(1)
Regional Programs	6,009	6,760	751
Technology & Agency Capital	3,975	3,226	(749)
Total Expenditures	**$ 31,746**	**$ 31,744**	**$ (2)**

Organization

The Agency's budgeted full-time equivalents in 2008 total 112, excluding the 12 paid RTA Board members. With Service Boards budgeted positions of 13,866, total 2008 regional headcount reached nearly 14,000 (Exhibit 3-16). The agency organization chart is presented in Exhibit 3-17, and organizational changes are identified in the discussion of organizational units that follows.

Exhibit 3-16: **Budgeted Positions**

RTA	2006	2007	2008
Agency	97	100	112
RTA Board	12	12	12
Total RTA	**109**	**112**	**124**
Service Boards			
CTA	10,873	10,258	8,631
Metra	3,618	3,978	4,010
Pace	1,422	1,449	1,225
Total Service Boards	**15,913**	**15,685**	**13,866**
Grand Total	**16,022**	**15,797**	**13,990**

Organizational Structure

The agency's organizational structure and staff support the RTA's mission, goals and objectives to plan, fund and oversee region-wide public transit. Organizational expenditures are presented on Exhibits 3-18 and 3-19. As mentioned earlier the Agency's predominant goal in 2007 was to obtain additional operations funding. The events which led to goal achievement are discussed later in this section.

Executive Office

This structure includes the RTA Board of Directors and organizations that support the RTA Chairman and Board of Directors, and administer day-to-day agency activities.

The RTA Board of Directors consists of 12 members and a chairman. The RTA Board has the statutory authority to establish by rule or regulation, financial, budgetary, or fiscal requirements for the region's public transit system. The RTA Board and its committees set policy, consider matters relating to RTA operations and compliance with the ADA Act, supervise audits, and consider planning studies and capital program investments. The Board has six standing committees that review and recommend policy to the entire Board (Exhibit 3-20).

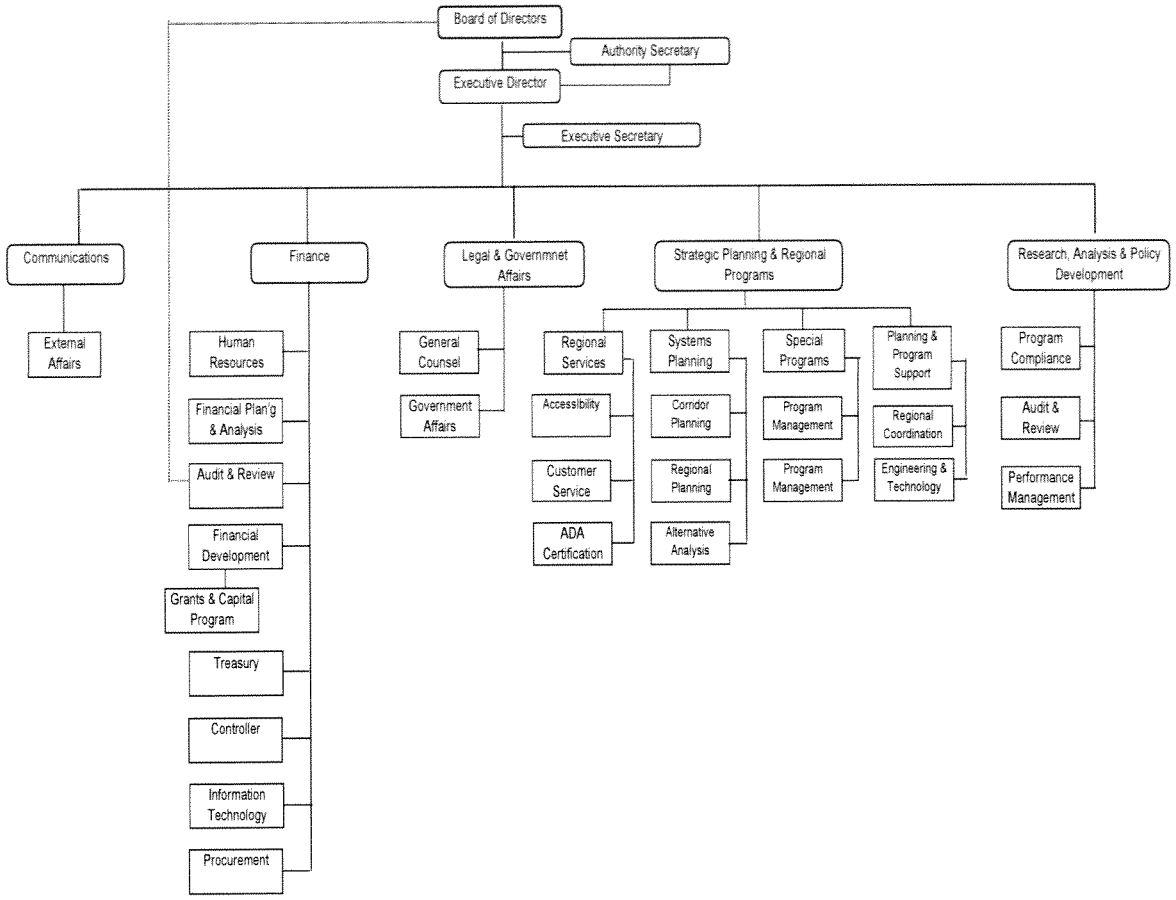
The Executive Director executes the policy decisions of the RTA Board and staffs the agency to administer its statutory mission and implement Board policy. The Executive Director informs and assists the RTA Chairman and the Board in the development of policy, and is the principal contact with executive staffs of the CTA, Metra, and Pace to ensure effective administration of the RTA's regional planning and oversight responsibilities.

The Secretary to the Authority provides Board support functions by assisting with the information, documentation, and logistical needs of the RTA Board. The Secretary works with staff to supply Board members with the information and documentation needed to fulfill their statutory role and to obtain quorums for meetings of the Board and its six standing committees.

Communications

Communications assists management in the formulation and execution of communications initiatives. The department manages the RTA's internal

Exhibit 3-17: **RTA Organization Chart**



and external production of reports, speeches, videos presentations, radio advertising, and publications that explain and promote agency initiatives and goals. The department also leads media relation efforts, marketing initiatives, and efforts to coordinate marketing opportunities with the Service Boards.

Public outreach is administered by External Affairs. This area develops and implements the agency's public outreach programs and services that promote the use of public transit in the region.

Legal and Government Affairs

The legal area ensures statutory and regulatory compliance, manages litigation, reviews all legal documents, manages the Joint Self-Insurance Fund (JSIF) and oversees the Agency's Equal Employment Opportunity and Disadvantaged Business Enterprise (DBE) programs and compliance with applicable civil rights laws.

This year's 11th Annual Transportation Symposium & Business Exchange was a success with over 500 people attending. The symposium, jointly sponsored by the RTA, the Chicago Transit Authority (CTA), Metra, Pace, and the Illinois Department of Transportation (IDOT), was held on November 28 at the Chicago Hilton & Towers. Twenty exhibitors and over 150 staff representing the RTA, the Service Boards, and IDOT were also on hand for this year's event.

The symposium's workshop entitled "Get Bids, Get Contracts and Get Paid" included a question and answer session with agency representatives.

2007 Transportation Symposium

RTA representatives provided information on the Authority's Disadvantaged Business Enterprise (DBE) Program and the potential business opportunities with the RTA.

Each year the symposium provides a valuable forum for attendees to network and meet with procurement and operations staff representatives from the sponsor agencies.

The department also oversees the Agency's governmental affairs functions. This area works with federal, state, and local governments, and with legislative consultants to address industry and regional concerns. Government Affairs also works on legislative issues with industry trade organizations such as the American Public Transit Association (APTA) and the Illinois Public Transit Association (IPTA).

RTA Receives Financial Reporting Award and Budget Award from the Government Finance Officers Association

Finance and Administration

The Finance office executes the funding and oversight responsibilities of the RTA. It works to maintain financial stability in the region and ensures that the agency, the CTA, Metra and Pace execute their statutory requirements for fiscal responsibility.

The finance divisions include:

- Controller
- Financial Planning and Analysis
- Audit and Review
- Financial Development/Grants and Capital Program
- Treasury

Administrative offices include:

- Human Resources
- Procurement
- Information Technology

These areas are responsible for compensation and benefits, purchasing, and information systems management.

Controller

The Controller area is responsible for all of the RTA's accounting functions including monthly financial statements, annual reports, audit coordination, and grant accounting.

The RTA was awarded the Certificate of Achievement for Excellence in Financial Reporting by the Government Finance Officers Association. It is the Agency's 13th consecutive award for its annual report. The award is the highest form of recognition in government accounting and financial reporting.

Financial Planning and Analysis

Financial Planning and Analysis is responsible for the development of the annual operating budget and two-year financial plan, as well as the subsequent analysis of performance against those plans. The division also provides analytical support to management and the RTA Board.

In 2007, the RTA received the Distinguished Budget Presentation Award from the Government Finance Officers Association. The award, the agency's eleventh consecutive, represents a significant achievement and reflects the Authority's commitment to the highest principles of governmental budgeting.

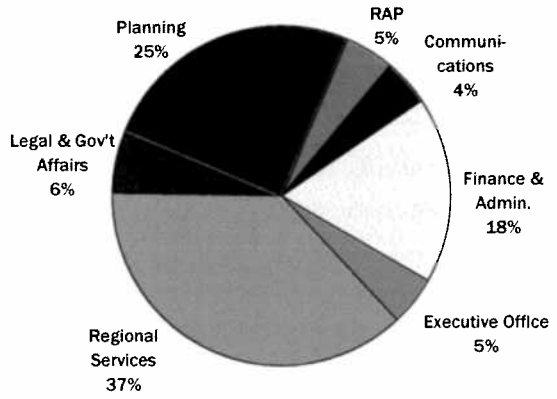
Audit and Review

Audit and Review examines agency activities and functions. Operations deemed to have higher risk

Exhibit 3-18: **Agency Organizational Expenses** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Executive Office	$ 1,507	$ 1,270	$ 1,507	$ 1,459	$ 1,482
Communications	1,565	1,351	1,398	1,505	1,523
Legal & Government Affairs	1,584	1,956	1,985	1,940	1,957
Finance & Administration	5,804	5,243	5,648	5,510	5,570
Regional Services	11,711	12,241	11,879	12,875	13,015
Strategic Planning & Programs	8,895	9,559	7,932	7,385	7,465
Research, Analysis & Policy Development	-	124	1,503	1,465	1,480
Agency Total	**$ 31,066**	**$ 31,744**	**$ 31,852**	**$ 32,139**	**$ 32,492**

Exhibit 3-19: **2008 Agency Expenses by Organization**
$31.9 million



receive annual or more frequent reviews. Functions with less risk are examined on a rotational basis.

Financial Development/Grants and Capital Program

Financial Development/Grants and Capital Program is responsible for the management of capital program grants as well as related on-going analysis and status reporting. These areas also manage federal, state, and local funding activity related to RTA planning initiatives.

Treasury

Treasury responsibilities include cash management, short-term and long-term financing, investments, debt service, banking relations, accounts payable, payroll, and Service Board funding.

Human Resource

Human Resource provides a variety of consulting and administrative services to the agency such as recruitment and selection, benefit and compensation administration, employee relations counseling, and organizational performance and development.

Procurement

Procurement handles the agency's purchasing activities and office support services. A major responsibility of this area is to ensure compliance

Exhibit 3-20: **RTA Board Committees**

Committee	Description
Administrative	Considers matters relating to the operation of the RTA which are not otherwise within the jurisdiction of another committee including contracting policies, personnel policies and issues, marketing and advertising, and litigation.
Audit	Authorizes and supervises all audits and reviews, considers matters related to investment performance and review of financial controls.
Chairman's Coordinating	Considers matters referred to it by the Chairman of the Board of Directors. The members of this committee are comprised of the Chairman of the Board and the Chairmen of the standing committees of the RTA.
Finance	Considers issues related to revenues and expenses, including the operating budgets and financial programs of the RTA and the Service Boards.
Mobility Limited	Considers ADA Paratransit Certification and other issues relating to the provision of public transportation services to the elderly and persons with disabilities.
Planning	Considers system planning issues, which include the RTA and Service Board capital programs and plans, and special planning studies.

with legal, financial, and policy requirements for purchasing activities. Procurement also conducts ongoing reviews of all office services as part of agency objectives to lower costs.

Information Technology

Information Technology provides internal technology services including help desk support and training to agency personnel. The organization administers software applications and implementations, hardware and network environments, and telephone and web-site systems.

Strategic Planning and Regional Programs

The department consists of four principal organizational areas:

- Systems Planning,
- Special Programs, and
- Planning and Program Support

provide regional planning and coordination services.

- Regional Services

is responsible for the following RTA-operated services and programs:

- RTA Travel Information Center,
- ADA/Special Services Certification and the RTA Certification Helpline,
- RTA Reduced Fare program,
- RTA Customer Service Center, and
- Fare Check Program.

Travel Information Center

The RTA's Travel Information Center (TIC) is a telephone-based service providing route and scheduling information for the CTA, Metra and Pace. TIC operators, available year-round from 5 a.m. to 1 a.m., field an average of 15,600 calls each day. The TIC phone number (836-7000) is accessible from every area code in the region. Call volume has increased dramatically in recent years. Most of this increase relates to customers calling from their cell phones checking on service availability (Exhibit 3-21). Performance is measured and reported daily. The most important metric is the call capture rate (calls answered/calls received) which measures the effectiveness of the service.

ADA/Special Services Certification

The RTA is responsible for the certification of riders who use curb-to-curb transportation services, also known as ADA paratransit. Beginning July 1, 2006, Pace operates all ADA paratransit operations in the region. The ADA Certification program conducts interviews and performs assessments of applicants requesting ADA paratransit certification as determined by guidelines established in the Americans with Disabilities Act (ADA). The interviews and assessments are completed at five sites operated under contract by a not-for-profit social service agency. A video is shown at each of the assessment sites to introduce applicants to fixed-route accessibility features and to encourage increased use of fixed-route services by people with disabilities.

An accessibility specialist, who reviews customer issues concerning mainline accessible transit services, paratransit services, and accessibility information, also supports these programs. The accessibility specialist chairs the Agency's Advisory Committee on Accessible Transportation and Mobility and represents the Agency on advisory committees established by the CTA, Metra, and Pace. For more information about special services and certification, contact the RTA's Certification Helpline at 312- 663-HELP (4357, voice) or 312-913-3122 (TTY for the hearing impaired).

Exhibit 3-21: **Travel Information Center**

	2003	2004	2005	2006	2007
Calls Accepted (in thousands)	3,484	4,109	4,800	5,100	5,700

Average Response Time (seconds)	25	31	33	41	24

New Customer Service Center at 165 N. Jefferson Street (at Lake Street)

RTA Reduced Fare Program

The RTA Reduced Fare program allows eligible senior citizens and qualified persons with disabilities to ride RTA services at a reduced fare. Service effectiveness is measured by the turnaround time for producing and distributing reduced fare permits. The benchmarks for turnaround time evaluation have been established by contract, and the contractor has continued to meet these requirements. A reduced fare smart card has been offered since 2000. The "smart card" provides easier access to the fare collection systems of the CTA and Pace for some people with disabilities. Fare values can also be added and deducted from the card. This initiative has been well received by many reduced fare riders.

RTA's Customer Service Center

On August 3, 2007 the RTA's Customer Service Center moved to its new location at 165 N. Jefferson Street (at Lake Street) in the CTA headquarters building. The new office will continue to process reduced fare applications and requests for replacement permits. It will also have a Metra fare sales machine and three RTA trip planning kiosks. Later in the year, Pace plans to sell Taxi Access Program (TAP) vouchers at the same location.

The new location will mark the first time customers will be able to interact with the RTA and CTA customer service under one roof.

RTA Fare Check Program

The RTA Fare Check Program markets and administers an employee benefit that reduces transit costs for employees and encourages public transit ridership. The program distributes RTA transit checks which are vouchers that can be used to purchase CTA, Metra, Pace, South Shore Railroad passes and Pace Vanpool services.

RTA renames transit voucher from Transit Check to Fare Check

In October the RTA changed the name of its tax-free transit voucher program from Transit Check to Fare Check. The name change is part of an RTA-led effort to boost awareness of the RTA/CTA Transit Benefit Program among Chicago-area employers and commuters. The program helps reduce commuting costs, roadway congestion, and air pollution, and results in a more reliable, on-time work force. The total annual value of RTA transit checks issued has declined with the growth of the CTA program, but the annual value of RTA transit checks still exceeds $49.4 million (Exhibit 3-22).

Frequent users of Amtrak trains to and from Chicago can now save money by buying tickets using RTA Commuter Checks. Amtrak began accepting the

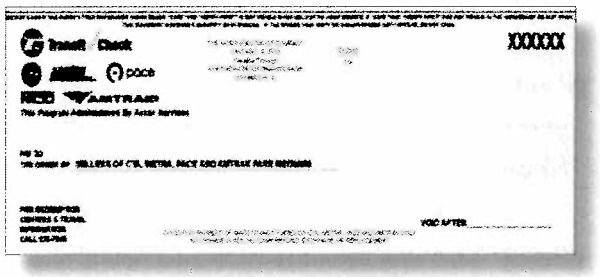

Exhibit 3-22: **Fare Check Program**

	2003	2004	2005	2006	2007
Total Face Value (in thousands)	58,442	57,179	52,810	49,323	49,481
Quantity (in thousands)	1,050	1,013	874	750	757
New Companies	289	186	195	149	193

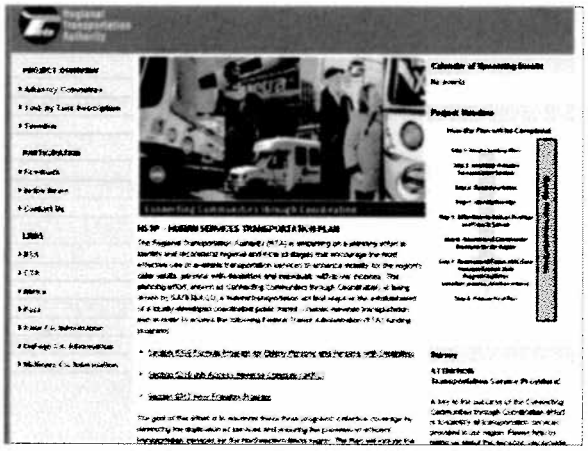
checks in January 2007 for the purchase of multi-ride tickets that are perfect for long-distant commuters. They are also valid for other routes with many available connections through Chicago Union Station. For more information about the transit benefit program, call 1-800-531-2828.

System Planning

System Planning is responsible for overall strategic plan enhancements, corridor planning studies, sub-regional planning and alternatives analysis. Corridor studies provide an opportunity for local officials, citizens, and regional planning organizations to objectively explore a wide range of possible transportation improvement alternatives and select the best solutions. The RTA's corridor planning approach includes a comprehensive multi-modal travel market analysis to understand travel patterns and clarify mobility issues.

In the first quarter the RTA launched a comprehensive, seven-county planning initiative geared toward strengthening the coordination of existing public transit and human services transportation. The initiative, known as *Connecting Communities Through Coordination*, aims for better coordination of existing transportation services by inventorying existing service, assessing mobility needs, and identifying potential gaps in service. The effort will also recommend strategies to ensure that transportation services are delivered effectively and efficiently to the area's disabled, elderly and low income residents. Better coordination of these transportation services will enable the RTA and regional stakeholders to maximize the use of every resource and every dollar. The planning effort is expected to last several months and will cover Cook, DuPage, Kane, Kendall, Lake, McHenry and Will Counties.

The planning initiative is being led by a Project Advisory Committee comprising representatives from the planning area, as well as individuals who represent people with disabilities, older adults, and those with low incomes.



Connecting Communities Through Coordination

Special Programs

Special Programs was created in 2007 to better address some of the recommendations of the Auditor General as well as to better administer the federal Job Access Reverse Commute (JARC) and New Freedom programs. The division oversees the Human Services Transportation Plan, monitors the region's paratransit services, and will expand and enhance the Regional Transportation Assistance Program (RTAP).

Planning and Program Support

Planning and Program Support is responsible for regional transit coordination plans and technology-driven engineering programs in the region. The RTA emphasizes coordination and interconnection of the regional transit system through the Regional Transit Coordination Plan (RTCP). The RTCP is a multi-year program to enhance regional mobility by facilitating seamless travel on public transportation. In cooperation with the CTA, Metra and Pace, and other local planning entities, the RTCP addresses the four principal elements of transit coordination—information coordination, physical coordination, service coordination and fare coordination.

Engineering and Technology

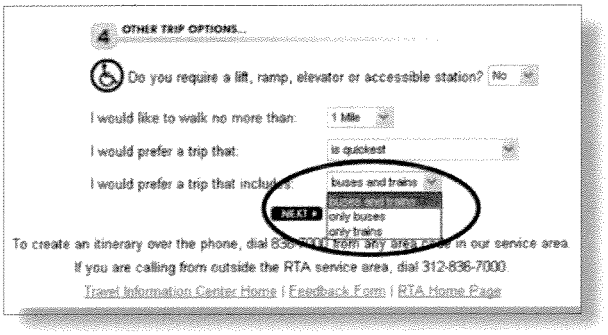
The Engineering and Technology area is responsible for conducting research and development studies of emerging transit technologies. It manages

the development and coordination of technology initiatives in the region and oversees the demonstration and implementation of these technologies by the CTA, Metra and Pace. Efforts include Active Transit Station Signs, Transit Signal Priority, Multi-Modal Information Kiosks, and the Regional Transportation Asset Management System.

A new feature on RTA's web-based Trip Planner is helping commuters find an alternate route with the reduction of service caused by the CTA's Brown Line Capacity Expansion Project.

The RTA's Trip Planner, available at *www.rtachicago.com*, can now plan a person's transit itinerary using only buses or only trains as an option. With 40 bus routes as options and more service on Metra's Union Pacific North line, as well as increased service on several other CTA routes, riders who normally would use the Red, Brown or Purple lines now have an easier way of finding an alternate route with the new trip planning feature.

The RTA's web-based Trip Planner is also available for web-enabled PDAs or cellular phones at *www.RTAMobile.com*.



Research, Analysis, and Policy Development (RAP)

RAP organization was created in 2007 to better meet the RTA's strategic objectives and address the recommendations of the Auditor General. Departmental divisions include Program Compliance, Performance Management, and Audit and Review. The department will ensure RTA staff has adequate finance, administration, operations information, as well as the resources to lead the development of policies for a more effective and efficient regional mass transit system.

The department is also responsible for the CTA Rail Safety Oversight and capital Project Management Oversight (PMO) for each Service Board. As the designated oversight agency for safety and security on the CTA's rapid transit system, the RTA assures compliance with the Federal State Safety Oversight Rule for Rail Fixed Guideway Systems.

Funding Goal Highlights

As mentioned earlier, agency initiatives in 2007 focused on obtaining additional funding for region-wide public transportation. A chronology of headline events heavily supported by agency efforts and sponsorship seeking additional public funding for the region, is summarized in the paragraphs that follow.

- **In 2006**, the RTA embraced plans to completely rework its strategic plan and opened discussions with State legislators to support additional funding sources for the region's public transportation system. Later in the year the State Office of the Auditor General (OAG) was commissioned by the Illinois House of Representatives to conduct financial, compliance, and performance audits of the four public transit agencies (RTA, CTA, Metra, and Pace) in northeastern Illinois to ensure existing funds were being used effectively and efficiently.

- **In November 2006**, the RTA released the Moving Beyond Congestion (MBC) plan, a 30-year vision to "maintain, enhance and expand transit" to meet growing urban and suburban demand for transit. Implementing the plan would also help ease traffic congestion, the second-worst in the country, estimated to cost almost $5 billion annually in time lost and fuel wasted.
  At the beginning of its planning process, the RTA made it clear that it considered the Auditor

General's examination of transit operations in the region to be a valuable contribution to the MBC effort.

- **In December 2006**, the RTA Board adopted the 2007 budget that included a $226 million operating deficit. In the upcoming legislative session, the RTA planned to lobby Springfield for a transit solution to fund the deficit and provide a dedicated source of funds for the future.

Strategic Plan Approved

- **In February 2007**, the RTA Board approved a five-year strategic plan (MBC) calling for $10 billion in new capital funds and an additional $400 million in annual operating funds. With the support of nearly 500 Partners for Transit, the plan was submitted to the legislature for consideration.

OAG Report Affirms Transit is Under Funded

- **In March 2007**, the OAG released its report which found that the transit agencies in northeastern Illinois "are facing a serious financial shortfall." The report suggested "a dedicated, predictable funding source" for transit investments as outlined in the RTA's MBC plan. The Auditor General commented, "While we identified some opportunities to improve efficiency and effectiveness through increased coordination, decreased redundancy, and improved operations, these savings are relatively minor – in the tens of millions of dollars – compared to the current funding deficit and unmet future needs – which are in the hundreds of millions of dollars." The report also suggested expanding RTA's role in overseeing planning and budgeting. The report is available at: *http://www.auditior.illinois.gov.*

- **In April 2007**, the RTA moved forward with OAG recommendations. While there was no "smoking gun" in evaluating management performance, the OAG put forth recommendations which the RTA intends to address and that will further guide the Agency's work as illustrated later in this section. Some of the key recommendations made by the OAG report and RTA responsive actions are outlined below.
  - Develop a long-term comprehensive strategic plan: MBC puts the RTA well ahead of the recommendation.
  - Coordinate service routes: The RTA will work with the Service Boards to establish standards and measures for new services.
  - Develop a seamless fare system: A policy group has been established to develop an implementation plan.
  - Implement performance measurements: The RTA is developing key indicators that link performance for all agencies.
  - Create a long-range financial plan: The RTA's 2008 Budget Call set forth guidelines to begin the development of 10-year financial plans.

Service Boards Develop Budget Shortfalls

With a $226 million budget shortfall for 2007 still looming, the RTA asked the Service Boards to begin making preparations to close their deficits if new funds was not secured. Without additional funding from the General Assembly, the Service Boards would need to implement drastic changes that might include service changes, workforce reductions, fare increases and other steps to meet their budgets.

- **In May 2007**, an overwhelming majority of the Illinois House Mass Transit Committee approved a transit operation funding proposal and a package of reforms to improve coordination and efficiency of the transit system. This strong bipartisan support for RTA reforms and funding reflected the shared belief in the importance the

regions public transportation system.
The proposal would have
  - Provided $452 million for service operations;
  - Provided an additional $120 million for the collar counties to use for locally controlled road or transit projects;
  - Raised funds by increasing the RTA sales tax in the six counties; and
  - Imposed a new RTA real estate transfer tax in the City of Chicago.

- **In June 2007**, new funding for the region's public transportation system was still pending legislative adoption. In the meantime, the CTA and its labor unions reached an unprecedented agreement to address pension and healthcare reform, an essential element for legislative support of new transit funding. The reforms, contingent on action from the state legislature, included
  - Increasing contribution rates for employees and the CTA;
  - Increasing the retirement age for full benefits;
  - Authorizing pension obligation bonds, shoring up pension and healthcare programs;
  - Creating a self-sustaining Retiree Healthcare Trust;
  - Adding an additional independent vote to the Retirement Plan and Retiree Healthcare Trust; and
  - Adding fiscal oversight by the OAG regarding bond issuance and required contributions.

- **By July and August 2007** the CTA and Pace were facing service cuts, fare increases and layoffs that would take effect on September 16.

- **In September 2007**, the Governor, wanting more time to work with the General Assembly on a capital funding plan and a long-term plan to fund transit operations, stepped in with a last minute partial advance of next year's funds which postponed the service cuts and fare increases scheduled for September 16. Unfortunately, this level of funding was only enough to operate the system at its current level until November 4.

- **In October 2007**, the Service Boards were completing their 2008 budgets which called for even more drastic service cuts, fare increases, and employee layoffs in order to balance their budgets.

- **In November 2007**, the service cuts, fare increases and layoffs s were again postponed when the Governor in late October stepped in once more and advanced additional funds from 2008. This action prevented operational changes until January 20 at which time all three Service Boards would start to impose fare increases, service cuts and employee layoffs.

- **In December 2007**, the RTA Board approved the 2008 budgets presented in this document which included a drastic series of service cuts, fare increases and layoffs to close a projected $405 million budget shortfall.

- **On January 18, 2008** Illinois lawmakers and the Governor signed public law 95-0708 that annually provides an additional amount of $530 million in new operating funds.

2008 Agency Strategic and Short-Term Goals

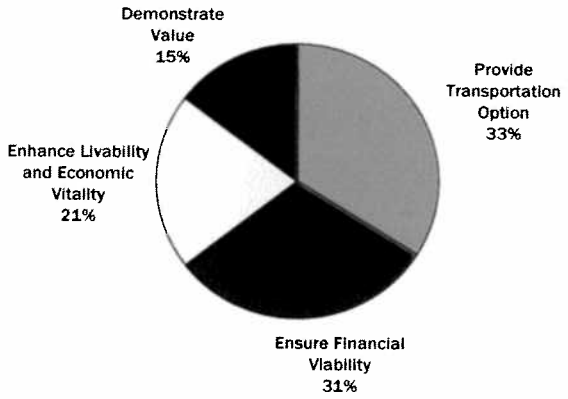
The 2008 Agency budget was developed by utilizing a zero-based budgeting approach. Each department submitted budget requests to reflect key initiatives and action plans that linked to the *Moving Beyond Congestion (MBC)* Strategic Plan.

The following chart identifies budget spending by MBC goal.

2008 Agency Budget Expenditures by MBC Goal
(dollars in thousands)

Provide Transportation Option	$ 10,805
Ensure Financial Viability	9,764
Enhance Livability and Economic Vitality	6,598
Demonstrate Value	4,685
Total RTA Strategic Goals	**$ 31,852**

2008 Agency Budget Expenditures by MBC Goal - $31.9 million



The matrix below provides a cross reference of Departments' primary short-term goals linked to the MBC long-term strategic goals.

Strategic Goals	Short-Term Goals	Departments
I. Provide Transportation Option Provide public transportation choices that link to jobs and deliver cost-effective, dependable and on-time commutes.	• Update the Strategic Plan to incorporate the mandates of the RTA reform legislation • Revise and adopt Planning and Coordination Requirements, Policy, and Process	Strategic Planning & Regional Services
II. Ensure Financial Viability Ensure the sustained financial viability of public transportation as intrinsic to the region's multimodal transportation system.	• Improve the regional operating budget program to reflect the RTA reform legislation mandates and OAG recommendations. • Improve the capital program to reflect RTA reform legislation mandates and OAG recommendations • Measure, analyze, and critique performance of all transit agencies. • Seek enactment of a state transit operating and capital funding & reform • Protect and increase the region's transit funding share in the federal reauthorization of the surface transportation programs. • Support the implementation of the RTA reform legislation mandates	Finance and Administration Research, Analysis, and Policy Development (RAP) Legal & Governmental Affairs
III. Enhance Livability and Economic Vitality Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.	• Establish the Innovation, Coordination and Enhancement (ICE) fund policy and criteria. • Strongly manage ADA paratransit oversight to control cost growth.	Strategic Planning & Regional Services
IV. Demonstrate Value Create and sustain public understanding of the benefits of public transportation to individual health and well-being, regional economic vitality and sustainability, and as a catalyst for new opportunities for users and non-users alike.	• Develop framework for more effective oversight of the Service Boards. • Create an integrated marketing program. • Develop and manage an on-going public participation on the Partners for Transit Program. • Manage departments' implementation of new RTA Act mandates • Oversee departments' achievement of their 2008 Program Goals • Ensure effective Board involvement in the program.	Research, Analysis, and Policy Development (RAP) Communications Executive Director

Goals and Peformance Measures

Introductions

In 2007, Regional Transportation Authority released its five-year strategic plan, *Moving Beyond Congestion* that presented a 30-year vision for maintaining, enhancing and expanding our public system which valued at $31 billion dollars and provides two million rides each weekday and thousands more on weekends. It also addressed several major issues across the region which includes congestion and mobility, changing travel markets, service coordination and integration, capital and operations funding, and the risks without additional funding. Formal process for goals and performance measures will be presented to the RTA board for adoption in 2008. Some plan components and informal processes are summarized below.

Vision

The RTA, Metra, CTA and Pace vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities.

Goals

I. **Provide Transportation Option**
- Provide public transportation choices that link to jobs and deliver cost-effective, dependable and on-time commutes.

II. **Ensure Financial Viability**
- Ensure the sustained financial viability of public transportation as intrinsic to the region's multimodal transportation system.

III. **Enhance Livability and Economic Vitality**
- Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.

IV. **Demonstrate Value**
- Create and sustain public understanding of the benefits of public transportation to individual health and well-being, regional economic vitality and sustainability, and as a catalyst for new opportunities for users and non-users alike.

Objectives and Specific Performance Measures

Regional performance measures will be presented to the Board of Directors for adoption on February 2008 board meeting. However, developing Service Board specific, sub-regional measures is still a working process. In the interim, some of the temporary measures (informal) placed by the Service Boards are as follows:

I. **Provide Transportation Options**

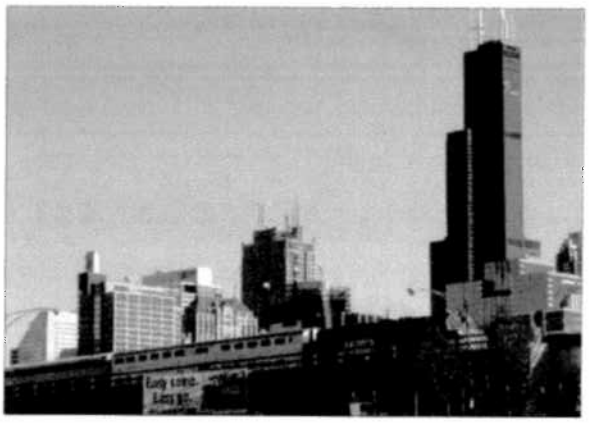
Objectives:

1. Improve on-time performance
2. Provide seamless public transportation
3. Increase ridership

Performance Measures

1. Improve on-time performance (96.6% - 5 year average - Metra)

Year	% On-Time	Goal (%)
2002	96.50%	<0.1
2003	97.10%	>0.5
2004	96.90%	>0.3
2005	96.30%	<0.3
2006	96.30%	<0.3



2. **Provide seamless public transportation** (January - November)

Options	2005	2006	2007	'06 vs. '07
Link-up Pass (issued by Metra--use on peak period for CTA & most Pace services)	55,154	80,222	87,472	7,250
PlusBus Pass (issued by Metra – unlimited use on most Pace Routes	13,064	13,962	13,213	(749)
Pass (e.g. 7-day pass, UPass, 1,2,3,5 day pass issued by CTA—unlimited use on CTA & Pace)	95,339	152,716	168,944	16,228

3. **Increase ridership** (in thousands)

Service Boards	2006 Actual	2007 Estimate	2007 Plan	Goal (%)
CTA	494,803	493,639	492,039	>0.3
Metra	80,844	84,206	84,387	<0.2
Pace	38,000	38,900	41,600	<6.6

II. Ensure Financial Viability

Objectives:

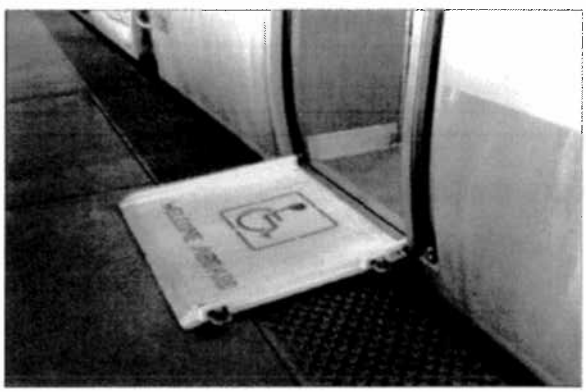
1. Demonstrate measurable achievement in the provision of clean, attractive, affordable, safe, reliable and convenient public transportation services.
2. Continually enhance efficiencies through effective management, innovation, and technology.

Performance Measures

Options	2006 Actual	2007 Estimate	2007 Plan	Goal (%)
CTA Bus accidents per 100,000 miles	6.11	5.81	6.00	<3.3
CTA Rail accidents per 100,000 miles	0.13	0.12	0.11	>8.0
System Recovery ratio	52.09%	51.6%	50.00%	>3.2

Options	2006 Actual	2007 Estimate	2007 Plan	Goal (%)
Travel Information Center Call Capture Rate (%) (see Exhibit 3-17 for details)	92.2	93.6	94	<0.4
Automated CTA Bus announcement	2,033	2,175	2,175	0

III. Enhance Livability and Economic Vitality



Objectives:

1. Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.
2. Provide mobility to aging populations and people with disabilities.

Options	2006 Actual	2007 Estimate	2007 Plan	Est. vs. Plan (%)
ADA Ridership (in thousands)	2,799	2,658	3,253	<22
CTA Bus Lifts	2,033	2,175	2,175	0
Pace Fixed Route Accessible stations	232	240	240	0
RTA Reduced Fare Permit (used by senior & ADA for fixed route)	320,000	320,000	320,000	0
RTA ADA Certification (used by seniors & ADA paratransit)	10,428	13,130	10,000	>31

IV. Demonstrate Value

Objectives:

1. Increase public outreach
2. Develop public-private partnerships

Options	2006 Actual	2007 Estimate	2007 Plan
Public Hearings	35	37	35

2007 Public Hearing with RTA Executive Director, Stephen E. Schlickman

In the future, specific performance measures will follow the matrix below:

Measure	MBC Goals
Service Supplied **(the amount of service scheduled and/or actually operated)**	
Vehicle revenue hours (hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per capita (population for the Chicago UZA &/or six county service area—US Census) • Peak to base ratio (The amount of service provided in the peak time period as compared to the base)	I. Provide Transportation Options
Vehicle revenue miles (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per capita (population for the Chicago UZA &/or six county service area—US Census) • Per service area/square miles (square miles within geographic boundary for the Chicago UZA &/or 6 county service area — US Census) • Peak to base ratio (The amount of service provided in the peak time period as compared to the base)	I. Provide Transportation Options
Transit Capacity (total person space miles: seating capacity (plus standees based on loading standards) multiplied by vehicle revenue miles. • Per capita (population for the Chicago UZA &/or six county service area—US Census)	I. Provide Transportation Options

Measure	MBC Goals
Service Consumed **(the amount of service actually used by passengers)**	
Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination). • Per capita (population for the Chicago UZA &/or six county service area—US Census) • Per vehicle revenue hour (hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time).	IV. Demonstrate Value
Passenger miles (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips). • Per capita (population for the Chicago UZA &/or six county service area (US Census)	I. Provide Transportation Options
Integrated fare utilization (Number of trips taken with fare media that is accepted by multiple service boards). • Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination).	I. Provide Transportation Options
Transit capacity utilization (Percent of transit capacity that is actually used: Passenger miles divided by transit capacity) • Per capita (population for the Chicago UZA &/or six county service area (US Census)	IV. Demonstrate Value
Senior passenger trips (Unlinked passenger trips taken by senior citizens using "free" fare cards certified by RTA) • Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination).	IV. Demonstrate Value
Service Efficiency **(Achieving the desired result (service delivery) with the minimum use of resources)**	
Operating cost (The expenses associated with the operation of the transit agency) • Per vehicle revenue hour (Hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per unit of transit capacity (Total person space miles: seating capacity (plus standees based on loading standards) multiplied by vehicle revenue miles)	II. Ensure Financial Viability

Measure	MBC Goals
Service Effectiveness **(The extent to which passengers are using public transit service in relation to the amount of service available)**	
Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination) • Per vehicle revenue hour (Hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time)	IV. Demonstrate Value
Passenger miles (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	I. Provide Transportation Options
Cost Effectiveness **(Economically worthwhile in terms of what is achieved for the amount of money spent)**	
Operating Cost (The expense associated with the operation of the transit agency) • Per passenger mile (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination).	II. Ensure Financial Viability
Service Delivery - Customer Service **(The provision of service to customers before, during and after a purchase that is designed to enhance the customer experience and level of satisfaction)**	
On time Performance (Percentage of the times a transit vehilcle departs a location within a certain number of minutes after and/or before the scheduled time and/or interval maintenance for frequent service).	II. Ensure Financial Viability
Customer satisfaction index score (A market research tool, administered through a survey, that identifies criteria and establishes a rating system for the measurement of customer satisfaction).	II. Ensure Financial Viability
Service Delivery - Safety **(Protection from the risk of harm or injury)**	
Major Security Incidents (Occurrences of bomb threats, robbery, larceny, burglary or arrests/citations for fare evasion, trespassing, vandalism, and assault) • Per vehicle revenue hour (Hours that vehicles travel while in revenue, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination).	II. Ensure Financial Viability

Measure	MBC Goals
Major Safety Incidents (Any event involving the operation of a transit system if, as a result, one or more of the following occurs: an individual dies either at the time of the event or within 30 days of the event; one or more persons suffer bodily damage as a result of the event requiring immediate medical attention away from the scene; property damage in excess of $25,000. • Per vehicle revenue hour (Hours that vehicles travel while in revenue, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination).	II. Ensure Financial Viability
Service Level Solvency – **Operations (The operating budget)**	
Short-term financial viability (The ability to fund operations over a three year period so as not adversely impact service delivery) • Operating reserves (the amount of unallocated unreserved fund balance)	II. Ensure Financial Viability
Fare Revenue (All income received directly from passengers, either paid in cash or through pre-paid tickets, passes, etc. and the reduced fares paid by passengers in a user-side subsidy arrangement) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles that are counted each time they board a vehicle used to travel from their origin to their destination) • Per passenger mile (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	II. Ensure Financial Viability
Subsidy (Government financial assistance) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles that are counted each time they board a vehicle used to travel from their origin to their destination) • Per passenger mile (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	II. Ensure Financial Viability
All other earned revenue (All income received other than fare revenue and subsidies) • Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles that are counted each time they board a vehicle used to travel from their origin to their destination) • Per passenger mile (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	II. Ensure Financial Viability
Recovery ratio • Percentage of the actual operating cost of service delivery that is covered by passenger fare revenue (NTD) • Total system-generated revenue recovery ration as required by the RTA Act.	II. Ensure Financial Viability

Reference

RTA Bonds

The bonds issued by the RTA carry a rating of "AAA" from Standard & Poor's and Fitch IBCA and "Aaa" from Moody's Investors Service, Inc., based on the RTA having the principal and interest guaranteed by an insurance policy. These rating agencies have indicated that they would have rated the bonds "AA", "AA", and "A1", respectively, without such insurance. These represent strong investment grade ratings. The RTA has the distinction of being one of the highest rated public transportation agencies in the United States.

All bonds are general obligations of the RTA to which the full faith and credit of the RTA are pledged. These general obligation bonds, with a balance of $2,351.4 million as of December 31, 2006, are divided into two types: $1,646.3 million in Strategic Capital Improvement Program (SCIP) bonds and $705.1 million in RTA bonds (Exhibit 3-23 and Exhibit 3-24).

On June 21, 1993, the RTA issued an advance refunding of a portion of its 1990A Series general obligation bonds. The RTA issued $23,265,000 of general obligation refunding bonds (1993C Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On January 30, 1996, the RTA also issued an advance refunding of a portion of its 1994B and 1994D Series general obligation bond issues. The RTA issued $151,235,000 of general obligation refunding bonds (1996 Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On September 18, 1997, the RTA issued an advance refunding of a portion of its 1990A, 1991A, 1992B and 1993B Series general obligation bond issues. The RTA issued $98,385,000 of general obligation refunding bonds (1997 Series). Proceeds from the issuance amounted to $105,570,935,

Exhibit 3-23: **RTA General Obligation Bonds Payable** (dollars in thousands)

2006	55,110	122,976	178,086

including a premium of $7,185,935. The proceeds are to fund an irrevocable trust for generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On August 10, 1999, the RTA made an advance refunding of a portion of its 1992A, 1993A, 1994A, and 1994C Series general obligation bond issues. The RTA issued $298,725,000 of general obligation (1999) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunded bonds are as follows: $113,895 of the 1992A Series, $9,720,000 1993A, $142,615,000 1994A, and $21,955,000 1994C. The refunding was undertaken to reduce debt service over the next 26 years by $22 million, an economic gain of $11.4 million, which represents a 3.9 percent savings on the previous debt service.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 to 2004. In March 2001, the RTA issued $100 million in SCIP bonds.

During 2002, the RTA issued two bond offerings. The first issue was a $160 million SCIP bond offering. The second issue was a $200 million non-SCIP issue.

During 2003, the RTA issued three bond offerings. On January 1, the RTA issued $150,000,000 of general obligation (2003B) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. The second issue was a $260 million SCIP bond offering on April 1. On the same day, RTA currently refunded the remaining portion ($19,055,000) of its 1993C Series general obligation bond issue. As a result the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunding was undertaken to reduce debt service through 2009 by $ 1.6 million (an economic gain of $ 1.6 million) which is a 6.9 percent savings on the previous debt service.

On October 13, 2004, the RTA issued one bond offering (Series 2004A) for $260 million in SCIP

2006 A	Metra	Replace Ties and Ballast	494
2006 A	Pace	Purchase/Install Enterprise Resource Planning System	425
2006 A	Pace	Purchase Fixed Route Buses	2,043
		Total	**$ 27,491**

bonds. The Series 2004A Bonds are also secured by the Series 2004A debt service reserve account.

On May 2,2005, the RTA issued $148,110,000 of general obligation bonds (2005B) to defease the remaining balance of the 1996 refunding. As a result, the 1996 refunding bonds have been removed from the financial statement.

On September 13, 2006, the RTA issued a general obligation bond for $250,350,000 (2006A) to be used to finance a portion of the costs incurred in connection with the construction, acquisition, repair and replacement of certain public transportation facilities.

RTA Sales Tax must be 2.5 times greater than the debt service requirement. As shown over the last ten years (Exhibit 3-25 and 3-26), the RTA meets this test. Any differences between debt service amounts presented and amounts shown in general purpose financial statements represent timing differences between payments made to trustees and payments made to bondholders. Also, investment income earned in the debt service accounts may lower actual cash transfers from the General Fund.

The RTA and its Service Boards have put an emphasis on making sure that the bond proceeds are spent in a timely and efficient manner. Exhibit 3-27 highlights recent bond issues with the largest project-to-date expenditures.

Fund Accounting

The accounts of the RTA are organized on the basis of funds and account groups, each of which is considered a separate accounting entity. The operations of each fund are separated in its own set of accounts that comprise its assets, liabilities,

fund equity, revenues and expenditures or expenses, as appropriate. RTA resources are allocated to and accounted for in individual funds based upon the purposes for which they are to be utilized and the means by which spending activities are controlled.

Governmental Fund Types

The RTA's governmental fund types are the General Fund, Debt Service Fund and Capital Projects Fund (Exhibit 3-28).

General Fund

The General Fund is the general operating fund of the RTA. It is used to account for all financial transactions that are not specifically required to be accounted for in another fund such as the Agency Fund.Exhibit 3-1 shows the balance in the General Fund from 2006 through 2010. The General and the Agency Funds are the only two funds that have annual budgets. Exhibit 3-29 highlights the 2008 budget for these funds.

Debt Service Fund

The Debt Service Fund is used to account for the accumulation of resources for, and the payment of, general long-term debt principal, interest and related costs. The interest earned is generated from the funds being held for payment to the bondholders. The difference between the transfer and payment expenditures reflects the year-over-year timing variance.

Exhibit 3-29: **RTA Statement of Revenues and Expenditures 2008 Budget by Fund** (dollars in thousands)

Capital Projects Fund

In 1989, the Illinois General Assembly authorized the RTA to issue a maximum of $500 million of SCIP bonds, and to have a maximum of $500 million RTA bonds outstanding. Capital Projects Fund is utilized for the receipt and disbursement of the proceeds of the bond issues. The first Capital Projects Fund was established in 1990 with the issue of $100 million of RTA bonds to fund capital projects at the Service Boards. The RTA allocated the proceeds from the bonds issued under the General Assembly's authorization as follows: 50 percent for CTA capital projects; 45 percent for Metra capital projects; and 5 percent for Pace capital projects. Projects included in approved five-year capital programs will be eligible for reimbursements from these proceeds by the RTA without further review or action by the RTA Board of Directors.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 through 2004 and to issue and have outstanding an additional $300 million of non-SCIP Bonds. These amounts have been issued.

Proprietary Fund

Proprietary Funds are used for activities that are similar to those found in the private sector and to account for the financing of goods or services provided by a department or agency to other departments or agencies of the governmental unit, or to other governmental units on a cost-reimbursement basis. The RTA has one Proprietary (Enterprise) Fund—the Joint Self-Insurance Fund.

Exhibit 3-30: **2006 Reconciliation of Budgetary Basis to GAAP Basis Accounting** (dollars in thousands)

	General Fund
Excess of revenues over expenditures and other financing use-budgetary basis	$ 52,566
Adjustments	
Capital grant expenditures incurred in current year but considered in prior years' budgets	(5,733)
Capital grant expenditures expected to be incurred in future years but considered in current year budget	(644)
RTA capital expenditures expected to be incurred in future years but considered in current year operating budget	365
Budgetary basis to GAAP basis adjustment	**$ (6,012)**
Net Change in Fund Balance - GAAP basis	**46,554**
Net Changes in Reserves	**(39,699)**
Net Change in Unreserved, Undesignated Fund Balance	**$ 6,855**

Joint Self-Insurance Fund

The Joint Self-Insurance Fund is used to finance claims incurred by the Service Boards and the RTA on a cost-reimbursement basis. This fund is reported as an enterprise fund since the predominant participants are outside of the RTA.

Fiduciary Fund Types

Fiduciary Funds account for assets held by a governmental entity in a trustee capacity or as an agent for others. The RTA's Fiduciary Funds consist of an Agency Fund and a Pension Trust Fund.

Agency Fund

The Agency Fund records the receipt and disbursement of amounts due to the CTA, Metra and Pace, including Retailers' Occupation and Use Tax (sales tax), interest on this tax, reduced fare reimbursement grants and federal operating assistance grants. Sales tax revenues are recorded in the fund and are equally offset by expenditures recording the pass through to the Service Boards.

Pension Trust Fund

The Pension Trust Fund is used to account for all accumulation of resources for and payments of, retirement benefits to employees participating in the RTA Pension Plan and Trust.

Basis of Budgeting

The basis of budgeting refers to the conventions for the recognition of costs and revenues in budget development and in establishing and reporting appropriations. The RTA's annual budget and related appropriations are prepared on the modified accrual basis of accounting in conformity with generally accepted accounting principles except for capital grants/expenditures and debt service payments. The modified accrual basis is a type of accounting whereby revenue and other financial resource increments (e.g., bond issue proceeds) is recognized when they become both "measurable" and "available" for finance expenditures of the current period (for more details, see Glossary page 157). Capital grants/expenditures are budgeted for on a project basis, which normally exceed one year. Debt service payments are budgeted as transfers from the General Fund.

Although appropriations are adopted for individual line items, the legal level of control is restricted to total appropriations/expenditures and total administration (statutory cap) appropriations/expenditures. Management has the authority to exceed any line appropriation without Board approval, provided it does not exceed the legal levels of control. It is the policy of the RTA to fund the budgets of the Service Boards up to the amount appropriated in the Budget Ordinance.

Budgetary reporting is balanced with accounting records on a monthly basis and is fully reconciled to the accounting system on an annual basis in the Comprehensive Annual Financial Report and for the annual Municipal Bond Disclosure Reports required by the Securities and Exchange Commission (Exhibit 3-30 and 3-31).

Exhibit 3-31: **RTA 2006 Statement of Revenues and Expenditures - General and Agency Fund** (dollars in thousands)

	2006 Budget	2006 Actual	Change

System-Generated Revenue Recovery Ratio			
Revenue			
Total Service Board Revenue	$ 927,687	$ 917,250	$ 949,207
CTA Lease Transaction	4,262	4,262	4,262
Agency	15,821	17,500	17,500
Less Pace Pass Revenue	(2,000)	(4,000)	-
Total Revenue	**$ 945,770**	**$ 935,012**	**$ 970,969**
Expense			
Total Service Board Expenses	$ 1,765,340	$ 1,756,655	$ 1,702,996
Add RTA Security Provision	25,215	28,200	32,059
Agency	28,824	27,770	29,952
Total Expenses	**$ 1,819,379**	**$ 1,812,625**	**$ 1,765,007**
Recovery Ratio	**52.0%**	**51.6%**	**55.0%**

(1) Metra's 2008 calculation is based on their "Option A" budget. Pace's proposed 2008-2010 budget and plan does not include "in-kind" revenue and expense for the ADvAntage program. The RTA Act allows certain expenditures to be excluded form the recovery ratio calculation including security, depreciation, and facility leases. RTA Ordinance 2005-06 authorized further security exclusion for Service Board recovery ratios. The amount of these additional exclusion are added back to region expenditures to calculate the statutory system-generated revenue recovery ratio. The Service Board calculations in 2008 exceed the marks set by the RTA for each operation, therefore the system-generated revenue recovery ratio on this schedule exceeds the budgetary requirement shown on Exhibit 3-1.

4 CTA Operating Plan

Overview

The Chicago Transit Authority (CTA) was created by the Illinois State legislature in 1945 and began operations in 1947. It became the sole operator of Chicago transit in 1952 when it purchased the Chicago Motor Coach System. The CTA is the region's largest transit operator providing service on 154 bus routes and eight rapid transit routes (service prior to 2007 and 2008 budget balancing actions). A seven-member Chicago Transit Board governs the CTA.

Service Characteristics

The CTA operates the second largest public transportation system in the United States. Average weekday ridership on its bus and rail system is 1.6 million. The CTA's service area encompasses 220 square miles in the City of Chicago and 40 surrounding suburbs.

Bus operations provide 2,175 buses traveling over 154 routes covering 2,529 miles, with approximately 11,846 bus stops. Rail service on eight routes has 1,190 train cars traveling over 242 miles of track. The CTA transferred all ADA paratransit service to Pace in July 2006. During the first half of 2006, CTA provided more than 1.2 million ADA paratransit rides at a cost of about $26 per ride.

Ridership

Ridership is estimated at 493.6 million trips by the end of 2007 (Exhibit 4-1). This is essentially at par with 2006 ridership (excluding ADA Paratransit). Bus ridership is forecasted at 304.1 million trips in 2007, which is 5.7 million trips or 1.9 percent higher than in 2006. Rail ridership is projected at 189.5 million in 2007 and is lower than the prior year by 5.7 million or 2.9 percent (Exhibit 4-2). The 2007 ridership remains flat with 2006 ridership.

Average weekday ridership on the CTA is 1.6 million, while Saturday and Sunday average ridership is at 956,000 and 671, 000, respectively (Exhibit 4-3). The CTA expects its ridership levels to decrease by a compound growth rate of 3.0 percent from 2006 through 2010. Total vehicle miles in 2007 and 2008 are expected to experience a significant decrease due to the reduction of service over the previous year and then remain flat from 2008 through 2010 (Exhibit 4-4).

Exhibit 4-1: CTA **Ridership** (in millions)

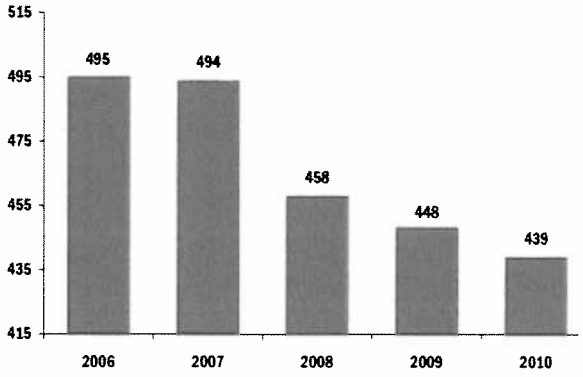

Exhibit 4-2: **CTA Annual Ridership by Mode** (in millions)

	2004	2005	2006	2007	2008
Bus	294.0	303.2	298 .4	304 .1	261.8
Rail	178.7	186.8	195.2	189.5	196 .0
Paratransit/Taxi	2 .2	2 .4	1 .2	-	-
Total Ridership	**474.9**	**492.4**	**494.8**	**493.6**	**457.8**

	2004	2005	2006	2007	2008
Weekday	1,426	1,482	1,596	1,588	1,586
Saturday	870	899	966	956	933
Sunday	582	621	662	671	659

Exhibit 4-4: **CTA Ridership and Miles** (Riders and Miles in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Ridership	494,803	493,639	457,802	447,956	438,840
Vehicle Miles	138,648	138,820	115,981	115,981	115,981
Passengers Per Mile	3.6	3.6	3.9	3.9	3.8

Service Quality

The CTA has continued to work on improving the core components of its business that impact its customers directly. Some of its efforts include the implementation of performance management initiatives that ensure the delivery of safe, clean, on-time, courteous and efficient service; the restructuring and consolidating of customer service and customer communications providing timely and accurate information to the riders; and concrete repairs made to improve the safety of bus turnarounds and rail stations .

Challenges of Insufficient State Funding

The 2008 budget reflects a $158.0 million funding shortfall. Without additional public funding, and in order to comply with the state's requirement to maintain a balanced budget, the CTA will be forced to reduce service, increase fares and significantly downsize its operations. As a result, the 2008 budget reflects the elimination of 43 bus routes, the closing of three bus garages, fare increases and 1,799 eliminated positions. The service cuts represent a 53 percent reduction of bus routes from current levels, which translates to 735 fewer buses required for service. Fare increases range from 11 to 63 percent over the current fare structure depending on the type of fare media used, however, fares will remain the same for students, seniors and individuals with disabilities who are reduced fare customers.

The 2008 budget reflects $158.0 million funding shortfall without additional public funding.

The reduction of service, closing of bus garages, fare increases and lay-offs will be implemented on November 4, 2007 and are proposed to be increased again on January 6, 2008 to meet the CTA's statutory requirement for a balanced budget.

Capital Investments

The CTA spent $640 million on capital programs in 2006. The CTA is expected to spend $1.4 billion on capital projects in 2007 and 2008 (Exhibit 4-5).

The Brown Line Capacity Expansion project of $529.9 million began in 2004 and continued to progress throughout 2007. In August 2006, the fully renovated Kedzie and Rockwell stations were re-opened to customers for service. The station boasts a new glass station houses, new platforms, brighter lighting and accessible features including ramps, tactile edging and accessible gates. The station is also ADA accessible which brings the total number of accessible CTA rail stations to 74 out of 144, or 51% of the system. In addition, at the Fullerton and Belmont stations, the most complex station rehabilitations on the Brown Line, northbound trains are operating on newly constructed rail bed and passengers board from new platforms even as structural work is proceeding to create new track and platforms for the southbound station areas.

Bus System

Under the CTA's proposed 2008 operating budget the bus system will be significantly reduced. Nevertheless, the oldest buses need to be replaced, ranging in age from 12 to 17 years, through September 2007, 508 air-conditioned and fully accessible

Exhibit 4-5: **CTA Capital Statistics** (dollars in thousands)

	2004	2005	2006	2007	2008
CTA Total Capital Expenditures	**$457,699**	**$402,951**	**$640,447**	**$662,111**	**$689,373**
CTA Bus Vehicles	2,017	2,033	2,089	1,797	1,304
Average Age of Buses (in years)	8.9	9.4	9.4	6.6	3.7
CTA Rail Cars	1,190	1,190	1,190	1,190	1,190
Average Age of Rail Cars (in years)	21.0	22.0	23.0	24.0	25.0
Bus Routes Offering Lift Service	148	150	154	154	154
ADA Accessible Stations	72	72	76	82	82

New Flyer buses were received. The entire bus fleet is ADA accessible and air-conditioned.

In addition, 20 diesel/electric hybrid buses were also received and placed into service. This will be the first side by side demonstration of two distinct hybrid technologies which will yield vital operating data for the US transit industry. Ten of the vehicles have a parallel hybrid propulsion system and ten have a series propulsion package.

Rail System

Work continues on the signal upgrade and replacement for the Blue Line. This project, which began in 2006, will replace the entire signal system in the Dearborn Subway, on the Congress (Forest Park) Branch and a portion of the O'Hare Branch. This will result a smoother train operation, reduced travel times and greater reliability.

Delivery of prototype rail cars is expected in 2008. Production of the base order of 206 is expected to begin in 2009 with delivery beginning in 2010. CTA's most recent purchase of new rail cars was in the 1990s when 3200-series buses were purchased for the opening of the Orange Line, and to replace older cars on the Brown and Yellow Lines.

System-Wide Improvements

The CTA continued to invest in new technology to further improve service and safety. Through technology, CTA was able to complete the installation of the infrastructure necessary to enhance communication capability on the Red and Blue Line subway system. This past summer, the first commercial wireless provider activated its service in the subway tunnels. Although the main purpose is to improve emergency communications capabilities in the subway, the improvement also lets riders use their wireless devices enhancing security and convenience. Today, only U.S. Cellular subscribers are able to use their wireless devices in the subway, however, CTA is working to add additional service providers to the system.

In 2006, the CTA completed a systemwide fiber optic expansion. The new system allows CTA to connect security cameras to its Control Center and to the City's 9-1-1 Center. The link between CTA's Control Center and the City's 9-1-1 Center is part of the Office of Emergency Management Communication's larger Homeland Security grid that is designed to expand the use of surveillance cameras throughout Chicago. The CTA announced last fall that all 11 stations on the 54th/Cermak branch had been networked, This effort is part of the link between the CTA's Control Center and the City's 9-1-1 Center. Today, 464 security cameras at 27 stations are a part of the network. By the end of this year the CTA will have 1,200 cameras at 45 stations hooked up to the network, and these numbers will continue to increase as all 144 rail stations are corrected to the system.

Partnerships

The CTA works to maintain partnerships with many groups. The CTA's efforts to strengthen its relationship with its riders have been illustrated in previous sections. The CTA also works to create partnerships with its workforce, vendors, the mobility impaired, the city of Chicago, the legislature and its security agencies.

Vendors

The CTA Purchasing Department pursues an aggressive Disadvantaged Business Enterprise Program (DBE) to encourage minority participation in CTA contracts. The CTA has set a minimum level

of 30 percent for minority participation for projects requiring outside vendors.

The CTA has also pursued cost savings in its purchasing practices by finding the best prices for the good and services procured. These efforts have saved the CTA several million dollars over the past few years.

City of Chicago

The CTA maintains a strong working relationship with the City of Chicago and various suburban entities. It continues to work with law enforcement agencies in both Chicago and the suburbs to reduce crime on its bus and rail systems. The CTA has also worked with the City of Chicago on various real estate matters, especially rail station construction. And it has worked with Chicago's Health and Human Services Department to reduce the number of homeless individuals using trains for shelter.

Over the past decade, the City of Chicago has provided the CTA $828.5 million for capital improvements. This substantial investment in the CTA's infrastructure includes the Roosevelt Connector project, replacement of the elevated span at Wacker Drive and Wells Street, the renovated Chicago Avenue station on the Red Line, the elevated Library–State/Van Buren station, and the rehabilitation of the underground transfer tunnel that provides a pedway connection between the Red and Blue Line platforms at Jackson.

In 2007, the Chicago Department of Transportation (CDOT) will begin renovation work on the Grand Station on the Red Line. The renovation includes mezzanine expansion, platform with glazed ceramic tile, and vaulted ceiling panels, additional turnstiles, and installation of new exit-only rotogates.

Legislators

State and federal funding has been crucial to the CTA's ability to rebuild its system. Specifically, Chicago Mayor Richard M. Daley, U.S. House Speaker Dennis Hastert, Governor Rod R. Blagojevich, the

Illinois Congressional delegation, and the Illinois General Assembly have supported efforts to maintain and improve the infrastructure of CTA bus and rail systems. While federal legislators have made a financial commitment to the future of public transit, state and local legislators must identify the matching funds required to secure the federal funds. In 1999, the State established Illinois FIRST, a $12 billion matching program to improve the State's infrastructure, which included $2.1 billion for transit. The CTA received more than $1 billion of Illinois FIRST funding over four years for capital improvements to its rail and bus systems.

Budget and Financial Plan

The budget and financial plan submitted by the CTA for the current planning period, 2008 through 2010, conforms to the marks set by the RTA on September 14, 2007. The CTA's operating funding marks were set at $471.8 million for 2008, $474.5 million for 2009, and $478.4 million for 2010. Funds to balance the budget and two-year financial plan do not include any additional funding the Region is seeking through new legislation. The CTA's recovery ratio was set at 52.0 percent for 2008 by the RTA, which the CTA has exceeded. The CTA's statement of revenue and expenditures, which includes the recovery ratio, is presented in Exhibit 4-6. The following portrays the outlook for the 2008-2010 planning period.

Exhibit 4-6: **CTA 2008 Budget and 2009-2010 Financial Plan** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
System-Generated Revenue					
Passenger Revenue	$ 462,218	$ 457,738	$ 470,376	$ 422,627	$ 414,041

Total Deficit Funding	**$ 524,056**	**$ 537,253**	**$ 471,828**	**$ 474,488**	**$ 478,409**
Recovery Ratio % (1)	54.6%	53.2%	57.1%	N/A	N/A

(1) Items excluded from expenditures are for security. Grant revenue and in-kind revenue and expenditures from the CPD of $22,000 are included in the recovery ratio.

System-Generated Revenue

Total system-generated revenue is expected to decrease from $552 million in 2006 to $512 million in 2010. This is a decrease of $40 million over the four-year period, or an average annual decrease of 1.8 percent (Exhibit 4-7). System-generated revenue includes passenger revenue, reduced fare reimbursement, and other revenue. Passenger revenue comprises 83 percent of the CTA's total operating revenue. The reduced fare subsidy and other revenue account for the remaining 17 percent (Exhibit 4-8).

Passenger Revenue

Passenger revenue is expected to decrease from $462 million in 2006 to $414 million by 2010, a $48 million decrease or an annual decline rate of 2.5 percent (Exhibit 4-9) due to reduced service provided in the region and planned fare increases that will result in loss of ridership.

Higher average fare due to fare increases implemented on November 4, 2007 and January 6, 2008 accounts for the projected growth in fare revenue for 2007. Fare revenue is estimated at $470.4 million in 2008, which is $12.7 million higher than the 2007 estimate. The CTA fare structure is shown in Exhibit 4-10.

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the CTA for

Exhibit 4-7: **CTA System-Generated Revenue** (dollars in millions)

Link-up Pass - Sold by Metra; use with Metra monthly ticket	$ 36.00	None
Express Surcharge - Downtown on bus routes 2, 6, 14, and 147.	$ 0.25	$ 0.25
Rush Shuttle Fares - To/from downtown Metra stations during rush hour.	$ 1.00	None
128 Soldier Field Express	$ 1.00	$ 0.50
154 Wrigley Field Express - per carload	$ 5.00	None

Note: (1) Reduced fares are for children 7 through 11 years old. Grade and high school students with CTA riding permit. Seniors age 65+ and riders with disabilitites with RTA reduced fare riding permit.

Exhibit 4-11: **CTA All Other Revenue** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Advertising, Charter & Concessions	$ 24,402	$ 23,142	$ 27,381	$ 29,426	$ 30,954
Investment Income	11,608	10,008	11,736	11,750	12,100
Contribution from Local Govt. Units	5,000	5,000	5,000	5,000	5,000
All Other Revenue	19,575	11,911	15,244	17,135	17,967
Total All Other Revenue	**$ 60,585**	**$ 50,061**	**$ 59,361**	**$ 63,311**	**$ 66,021**

the cost of providing reduced fares for the elderly, students, and the disabled. Fare reimbursement is included as revenue and became available in July 1989. In the State's 2008 fiscal year budget, the appropriation for reduced fare for the RTA region is $36.3 million. These funds are distributed to the Service Boards according to the percentage of reduced fare revenue that each has generated. The CTA estimates its share at $32.3 million per year from 2008 through 2010.

Other Revenue

This category includes advertising, charters, concessions, contributions from local governments, investment income, the funding for paratransit services under contract, and other revenue (Exhibit 4-11). Also included are essential contributions from the City of Chicago and Cook County. Annual funds provided by the City are $3 million and the County contributes an additional $2 million. Revenue for this category was approximately $61 million in 2006 and is expected at $66 million in 2010. Reasons for this increase include additional revenue from advertisements placed on buses and trains and in stations, as well as income from concessions and charters.

Operating Expenditures

Total operating expenditures are forecasted to decrease from $1,076 million in 2006 to $991 million in 2010. This $85 million decrease represents a 2.01 percent compound annual rate of decline from 2006 through 2010 (Exhibit 4-12).

For 2007, operating expenditures are estimated at $1,079.1 million. This is 0.2 percent higher than 2006 actual expenditures of $1,076.4 million. The increase is due mainly to higher labor and pension costs, fuel, security and all other costs.

Budgeted 2008 expenditures of $1,033.8 million are 4.2 percent lower than 2007 projections. The financial projections for 2009 and 2010 show operating expenditures of $992.7 million and $990.7 million, respectively. The 2009 financial projection represents a decrease of 4.0 percent from the 2008 operating budget. The 2010 financial projection represents a decrease of 0.2 percent over the 2009 financial plan.

Expenditure Elements

The 2008 operating expenditure elements include labor, material, fuel, power, insurance and claims, security, paratransit services, and other costs. Labor expenditures, including fringe benefits, represent 72 percent of the CTA's total expenditures. Base wages represent about two thirds of that total, while fringe benefits, which are primarily medical insurance and pension costs, represent the remaining one third. Materials, used primarily for maintenance, are 7 percent of total expenditures.

Exhibit 4-12: **CTA Total Operating Expenditures** (dollars in millions)

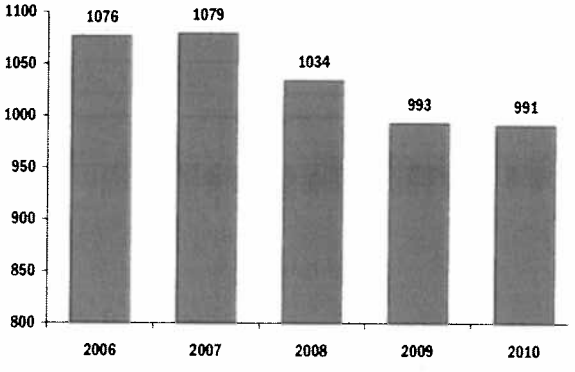

Exhibit 4-13: **CTA Operating Expenditures** - $1,034 million

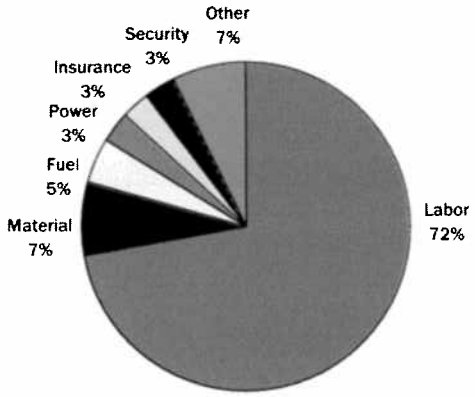

Fuel and power represent 8 percent of the CTA's expenditures. Security, insurance and claims represent 6 percent of total spending. Other expenditures comprise the remaining 7 percent. The other expenditure category includes items such as leases, utilities, and contractual services (Exhibit 4-13).

Labor Costs

Labor expenditures are expected to decrease from $760.8 million in 2006 to $747.7 million in 2010. This is a $13.1 million decrease, or a decline of 0.4 percent annually (Exhibit 4-14). Labor expenditures for 2007 are estimated at $788.9 million, which is $28.1 million more, or 3.7 percent higher, than prior year. This increase is due to the rising costs of healthcare, workers compensation, and wages. Labor expenditures are forecasted to be $747.7 million in 2008, a decrease of $41.2 million or 5.5 percent lower than 2007. This decrease is due to layoffs scheduled for November 4, 2007 and January 6, 2008. In addition, the CTA pension plan is severely under funded. With a current funding ratio of 32.0 percent, actuarial projections show that the fund will deplete its assets by 2012 without additional funding and substantial changes to the plan. Changes to the plan require legislative intervention or union agreement. The numbers of budgeted positions for 2008 is lower than 2007(Exhibit 4-15). Overall, labor expenditures of $749.6 million are projected to rise by 0.3 percent in 2009 and then decrease to $747.4 million in 2010, a 0.3 percent change.

Material

The material category covers all repair parts for buses, trains, track, structure and signals in the system. Material expenditures are forecasted at approximately $81.4 million in 2007, $72.3 million in 2008, $60.9 million in 2009, and $60.1 million in 2010. The decrease in material expenditures is mainly due to the reduction of the bus fleet resulting from reduced service planned in 2007 and 2008.

Fuel

Assuming 25.5 million gallons at $2.69 per gallon, the CTA estimates fuel expenditures at $68.6 million for 2007 (Exhibit 4-16). The cost per gallon is higher than 2006 actual results.

The CTA forecasts the need for 18.6 million gallons of diesel fuel in the 2008 budget.

Exhibit 4-15: **CTA Budgeted Positions** (in thousands)

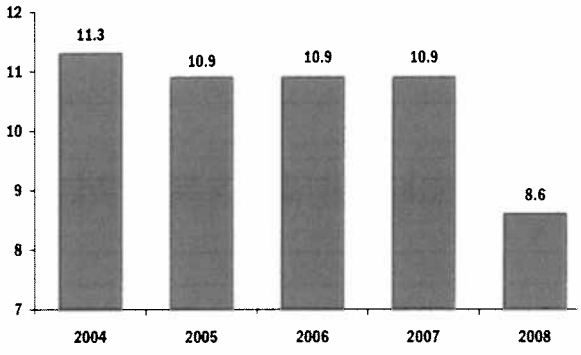

Exhibit 4-14: **CTA Labor Expense Growth** (in thousands)

	2006	2007	2008	2009	2010
Labor Expense	$ 760,751	$ 788,947	$ 747,651	$ 749,619	$ 747,367
% Change from Prior Year	6.5%	3.7%	-5.2%	0.3%	-0.3%

Exhibit 4-16: **CTA Fuel Cost per Gallon** (cost and gallons in thousands)

	2006	2007	2008	2009	2010
Fuel Cost	$ 57,470	$ 68,614	$ 48,467	$ 31,847	$ 31,101
Gallons	24,722	25,500	18,600	11,400	10,400
Cost Per Gallon	$ 2.32	$ 2.69	$ 2.61	$ 2.79	$ 2.99

Due to the uncertainty surrounding energy prices, the CTA estimates that the cost of fuel will be about $2.60 per gallon. The 2009 and 2010 financial projections hold diesel fuel costs at $2.79 per gallon and $2.99 per gallon respectively.

Power

Electric power expenditures for the rail system are forecasted at $29.1 million in 2007. This increase is due to unusually cold weather experienced during winter. Expenditures for power increase by $0.7 million in 2008, higher by $1.0 million in 2009 and higher by $1.1 million in 2010. The $2.1 million or 7% increase in 2008 reflects the newly deregulated electricity market in Illinois.

Insurance and Claims

The Provision for Injuries and Damages represents the expenditure for claims and litigation for injuries and damages that occur on CTA property, or with CTA vehicles.

As shown in Exhibit 4-17, the CTA expects slightly higher bus and rail accidents per 100,000 miles through 2008. The 2007 forecast is $25.0 million and is $20.3 million lower than the prior year. The CTA utilized increased fare revenues to fully fund the reserve for injuries and damages as projected by the 2005 actuarial analysis. The 2008 funding is $28.0 million versus an estimate of $25.0 million for 2007. In 2009 and 2010, the CTA projects these expenditures to be $28 million.

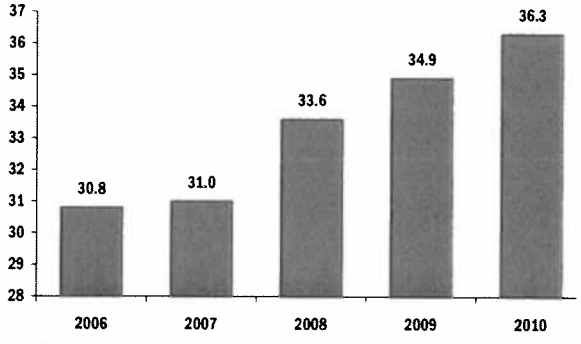
Exhibit 4-17: **CTA Claims and Safety Statistics** (dollars in thousands)

	2006	2007	2008
Claims	$ 45,266	$ 25,000	$ 28,000
Bus Accidents per 100,000 Miles	6.11	5.81	5.52
Rail Accidents per 100,000 Miles	0.13	0.12	0.11

Purchase of Security Services

Security is strategically deployed throughout the CTA system to provide 24-hour coverage, seven days a week. Security services are provided by the Chicago, Evanston and Oak Park Police departments, the Wells Fargo Guard Service and National K-9 Security.

Exhibit 4-18: **CTA Purchase of Security Service** (in millions)



Expenditures are forecasted at $31.0 million in 2007, which is a slight increase from prior year (Exhibit 4-18). The 2008 budget is $33.6 million and for 2009 and 2010, security expenditures are expected to increase $1.3 million. These increases are due to the heightened need for security since September 11, 2001 and the Madrid, and London bombings.

Purchase of Paratransit Services

Since Paratransit services were transferred to Pace effective July 1, 2006, no expenditures are budgeted for this item.

Exhibit 4-19: **CTA All Other Expenses** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Utilities	$ 20,975	$ 20,891	$ 23,992	$ 24,691	$ 25,691
Advertising and Promotion	2,757	2,331	3,023	3,023	3,023
Contractual Services	37,257	36,597	38,765	38,765	38,765
Leases and Rentals	1,621	2,032	2,042	2,042	2,042
Travel, Training, Seminars, and Dues	2,867	2,956	3,111	3,111	3,111
Warranty and Other Credits	(20,523)	(21,121)	(21,781)	(21,781)	(21,781)
General Expenses	6,115	6,058	6,149	6,149	6,149
Total All Other Expenses	**$ 51,069**	**$ 49,744**	**$ 55,301**	**$ 56,000**	**$ 57,000**

All Other Expenditures

All other expenditures include utilities, rents, maintenance and repair, advertising, commissions, consulting, insurance, and other general expenditures. For 2007, $55.0 million is forecasted, which is $6.7 million or 13.9 percent more than the prior year (Exhibit 4-19).

The 2008 budget is $74.0 million, which is higher than the 2007 estimate by $19.0 million. The increase is primarily due to inflation and increases in contractual services. Expenditures are forecasted to decrease from 2008 levels in 2009 and 2010 due to the inclusion of one-time expenditures that help improve the appearance and cleanliness of vehicles and stations.

Deficit

System-generated revenue (fares and other revenue) total more than half of the CTA's operating budget, with the remainder (operating deficit) covered by public funding. The operating deficits are derived from total system generated revenue minus total operating expenditures. The deficit for the budget and two-year financial plan is $472 million, $474 million and $478 million, respectively (Exhibit 4-6).

Funding

RTA Sales Tax and RTA discretionary funding represent the major sources of public funds to the CTA and are usually less than half of the CTA's operating budget. The RTA Sales Tax is a primary source of the CTA's operating funding. The RTA retains 15 percent of the sales tax revenue, and distributes the remaining 85 percent to the Service Boards. The CTA receives 100 percent of the RTA Sales Tax collected in Chicago and 30 percent of the sales tax collected in suburban Cook County. RTA discretionary funds for the CTA are expected to range between $171 million and $158 million from 2006 to 2010. Apportionments from the RTA's 15 percent share of the sales tax revenue and the State's public transportation fund (PTF) are the source of the RTA's discretionary funds. The Region Section provides the details for this funding calculation.

Recovery Ratio

The CTA's recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2008, the CTA's recovery ratio estimate is 57.1 percent and exceeds the mark of 52% set by the RTA. The Region Section provides the detailed recovery ratio calculation.

Exhibit 4-20: **CTA 2007 Budget versus 2007 Estimate** (dollars in thousands)

	2007 Amended Budget	2007 Estimate	Variance
System-Generated Revenue			
Passenger Revenues	$ 472,191	$ 457,738	$ (14,453)
Reduced Fare Subsidy	32,000	34,000	2,000
Other Revenue	52,410	50,061	(2,349)
Total Revenues	**$ 556,601**	**$ 541,799**	**$ (14,802)**
Operating Expenditures			
Labor	$ 805,095	$ 788,947	$ 16,148
Material	75,844	81,411	(5,567)
Fuel	59,770	68,614	(8,844)
Power	28,057	29,074	(1,017)
Insurance & Claims	25,000	25,000	-
Purchase of Security Services	35,334	31,000	4,334
Purchase of Paratransit Services	-	-	-
All Other	54,751	55,006	(255)
Total Operating Expenditures	**$ 1,083,851**	**$ 1,079,052**	**$ 4,799**
Operating Deficit	**$ 527,250**	**$ 537,253**	**$ (10,003)**
Recovery Ratio %	**54.8%**	**53.2%**	**(1.6) pts.**

The following factors affect the recovery ratio for the 2007 estimate and 2008-2010 plans. First is the inclusion of $22 million of in-kind security services provided by the Chicago Police Department, which is included as both revenue and expenditure in the recovery ratio calculation. Second is the exclusion of additional security expenditures from the recovery ratio. Finally, expenditures for paratransit are eliminated for 2008, 2009 and 2010 as all paratransit services were transferred to Pace effective July 1, 2006. The CTA's recovery ratio was 54.6 percent in 2006 and is expected to be at 53.2 percent in 2007 (Exhibit 4-6).

2007 Budget versus 2007 Estimate

The CTA expects a balanced budget in 2007 based on an amended budget.

Revenue

Revenue from fares is forecasted at $457.7 which is lower than budget by $14.4 million, or 3.1 percent (Exhibit 4-20). The lower fare revenue is due to increased pass usage on the system. Pass users pay a lower rate per trip.

- The reduced fare subsidy is the State's reimbursement to the CTA for providing discounted fares to the disabled, the elderly, and students. The reduced fare reimbursement is $2.0 million favorable to budget, due to more reduced fare trips and the State of Illinois' advance of its 2008 fiscal year appropriation.
- Other revenue is expected to be $2.3 million unfavorable to plan. The categories listed below reflect this line item.
- Contributions from local governments of $5 million are on par with budget. The RTA Act requires the City of Chicago to contribute $3 million and Cook County to contribute $2 million annually to the operations of CTA. Revenue from advertising, charter, and concessions is at par with budget.
- Investment income is estimated at $10.0 million, which is $2.1 million or 17.4 percent lower than budget. The CTA benchmarks its investments against the rates for the 90-day Treasury bond.
- All other revenue is projected at $11.9 million, which is $1.6 million or 15.5 percent higher than budget. This is due to higher rental and parking revenue.

Expenditures

Calendar year 2007 operating expenditures are estimated at $1,079.1 million and are projected to be favorable to budget by $4.8 million or 4.4 percent. Expenditures for material, fuel, power and all other costs are expected to be over budget for the year. This is primarily due to higher energy and commodity prices that impacts CTA's fuel and material expenses. On the other hand, labor and security are forecasted to finish under budget due to cost containment strategies implemented to ensure that the CTA balanced its budget in 2007.

- Labor expenditures are projected at $788.9 million, which is $16.1 million or 2.0 percent under budget. The decrease is to administrative cuts and efficiencies, an exempt employee pay freeze, a selective hiring freeze and labor arbitration savings. Benefits (excluding paid time off) provided to CTA employees equals approximately 27 percent of CTA's labor costs.
- Material expenditures are forecasted at $81.4 million, which is higher than budget by $5.6 million. The increase in material expenditures is due to higher energy prices on building materials, vehicle replacement parts and other materials CTA uses in day-to-day system maintenance.
- Fuel expenditures for revenue equipment are expected to be $68.6 million at the end of 2007. This is $8.8 million or 14.8 percent higher than budget. The 2007 budget assumed an average price of $2.50 per gallon for 24.5 million gallons. Fuel prices have been running above budget and are estimated to end the year at an average price of $2.69.
- Electric power expenditures for the rail system are forecasted at $29.1 million or $1.0 million higher than budget. The increase can be attributed to unusually cold weather during winter.
- Expenditures for insurance, claims and litigation for injuries and damages that occur on CTA property or with CTA vehicles are forecasted at $25.0 million for 2007 which is par to budget.

- Security is deployed strategically throughout the system to provide 24-hour coverage, seven days a week. These services are provided by the Chicago, Evanston, and Oak Park Police departments and contracts with private security firms. Full year expenditures are estimated at $31.0 million, which is lower than budget. This lower spending level reflects the CTA's decision to utilize alternative security measures, such as increasing the number of CTA employees deployed to rail stations and the installation of additional surveillance cameras, to maintain a safe environment to riders. In addition to the services contracted by CTA, the Mass Transit Unit of Chicago Police Department (CPD) continues to provide services to CTA at an estimated cost of $22 million.

Statutory Compliance

The RTA Act requires that each Service Board meet the six criterions detailed in the Region Section for their budgets to be approved. The CTA budget, as submitted, meets all criteria.

Organizational Structure

The CTA organization chart is shown in Exhibit 4-21 and consists of the following divisions.

CTA Board

The CTA's governing arm is the Chicago Transit Board, consisting of seven board members.

The Mayor of Chicago appoints four board members who are subject to the approval of the City Council and the Governor. The Governor appoints three board members who are subject to the approval of the State Senate and the Mayor of Chicago.

The Citizens Advisory Board, the CTA Board Members, the Chief of Staff to the Chairman, and the Secretary of the CTA Board report to the Chairman of the Board.

General Counsel

The General Counsel handles appellate matters, claims and tort litigation, and workers compensation matters.

Office of Inspector General

The Office of Inspector General reviews and analyzes the integrity of financial, operating, and computer system activities and any other organizational activity that management requires. This office is also responsible for financial and general investigations.

Treasurer

The Treasurer manages cash and handles investment.

Office of the President

The CTA President is the agency's chief executive and is charged with executing the policy decisions made by the CTA Board of Directors and providing direction to the CTA staff as they work to fulfill the mission and goals of the Service Board.

Planning

The Planning department is responsible for developing routes and schedules that best synchronize CTA capabilities with customer demand. Planning ensures that the highest level of service is attained.

CTA Brown Line Francisco Station

Security and System Safety

Security and System Safety administers the Destination Safety program with aims to reduce employee and third party accidents and injuries.

Facilities Maintenance, Construction & Engineering

Facilities Maintenance includes system maintenance support, power and way maintenance, rail station appearance, and facility maintenance. Construction is responsible for ensuring that major capital construction projects are on time, budget, and in conformance with the standards. Engineering is responsible for creation and maintenance of construction documents for CTA facilities, reviewing and answering design requests.

Performance Management

Performance management includes developing strategic goal for each business unit that focuses on five goals namely, safety, on-time, cleanliness, efficiency, and courtesy.

Transit Operations

Transit Operations, which represents the largest percentage of CTA employees, is responsible for bus and train operations, customer and paratransit services (prior to July 1, 2006), planning, security, control center, and training.

Bus and Rail Operations manages a fleet of 2,106 buses and 1,190 rail cars that cover 188,000 bus miles and 189,000 rail miles driven every day.

They employ approximately 4,200 full-time equivalent bus operators and 1,300 rail operators that provide service to the customers.

The Control Center monitors passenger and facility security and maintains accident statistics and monitors environmental affairs. The Control Center operates 24 hours per day, 7 days a week.

Operations Support

Communications and Marketing is responsible for marketing, media relations, identity development, and publications.

Finance is responsible for budgeting, general accounting, investment support, program development, and the management and control of property, grants, and funding.

The Government and Community Relations and Affirmative Action department monitors transit legislation that affects the CTA on both regional and national levels.

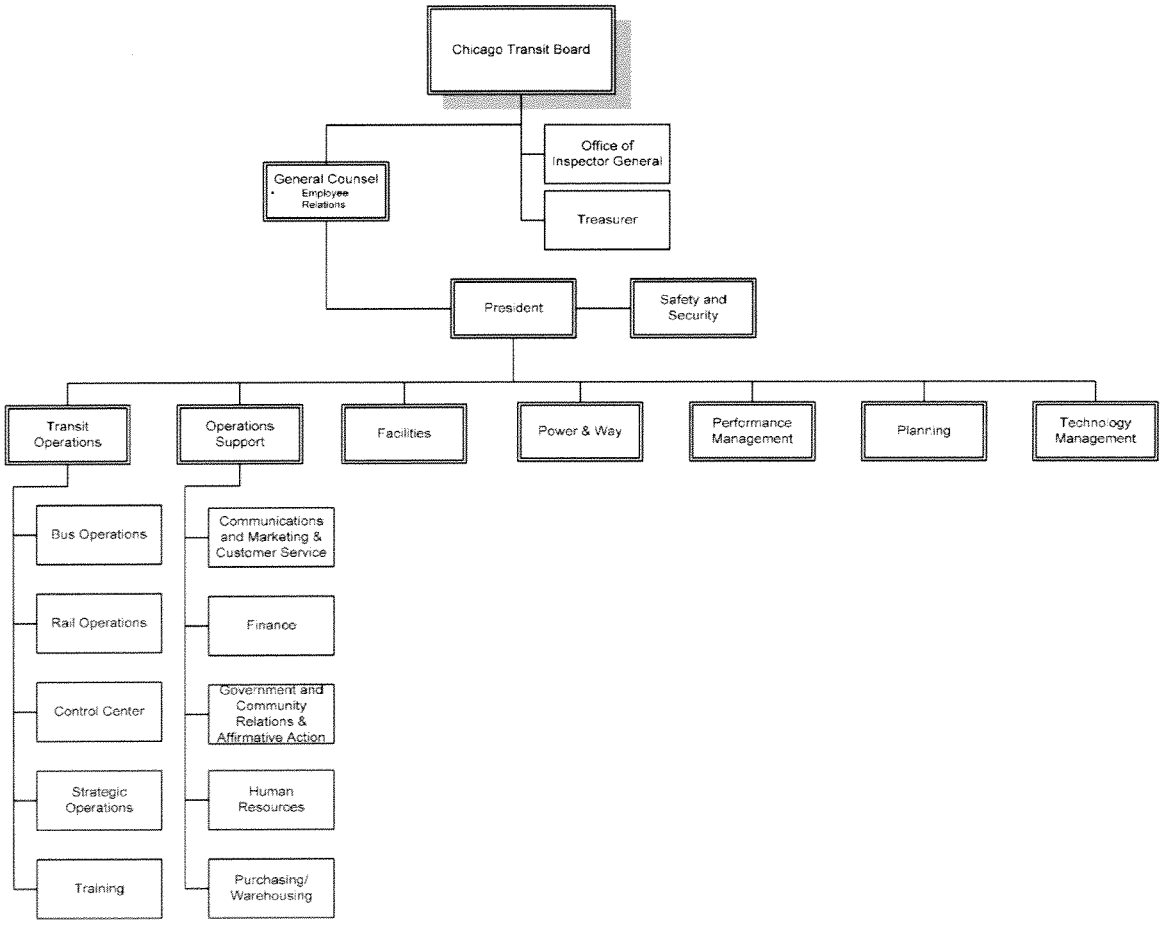
The Human Resources department includes recruiting, hiring, benefit services, medical services, and program compliance.

The Purchasing/Warehousing department includes inventory management.

The Technology Management department includes management information systems.

The Property & Real Estate Asset Management is responsible for the management of the CTA Headquarter, the CTA control center, and for the management of all properties leased by the CTA.

Exhibit 4-21: **CTA Organization Chart**



5 Metra Operating Plan

Overview

Metra was formed in November 1983 as part of the reorganization of the RTA by the State of Illinois. Metra (the commuter rail division) is responsible for the day-to-day operations of the region's commuter rail system including fare and service levels, capital improvements, finances, passenger services, safety, and systems planning. Service is operated by private carriers under contract to Metra and by Metra directly.

Metra is governed by a seven-member board of directors; three of the directors are appointed by the suburban members of the Cook County Board. The County Board Chairmen of Kane, Lake, McHenry, and Will counties appoint two directors and the County Board Chairman of DuPage County appoints one director. The Mayor of the City of Chicago, subject to City Council approval, also appoints one director. The Chairman of Metra's board of directors must be one of the seven directors, and is appointed by the concurrence of five directors.

Metra operates 60 percent of its trains on weekdays, 25 percent on Saturdays and 15 percent on Sundays and holidays.

Service Characteristics

The Metra rail system is comprised of 11 separate lines, which run north, west, and south of the Chicago central business district. The system extends 565 route-miles to the limits of the six-county area and serves 239 local rail stations in more than 100 communities. The network itself is made up of more than 1,100 pieces of rolling stock, 800 bridges, more than 2,000 signals, 16 rail storage yards, and six major maintenance facilities. Geographically, the Metra system is the largest in the United States; and its operational interface with extensive freight network makes it arguably the nation's most complex.
A system of such magnitude requires continual maintenance and renewal in order to preserve operational performance, safety, and service efficiency.

Metra provides safe, reliable commuter rail service with an average weekday ridership of 319,100. Peak period ridership represents 77 percent of the total average weekday trips.

Metra operates 60 percent of its trains on weekdays, 25 percent on Saturdays and 15 percent on Sundays and holidays. The trains' operating speeds are 10 percent higher during a weekday peak period than during off-peak hours.

Metra serves the region on routes owned by Metra or freight carriers and through the purchase of service agreements with Union Pacific and Burlington Northern Santa Fe, the two largest freight carriers in the nation. The South Shore Line, operated by the Northern Indiana Commuter Transportation District (NICTD), is another Metra partner, providing service between Chicago and South Bend, Indiana.

Metra's hub is the downtown Chicago business district. Four downtown terminals feed service to all of Metra's 11 lines. Today, approximately one-half of all commuter trips from the suburbs to downtown Chicago are made on Metra.

Ridership

Metra's ridership, excluding South Shore service outside Illinois, for the year 2006 totaled 80.8 million passenger trips. This was a 5.0 percent increase from 2005 ridership of 77.0 million (Exhibit 5-1).

Exhibit 5-1: **Metra Ridership** (in millions)

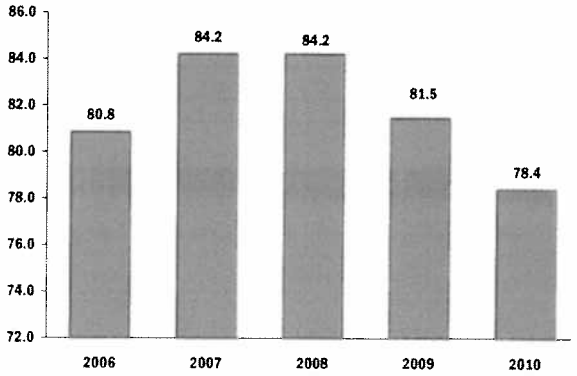


Exhibit 5-2: **Riders and Miles** (in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Total Riders	84,331	87,861	87,861	84,996	81,813
South Shore Elimination (1)	(3,487)	(3,655)	(3,655)	(3,535)	(3,403)
Total Metra Riders	**80,844**	**84,206**	**84,206**	**81,461**	**78,410**
Total Revenue Car Miles	35,984	36,697	37,013	36,968	36,968
South Shore Elimination (1)	(2,855)	(2,864)	(2,873)	(2,867)	(2,867)
Total Metra Revenue Car Miles	**33,129**	**33,833**	**34,140**	**34,101**	**34,101**
Total Passenger Miles	1,943,675	2,045,569	2,073,432	2,005,817	1,930,699
South Shore Elimination (1)	(109,000)	(113,460)	(112,811)	(109,133)	(105,046)
Total Metra Passenger Miles	**1,834,675**	**1,932,109**	**1,960,621**	**1,896,684**	**1,825,653**

(1) Ridership outside the Illinois service area is excluded from the South Shore operating statistics. 79 percent of South Shore Line ridership occurs outside the Illinois service area.

In 2007, Metra's ridership continues to grow with projected passenger trips of 84.2 million, exceeding record ridership in 2001 of 79.2 million. For the January to November period, ridership in 2007 of 77.7 million increased 4.7 percent over the comparable period in 2006. This year-to-date ridership result is the highest ever in Metra's history. November was the sixth consecutive month that Metra recorded over 7 million passenger trips. Ridership and service projections are summarized in Exhibit 5-2.

Metra has successfully marketed off-peak and reverse commute trips. However, Metra's primary customer base is work trips serving the Chicago downtown market. Surveys indicate that although an increased number of riders are using Metra for non-work related purposes, work trips still account for more than 90 percent of all trips. Exhibit 5-3 compares 2002 and 2007 average daily load counts by service period.

Exhibit 5-3: **Average Daily passenger Loads by Service Period July-June** (in thousands)

	July 2002-June 2003	July 2006-June 2007	Change	% Change
Service Period				
Peak Direction	237	246	8	3.5
Reverse Peak	14	18	4	30.4
Midday	30	36	6	20.0
Evening	16	20	4	27.7
Total Weekday	**296**	**319**	**23**	**7.7**
Saturday	52	72	20	38.5
Sunday	30	45	16	52.0

Trains operating in the reverse-peak direction, during evening, and weekend periods have realized the greatest percentage gains. These gains are attributable to efforts taken by Metra to broaden its ridership base. Such efforts include Metra's weekend ticket, enhanced off-peak service, targeted promotion of service to suburban employers, marketing the service for travel to cultural and entertainment attractions, and Metra's Bikes on Train program.

Metra's Bike on Train program was implemented on June 1, 2005. In 2006, the program was expanded to allow three bikes in each diesel rail accessible car and two in each electric rail car.

Passenger loads on peak period, peak direction trains have realized an increase of 3.5 percent during the five-year period. For the January–November 2007 period, average monthly regional employment was up

1.8 percent from the same period of 2006. Downtown office occupancy rates averaged 88.3 percent for the third quarter of 2007, which is the highest level since the third quarter of 2002. The third quarter of 2007 marked the sixth consecutive quarter of occupancy rate increases in Downtown Chicago. The suburbs posted an 85.1% office occupancy rate, which is the highest level since the fourth quarter of 2001. As office occupancy increases, especially in Downtown Chicago, Metra ridership tends to increase as more people are commuting to work in Metra's primary market.

Service Quality

To deliver on its objective and to provide service that is customer-driven, flexible and personalized, Metra knows that it must understand the needs and interests of its customers. Metra periodically conducts on-board surveys to measure various service attributes. Metra not only measures general rider satisfaction, but also collects information on what service attributes are considered the most valuable to attract and retain riders. This data provides direction for planning, scheduling and marketing activities. For example, Metra's goal to provide safe, reliable, clean and on-time service is directly derived from the most important service characteristics identified through these customer surveys.

Metra measures service reliability by on-time performance. A train delay is recorded if the train is more than five minutes late at the final destination compared to the schedule. Exhibit 5-4 presents system-wide annual on-time performance since 2002. Metra's on-time performance in 2006 was 96.3 percent.

Exhibit 5-4: **On-time Performance**

Year	Delays	% On-Time
2002	6,809	96.5
2003	5,627	97.1
2004	6,027	96.9
2005	7,260	96.3
2006	7,400	96.3

Exhibit 5-5: **Passengers Per Revenue Car Mile** (in millions)

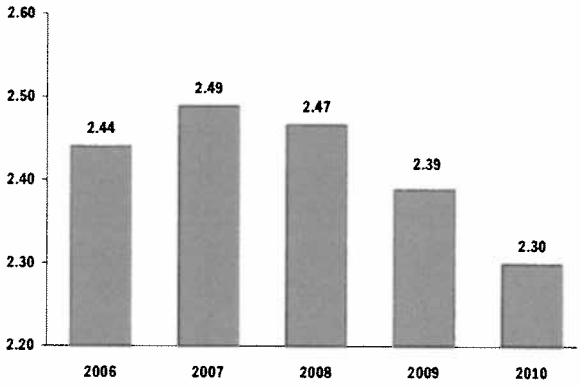

Exhibit 5-6: **Metra Cost Efficiency**

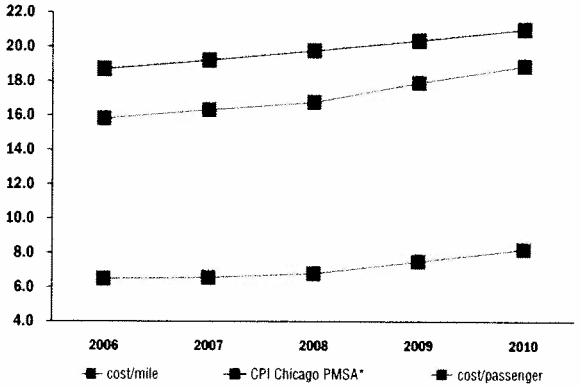

* Note: CPI = Consumer Price Index; PMSA = Primary Metropolitan Statistical Area.

To be responsive to changing customer needs, Metra continuously looks for ways to expand and improve its service within financial constraints.

Matching the supply of service to the demand is one means of maintaining system efficiency. Metra measures capacity utilization train-by-train, which allows it to track average daily passenger loadings by service period (Exhibit 5-3) by line and to analyze trends. In addition, Metra monitors and reports trains with occupancy rates exceeding 95 percent. This information is valuable support for service change decisions.

Another more general measurement of system-wide effectiveness is made by relating the number of passengers to the number of miles of service, thereby calculating passengers per mile. Metra's passengers per revenue car mile ratio decreased

from 2.73 in 2001 to 2.44 in 2006. In the case of a new service, the number of miles increases faster than ridership, thereby decreasing the passenger per mile ratio.

Metra strives to strike a balance between mile increases due to service expansions and passenger growth. The passenger per mile ratio in 2006 of 2.44 shows an increase to an estimated 2.49 in 2007 estimate due to greater ridership as a result of service expansions. However, according to its adopted 2008 budget, Metra estimates a ratio of 2.47, which is expected to decrease to 2.30 by 2010 due to decreasing ridership as a result of the projected 10% fare increases in 2008, 2009, and 2010 (Exhibit 5-5).

Another measurement used to calculate whether costs are being contained and efficiency maintained is cost per revenue car mile. This measure recognizes that costs tend to vary with the amount of service provided. As seen in Exhibit 5-6, Metra has efficiently held expenditures in-line with cost increases, when compared to the Consumer Price Index (CPI).

The cost per passenger ratio measures cost effectiveness and is designed to examine how well vehicles are deployed to serve riders. As Exhibit 5-6 illustrates, Metra's cost per passenger ratio has outperformed the Consumer Price Index.

Maintenance and Modernization

Since Metra was formed in 1984, Metra has overseen a comprehensive program to improve and grow the regional commuter rail network in support

of the twin objectives of core system maintenance and strategic service expansion. Metra has expended more than $5 billion to overhaul and modernize the system and to create a cyclical program of preventive maintenance and renewal. Such investment has led to the emergence of one of the nation's premier commuter rail operations, with Metra enjoying a near unparalleled record of sustained ridership growth and operational excellence.

In 2008, however, the Metra system will be at a critical juncture. Despite an effective, business-like stewardship of Metra resources, sales tax receipt and farebox revenues have not kept pace with overall expense growth especially given the extraordinary increases in the cost of fuel, electrical power, security, and insurance. Metra has experienced continuing shortfalls in funding for its operations since 2005. To date, Metra has bridged these shortages through a variety of cost containment strategies and by shifting certain capital resources to operations. Over the past three years, Metra has diverted $134.7 million in capital funding to cover operating expenses. However, every dollar that is shifted from capital to operating makes it just that much more difficult to maintain existing service levels due to delays in completing required infrastructure projects, equipment overhauls, and new rolling stock purchases.

Safety and Security

Metra provides employee incentives to those regularly meeting goals. Key among these goals is workplace safety. A safe workplace correlates with a

safe environment for Metra employees and Metra commuters.

Metra's investments in staff training programs and incentive plans have resulted in substantial dividends, including commuter satisfaction and industry recognition.

In addition to routine workplace safety training, Metra employees have also been trained to recognize and observe potential safety hazards in and around trains, stations and tracks. Metra is the only railroad organization in the nation to train all of its 4,000 employees in terrorism awareness and emergency procedures. As part of these investments, security cameras are being installed at several downtown train stations. Metra is also installing emergency signage involving LED technology in strategic locations throughout Metra's downtown terminals. The signs will alert commuters in advance to emergency situations and can display pre-programmed or free form messages to assist Metra in communicating with customers.

In addition, Metra installed a train tracking system using Global Positioning System (GPS) technology in 2001. GPS monitors the real time position and movement of all trains on Metra's routes.

GPS offers Metra's operations professionals a snapshot that details the performance of every train during an operational day. The real-time information supports and delivers a more effective response to any service disruptions or emergencies and leads to enhanced overall safety.

Metra also encourages and provides safety training and education opportunities within the community.

Exhibit 5-7: **Metra 2008 Budget and 2009-2010 Financial Plan** (dollars in thousands)

	2006 Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
System-Generated Revenue					
Passenger Revenue	$ 217,611	$ 226,868	$ 251,420	$ 267,380	$283,170
Reduced Fare Subsidy	3,778	3,492	3,540	3,100	3,100
Other Revenue	53,885	57,160	54,290	50,290	50,290
Total Revenues	**$ 275,274**	**$ 287,520**	**$ 309,250**	**$ 320,770**	**$ 336,560**
Operating Expenditures					
Transportation and Maintenance	$ 322,051	$ 331,610	$ 341,817	$ 363,186	$ 379,583
Administration	30,866	30,700	27,650	27,650	27,650
Risk Mgmt. & Claims	21,160	19,570	19,930	20,730	21,760
Regional Services and Downtown Stations	23,397	24,140	26,380	30,220	31,560
Diesel Fuel	47,390	56,580	63,560	69,920	76,910
Security	14,022	17,000	18,000	19,000	20,000
Health Insurance	49,239	53,940	55,980	60,460	65,290
Pension	3,736	4,840	4,840	4,840	4,940
Electricity	13,056	14,960	15,190	15,760	16,940
Total Expenditures	**$ 524,917**	**$ 553,340**	**$ 573,347**	**$ 611,766**	**$ 644,633**
Operating Deficit	**$ 249,643**	**$ 265,820**	**$ 264,097**	**$ 290,996**	**$ 308,073**
Deficit Funding					
RTA Sales Tax	$ 256,301	$ 257,374	$ 264,097	$ 270,996	$ 278,073
Federal Capital Funds used for Operations	57,912	60,358	-	-	-
Total Deficit Funding	**$ 314,213**	**$ 317,732**	**$ 264,097**	**$ 270,996**	**$ 278,073**
Funding Less Deficit (1)	$ 64,570	$ 51,912	-	$ (20,000)	$ (30,000)
Recovery Ratio % (2)	55.8%	55.6%	57.7%	N/A	N/A

(1) When the amount of funding exceeds the operating deficit (2006-2007), the funds are transferred to the capital program. When the amount of funds available for operations is less than the funds required for operations (2009-2010), service reductions or other operating modifications must be made to achieve a balanced budget and financial plan. (2) Includes allowable expense deductions (funded depreciation, security and lease). In 2008 the amount is $37.8 million.

Budget and Financial Plan

Over the past year, Metra, along with the RTA, CTA, and Pace, has been engaged in an ongoing process to demonstrate the need for new sources of state funding. As of the time this budget was prepared, no financing plan had been acted upon by the General Assembly. Metra, therefore, had to make some very serious and difficult decisions beginning in 2008 to bring its budget into line with available resources. Since a continued shift of capital funds to operations is neither an effective nor prudent long term approach, fare increases and other actions will be required.

In 2008, Metra projected a shortfall of $40.3 million in sales tax revenues used for operations. In order to prevent this shortfall, Metra proposes the following actions:

- 10% fare increase starting on February 1, 2008.
- Elimination of the popular weekend fare program. Instead, Metra will offer a $7 all-day ticket for travel on either weekend day.
- Reduction of janitorial services and coach cleaning.
- Reduction of 100 jobs through attrition.
- A wage freeze for non-contract positions.
- Additional 10% fare increase in 2009 and 2010.
- Service reductions.

Exhibit 5-8: **Metra System-Generated Revenue** (dollars in millions)

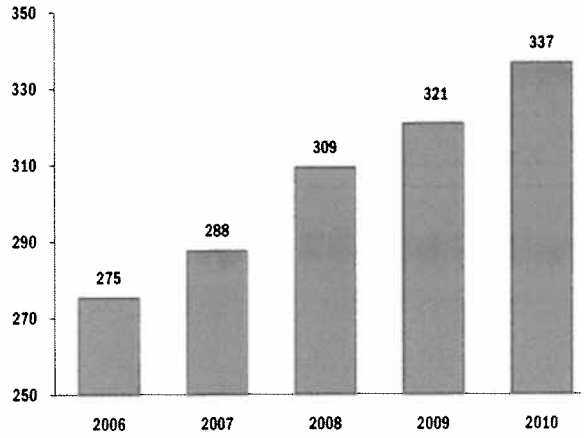

Exhibit 5-9: **2008 Metra Revenue** - $309.3 million

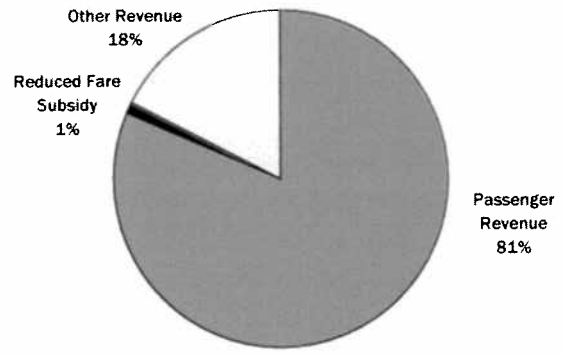

Exhibit 5-10: **Ticket Sales by Ticket Type** (in thousands)

	July 2005-June 2006	July 2006-June 2007	Change	% Change
Monthly	1,170.4	1,208.9	38.5	3.3
25-Ride	15.5	16.3	0.8	5.2
Ten-Ride	1,733.3	1,823.7	90.4	5.2
Regular One-Way	6,460.4	6,681.1	220.7	3.4
Conductor	4,360.2	4,735.3	375.1	8.6
Weekend	1,307.3	1,566.9	259.6	19.9
Link-Up	73.1	92.8	19.7	26.9
PlusBus	14.5	15.3	0.8	5.5

System-Generated Revenue

Total system-generated revenue is expected to increase from $275.3 million in 2006 to $336.6 million in 2010. This represents an increase of $61.3 million or a compound annual growth rate of 5.2 percent (Exhibits 5-7 and 5-8).

Metra's system-generated revenue has three major components: passenger revenue, reduced fare subsidy, and other revenue. Passenger revenue of $251.4 million comprise 81 percent of the total revenue budgeted for 2008 (Exhibit 5-9).

Passenger Revenue

Passenger revenue or farebox revenue is estimated to increase from $217.6 million in 2006 to $283.2 million by 2010. This increase of $65.6 million represents a 6.8 percent annual growth rate. Metra's passenger revenue increase is mainly the result of 10% fare increases in 2008, 2009, and 2010. The 10% fare increase will generate $20.6 million in

2008. By increasing Saturday and Sunday fares to $7.0 provides additional revenue of $3.0 million, and the effect of having a separate Sunday fare of $7.0 increases revenue by $1.0 million in 2008.

The continued strength of the local economy, the higher cost of gasoline, major road reconstruction projects, and service expansions or extensions on the North Central Service, Union Pacific West, and SouthWest Service Lines in 2006 also contributed to higher ridership and therefore higher passenger revenue.

Changing rider and ticket trends, such as longer trip length and increased one-way, conductor, and weekend ticket sales (Exhibit 5-10) also contributes to the higher passenger revenue.

Metra's fare structure is presented at the end of this section (Exhibit 5-14).

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 providing funds to reimburse Metra for the cost of providing reduced fares for the elderly, students, and persons with disabilities. The fare reimbursement is included in revenue and is contingent upon annual approval by the State. In 1999, the Assembly passed new reduced fare legislation, which doubled the reimbursement level of previous years. This aid, which totals approximately $3.5 million in 2008, is projected to be $3.1 million during this planning cycle.

Other Revenue

The other revenue category represents 18 percent of Metra's total revenue for 2008. The components of this category are investment income, joint facility and lease revenue, advertising income, capital credits, and miscellaneous non fare-generated income. The total other revenue category is expected to decrease from $53.9 million in 2006 to $50.3 million in 2010, due mostly to lower capital credits.

Exhibit 5-11: **Metra Operating Expenditures** (dollars in millions)

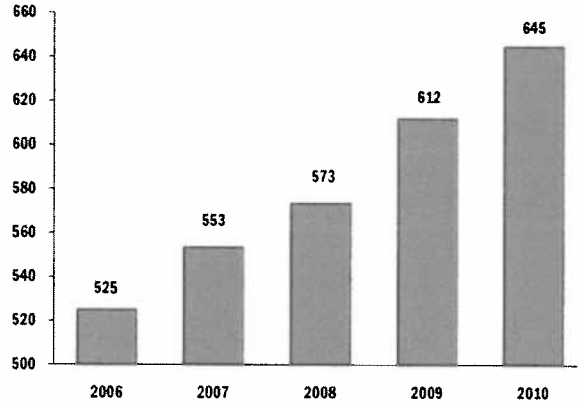

Exhibit 5-12: **Metra Operating Expenditures** - $573.3 million

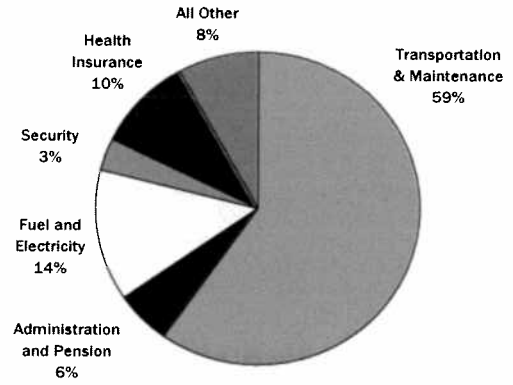


Operating Expenditures

Total operating expenditures are forecast to increase from $524.9 million in 2006 to $644.6 million in 2010. This $119.7 million increase represents a 5.3 percent compound annual growth rate (Exhibit 5-11).

Metra's 2008 operating expenditures of $573.3 million are projected to grow by 3.6 percent from the 2007 estimate.

In 2009 and 2010, total expenditures will increase by 6.7 percent and 5.4 percent respectively, compared to the previous year (Exhibit 5-7). Higher maintenance expense due to the lack of capital funding is the major contributing factor.

Expenditure Elements

The components of operating expenditures are transportation and maintenance, administration and pension, diesel fuel and electricity, security,

health insurance and all other, including claims and risk management, regional services and downtown stations. Metra's 2008 total expenditures breakdown is transportation and maintenance 59 percent, administration and pension 6 percent, fuel and electricity 14 percent, security 3 percent, health insurance 10 percent, and all other 8 percent. (Exhibit 5-12).

Transportation and Maintenance

Transportation includes the functions and activities directly responsible for the operation of the commuter trains. The major functions include train and engine crew work, dispatching, tower operations, ticket sales, police and security services, employee safety, and supervisory support. The main objective of this area is to run service consistent with the published train schedules in a safe and efficient manner and in accordance with federal and state regulations.

Maintenance includes two types of activities: maintenance of way and maintenance of equipment. Maintenance of way activities include the maintenance of track, structures, communications and facilities to preserve operational safety, reduce travel times and service interruptions, and increase passenger comfort. Maintenance work is concentrated on safety inspections and short-term projects to safeguard overall track and structure conditions.

Maintenance of equipment activities includes regular repairs, inspection and preventive maintenance on passenger train equipment to ensure that this equipment is safe and in good working order to meet train schedules and passenger demand for seating.

Transportation and maintenance expenditures are expected to increase from $322.1 million in 2006 to $379.6 million in 2010. This $57.5 million increase represents a compound annual growth rate of 4.2 percent (Exhibit 5-7).

Administration and Pension

Administration activities include general support functions for the organization to ensure overall corporate goals and regulations are met. Administrative activities include human resources, labor management committee, information systems, training, accounting and other support areas. Management of the Metra owned and operated rail services are also included in this category.

Administration and pension expenditures are projected to decrease from $34.6 million in 2006 to $32.6 million in 2010. This $2.0 million decrease is mainly attributable to the projected staff reduction without new funding (Exhibit 5-7).

Diesel Fuel and Electricity

Diesel fuel is one of the most volatile components of the operating expenditures. Diesel fuel averaged $1.93 per gallon in 2006 totaling to $47.4 million and was budgeted at $2.30 per gallon in 2007 to total $59.6 million. Metra is estimating an average price of $2.11 per gallon in 2007 for a total cost of $56.6 million, $3.0 million less than the 2007 budget. Metra is projecting an average price of $2.30 per gallon for 2008, the same as in the 2007 budget, for a total of $63.6 million.

Rates for Metra electric motive power and power at Metra's large yards are under contract until May 2009 and therefore show little growth in the 2008 budget.

Fuel and electric power is projected to increase from $60.4 million in 2006 to $93.9 million in 2010. This $33.4 million increase represents a compound annual growth of 11.6 percent (Exhibit 5-7).

Security

Security has become a significant concern for Metra as it seeks to safeguard riders and employees alike. This expense category includes police and contract security services as well as planning, coordination, and training with other agencies. For 2008, the budget is $18.0 million, which is 6 percent above the 2007 estimate of $17.0 million. Security expenses are expected to increase by $1.0 million per year in 2009 and 2010 (Exhibit 5-7).

Health Insurance

Health insurance costs for 2008 of $56.0 million are expected to increase 3.8% from $53.9 million in 2007, with an 8% annual growth rate in 2009 and 2010 (Exhibit 5-7).

All Other

Expenditures for risk management and claims are expected to increase from $21.2 million in 2006 to $21.8 million by 2010. This $0.6 million increase represents a compound annual growth rate of 0.7 percent.

Metra is also responsible for setting fare and service levels, capital improvement planning and oversight, and service planning. Expenditures for these functions are included in the regional services and downtown stations category.

Expenditures in this category are expected to increase from $23.4 million in 2006 to $31.6 million by 2010. This $8.2 million increase represents a compound annual growth rate of 7.8 percent (Exhibit 5-7).

Deficit

The operating deficit is derived from total system-generated revenue minus total operating expenditures. Metra's 2008 budget deficit is $264.1 million (Exhibit 5-7). This deficit is offset by public funding to reach a balanced budget.

Funding

The RTA Sales Tax is the major source of public funds used to cover the budgeted operating deficit. By statute, the RTA retains 15 percent of the sales tax receipts and passes the remaining balance of 85 percent to the Service Boards. Of this remaining amount, Metra receives 55 percent of the RTA Sales Tax dollars collected in suburban Cook County, and 70 percent of the RTA Sales Tax collected in the collar counties. Metra's budgeted statutory sales tax receipts in 2008 are $264.1 million.

Recovery Ratio

Metra's recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2008 Metra's recovery ratio is 57.7 percent exceeding the mark of 55% set by the RTA. The RTA Region section provides a detailed recovery ratio calculation.

2007 Budget versus 2007 Estimate

Total revenue is expected to finish $2.5 million favorable to budget for 2007. Passenger revenue is projected to be favorable to budget by $2.1 million or 0.9 percent due to higher ridership. Other revenue is expected to closely match budget of $57.2 million

Expenditures are forecast to finish $0.6 million, or 0.1 percent favorable to budget for 2007. Expenditures such as administration, regional services

Exhibit 5-13: **Metra 2007 Budget versus 2007 Estimate** (dollars in thousands)

	2007 Budget	2007 Estimate	Variance
System-Generated Revenue			
Passenger Revenue	$ 224,800	$ 226,868	$ 2,068
Reduced Fare Subsidy	3,050	3,492	442
Other Revenue	57,210	57,160	(50)
Total Revenue	**$ 285,060**	**$ 287,520**	**$ 2,460**
Operating Expenditures			
Transportation and Maintenance	$ 326,240	$ 331,610	$ (5,370)
Administration	30,700	30,700	-
Risk Mgmt. & Claims	19,300	19,570	(270)
Regional Services and Downtown Stations	24,140	24,140	-
Diesel Fuel	59,580	56,580	3,000
Security	17,000	17,000	-
Health Insurance	52,120	53,940	(1,820)
Pension	4,840	4,840	-
Electricity	20,060	14,960	5,100
Total Expenditures	**$ 553,980**	**$ 553,340**	**$ 640**
Operating Deficit	**$ 268,920**	**$ 265,820**	**$ 3,100**
Recovery Ratio %	**55.0%**	**55.6%**	**0.6%**

and downtown stations, security, and pension are expected to finish the year on budget. However, health insurance, transportation and maintenance, and risk management & claims are projected to exceed budget by 3.5%, 1.6%, and 1.4% respectively. Health insurance continues to increase rapidly, while the transportation category includes an additional $4 million in the 2007 estimate because the freight railroads concluded their labor contracts as well as the inclusion of two major union contract extensions. Fuel is estimated to be under budget by $3.0 million or 5%, while electricity will be more than $5 million or 25% favorable to budget due to a locked electrical rate contract for a two-year period. Exhibit 5-13 details the variance between the 2007 budget and 2007 estimate.

Statutory Compliance

The RTA Act requires that each Service Board meet six criteria, which are detailed in the RTA Region section, for RTA Board approval of its budget. The Metra budget meets each of these criteria.

Fare Structure

Commuter rail fares are based upon travel between designated fare zones. These zones are set at five-mile intervals beginning at each rail line's downtown Chicago station. The zone system does not apply to the South Shore fares set by the Northern Indiana Commuter Transportation District (NICTD).

A uniform base fare is charged for travel within a zone and increments are added to this base fare as fare zone boundaries are crossed. The base fare is $2.15 for a one-way trip beginning February 1, 2008. The incremental charge is 40¢ or 45¢ for each additional zone (Exhibit 5-14).

Exhibit 5-14: **Metra Ticket Pricing Formula**

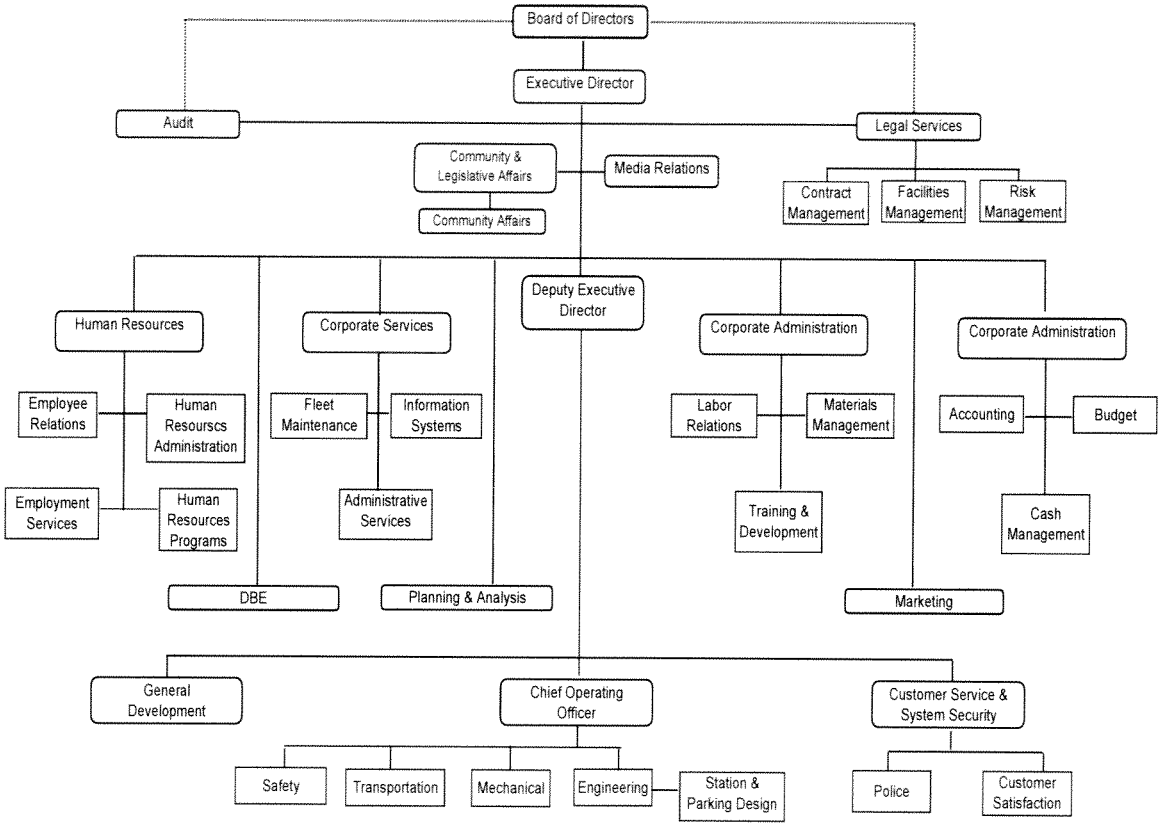
Ticket Type	Period of Validity	Number of Rides	Pricing Basis
Monthly*	Calendar Month	Unlimited	27 times one-way fare
10-Ride*	One Year	Ten	8.5 times one-way fare
One-Way*	One Year	One	Base fare plus increments
Weekend	Saturday/ Sunday	Unlimited	Flat rate $7/day

*These ticket types are offered at a reduced rate to senior citizens, persons with disabilities, children, and students through high school traveling to and from school. Military personnel in uniform are entitled to reduced one-way ticket rates. The base fare for a one-way trip is $2.15 beginning February 1, 2008.

Organizational Structure

Metra's administrative organization chart is presented in Exhibit 5-15.

Exhibit 5-15: **Metra Organization Chart**



6 Pace Operating Plan

Suburban Service

Overview

Pace was formed in 1983 as part of the reorganization of the Regional Transportation Authority (RTA), and began service in 1984. A 12-member board of directors made up of current and former village presidents and mayors governs Pace. Beginning July 1, 2006, Pace assumed operating responsibility for all paratransit service in the RTA region. Pace's regional ADA paratransit service is discussed separately later in this section.

Service Characteristics

Pace's mission is to provide efficient well-integrated transportation services that meet the travel needs of the suburban Chicago area. Effective suburban mobility supplies line-haul and community-based services that provide access between both nearby and distant origins and destinations. To attract riders in an automobile-oriented market requires coordination of infrastructure, service, information, and travel demand. Achieving this mission will also require the continued restructuring of Pace's current fixed-route service.

Pace suburban service includes 143 regular routes, 65 feeder routes, 23 shuttle routes, and 767 vanpool vehicles.

Pace's suburban service area measures 3,446 square miles. The suburban area is divided among the six counties and incorporates 284 municipalities. Transportation needs in this broad area are as unique as the individual communities Pace serves. Pace service includes approximately 143 regular routes, 65 feeder routes, 23 shuttle routes, 767 vanpool vehicles, 191 Pace-owned Dial-A-Ride vehicles, and 358 Pace-owned ADA paratransit vehicles. The suburb-to-suburb travel market is the largest service area in the region and is primarily served by the automobile.

Employment and residential shifts outward from central business districts have resulted in longer commutes, greater single-occupant automobile use, increased traffic congestion, and declining air quality. Changing travel needs are the result of the growing suburban job market, welfare-to-work initiatives, and greater work-hour, workday, and work-location flexibility. However, increased support for smart growth, transit-oriented development, and environmental concerns have accompanied these trends. In light of these factors, Pace is working to better serve various suburban travel markets.

To attract more riders, Pace will need to gain consensus among a diverse group of stakeholders, communities, and organizations interested in transportation and smart growth; create viable community and regional partnerships; develop service plans for specific communities and groups of communities; and gain funding from local, regional, state and federal sources.

In April 2002, Pace unveiled a new long range comprehensive operating plan called Vision 2020. The plan outlines the goals and overall direction for Pace for the 21st century and a strategy to create a true suburban transportation network through route restructuring. Vision 2020 also includes plans for transit signal priority, bus-only lanes, localized flexible transit services and regional transportation centers that provide coordinated links between the region's transit services.

Pace already works with 210 communities to plan, design, and deliver services. Vision 2020 identifies nearly 100 service areas for further study in partnership with communities. To better support a service area that spans walkable suburban neighborhoods, satellite cities, and rural communities, Pace will expand its current offerings (e.g., fixed-route, commuter rail feeder, employer shuttle, and route-deviation services) and further customize the mix of tailored, flexible community-based services (e.g., demand response, curb-to-curb van service, and subscription routes) based on detailed studies of travel markets and local interests and conditions. Vision

2020 addresses three service levels—low, medium, and high—which reflect the spectrum of population and employment density found in Pace's service area. To achieve high service levels at low cost, Pace will apply Bus Rapid Transit (BRT) features, limited stops, simple routes, frequent service, off-board fare payment, electronic next-stop announcements, traffic signal priority, and bus lanes on expressway/tollway and arterial line haul routes.

To develop an effective regional arterial and community-based transit system, Pace began route-restructuring initiatives in 2000. Consistent with Vision 2020, the goals of route restructuring include faster, more efficient, and more effective service, as well as an enhanced image of transit as an alternative to the automobile. Pace restructured routes in Elgin, along the Halsted Corridor, and in the vicinity of Orland Square Mall. In 2005, Pace completed its restructuring of eleven routes in North Shore communities to serve new trip generators, reduce transfers, and eliminate unproductive segments and route duplication.

Late in 2005, Pace implemented an initial round of service changes in the Aurora area as part of its restructuring efforts in the Fox Valley/Southwest DuPage region. After Metra increased service on its North Central Line, Pace added three new Shuttle Bug routes for employees of several nearby companies. Pace has completed most of the planning for the redesign of service in southern and southwestern Cook County and all of Will County. In the next few years, Pace plans restructuring initiatives in the Waukegan and Elgin areas and in western Cook County.

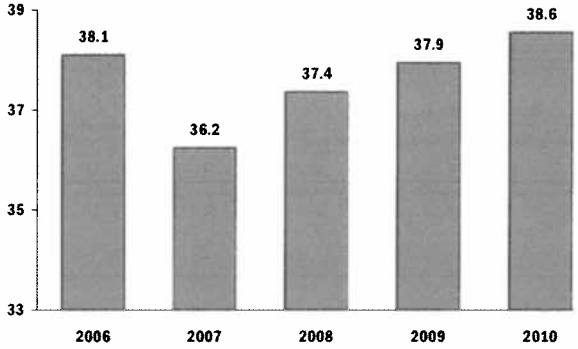
Pace is seeking to implement a regional Transit Signal Priority (TSP) program along major arterial routes. Implementation of the Harvey Transportation Center TSP initiative will improve the operation of the transit terminal and increase the reliability of Pace routes traveling along nearby 154th Street, 159th Street, and Halstead Street. Initially focusing on expanding Pace's existing express bus service and new express bus service between southern Cook County and the Rosemont/O'Hare area, implementation of a suburban expressway/tollway service express bus network will connect major regional activity centers and park-n-ride lots. Pace's Bus Rapid Transit (BRT) Corridor Implementation will develop Pace's Arterial Rapid Transit Network for the Region (PARTNER) Program. Integrated with Pace's express bus service, the PARTNER Program will operate on major east-west and north-south arterials and utilize TSP and queue jump lanes to increase travel speed and route reliability.

Ridership

In 2006, Pace ridership of 38.1 million included suburban service ridership of 36.5 million. Pace estimates 2007 suburban service ridership of 36.2 million.

Pace expects suburban service ridership of 37.4 million in 2008. Pace projects suburban service ridership to increase 1.6 percent annually to 37.9 million in 2009 and 38.6 million in 2010 (Exhibit 6-1).

Exhibit 6-1: **Pace Suburban Service Ridership** (in millions) (1)



(1) In 2006, ridership includes ADA paratransit service. Ridership in 2008 through 2009 assumes no service cuts or fare increases.

Marketing Strategies

Pace's 2007 marketing strategy implementation will continue to take the form of tactical local awareness campaigns. Initiatives will educate the public about the availability of Pace services and the value of public transportation to both riders and non-riders. After categorizing riders and potential riders based

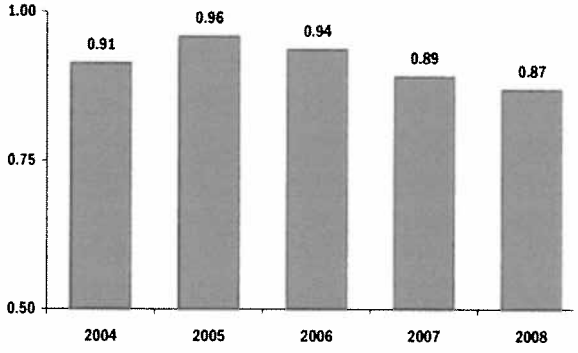
on their commuting, demographic, and psychographic characteristics, campaigns will promote the features and benefits of Pace services to these sub-groups on a local or county level.

Cost Efficiency

Matching the service supply to demand is one means of achieving system effectiveness. One way to measure supply versus demand is to relate the number of passengers to the number of miles serviced. Pace's passengers per mile ratio for suburban service is expected to continue to decline to 0.87 in 2008 (Exhibit 6-2). Part of this decline results from route restructuring that reduces transfers.

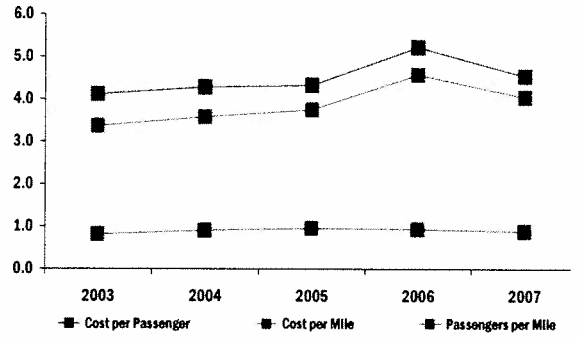
The cost per mile measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-3). Cost per mile has increased from $3.38 in 2003 to $4.58 in 2006 with the addition of CTA service area ADA paratransit service during the second half of 2006. Pace estimates suburban service cost per mile of $4.05 in 2007.

Exhibit 6-2: **Pace Suburban Service Passengers Per Mile** (in millions) (1)



(1) In 2008, passengers per mile assumes no service cuts or fare increases.

Exhibit 6-3: **Pace Suburban Service Cost Efficiency** (1)



(1) In 2003 through 2006, cost per passenger and cost per mile include ADA paratransit.

Capital Investment

The capital program funds the purchase and maintenance of rolling stock, support facilities and equipment (including new technologies), and project management.

Rolling Stock

In 2008, Pace intends to replace 33 fixed-route buses which have exceeded their useful life. The new vehicles will be 30-foot vehicles. Pace will also purchase two buses for local municipal service in the Village of Oak Park.

Pace plans to replace 80 paratransit replacement vehicles which have exceeded their useful life. The new vehicles, a combination of buses and vans, will be operated to provide dial-a-ride services in Pace's suburban service area.

Pace expects to expand its community vehicle lease program by 48 vehicles. Local communities lease these vehicles to provide locally-based transit services.

Pace plans to purchase 75 vanpool vehicles for program expansion and to replace vehicles which have exceeded their useful life. Pace's 2008 goals for the vanpool program include carrying 2.2 million passengers, which is a ridership increase of 17.8 percent over the 2007 estimate. The recovery performance of the vanpool programs in 2007 is expected to range from 84.9 percent for the ADvAntage program to 181.8 percent for the Corporate Shuttle Program. Pace plans to increase the number of vans in service from 725 at the end of 2007 to 855 by the end of 2008.

Electrical, Signal & Communications

The capital program contains funds to replace the 13-year old fleet-wide radio system. The program also includes continued funding of transit signal priority (TSP) systems in major corridors.

Support Facilities & Equipment

The capital program includes continued funding of the HPe3000 computer system replacement project, miscellaneous computer hardware and software, and a new bus safety system. The program also contains funds to make critical improvements to garages and facilities and to purchase garage and office equipment.

Budget and Financial Plan

The Pace suburban service budget and financial plan presented in Exhibit 6-4 meets the funding marks set by the RTA Board on September 14, 2007. The RTA Board set Pace's 2008 recovery ratio mark for suburban service operations at 36.0 percent and adopted this mark on December 14, 2007. Pace's 2008 budget reflects a recovery ratio of 38.5 percent.

From 2004 to 2007, the RTA provided additional funding to Pace to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes. Unlike prior years, RTA funds to Pace in 2008 through 2010 do not include additional funding to accept these passes.

As of the time this budget was prepared, Pace's planned budget balancing actions will eliminate 58 regular bus routes, 56 feeder/shuttle routes, weekend service on 53 bus routes, evening weekday service, routes presently funded by federal CMAQ and JARC funds, and special event service, together comprising 30% of Pace fixed route ridership base. The service reductions will be accompanied by the loss of 224 positions including administrative employees and fare increases which will increase Pace's base fare to $2.

Beginning in 2007, Pace's revenue, expenditures, and funding are separated into suburban service and regional ADA paratransit service. Pace's budget and financial plan for suburban service is presented in Exhibit 6-4. Revenue, expenditures, and funding for regional ADA paratransit service beginning in 2007 are discussed later in this section.

System-Generated Revenue

In 2006, Pace's system-generated revenue from suburban service, suburban ADA paratransit service, and ADA paratransit service in the CTA service area during the second half of the year totaled $55.0 million. Pace expects that in 2007 suburban service will result in system-generated revenue of $52.4 million. After adjusting for proposed fare increases and service cuts, Pace projects suburban service system-generated revenue of $55.9 million in 2008, $57.3 million in 2009, and $59.6 million in 2010, corresponding to a compound annual growth rate of 3.2 percent from 2008 through 2010 (Exhibit 6-5). In 2008, passenger revenue is expected to account for 54 percent, local share/other 29 percent, advertising/investment revenue 11 percent, and reduced fare subsidy 6 percent of total suburban service revenue (Exhibit 6-6).

Passenger Revenue and Local Share

In 2006, Pace's passenger or farebox revenue from suburban service, suburban ADA paratransit service, and ADA paratransit service in the CTA service area during the second half of the year totaled $31.4 million. Pace expects that in 2007 suburban service will result in farebox revenue of $28.4 million. Before adjusting for proposed fare increases and service cuts, Pace projects suburban service farebox revenue of $30.2 million in 2008 will grow to $31.7 million in 2010, a $1.5 million increase corresponding to a compound annual growth rate of 2.5%

Exhibit 6-4: **Pace Suburban Service 2008 Budget and 2009-2010 Financial Plan*** (dollars in thousands)

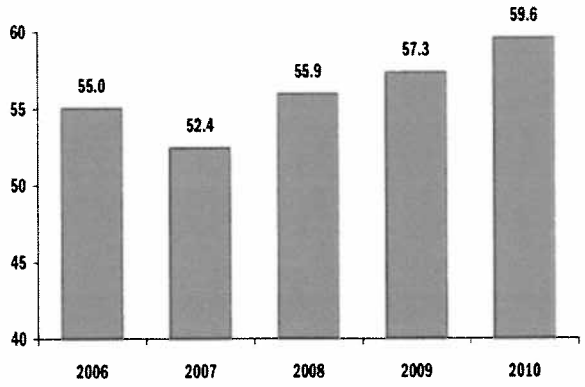
*2006 Actual includes suburban ADA paratransit service during all of 2006 and ADA paratransit service in the CTA service area provided by Pace during the second half of 2006.

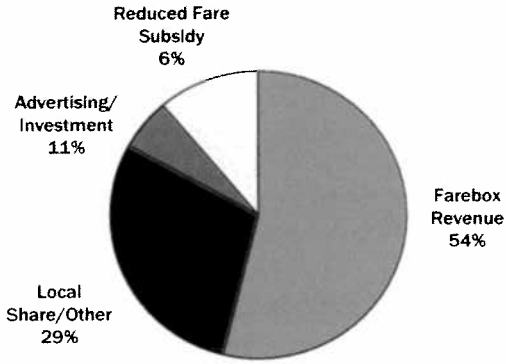
(1) Includes fixed route, vanpool, municipal vanpool, Ride DuPage, and other services. (2) Excludes ADvAntage Program–in-kind revenue and expense (of equal amount) that are included in Pace's recovery ratio calculation. (3) Pass reimbursement is considered revenue for Pace's recovery ratio calculation. (4) Federal Section 5307 funding (preventive maintenance and ADA complimentary) transferred from the capital program to operations. Since the capital-related costs of paratransit service under contract are characterized as operating expenditures under GAAP, this funding is recognized as operating revenue. In 2006, this amount is divided between funding for suburban service (Dial-A-Ride) and funding for ADA paratransit. In 2006, the amounts applied to the recovery ratio calculation were $3.8 million for suburban service and $3.7 million for ADA paratransit for a total of $7.5 million. (5) The recovery ratio in 2008 exceeds the 36% mark set for Pace by the RTA Board on September 14, 2007.

Exhibit 6-5: **Pace Suburban Service System-Generated Revenue**
(dollars in millions) (1) (2)



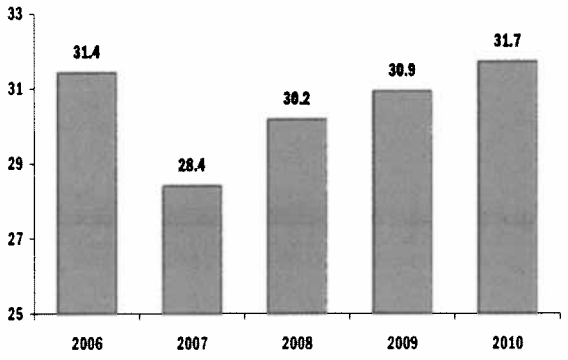
(1) In 2006, revenue includes ADA paratransit service. In 2008, revenue reflects fare increases and service reductions. In 2009 and 2010, revenue reflects fare increases. (2) Revenue excludes RTA pass reimbursement, funding for paratransit for ADA paratransit or Dial-A-Ride services, and ADvAntage Program–in-kind revenues.

Exhibit 6-6: **2008 Pace Suburban Service Revenue**
$55.9 million (1)



(1) Reflects fare increases and service reductions.

Exhibit 6-7: **Pace Suburban Service Farebox Revenue**
(dollars in millions) (1)



(1) In 2006, farebox revenue includes ADA paratransit service. In 2008, revenue reflects fare increases and service reductions. In 2009 and 2010, revenue reflects fare increases.

(Exhibit 6-7). Passenger revenue includes fixed route farebox deposits (using cash, pass, and cards) and payments for vanpool, dial-a-ride, van pool, and other services. Other services are Congestion Mitigation Air Quality (CMAQ) receipts, Job Access Reverse Commute (JARC) receipts, and shuttle service.

In 2006, Pace's local share contributions and other revenue totaled $14.6 million. Pace expects that in 2007 suburban service will result in local share contributions and other revenue of $14.8 million. Suburban service local share contributions and other revenue are expected to grow from $16.3 million in 2008 to $18.0 million in 2010, a $1.7 million increase that corresponds to a 5.1 percent compound annual growth rate.

Pace's suburban service fare structure is presented at the end of this section (Exhibit 6-10). Pace intends to raise fares as follows:

- base fare from $1.50 to $2.00,
- monthly pass from $75.00 to $84.00, and
- van pool fares by 10%.

Pace also planned to raise the price of its other full-fare and reduced fare single-ride fares, transfers, ten-ride tickets, and passes.

Reduced Fare Subsidy

The reduced fare subsidy is expected to increase from $3.0 million in 2006 to $3.2 million in 2008 and remain stable through 2010. In 1999, the subsidy essentially doubled with the implementation of the Illinois FIRST program.

Advertising/Investment

Advertising and investment revenue is expected to increase from $5.9 million in 2006 to $6.7 million in 2010. In September 2003, the Pace Board of Directors approved a revenue-generating multi-year contract with Transit Television Network (TTN) of

Orlando for the installation of on-board broadcasting monitors. The television screens broadcast informational programming on fixed-route buses. Fully funded by TTN, the project provides Pace with a minimum of $0.5 million during the five-year agreement. Investment revenue includes income from investments of cash balances.

Operating Expenditures

Total Pace operating expenditures of $199.2 million in 2006 comprised suburban service, suburban ADA paratransit service, and ADA paratransit service in the CTA service area during the second half of the year. In 2007, Pace expects operating expenditures for suburban service of $164.8 million. After adjusting for proposed service and expense reductions, Pace projects suburban service operating expenditures of $145.2 million in 2007 to grow to $161.2 million in 2009, an increase of $16.0 million corresponding to a compound annual growth rate of 5.4 percent (Exhibit 6-8). These expenditure totals include a regional ADA support credit of approximately $2.8 million annually that reflects many of the administrative and overhead costs to be incurred throughout Pace in support of ADA paratransit. Growth of labor/fringes and health care costs is the primary factor behind the increases in suburban service operating expenditures.

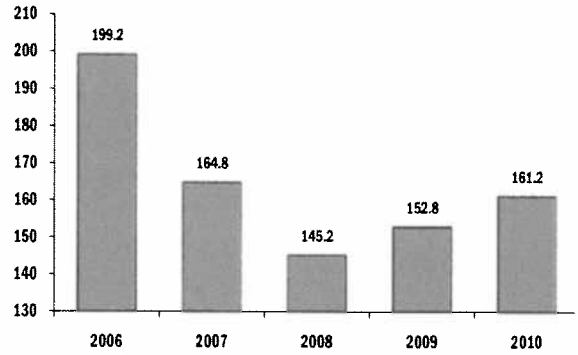
Expenditure Elements

Operating expenditure elements include labor/fringes, health insurance, parts/supplies, utilities, fuel, insurance and claims, other, public/private contracts, Dial-A-Ride, vanpool, and ADA paratransit (Exhibit 6-4). Figures for individual expenditure elements during 2008 through 2010 do not incorporate proposed service and expense reductions which are deducted from total expenditures.

Labor/Fringes and Health Insurance Costs

Labor/fringe and health insurance expenditures are expected to account for 57.9 percent and 56.8 percent of total suburban service operating expenditures in 2007 and 2008, respectively. Combined labor/fringes and health insurance expenditures for suburban service are projected to grow from $99.8 million in 2008 to $108.7million in 2010, an $8.9 million increase that corresponds to a 4.4 percent compound annual growth rate.

Exhibit 6-8: **Pace Suburban Service Operating Expenditures** (dollars in millions) (1) (2)



(1) In 2006, expenditures include ADA paratransit. Expenditures reflect a regional ADA support credit beginning in 2007 and a service/ expense reduction credit beginning in 2008. (2) Expenditures exclude ADvAntage Program–in-kind expenses.

Parts/Supplies

Parts/supplies expenditures are expected to account for 3.3 percent of total suburban service operating expenditures in both 2007and 2008. These expenditures are projected to grow from $5.8 million in 2008 to $6.1 million in 2010, a $0.3 million increase that corresponds to a 2.2 percent compound annual growth rate.

Utilities

Utilities expenditures are expected to account for 1.3 percent of total suburban service operating expenditures in 2007 and 2008. These expenditures are projected to grow from $2.3 million in 2008 to $2.6 million in 2010, a $0.3 million increase that corresponds to a 6.7 percent compound annual growth rate.

Fuel

Fuel expenditures are expected to account for 8.1 percent and 8.9 percent of total suburban service operating expenditures in 2007 and 2008, respectively. These expenditures are projected to grow from $15.7 million in 2008 to $19.6 million in 2010, a $3.9 million increase that corresponds to an 11.8 percent compound annual growth rate.

Insurance and Claims

Insurance and claims expenditures are expected to account for 6.0 percent and 6.1 percent of total suburban service operating expenditures in 2007 and 2008, respectively. These expenditures are projected to grow from $10.7 million in 2008 to $11.2 million in 2010, a $0.5 million increase that corresponds to a 2.2 percent compound annual growth rate.

Other

Other expenditures are expected to account for 6.4 percent and 6.1 percent of total suburban service operating expenditures in 2007 and 2008, respectively. These expenditures are projected to grow from $10.7 million in 2008 to $10.9 million in 2010, corresponding to a 1.4 percent compound annual growth rate.

Public/Private Contract

Public/private contract expenditures are expected to account for 6.3 percent and 6.9 percent of total operating suburban service operating expenditures in 2007 and 2008, respectively. These expenditures are projected to increase from $12.0 million in 2008 to $13.2 million in 2010, corresponding to a 4.6 percent compound annual growth rate.

Shuttle services were implemented in Schaumburg and Downers Grove in 2001. The Downers Grove service feeds passengers to the Metra/Burlington Northern rail station in Downers Grove. In 2008, expenditures of $0.7 million are expected to be offset by revenue of $0.6 million including local

subsidy. In Schaumburg, a shopper's trolley service operates in the Woodfield Mall area. In 2008, the cost of this shuttle is expected to be $0.5 million, all of which will continue to be funded by the Village of Schaumburg.

Pace provides fixed-route service in 31 communities by contracting directly with four private transit companies: Academy Coach Lines, Colonial Coach Lines, Laidlaw, and M. V. Transportation. The fixed route portion of CMAQ/JARC services is also included in the private contract carrier budget. In 2008, private contract carrier expenditures of $10.7 million are projected to be offset by revenue of $3.0 million. This $7.7 million funding requirement corresponds to a recovery ratio of 28.0 percent.

Dial-A-Ride

Including Ride DuPage and Ride in Kane, Dial-A-Ride (DAR) expenditures are expected to account for 9.5 percent and 9.9 percent of total suburban service operating expenditures in 2007 and 2008, respectively. These expenditures are projected to increase from $17.3 million in 2008 to $19.3 million in 2010, a $2.0 million increase that corresponds to a 5.5 percent compound annual growth rate.

Pace contracts with private operators to provide service for 32 Dial-A-Ride projects. The communities served cover a portion of the costs through 42 local share agreements. Pace also has service agreements with local governments for the operation of 30 other Dial-A-Ride projects. Generally, the village or township, under contract with Pace, operates these

services. Pace subsidizes these services based on a funding formula.

Launched in mid 2004, Ride DuPage consolidates all scheduling and dispatching and provides a single point of contact for (non-ADA) paratransit riders in DuPage County. The new Ride in Kane program provides similar services in this county.

Annual Dial-A-Ride ridership is expected to remain at 1.1 million from 2006 to 2008. Dial-A-Ride is expected to maintain a recovery of 68% in 2007 and 2008.

Vanpool

Pace's vanpool program, which provides passenger vans to groups of 5 to 15 commuters, continues to grow. In 2008, Pace expects to have more than 850 vans carrying 2.2 million riders, an increase of 130 vans (17.9 percent) and 330,000 riders (17.8 percent) from 2007.

The vanpool program is comprised of four elements: the Vanpool Incentive Program (VIP), the Corporate Shuttle, the ADvAntage program, and the Municipal Vanpool program. The VIP service, the core element of the program, is projected to achieve ridership of 994,000 with 310 vans by the end of 2008. Pace estimates that by the end of 2008 the Corporate Shuttle program will have 25 vans transporting employees between suburban employers and nearby CTA, Metra and Pace facilities. By the end of 2008, the ADvAntage element of the vanpool program is expected to have 360 vans transporting individuals with disabilities to work sites or rehabilitative workshops. Pace projects that the Municipal Vanpool program, which allows local municipalities to provide public transportation within their communities, will have 160 vans in service in 2008.

Vanpool expenditures are expected to account for 2.1 percent and 2.2 percent of total suburban service operating expenditures in 2007 and 2008. Vanpool expenditures for suburban service are projected to increase from $3.9 million in 2008 to $5.5 million in 2010, a $1.6 million increase that corresponds to an 18.7 percent compound annual growth rate.

ADA Paratransit

In 2006, Pace incurred $40.0 million for purchased transportation to provide ADA paratransit service to 1.6 million riders in Pace's suburban service area during the entire year and in the CTA service area during the second half of the year.

In 2007, Pace began deducting ADA paratransit administrative and overhead expenses (ADA Indirect Overhead Credit) from its suburban service budget and charging this amount to its regional ADA paratransit budget. In 2007, Pace expects to transfer $1.4 million. Pace projects an annual ADA Indirect Overhead Credit of approximately $2.7 million in 2008 through 2010. ADA paratransit expenditures for 2007 through 2010 are discussed separately later in this section.

Service / Expense Reductions

To meet the funding marks set by the RTA Board on September 14, 2007, Pace prepared to implement service and expense reductions that would reduce expenses by $30.4 to $33.1 million annually in 2008 through 2010.

Deficit

The operating deficits are derived from total system-generated revenue minus total operating expenditures. In 2006, Pace ended the year with a net funding deficit of $4.1 million. In 2007, Pace projects a net funding surplus of $0.6 million for its suburban service operations. From 2008 to 2010 Pace projects deficit funding to match the operating deficit.

Funding

The RTA sales tax is the primary source of funding for Pace suburban service. The RTA retains 15 percent of the sales tax funds for discretionary funding and allocates the remainder to the service boards by statutory formula. Of this remaining amount, Pace receives 15 percent of the sales tax collected within suburban Cook County and 30 percent of the sales tax collected in the collar counties. In 2006 and 2007, Pace's portion of RTA sales tax and discretionary funding totaled $81.6 million and $84.2 million, respectively. This amount is expected to grow 2.7 percent annually from $84.6 million in 2008 to $89.3 million in 2010.

In 2006 and 2007, the RTA funded Pace $2 million and $4 million, respectively, to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes. The RTA does not plan to fund Pace to accept these passes in 2008 through 2010. Pace expects to continue to receive federal CMAQ, JARC, and New Freedom operating funds. In 2006, Pace applied $38.8 million of federal 5307 funds to its operating budget. This amount is expected to decline to $22.9 million in 2007 and $2.5 million in 2008 before growing to $7.3 million and $11.8 million in 2009 and 2010, respectively.

The Pace suburban service budget and financial plan presented in Exhibit 6-4 satisfy the funding marks set by the RTA on September 14, 2007.

Recovery Ratio

The recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. With the inclusion of the revenue for the funding of ADA and Dial-A-Ride paratransit service under contract of $7.5 million, $2.0 million of reimbursement from the RTA to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes, and $5.5 million of ADvAntage Program in-kind revenue and expenditure, Pace achieved a recovery ratio of 34.2 percent in 2006. With the inclusion of $4.0 million of reimbursement from the RTA to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes and $4.5 million of ADvAntage program in-kind revenue and expenditure, Pace expects to achieve a recovery ratio for suburban service of 36.0 percent in 2007. With the implementation of fare increases and service and expense reductions, Pace projects a recovery ratio for suburban service of 38.5 percent in 2008 which exceeds the 36 percent recovery ratio mark set by the RTA Board on September 14, 2007. Exhibit 6-4 provides the detail used in these calculations.

Exhibit 6-9: **Pace 2007 Budget vs. 2007 Estimate** (dollars in thousands)

	2007 Amended Budget	2007 Estimate	Variance
System-Generated Revenue			
Farebox Revenue (1)	$ 29,825	$ 28,408	$ (1,417)
Local Share/Other	14,783	14,799	16
Reduced Fare Subsidy	3,327	3,153	(174)
Advertising/Investment	5,532	6,075	543
Total Revenues	**$ 53,467**	**$ 52,435**	**$ (1,032)**
Operating Expenditures			
Labor/Fringes	$ 80,989	$ 81,315	$ (326)
Health Insurance	15,299	14,077	1,222
Parts/Supplies	4,950	5,470	(520)
Utilities	1,868	2,154	(286)
Fuel	15,026	13,391	1,635
Insurance	9,925	9,891	34
Other	10,856	10,496	360
Public/Private Contract	10,307	10,387	(80)
Dial-A-Ride	15,088	15,589	(501)
Vanpool	3,567	3,379	188
ADA Paratransit Service	(1,529)	(1,392)	(137)
Total Expenditures	**$ 166,346**	**$ 164,757**	**$ 1,589**
Operating Deficit	**$ 112,879**	**$ 112,322**	**$ 557**
Deficit Funding			
RTA Sales Tax	$ 81,573	$ 81,573	-
RTA Discretionary Funds	2,619	2,619	-
Federal CMAQ & JARC Funds	1,717	1,830	113
RTA Pass Reimbursement	4,000	4,000	-
Federal 5307 Funds	22,876	22,876	-
Total Deficit Funding	**$ 112,785**	**$ 112,898**	**$ 113**
Funding Surplus/Deficit (Revenue less Expense)	$ (94)	$ 576	$ 670
ADvAntage Program - In-Kind (2)	$ 4,758	$ 4,496	$ (262)
Recovery Ratio %	**36.4%**	**36.0%**	**(0.4%)**

(1) Passenger revenue includes Fixed Route, Van Pool, Dial-A-Ride, Ride DuPage, Ride in Kane, and Other Services. (2) The ADvAntage Program - in-kind revenue and expense (of equal amount) is included in the recovery ratio calculation.

2007 Budget versus 2007 Estimate

Pace projects 2007 operating revenue for suburban service to be $1.0 million or 1.9 percent unfavorable to budget. Passenger revenue is expected to finish the year $1.4 million or 4.8 percent unfavorable, while local share/other revenue is expected to finish the year at budget. The reduced fare subsidy is projected to finish the year $0.2 million or 5.2 percent unfavorable to budget. Advertising/investment revenue is projected to finish the year $0.5 million or 9.8 percent favorable.

Total expenditures are expected to finish the year $1.6 million or 1.0% favorable to budget. Expenditures for fuel, health insurance, and other are expected to be $1.6, $1.2, and $0.4 million favorable to budget, respectively. Expenditures for parts/supplies and Dial-A-Ride are each expected to be $0.5 million unfavorable to budget, while expenditures for labor/fringes and utilities are each expected to be $0.3 million unfavorable.

From a funding perspective, Pace expects a favorable variance of $0.1 million in 2007 because of higher than budgeted federal CMAQ & JARC funding (Exhibit 6-9).

Exhibit 6-10: **Pace Suburban Service Fare Structure**

	Current Fares		New Fares

Vanpool				
New monthly VIP and other van pool services fares range from $66 to $158 depending on the daily round trip van miles and the number of passengers. This range represents a 10% increase from 2007.				

*Effective January 1, 2006, the CTA discontinued issuing or accepting cash transfers.

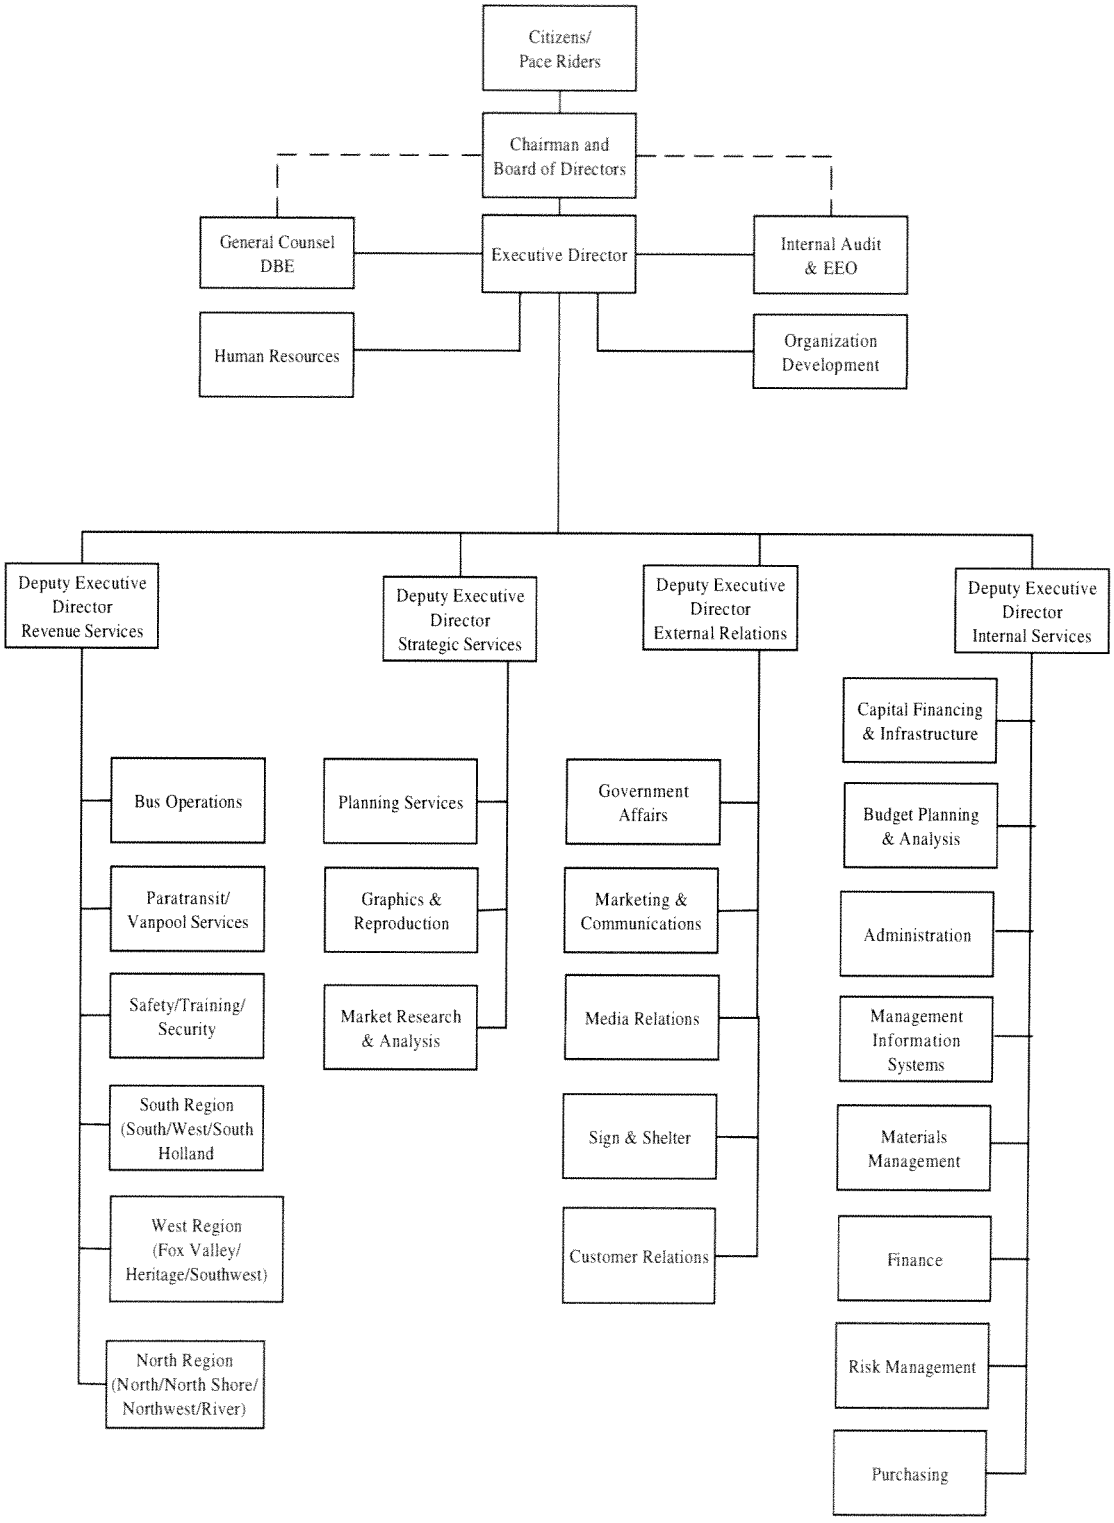
Statutory Compliance

Pace's proposed 2008 budget, 2009-2010 plan, and 2008 recovery ratio submitted to the RTA complies with the operating marks set by the RTA Board on September 14, 2007. Fare increases and service/expense reductions were required to meet these marks.

Organizational Structure

Pace is organized into four main areas: Revenue Services, Strategic Services, External Relations, and Internal Services (Exhibit 6-11). Pace's organizational structure comprises four primary elements: administration, central support, Pace-owned divisions, and regional ADA paratransit services. Within each element, employees are classified into four areas: operations, maintenance, non-vehicle maintenance and administration. These activity areas are defined by the National Transit Database reporting requirements, which apply to all public transit operators.

Exhibit 6-11: **Pace Organization Chart**



ADA Paratransit

Overview

Effective July 1, 2006, Pace has provided all ADA paratransit service in the RTA region. Beginning in 2007, Pace's revenue and expenditures are separated into suburban service and regional ADA paratransit service.

Service Characteristics

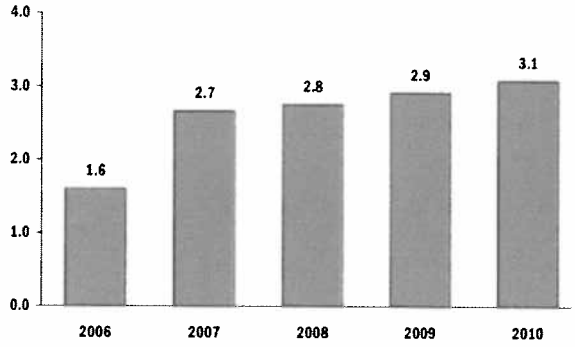
The RTA administers a regional certification program that determines if individuals with physical or cognitive disabilities are eligible for ADA paratransit service. If eligible, passengers can arrange for travel within three quarters of a mile of Pace or CTA bus routes or CTA or Metra rail stations, as described in the Americans with Disabilities Act (ADA).

In the suburban area where Pace provides fixed route service, Pace contracts with private operators to provide ADA paratransit service. These operators use Pace-owned lift-equipped vehicles to provide curb-to-curb service to ADA-certified passengers within a portion of the suburban area of the RTA region.

In the CTA service area, Pace contracts with three private operators (Cook-DuPage Transportation (CDT), SCR Transportation and Art's Transportation) to provide ADA paratransit service. The operators use contractor-owned vehicles to provide service to ADA-certified passengers throughout the City of Chicago and the suburban communities served by CTA bus and rail operations. Pace also administers two subsidized taxi programs in the City of Chicago (the Taxi Access Program (TAP) and the Mobility Direct program) for ADA-certified passengers, although these programs are not required by the Americans with Disabilities Act.

The CTA and Pace fixed route services are described earlier in this document.

Exhibit 6-12: **Pace ADA Paratransit Service Ridership** (in millions) (1)



(1) In 2006, ridership includes Pace service area plus CTA service area during second half of year. In 2007 through 2010, ridership includes Pace and CTA service areas. In 2008 through 2010, ridership does not reflect fare increases and service reductions.

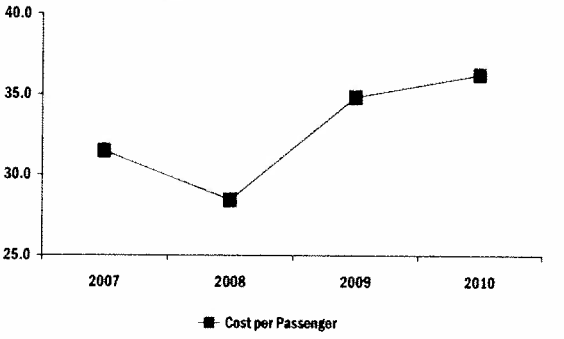
Ridership

In 2006, Pace's ADA paratransit ridership in Pace's suburban service area and in the CTA service area during the second half of 2006 totaled 1.6 million. In 2007, Pace expects regional ADA paratransit ridership of 2.7 million. Pace projects regional ADA paratransit ridership will grow 5.8% annually from 2.8 million in 2008 to 3.1 million in 2010, based on the assumption that during these years ADA paratransit ridership will grow 6% and 5% annually in the CTA service area and suburban service area, respectively (Exhibit 6-12).

Cost Efficiency

The cost per passenger measurement recognizes that expenditures tend to vary with the amount

Exhibit 6-13: **Pace ADA Paratransit Cost Efficiency** (cost per passenger) (1)



(1) In 2008 through 2010, ridership does not reflect fare increases and service reductions.

Exhibit 6-14: **Pace Regional ADA Paratransit Service 2008 Budget and 2009-2010 Financial Plan** (dollars in thousands)

	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
System-Generated Revenue				
Farebox revenue	$ 6,526	$ 7,485	$ 7,919	$ 8,379

Service Reductions	-	(1,740)	(2,076)	(2,459)
Service Reductions (1)	-	(13,986)	-	-
Total Expenditures	**$ 83,719**	**$ 78,235**	**$ 101,409**	**$ 111,579**
Operating Deficit	**$ 76,374**	**$ 68,401**	**$ 89,142**	**$ 98,599**
Deficit Funding				
State ADA Paratransit Funding	$ 54,252	$ 54,252	$ 54,252	$ 54,252
RTA ADA Discretionary	19,758	11,670	31,576	40,105
Additional Operations Funding Needed	2,364	-	-	-
Metra Transfer Capital	-	2,479	3,314	4,242
Total Deficit Funding	**$ 76,374**	**$ 68,401**	**$ 89,142**	**$ 98,599**
Funding Surplus/Deficit	-	-	-	-
Recovery Ratio % (2)	**8.8%**	**12.6%**	**12.1%**	**11.6%**

(1) Additional revenue and expenditure reductions required to meet 2008 funding mark set for Pace by the RTA Board on September 14, 2007 and match the recovery contained in the Pace 2008 budget book. (2) The recovery ratio in 2008 exceeds the mark set for Pace by the RTA Board on September 14, 2007. The RTA Act requires a 10% recovery ratio for regional ADA paratransit service in 2008.

of service provided (Exhibit 6-13). Cost per passenger for Regional ADA paratransit service is projected to increase from $28.45 in 2008 to $36.24 in 2010. This $7.79 increase corresponds to a compound annual growth rate of 12.9%. Pace projects that during this period contractor costs will grow 10.9% and 9.6% annually in the CTA service area and suburban service area, respectively.

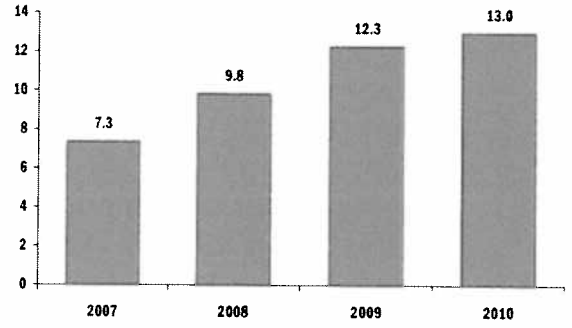
Budget and Financial Plan

The Pace ADA paratransit service budget and financial plan presented in Exhibit 6-14 meets the three-year funding marks and exceeds the 2008 recovery ratio mark set by the RTA on September 14, 2007. The marks set funding for ADA paratransit at $68.4 million for 2008, $89.1 million for 2009, and $98.6 million for 2010. In compliance with the RTA Act, the RTA set the ADA paratransit recovery ratio for 2008 at 10.0 percent.

System-Generated Revenue

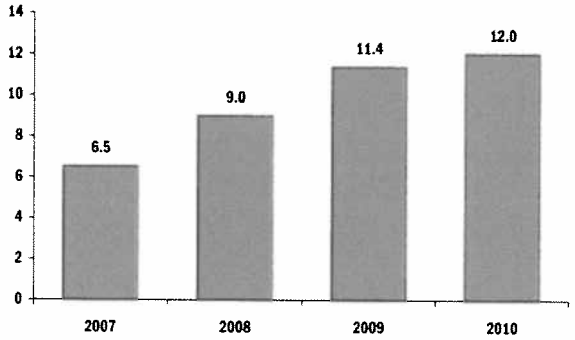
In 2006, the Pace Board voted to increase the ADA paratransit fare in the CTA service area from $1.75 to $2.25 and the fare for the Taxi Access Program (TAP) from $1.75 to $5.00 effective

Exhibit 6-15: **Pace ADA Paratransit Service System-Generated Revenue** (dollars in millions) (1)



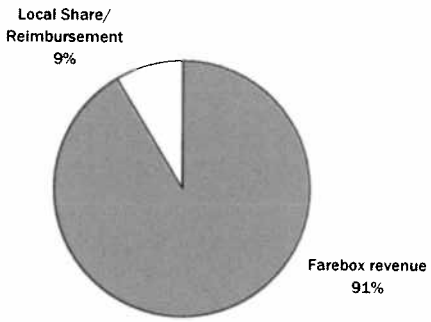
(1) In 2008, revenue reflects fare increases and service reductions. In 2009 and 2010, revenue reflects fare increases.

Exhibit 6-16: **Pace ADA Paratransit Farebox Revenue** (dollars in millions) (1)



(1) In 2008, revenue reflects fare increases and service reductions. In 2009 and 2010, revenue reflects fare increases.

Exhibit 6-17: **Pace ADA Paratransit Revenue** - $9.8 million (1)



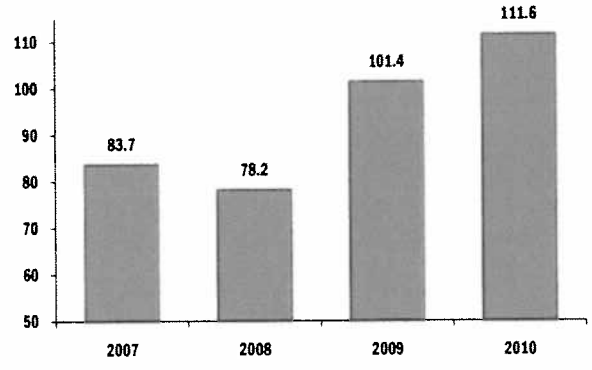
(1) In 2008, revenue reflects fare increases and service reductions. In 2009 and 2010, revenue reflects fare increases.

January 1, 2007. In 2007, Pace expects total regional ADA paratransit revenue to reach $7.3 million with passenger revenue accounting for $6.5 million of this amount and local share contributions and reimbursements from the RTA for transporting paratransit applicants to assessment sites accounting for the rest (Exhibit 6-15 and Exhibit 6-16). Without further fare increases and service reductions, Pace projects total ADA paratransit system-generated revenue of $8.3 million in 2008 with farebox revenue accounting for $7.5 million of this amount and local share contributions and RTA reimbursement accounting for the remainder. In 2007, however, the Pace Board voted to reduce ADA paratransit service to the minimum required by the ADA and to increase the ADA paratransit fares throughout the region to $4.00 (the maximum permitted by the ADA) and the TAP fare to $6.50 effective January 1, 2008 (Exhibit 6-20). Pace projects that these fare increases and service reductions will result in additional farebox revenue of $3.3 million in 2008, $3.5 million in 2009, and $3.7 million in 2010. To meet the 2008 funding mark set for Pace by the RTA Board on September 14, 2007, and match the recovery ratio projected by Pace for 2008, Pace's projected additional farebox revenue was reduced by $1.8 million. These adjustments result in total ADA paratransit system-generated revenue of $9.8 million in 2008 with farebox revenue of $9.0 million (91%) and local share contributions and RTA reimbursement of $0.8 million (9%) (Exhibit 6-17). The RTA Act also requires that regional ADA paratransit service meet a recovery ratio of 12% beginning in 2009. To meet this requirement, Pace projects total ADA paratransit revenue of $12.3 million in 2009. However, Pace's projected total ADA paratransit revenue of $13.0 million in 2010 is insufficient to meet the 12% requirement. Based on these projections, Pace will have to take additional actions to meet the requirement. These actions may include, but are not limited to, adjusting service, reducing costs, and adjusting fares.

Operating Expenditures

Pace expects Regional ADA paratransit service operating expenditures to total $83.7 million in 2007. Without service reductions, Pace projects total

Exhibit 6-18: **Pace Total Operating Expenditures**
(dollars in millions) (1)



(1) In 2008 through 2010, expenditures reflect service reductions.

ADA paratransit service operating expenditures of $94.0 million. Pace projects that by reducing service to the minimum required by the ADA will reduce expenditures by $1.7 million in 2008, $2.1 million in 2009, and $2.5 million in 2010. By reflecting fare increases and service reductions, Pace's projected total operating expenditures are reduced by an additional $14.0 million to $78.2 million meeting the 2008 funding mark set for Pace by the RTA Board on September 14, 2007. Pace projects reducing service to the minimum required by the ADA will result in total ADA paratransit service operating expenditures of $101.4 million and $111.6 million in 2009 and 2010, respectively (Exhibit 6-18). Growth in purchased transportation costs is the primary factor behind these increases in operating expenditures.

Expenditure Elements

Operating expenditure elements include labor and fringes, health insurance, administrative expense, fuel, insurance and claims, RTA certification, suburban ADA purchased transportation, CTA service area ADA purchased transportation, and an indirect overhead allocation (Exhibit 6-14). Figures for individual expenditure elements during 2008 through 2010 do not incorporate proposed service and expense reductions which are deducted from total expenditures.

Labor/Fringe and Health Insurance Costs

To administer ADA paratransit service in the CTA service area, Pace hired 31 additional administrative support staff to supplement the six staff members who were responsible for administering the suburban ADA paratransit service. Labor/fringe and health insurance expenditures are expected to account for 2.7 percent of regional ADA paratransit service operating expenditures in 2007. Labor/fringe and health insurance expenditures are projected to grow from $2.5 million in 2008 to $2.7 million in 2010, a $0.2 million increase that corresponds to a 4.7 percent compound annual growth rate.

Administration

Administration expenditures are expected to account for 1.5 percent of regional ADA paratransit service operating expenditures in 2007. Pace leases its operations center for ADA paratransit services in Metra's downtown Chicago headquarters at 547 W. Jackson Blvd. Administrative expenditures are projected to grow from $1.6 million in 2008 to $1.7 million in 2010, at a 5.4 percent compound annual growth rate.

Fuel

Pace purchases fuel for the private operators who provide ADA paratransit service using Pace-owned vehicles in Pace's suburban service area. Fuel expenditures are expected to account for 1.7 percent of regional ADA paratransit service operating expenditures in 2007. Fuel expenditures are projected to

grow from $1.7 million in 2008 to $2.1 million in 2010, a $0.4 million increase that corresponds to an 11.8 percent compound annual growth rate.

Insurance and Claims

Insurance and claims expenditures are expected to account for 0.5 percent of regional ADA paratransit service operating expenditures in 2007. Insurance and claims expenditures are projected to remain near $0.5 million from 2008 to 2010.

RTA Certification

RTA certification expenditures comprise the cost of transporting applicants for ADA certification to and from assessment centers. These expenditures are expected to account for 1.0 percent of regional ADA paratransit service operating expenditures in 2007. RTA certification expenditures are projected to grow from $0.8 million in 2008 to $0.9 million in 2010, a $0.1 million increase that corresponds to a compound annual growth rate of 5.7 percent.

Suburban service area and CTA service area purchased transportation expenses account for 16.4% and 74.4%, respectively, of total regional ADA paratransit expenditures.

Suburban ADA purchased transportation

Suburban ADA purchased transportation expenditures are expected to account for 16.4 percent of regional ADA paratransit service operating expenditures in 2007. These expenditures are projected to increase from $15.9 million in 2008 to $19.1 million in 2010, a $3.2 million increase that corresponds to a 9.6 percent compound annual growth rate. Pace assumes that demand for suburban ADA paratransit service will increase 5.0% annually.

CTA service area ADA purchased transportation

CTA service area ADA purchased transportation expenditures are expected to account for 74.4 percent of regional ADA paratransit service operating expenditures in 2007. These expenditures are projected to increase from $68.3 million in 2008 to $84.0 million in 2010, a $15.7 million increase that corresponds to a 10.9 percent compound annual growth rate. Pace assumes that demand for CTA service area ADA paratransit service will increase 5.0% in both 2008 and 2009.

Regional ADA support allocation

In 2007, Pace expects to charge approximately $1.4 million of administrative and overhead expenses to the regional ADA paratransit budget. Pace projects that this amount will increase from $2.7 million in 2008 to $2.9 million in 2010.

Deficit and Funding

The annual operating deficits are derived from total system-generated revenue minus total operating expenditures. State ADA paratransit funding is expected to remain at $54.3 million from 2007 through 2010. Despite $19.8 million of RTA discretionary funding, Pace expects that regional ADA paratransit service will end 2007 with a need for additional funding in the amount of $2.4 million to balance the budget. RTA discretionary funding will increase from $11.7 million in 2008 to 40.1 million in 2010. From 2008 to 2010, public funding from the Sate of Illinois, the RTA, and Metra transfer capital match the annual operating deficits. Contingent on fare increases and service reductions, the budget and financial plan for ADA paratransit service presented in Exhibit 6-14 meets the funding marks set by the

Exhibit 6-19: **Pace Regional ADA Paratransit Service 2007 Budget versus 2007 Estimate** (dollars in thousands)

	Amended 2007 Budget	2007 Estimate	Variance
System-Generated Revenue			
Farebox Revenue	$ 8,995	$ 6,526	$ (2,469)
Local Share/Reimbursement	658	819	161
Total Revenue	**$ 9,653**	**$ 7,345**	**$ (2,308)**
Operating Expenditures			
Labor/Fringes	$ 2,168	$ 2,050	$ 118
Health Insurance	341	232	109
Administrative Expense	1,003	1,269	(266)
Fuel	1,503	1,451	52
Insurance/Claims	625	460	165
RTA Certification	658	819	(161)
Suburban ADA Purchased Transportation	14,770	13,726	1,044
CTA Service Area ADA Purchased Transportation	68,866	62,320	6,546
Regional ADA Support Allocation	1,529	1,392	137
RTA Adjustment to Regional ADA Expenses	(7,800)	-	(7,800)
Total Expenditures	**$ 83,663**	**$ 83,719**	**$ (56)**
Operating Deficit	**$ 74,010**	**$ 76,374**	**$ (2,364)**
Deficit Funding			
State ADA Paratransit Funding	$ 54,252	$ 54,252	-
RTA ADA Discretionary	19,758	19,758	-
Additional Operations Funding Needed	-	2,364	2,364
Total Deficit Funding	**$ 74,010**	**$ 76,374**	**$ 2,364**
Funding Surplus/Deficit	**-**	**-**	**-**
Recovery Ratio	**11.5%**	**8.8%**	**-2.8%**

RTA on September 14, 2007. These marks set the total funding levels at $68.4 million for 2008, $89.1 million for 2009, and $98.6 million for 2010.

Recovery Ratio

The recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. The RTA Act requires that regional ADA paratransit service meet a recovery ratio of 10% in 2007 and 2008 and 12% beginning in 2009. In 2008, 2009, and 2010, Pace's projected recovery ratios for regional ADA paratransit service are 12.6%, 12.1%, and 11.6%, respectively. Further revenue enhancements or expense reductions will be required to meet the 12% requirement in 2010. Exhibit 6-14 provides the detail used in this calculation.

2007 Budget versus 2007 Estimate

Pace projects 2007 operating revenue for ADA paratransit service to be $2.3 million or 23.9 percent unfavorable to budget. Passenger revenue is expected to finish the year $2.5 million or 27.4 percent unfavorable because of lower than expected ridership, while local share contributions and RTA reimbursement are expected to finish the year $0.2 million or 24.5 percent favorable to budget.

Total expenditures are expected to finish the year near budget. Expenditures for suburban service area and CTA service area purchased transportation are expected to be favorable to budget by $1.0 million (7.1 percent) and 6.5 million (9.5 percent), respectively. During the year, the RTA amended Pace's 2007 ADA paratransit budget by reducing total expected expenditures by $7.8 million.

Exhibit 6-20: **Fare Structure**

	2007 Fares	New Fares
CTA Service Area		
ADA Paratransit	$ 2.25	$ 4.00
Taxi Access Program and Mobility Direct	$ 5.00	$ 6.50
Pace Service Area		
Regular Route analog	$ 3.00	$ 4.00
Local Route analog	$ 2.50	$ 4.00

From a funding perspective, Pace expects an unfavorable variance of $2.4 million in 2007 because of lower than expected revenue (Exhibit 6-19).

Statutory Compliance

Pace's proposed 2008 budget did not meet the funding mark set by the RTA Board on September 14, 2007. To meet that mark, Pace's revenue and expense projections were reduced by $1.8 million and $14.0 million, respectively, maintaining the 12.6% recovery ratio contained in Pace's submission. Pace's projected recovery ratio in 2008 and annual funding requirements in the 2009-2010 plan for regional ADA paratransit service submitted to the RTA comply with the operating marks set by the RTA Board on September 14, 2007.

7 Capital Program

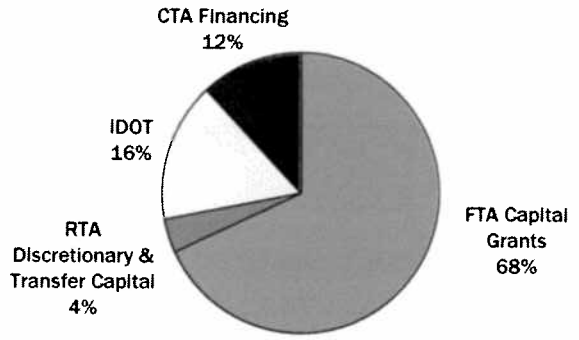
Regional Overview

The RTA Act requires that the capital expenditures of the CTA, Metra and Pace be subjected to continuing review so that the RTA may budget and expend funds available to the region with maximum efficiency. The RTA Board must adopt a five-year capital program every year. The RTA's five-year capital program describes the nature, location, and budget by project and by fiscal year of all anticipated Service Board capital improvements. Public hearings are held in each county in the northeastern Illinois region to inform the public and government officials of the Authority's capital development plans.

The RTA emphasizes the need to preserve and enhance the RTA system's valuable infrastructure. This includes bringing the system's $31.3 billion in assets (as measured in terms of replacement value) to good condition and extending or expanding service when demand is justified and funding available. This translates into a need of approximately $1 billion per year just to maintain and preserve the existing system. In 2005, Congress passed a reauthorization of federal funding for transportation projects. Although this legislation provided an increase over previous levels of funding, it will still leave a substantial shortfall.

With funding needs for capital improvements and rehabilitation greatly exceeding expected resources, the RTA and the Service Boards must actively pursue additional funding opportunities to preserve and enhance the economic viability of the RTA system.

Exhibit 7-1: **2008-2012 Capital Program Marks**



It is critical that the RTA allocate our available capital resources consistent with long-range plans and short-range needs.

2008–2012 Capital Program Marks Issues

Continued financial support for public transportation is vital to the region's economic health. However, the region's current transit needs, which are based upon bringing the entire system to a state of good repair, continue to outpace projected funding levels. For the 2008 budget, we face a large operating and capital shortfall, because there has not been any new state capital funding for transit since Illinois FIRST, and because operating funding has not kept pace with 21st century demand. The $31.3 billion asset of trains and buses and vans and stations and tracks belongs to the people of Northeastern Illinois. We are at a crossroad where we need to decide whether we are going to invest in this asset or shrink it.

(*) As noted on page 34, variances between the capital marks and program may occur.

Source of Funds

The funding sources for the RTA capital program include the U.S. Department of Transportation's Federal Transit Administration (FTA), the Illinois Department of Transportation (IDOT), the RTA, and the Service Boards. The total estimated new capital funds available for 2008 are projected at $853.6 million. After deducting $83.3 million to provide for the CTA's repayment of principal and interest on borrowed funds, $2.5 million for Regional ADA Paratransit expenses and adding $10 million of de-obligated CTA funds, $777.9 million is available for capital projects. At this time, the final federal appropriation figures for 2008 have not been determined. Once this amount has been established, the capital program will be adjusted to reflect the available funding.

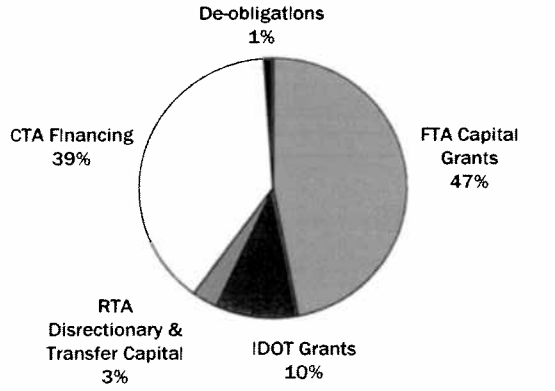
On September 14, 2007, the RTA adopted preliminary capital funding marks. Since then, the RTA received proposals for funds controlled by the Service Boards. When the RTA adopts its budget on December 14, 2007, these marks will be revised to update various federal and local funding sources based on the latest information from the Service Boards and the RTA. (Exhibits 7-1 and 7-2). Of the estimated $777.9 million of new and de-obligated funding sources for 2008, federal funding accounts for $367.5 million or 47 percent, IDOT funds account for $80 million or 10 percent, RTA funds account for $20.3 million or 3 percent, CTA financing funds account for $300 million or 39 percent, and de-obligated funds account for $10 million or 1 percent (Exhibits 7-3 and 7-4).

Federal

The RTA receives federal funds authorized under federal sections 5307, 5340 and 5309 of the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). SAFETEA-LU provides funding for federal surface transportation programs, including transit through federal fiscal year 2009. For planning purposes, the RTA preliminary marks assume the continued availability of federal funds in 2010 through 2012. At the time of this writing, Congress has not completed action on any of the federal agency funding bills.

While a formal conference has not been convened to resolve the differences in the House and Senate versions of the FFY 2008 DOT-HUD appropriation bills, the committee staffs have been meeting informally to sort through the bills. In general, aside

Exhibit 7-4: **2008 Capital Funding** - $777.9 million



from the earmarks, there are few major differences in the two bills. Both versions are very close to SAFETEA-LU levels.

Certain federal funding programs are allocated to urbanized areas based on legislatively defined formulas. The RTA region receives federal Section 5307 Urbanized Area Formula funds and federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds in this fashion. SAFETEA-LU included a new program, federal Section 5340 Growing and High Density States, also distributed by formula that will provide funds to Northeastern Illinois.

Other federal funds are available to the region on a competitive basis. The RTA, with substantial input from the Service Boards, estimates annual funding levels based on staff analysis of national funding levels, past performance, project readiness and existing legislative or contractual commitments. The federal Section 5309 (m)(2)(A) New Start and Section 5309 (m)(2)(C) Bus and Bus Facility capital funding are often earmarked in federal legislation. The RTA 2008-2012 federal Section 5309 (m)(2)(A) New Starts funding marks includes monies to complete one CTA project currently underway as earmarked in SAFETEA-LU. The RTA marks includes federal 2008 Section 5309 New Start funding of $40 million for CTA's Ravenswood lines; and $29.4 million for the completion of the CTA's Ravenswood project in 2009. In addition, Pace was awarded $280,000 in Section 5339 funds for an Alternative Analysis study for their Cermak Road Arterial Rapid Transit project.

Flexible funds are another source of federal funding for the RTA 2008-2012 capital program.

It is expected that the Federal New Starts monies for system expansion will be available in 2008-2011. However, without matching funds, the region will not be able to access these funds. Therefore, no new New Start funding is being programmed in 2009-2012.

In addition, flexible funds are another source of federal funding for the RTA 2008-2012 capital program. Flexible funds may be used either for transit or highway purposes. This provision was first included in the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and is continued with SAFETEA-LU. Flexible funds include Federal Highway Administration (FHWA) Surface Transportation Program (STP) funds and Congestion Mitigation and Air Quality (CMAQ) improvement program. The federal flexible funds, such as CMAQ and STP funds, are sought by the Service Boards through a regional competitive process.

The idea behind flexible funds is to enable a local area to choose to use certain federal surface transportation funds based on local planning priorities, not on a restrictive definition of program eligibility. Since the enactment of ISTEA, FHWA funds transferred to the FTA have provided a substantial new funding source for transit projects. FHWA funds transferred to FTA can be used for a variety of transit improvements such as new Fixed Guideway projects; bus purchases; construction and rehabilitation of rail stations; maintenance facility construction and renovations; alternative-fuel bus purchases; bus transfer facilities; multi-modal transportation centers; and technologically advanced fare collection systems.

In urbanized areas of more than 200,000 population, the decision on the transfer of flexible funds is made by the Metropolitan Planning Organization (MPO). In the RTA region, the MPO is the Chicago Area Transportation Study (CATS) Policy Committee. The Service Boards' proposed capital programs include projects that could be funded by these flexible programs.

In addition, other federal funds will be made available to the region by formula but will be allocated among a variety of agencies including transit operators on a competitive basis. These programs include the federal Section 5316 Job Access and Reverse Commute (JARC) program and federal Section 5317 New Freedom program (for services supplemental to ADA requirements). Since projects using funds for these programs will be selected in 2008 based on a

competitive selection process coordinated by the RTA and the CATS, no funding marks have been proposed at this time. The RTA Capital Program marks will be amended to include JARC and New Freedom funding to the Service Boards for capital projects only.

In summary, the 2008 RTA preliminary federal estimates reflecting the SAFETEA-LU legislation are $159.8 million for federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds, $229.9 million for federal Section 5307 Urbanized Area Formula funds combined with Section 5340 Growing and High Density States, $40 million for federal Section 5309 (m)(2)(A) New Start funds, $4.8 million for federal Section 5309 (m)(2)(C) Bus and Bus Facility funds, $0.3 million for federal Section 5339 Alternative Analysis funds, $7 million for federal flexible including CMAQ and other funds, and $11.5 million in Department of Homeland Security funds for systemwide security projects for the CTA and Metra. Furthermore, the CTA requested to reduce their federal funding by $83.3 million for the payment of debt principal and interest for 2008 and $454.3 million for this purpose in the out years. In addition, the Marks have been reduced by $2.5 million in 2008 and $17.5 in the out-years for Regional ADA Paratransit expenses.

RTA

In 1999, the RTA Act was amended as part of Illinois FIRST legislation. The legislation increased the RTA borrowing authority by $1.6 billion for capital infrastructure improvements. This amount included $1.3 billion in authorization for Strategic Capital Improvement Program (SCIP) bonds. The State of Illinois reimburses the RTA for the principal and interest expense on these bonds. The remaining $300 million represented RTA bonds for which the RTA does not receive State reimbursement. All of these funds (SCIP and RTA bonds) have been programmed to the Service Boards since 2004. Also, since the RTA bond authorization represents a cap on outstanding bonds, additional bonds can be programmed when existing bonds are retired.

The RTA's Five-Year Capital Marks contain no additional SCIP or RTA Bond funds since there has been no legislation passed to extend the RTA's bond programs. Note that any additional bonding authority would require State legislation, as well as a funding source to pay debt service on any additional bonds that were authorized to be issued.

In 1995, the RTA began funding a new Transfer Capital (TC) program that utilizes funds available for operations to be used for capital investments. The 2008-2012 Capital Program includes $101.8 million for the CTA from Transfer Capital funds.

The RTA discretionary funds are yet another source of capital funding. Discretionary funds, which are the portion of the 15 percent of the RTA Sales Tax receipts that remain after funding RTA Agency operations, can be used to match federal funds or to fully fund Service Board projects. In the past, the RTA has used these discretionary funds to address the backlog of unfunded capital needs. In the last few years, due to limited RTA Sales Tax receipts, the RTA deferred an allocation of any discretionary funds to the Service Boards for capital projects.

State

State funds historically are awarded to the Service Boards by IDOT on a discretionary basis and are used primarily for federal match purposes to ensure that sufficient local funds are made available for critical transit projects in the region. The State of Illinois has historically provided capital support of public transportation in Northeastern Illinois. However, no State capital program has been adopted since 1999. Therefore, the marks assume only that the State will provide sufficient funds to match available federal formula funds. Without an adequate State capital program the transit system will have insufficient funds to maintain, let alone enhance and expand the transit system.

Service Boards

Funding for this category includes Service Boards' own funds, local community and other non-traditional funding from state and federal agencies based on information supplied by the Service Boards. Historically the Service Boards have occasionally transferred monies from current revenues or fund balances to the Capital Programs. Until additional operations funding is available, it will be difficult for such transfers to be made. Therefore, no Service Board transfers from operations are allocated at this time.

CTA Financing

The CTA is proposing to borrow funds of $300 million in 2008. These funds will enable the acceleration of rail car and bus purchases, construction of the Howard and Washington Intermodal stations, upgrade of the Blue Line and Loop Elevated signals and the timely repair of track and structure by the CTA. The CTA will secure all funds and pay for all borrowings from their federal Section 5307 formula funds and federal Section 5309 Fixed Guideway Modernization funds.

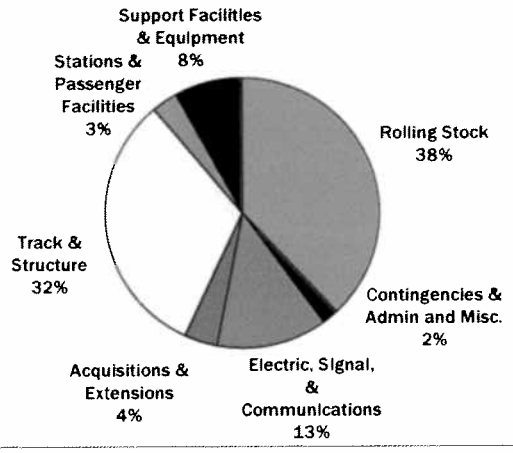
Transfer to Operating

The Capital Marks have not been reduced to reflect the Service Boards' use of Section 5307 Urbanized Area Formula and Section 5309 Fixed Guideway Modernization funds for their operating budgets. These funds have been used in past years when operations funding or deficit reductions were not sufficient to balance operating budgets.

Use of Funds

The RTA capital program increased dramatically in 2000 primarily as a result of the increased funding included in the Illinois FIRST program. The 1999 program totaled $552.7 million. The average funding level from 2000 thru the 2004 program was $918.8 million, a 60 percent increase. The CTA, Metra and Pace have responded by significantly increasing their project implementation performance. An average of $418 million was obligated annually by the Service Boards from 1995 thru 1999. From 2000 thru 2007 (projected), the Service Boards have awarded an annual average of $797 million in contracts. Project spending has also increased substantially, from an average of $420 million per year from 1995 thru

Exhibit 7-8: **Regional Five-Year Assets by Category** - $2,575 million



1999 to $784 million from 2000 thru 2007 (projected). Exhibits 7-5 and 7-6 illustrate these trends. These results show that the Service Boards are putting the monies available to good use, providing benefits to public transportation riders. However the 2008-2012 capital program only averages $514.9 million per year.

The primary emphasis of the 2008 capital program is to continue efforts to bring the system's assets to a state of good repair. When replacing worn out items, it is imperative to utilize modern technologies that often result in improved functionalities of equipment, facilities and rolling stock. In addition, a balanced capital program is responsive to customer needs and shifting markets by including investment in system expansion. While the current funding level does not satisfy all needs, an appropriate balance of investment is achieved.

Investments in the capital program can also be broken down by various asset categories. Exhibits 7-7 and 7-8 show that $971 million or 38 percent of the program is spent on rolling stock and $75 million or 3 percent for station and passenger facilities which are considered to have the greatest direct impact on transit users. Substantial investment in other infrastructure is also critical to maintaining safe, reliable transportation services.

The 2008-2012 capital programs for the CTA, Metra, and Pace are presented by major asset categories in Exhibits 7-9 –7-12. Some of the more significant projects included in the proposed 2008-2012 capital program are:

- $212.9 million for the purchase of 406 CTA rail cars;
- $208.2 million for the rehabilitation of right-of-way to reduce slow zones;
- $152.7 million for the rehabilitation and overhaul of CTA rail cars;
- $140.3 million for the continuation of the purchase of CTA buses;
- $91.2 million for the expansion of the CTA Ravenswood Brown Line;
- $88.2 million for the replacement and upgrade of the CTA power distribution and signals;
- $73.2 million for the rehabilitation and overhaul of CTA buses;
- $139.2 million for Metra bridge rehabilitation and renewal;
- $128 million to initiate the purchase of bi-level cars for the Metra Electric District;
- $66 million for the rehabilitation of Metra commuter rail cars;
- $53.8 million for the construction and renewal of Metra yards, shops and facilities;
- $53.2 million for the upgrade of Metra signal systems;

CTA tracks and signals

- $34 million for the rehabilitation and improvement of Metra locomotives;
- $66.6 million for the purchase of Pace fixed route buses;
- $24 million for the purchase of 300 Pace paratransit vehicles;
- $23.4 million for the purchase of Pace vans and community vehicles;
- $21.5 million for improvements to Pace garages and facilities;
- $20 million for the purchase of a replacement of Pace's fixed route radio system;
- $20 million for the purchase of a replacement Pace farebox system;
- $14.4 million for the purchase of the replacement for the HPe3000 computer system;
- $3 million for the construction of passenger and transfer facilities; and
- $1.8 million for the implementation of Transit Signal Priority projects.

CTA Overview

The proposed projects in the CTA's portion of the 2008-2012 capital program total $1.5 billion. The CTA's portion of the capital program continues the rehabilitation and replacement of their capital assets. The percentage for the general categories of capital improvements of the total program are: rolling stock at 40 percent, track and structure (including acquisitions and extensions) at 42 percent, electric, signal and communications at 10 percent, support facilities and equipment at 4 percent, and stations and passenger facilities and miscellaneous at 4 percent. The general categories of capital improvements comprising the CTA's portion of the capital program are illustrated in Exhibit 7-9.

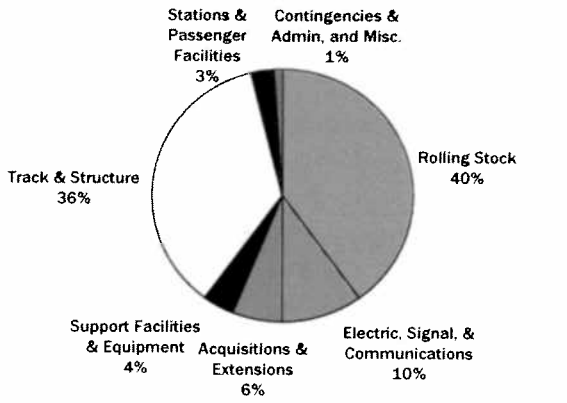
Highlights of the CTA's portion of the 2008-2012 capital program are as follows:

Rolling Stock

The CTA's portion of the 2008-2012 capital program includes $213.6 million in the bus rolling stock category. The CTA's bus fleet consists of approximately 2,175 vehicles. The CTA's portion of the 2008-2012 capital program contains $140.3 million for replacement of overage buses. These buses will have reached the industry standard retirement age of 12 years by the end of the five-year program. Continued operation of these buses imposes unnecessarily high maintenance and operating costs and reduces service reliability for the CTA's customers. All new buses will be air conditioned, low-floor and fully accessible to persons with disabilities. In 2008, on-going bus purchases totaling $105.3 million are planned to complete the purchase of 1,050 buses in the current bus contract. The CTA's out-year program includes $35 million to begin the replacement of the remaining buses purchased in 1995. All of these buses have or will have exceeded their useful life by the time they are replaced.

In addition, $73.2 million is budgeted for capital-eligible bus maintenance activities and life extending overhauls over the five-year program with $14.1 million planned in 2008. The CTA will continue its aggressive Bus Preventive Maintenance Program to schedule the replacement of parts nearing the end of their useful life. This program will improve the comfort, quality and reliability of the CTA's bus service and will reduce operating expenses by avoiding service disruptions and unscheduled maintenance of buses.

Exhibit 7-9: **CTA Five-Year Assets by Category** - $1,453 million



CTA hybrid bus

The rail rolling stock category includes $365.6 million in 2008-2012 to rehabilitate or purchase CTA rail cars. The CTA's rail fleet consists of approximately 1,190 CTA cars. The five-year program includes $212.9 million for the replacement of aging 2200 and 2400 Series rail cars and the purchase of additional cars to meet the service requirements associated with the Brown Line capacity expansion. Also, the 2008-2012 capital program contains $152.7 million for the CTA systematic maintenance and upgrade of rapid transit rolling stock including the overhaul and mid-life rehabilitation for the 2200 and 2400 Series rail cars. The 2200 Series cars have been in service for more than 36 years and the 2400 Series cars have been in service for more than 28 years; both have already exceeded their expected service life. The average car in the CTA rail fleet is over 24 years of age in 2008 and approximately 30% of the fleet exceeds the 25-year FTA standard life of a rail car. The CTA is proposing $18.4 million for the purchase of new rail cars in 2008.

Track and Structure/ Acquisitions & Extensions

The track and structure category including acquisitions and extensions includes $620 million in 2008-2012 to rehabilitate and expand existing rail lines with $270 million programmed in 2008. The CTA rail system contains over 287.8 total track miles, including yard track. Of these, 63.2 miles are at grade, with exclusive right-of-way; 32.1 miles are at grade with cross traffic; 111.1 miles are on elevated structure; 55.2 miles elevated are on fill; 2.9 are open cut miles; and 23.3 miles are subway.

The highlights of CTA's five-year track and structure program are:

1) The capacity expansion of the Ravenswood Brown Line from Kimball Terminal to Tower 18 in the Loop by extending platforms to accommodate eight-car trains and making selected yard improvements, at a cost of $91.2 million over the next two years, with $50 million programmed in 2008; and

2) The repair of track and structure, at a cost of $529 million, with $220 million programmed in 2008. The five-year program includes $208.2 million for rehabilitation of right-of-way, ties track and structure to reduce slow zones.

Electrical, Signal, and Communications

The electrical, signal, and communications category totals $152 million for the CTA's portion of the proposed five-year program, with $94.7 million programmed in 2008. The CTA's five-year plan includes the replacement and upgrade of the train control and track interlocking on the Loop Elevated Line with modern equipment providing increased reliability for customers at a cost of $13.7 million. It also includes the upgrade and replacement of the signal system for the entire Dearborn Subway, the Congress Branch and a portion of the O'Hare Branch on the Blue Line a cost $74.5 million. The capital program includes $24.2 million for the Bus Tracker

CTA track construction

Red Line Howard Station reconstruction

system with $12.6 million programmed for 2008. In addition, the CTA's five-year program includes $39.5 million for systemwide security enhancements with $13.5 million programmed for 2008.

Support Facilities and Equipment

The CTA's portion of the 2008-2012 capital program includes $55.8 million in the support facilities and equipment category with 2008 funding of $10.1 million.

The CTA's five-year program includes upgrades and improvements to various CTA facilities that need repair and require security enhancements, upgrades to bus turnarounds, rail stations and bus garages, and the rehabilitation of elevators and escalators. Various escalators and elevators throughout the system are beyond their service life, require continual maintenance work and need to be replaced. Other escalators and elevators are in poor condition and need to be rehabilitated.

Stations and Passenger Facilities

The stations and passenger facilities category totals $38 million in 2008 of the CTA's the proposed five-year program. The CTA operates 144 rapid transit stations serving eight routes. Seventy-seven of these stations are wheelchair accessible via elevator or ramp. The CTA will use the funding in the capital program to reconstruct the Howard Station on the Red Line including the reconstruction of the bus terminal and parking lot. The station will be made fully compliant with the Americans with Disabilities Act. The CTA proposes to program $33.4 million to complete the construction of the Howard Station on the Red Line and $4.7 million to continue construction of the Washington Street Station/Block 37 project connecting the State Street and Dearborn subways in downtown Chicago.

Metra Overview

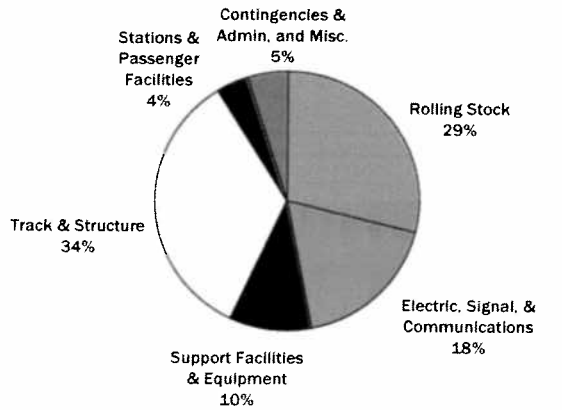
Metra's portion of the proposed 2008-2012 capital program totals $894 million. During this five-year period, Metra will continue the process of renewing its extensive commuter rail infrastructure. The percentage for the general categories of capital improvements of the total program are: rolling stock at 29 percent; track and structure at 34 percent; electric, signal, and communications at 18 percent; support facilities and equipment at 10 percent; stations and passenger facilities at 4 percent; and contingencies, administration and miscellaneous at 5 percent (Exhibit 7-10).

Highlights of Metra's 2008-2012 Capital Program are as follows:

Rolling Stock

The five-year rolling stock program totals $261 million, with $24.4 million planned for 2008. Metra's fleet includes 144 locomotives, 818 non-electric cars

Exhibit 7-10: **Metra Five-Year Assets by Category** - $894 million



Schiller Park station at Metra's North Central Service line

and 173 self-propelled electric cars. The 2008-2012 capital program includes $34 million for the rehabilitation and improvements of locomotives, $66 million for the rehabilitation and improvements of commuter cars, and $17.6 million for the overhaul of rolling stock fleet components. Metra's out-year capital program includes $128 million to initiate the purchase of bi-level cars for the Electric District.

Track and Structure

The track and structure category totals $303 million over the five years of the program, with $63.5 million planned for 2008.

The Metra system operates on approximately 475 route miles with over 1,100 miles of track and 800 bridges. Metra is continuing a program of systemwide rehabilitation and preventive maintenance that includes bridge rehabilitation, grade separation, retaining wall rehabilitation, continuous-welded rail installation, ties and ballast replacement, rail grinding, fence installation, grade crossing replacement, and track undercutting.

Bridge rehabilitation and replacement projects, totaling $139.2 million, are planned over the five-year program including $17.7 million for 2008. Metra is also proposing $98.7 million for track infrastructure improvements in the five-year capital program with $27 million programmed for 2008.

Electrical, Signal and Communications

A total of $158 million is planned for the five-year program for electric, signal and communications projects that include upgrades and improvements to existing facilities such as interlockers, switches, signal systems, and electrical power control facilities. The 2008 program provides $24.7 million for numerous projects throughout the system.

Metra's capital program includes $53.2 million to upgrade signal systems with $10.4 million programmed for 2008. The capital program also includes $40 million to upgrade interlockers and $27.5 for electrical and communications improvements.

Support Facilities and Equipment

The support facilities and equipment category totals $93 million for the 2008-2012 planning period, with $22.5 million in the 2008 capital program. Support facilities and equipment includes rail car and locomotive maintenance buildings, storage yards, work crew headquarters, maintenance vehicles and equipment, office buildings, and associated computer hardware and software.

Metra's portion of 2008 capital program includes $8.5 million to renew yards, shops and facilities with $45.3 million planned for the out-years. Metra is also proposing $3.9 million in 2008 with $17.5 million in the out-years to purchase right-of-way maintenance equipment and $11 million in the five-year capital program to improve work crew facilities.

Grand Cicero station at Metra's Milwaukee District West line

Stations and Passenger Facilities

There are 232 stations in the Metra system, including four major terminals in downtown Chicago. In Metra's portion of the five-year capital program, a total of $32 million is programmed for stations and parking. In 2008, $12.7 million is programmed for these projects.

The 2008-2012 capital program includes $21.3 million to upgrade stations and improve platforms and ramps for compliance with the Americans with Disability Act (ADA); $2.2 million for the new 35th Street Station on the Rock Island District and $2 million to improve the Des Plaines Station on the Union Pacific Northwest Line. In addition, the 2008 capital program includes $1 million for parking fee collection equipment.

Miscellaneous, Contingencies and Administration

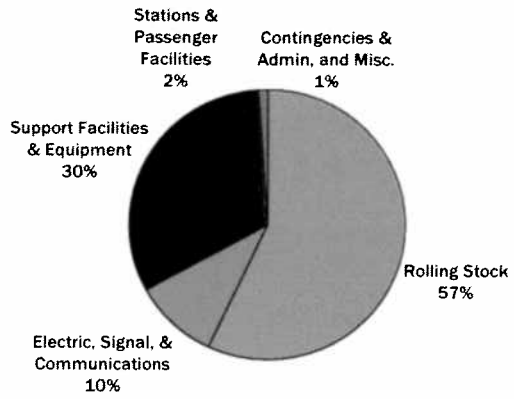
Metra's portion of 2008-2011 capital program includes $47 million for station studies, project management and oversight, security improvements, advertising, material additives, insurance, support engineering, unanticipated capital, administration and contingencies, with $18.2 million programmed in 2008.

Pace Overview

Pace's portion of the proposed 2008-2012 capital program totals $228 million. A majority of the funding is provided for the replacement and expansion of rolling stock. The percentage for the general categories of capital improvements of the total program are: rolling stock 57 percent; electric, signal and communications 10 percent; support facilities and equipment 30 percent; stations and passenger facilities 2 percent and contingencies and administration at 1 percent. These allocations are illustrated in Exhibit 7-11.

Highlights of Pace's 2008-2012 Capital Program are as follows:

Exhibit 7-11: **Pace Five-Year Assets by Category** - $228 million



Rolling Stock

In the five-year capital program, Pace plans to purchase up to 992 transit vehicles for replacement and expansion at a cost of $114 million. Pace's fleet consists of 705 fixed-route buses, 358 paratransit vehicles and 767 vanpool vehicles. Pace's 2008 fixed route bus purchase budget of $12.2 million includes the replacement of 33 fixed route buses purchased in 1992 and 1993. All the buses to be replaced have exceeded their useful life; and the new vehicles will be 30 feet in length.

In 2008, Pace also plans to spend $6.4 million to purchase up to 80 paratransit vehicles to replace vehicles that have exceeded their useful lives. These vehicles will be a combination of buses and vans.

In addition to other rolling stock purchases, Pace's portion of 2008 capital program includes $4.4 million for the purchase of 50 community vehicles and $2.9 million for the purchase of 75

El Dorado National 30-foot bus

Pace Vanpool Incentive Program

vans for services throughout Pace's territory. Pace's community vehicle program leases small vehicles to local communities which provide locally based transit services. The funds for the vanpool programs are for the replacement of the vanpool vehicles which have exceeded their useful life and for the expansion of service. Pace's vanpool program is composed of the Vanpool Incentive Program (VIP), the Corporate Shuttle Program and the ADvAntage Program in addition to the Municipal Vanpool Program.

This program includes a bus overhaul program including the replacement of bus components such as A/C condensers, alternators, regulators, drive shafts, transmission coolers, fan motors, steering shafts, and other items. Under the rolling stock category, Pace proposes $2 million for bus overhaul in 2008, with $8 million programmed in the out-years.

The purchase of associated capital items, estimated at a cost of $3.1 million, is also planned in 2008. The 2009-2012 capital program includes $4 million for associated capital purchases. Associated capital items include engines, transmissions, axle assemblies and other parts for fixed route and paratransit vehicles.

Electrical, Signal and Communications

Pace's portion of the 2008 capital program includes $0.8 million to implement four Transit Signal Priority (TSP) projects earmarked in the federal Accountable, Flexible, and Efficient Transportation Equity Act—A Legacy for Users (SAFETEA-LU) legislation. The Transit Signal Priority projects included in the program contains continuation of funding for the development and purchase of the TSP system in major corridors. These TSP corridors are: Cermak Road, Rand Road, Cicero Avenue, and South Suburban.

Also, Pace proposes $20 million in the five-year capital program for the purchase and installation of a new systemwide radio system to replace Pace's existing radio system with $0.6 million planned for 2008. The existing system is 13 years old and has exceeded its useful life, and parts are becoming difficult to find. The new radio system will not only save operating money, the technology will provide Pace with better communication coverage.

Support Facilities and Equipment

Pace proposes to program $68 million over five years for support facilities and equipment. Of the $12.9 million for support facilities and equipment projects planned in 2008, Pace's portion of the capital program includes $4.4 million for improvements to garages and facilities. 2008 includes funds to make critical improvements to our facilities such as the replacement of concrete, fire sprinklers, security systems and overhead doors. The out-year plan includes $17 million for improvements and upgrades at various garages. The capital program also includes $14.4 million in 2008-2012 for the purchase and installation of the Enterprise Resource Planning System. This program provides for the

Ramped minivan

continuation of funding for the HPe3000 migration project, an integrated system of financial, purchasing and other business processes.

The 2008 program includes $0.9 million for the purchase of miscellaneous maintenance and office equipment and replacement of non-revenue vehicles with a total of $3.5 million programmed through 2012.

In addition, Pace's capital program includes $5 million for the purchase of software and hardware and associated design and installation services for computers, printers, computer systems, network, communications, and presentation needs with $1.9 million programmed in 2008. Further, Pace's five year capital program proposes $1.9 million for the purchase of office equipment with $250,000 programmed in 2008. Pace's capital program includes $1.2 million in 2008 for the purchase of a safety data/video recording system for fixed route buses. Pace's out year program plans $20 million to purchase a replacement farebox system.

Stations & Passenger Facilities

Five-year program includes $5 million for Pace stations and passenger facilities. This funding will provide for upgrades of numerous passenger facilities as well as the purchase of bus stop signs, shelters and other passenger amenities.

Acquisition and Extensions

The 2008 capital program contains funding of $280,000 for an Alternative Analysis study for the Cermak Road Arterial Rapid Transit (ART) project.

Project Administration

A total of $2 million is proposed for project administration for 2008 through 2012. Pace project administration covers the in-house staff salaries associated with undertaking and completing capital projects.

	GRAND TOTAL		**777,873,717**	**1,796,761,908**	**2,574,635,625**

Capital Impact on Operations

Capital investments by the three Service Boards are intended to improve public transit service while reducing operating costs. Procurement of replacement vehicles for bus and rail fleets will improve service reliability, while reducing maintenance costs and fuel consumption. Similarly, investments in vehicle overhaul and preventive maintenance programs will reduce service failures and vehicle down time. Rail line expansion and infrastructure improvements will increase passenger capacity and travel speed, as well as improve safety. System-wide improvements, including upgrades in passenger and maintenance facilities, communications and computer equipment, and security systems, will improve employee productivity, operating efficiency and passenger safety (Exhibit 7-13 through 7-15).

The mass transit system has faced significant challenges over the past year. Insufficient operating and capital funding have forced the RTA and its partners at the CTA, Metra, and Pace to make tough decisions in order to maintain vital transportation services for millions of riders throughout northeastern Illinois. Despite these challenges the system was able to fulfill its critical responsibility throughout 2007 to the people, businesses and institutions of the nation's third largest metropolitan region.

CTA

The proposed 2008 Capital Program for CTA totals $566.0 million which is divided among the following: Rolling Stock for $153.1 million; Track & Structure for $220.0 million; Electrical/Signal/Communications for $94.7 million; Support Facilities & Equipment for $10.1 million; Stations & Passenger Facilities for $38.1 million; and Acquisitions & Extensions for $50.0 million.

Exhibit 7-13: **CTA Capital Impact on Operations** (includes some of the major programs only)

Type	Current Service	Nov 4, 2007 *	Jan 6, 2008 *	New Service	Impact on Operations
Rolling Stock					
Replacement of 1,050 buses ($105.3 million)					• Prevent disruption of operation (oldest buses age 12 to 17 years) • Reduce maintenance costs by $6.9 million • Increase fleet reliability • Reduce travel delay
Elimination of bus routes	154	39	43	72	• Reduce operating expense by $92.6 million • Reduce additional maintenance costs as a result of retiring older fleet on existing bus routes
Replacement of 406 rail cars ($18.4 million)					• Increase fleet reliability (30% of the fleet exceeds the 25-year FTA standard life of a rapid transit car) • Reduce maintenance costs
Track & Structure					
Repairs ($220.0 million)					• Maintain safe, reliable travel • Eliminate the impose slow zones • Faster travel time
Employee layoff	10,907	477	1,799	8,631	• Reduce operating expense by $10.4 million as a result of reduced bus service
Deferring bus and rail car overhauls (due to transfer of capital funds to operating to maintain a balance budget)					• Increase maintenance costs by $0.7 million • Severe disruption of service

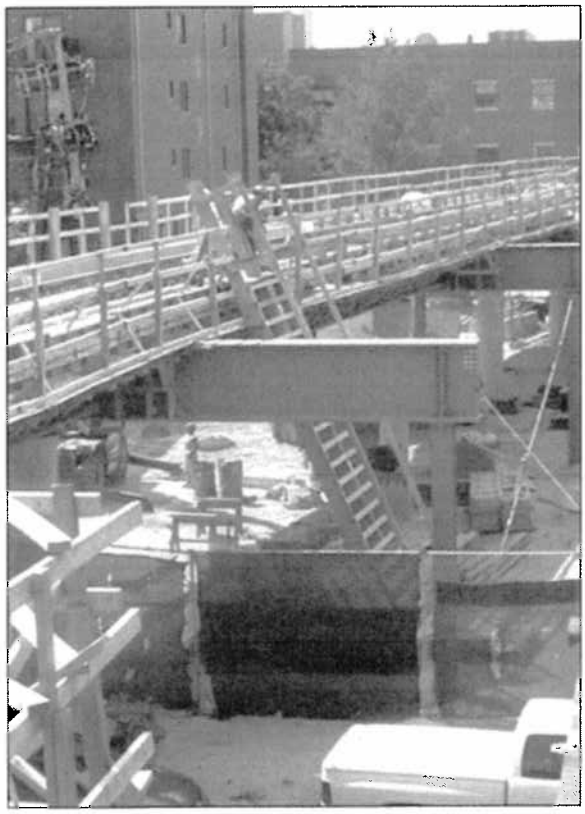
(*) See details on service reductions in the CTA section.

Exhibit 7-14: **Metra Capital Impact on Operations** (includes some of the major programs only)

Type	Impact on Operations
Rolling stock	
Rehabilitation of Commuter Bi-level rail cars ($14.5 million)	• Maintain on-time performance • Reduce maintenance cost • Enhance safety • Increase customer satisfaction
Track & Structure	
Rehabilitation of bridges ($17.7 million)	• Preserve uninterrupted service - higher on-time performance • Improve vertical clearances, • Improve traffic flow and pedestrian safety
Electrical, Signal & Communications	
Signal system upgrade ($10.4 million)	• Improve travel times resulting in higher on-time performance • Enhance safety
Stations & Passenger Facilities	
Station upgrades and ADA accessibility improvement ($6 million)	• Increase ridership • Increase other revenue by providing more commercial and retail space

	1985 *	2006	% Change	Comments
Systemwide				
Cost per Passenger Trip	$7.45	$7.28	-2%	For more than 20 years Metra's capital reinvestments resulted in reductions in operating expense. *"The more we capitalize, the less we subsidize."*
Cost per Passenger Mile	$0.36	$0.32	-11%	
Subsidy per Passenger Mile	$0.16	$0.15	-6%	

(*) Adjusted for inflation.



Belmont station track 4 construction at the CTA Brown line

Metra

The proposed 2008 Capital Program for Metra totals $166.0 million which is divided among the following: Rolling Stock for $24.4 million; Track & Structure for $63.5 million; Electrical/Signal/Communications for $24.7 million; Support Facilities & Equipment for $22.5 million; Stations & Passenger Facilities for $12.7 million; and Miscellaneous for $18.2 million.

Ballast, track, and signal upgrade at Metra's Milwaukee West line

Exhibit 7-15: **Pace Capital Impact on Operations** (includes some of the major programs only)

Type	Impact on Operations
Rolling stock	
Purchase of 173 fixed route accessible buses ($12.2 million)	• Reduce maintenance cost • Improve travel time • Enhance safety
Replacement of engines, transmissions and other major components ($5.1 million)	• Reduce operating expense by $1.5 million • Lower maintenance cost • Improve travel time
Purchase 300 paratransit vehicle ($6.4 million)	• Increase ridership • Reduce maintenance cost • Improve travel time • Enhance safety
Electrical, Signal & Communications	
Replacement of radio system phase 1 ($0.6 million)	• Provide clear, reliable communication; better communication coverage and reduces static
Transit Signal Priority Projects (TSP) ($0.7 million) (TSP is an operational strategy to facilitate the movement of in-service transit vehicles through traffic signal controlled intersections)	• Reduce 7-20% transit travel time • More reliable schedules • Reduce the number of buses needed to operate the service resulting in a lower operating expense • Increased passenger satisfaction
Support Facilities & Equipment	
Replacement of Computer EquipmentSystem ($2.2 million)	• Increase overall operating expense by $1.1 million as a result of increased labor and staff time associated with the implementation of Phase II (ERP system)
Miscellaneous Alternative Analysis ($0.3 million)	• Increase ridership as a result of providing alternative bus routes for faster transit travel (Study for Cermak Raod Arterial Bus Rapid Transit (ART) - potentail vendor see pictures below)

Pace

The proposed 2008 Capital Program for Pace totals $45.9 million which is divided among the following: Rolling Stock for $30.9 million; Electrical/ Signal/Communications for $1.4 million; Support Facilities & Equipment for $12.9 million and Miscellaneous for $0.7 million.

8 Appendices

Exhibit 8-1: **2008 Budget Call Calendar** (dates listed are in 2007)

June 28	RTA Finance Committee meeting; 2008 budget call release.
Aug. 1 - 17	Service Board five-year capital program, ten-year capital plan and critical issue submittals due to the RTA. Service Boards submit budget call documents (budget and two-year financial plan information) to the RTA immediately following each Service Board's August Board meeting.
Aug. 17 - 31	RTA staff analysis of each Service Board's budget and two-year financial plan information. RTA and Service Board staffs discuss business issues. RTA staff prepares the budget, the two-year financial plan, the preliminary five-year capital program, and preliminary ten-year capital plan summaries for management review. RTA staff submits for management review the finance and ordinance information required to: (1) set the operating funding marks for the 2008 budget and the 2009-2010 financial plan of each Service Board, (2) set the 2008 budget recovery ratio for each Service Board, and (3) set the preliminary 2008-2012 five-year capital program marks.
Sep. 14	RTA Finance Committee meeting to review and discuss the preliminary five-year capital program marks, review each Service Board's budget and two-year financial plan, and discuss an ordinance setting the operating funding marks and recovery ratio. RTA Board meeting to discuss and consider adoption of an ordinance which sets the operating funding marks from 2008 through 2010, the 2008 recovery ratio and the preliminary five-year (2008-2012) capital program marks for each Service Board.
Sep. 14 - Oct. 15	Service Boards develop detailed budgets, two-year financial plans, a seven-year long-term financial view, performance measures, preliminary five-year capital programs, and a preliminary ten-year capital plan. Staff of the RTA and Service Boards meet to review issues.
Oct. 1 - Dec. 7	FTA releases Federal Fiscal Year 2008 Apportionments in the Federal Register.
Oct. 2 - Dec. 7	RTA and NIRPC renegotiate Letters of Understanding regarding the FTA Sections 5309 and 5307 allocations between NE Illinois and NW Indiana; and RTA and SEWRPC renegotiate Letter of Understanding regarding the FTA Section 5307 allocation between NE Illinois and SE Wisconsin.
Oct. 15 - Nov. 9	Service Boards release their budgets, two-year financial plans, seven-year long-term financial view, performance measures, and preliminary five-year capital program and ten-year capital plan documents to the public, and present highlights to the County Boards.
Nov. 1	RTA Board Committees and the RTA Board review the RTA Agency budget.
Nov. 6 - Dec. 7	RTA Board Members and staff present highlight summaries of the regions proposed budget, two-year financial plan, seven-year long-term financial view, performance measures, and preliminary five-year capital program and ten-year capital plan to County Committees and their Boards.
Nov. 9 - 21	RTA staff consolidates the proposed budgets, financial plans, performance measures, and revised capital programs of the Service Boards and Agency into proposed 2008 annual budget, two-year financial plan, seven-year long-term financial view, performance measurements, and five and ten-year capital program and plan documents.
Nov. 15	Service Boards submit proposed budgets, two-year financial plans, seven-year long-term financial view, performance measures, and revised five and ten year capital programs and plans to the RTA.
Nov. 16	CMAP Transportation Committee meets to recommend to the CATS Policy Committee the FTA allocations between NE Illinois, NW Indiana, and SE Wisconsin.
Nov. 26	The RTA's proposed 2008 budget, 2009-2010 financial plan, 2011-2017 long-term financial view, performance measures, and five and ten-year (2008-2017) capital program and plan documents are available for public inspection.
Dec. 6 - 13	RTA holds public hearings (dates to be determined) on the proposed consolidated 2008 budget, 2009-2010 financial plan, 2011-2017 long-term financial view, performance measures, and 2008-2017 capital program and capital plan.
Dec. 14	RTA Finance Committee meeting to review and discuss the 2008 budget, the 2009-2010 financial plan and the revised 2008-2012 capital program. RTA Board meeting to review and consider adoption of an ordinance for the 2008 budget, the 2009-2010 financial plan, and the revised five-year (2008-2012) capital program. The Finance Committee and RTA Board meet to review and consider concurrence with the 2011-2017 long-term financial view and the 2008-2017 ten-year capital plan.

Exhibit 8-2: **RTA Community Meetings/Budget Hearings Schedule**

The RTA is seeking public input regarding the Moving Beyond Congestion strategic planning process and the 2008 proposed operating and capital program budget for public transportation in the region. Meetings are open to the general public. No RSVP necessary. All locations are ADA accessible. For questions, call the RTA at 312-913-3200.

CHICAGO

Central - Thursday, December 6th
9:00 am - 10:30 am
RTA Headquarters, Board Room
175 W. Jackson Boulevard, Suite 1550 Chicago

South - Thursday, December 6th
6:00 pm - 7:30 pm
Sheldon Heights Church of Christ
Corner of 113th Street and Halsted Street Chicago

North- Monday, December 10th
6:00 pm - 7:30 pm
Loyola University Lakeshore Campus, Auditorium
Kenmore Avenue and Sheridan Road Chicago

Southwest - Wednesday, December 12th
6:00 pm - 7:30 pm
Toman Public Library
2708 S. Pulaski Road Chicago

West* - Thursday, December 13th
6:00 pm - 7:30 pm
South Loop School
1212 S. Plymouth Court
(at State Street & Roosevelt Road) Chicago

**Relocated from National Teachers Academy, 55 W. Cermak Road, Chicago*

SUBURBAN COOK COUNTY

North - Monday, December 10th
6:00 pm - 7:30 pm
Pace Headquarters, Board Room
550 W. Algonquin Road Arlington Heights

South - Wednesday, December 12th
6:00 pm - 7:30 pm
South Suburban Mayors and Managers Association
Meeting Room C
1904 W. 174th Street East Hazel Crest

DUPAGE COUNTY

Thursday, December 6th
6:00 pm - 7:30 pm
DuPage County Building Auditorium
421 N. County Farm Road Wheaton

KANE COUNTY

Tuesday, December 11th
6:00 pm - 7:30 pm
Kane County Government Center
Building A, Auditorium
719 Batavia Avenue (Route 31) Geneva

LAKE COUNTY

Wednesday, December 12th
6:00 pm - 7:30 pm
University Center of Lake County
1200 University Center Drive Grayslake

MCHENRY COUNTY

Thursday, December 6th
6:00 pm - 7:30 pm
Administration Building, Conference Room A
667 Ware Road Woodstock

WILL COUNTY

Tuesday, December 11th
6:00pm-7:30pm
Joliet Historical Museum
204 N. Ottawa Street Joliet

Public Hearing Overview

Section 4.01 of the RTA Act directs the RTA to hold public hearings on its annual consolidated budget and financial plan, prior to Board consideration of the ordinance adopting the budget and plan. This year the RTA held twelve public hearings during the first two weeks of December 2007 with one in each Collar County and seven occurring around Cook County. The meetings were publicized in press releases issued to the media, legal notices in newspapers across the region, e-mails and calls to Moving Beyond Congestion Partners for Transit, the RTA's InTransit newsletter, a special communication to elected officials, as well as through the Service Boards, at reduced fare presentations, and on MovingBeyondCongestion and RTA websites. The hearing schedule is detailed in Exhibit 8-2.

At these meetings, the RTA briefed the public on the proposed RTA 2008 Budget, provided an update on the Moving Beyond Congestion strategic plan, and responded to comments and questions. Presenters included Executive Director Steve Schlickman and RTA senior management who were joined by RTA board members at several hearings. The approximately 50 attendees included members of the general public, representatives of municipalities and Partners for Transit organizations, and State and local elected officials.

The majority of comments on record were supportive of the RTA strategic plan and State legislation that calls for additional transit funding. Strong opposition to fare increases, service cuts and layoffs was also expressed. Court reporters were present to take testimony, and transcripts of this testimony are on file at the RTA.

Glossary

Accessible—As defined by FTA, a site, building, facility, or portion thereof that complies with defined standards and that can be approached, entered, and used by persons with disabilities.

Accessible Service—A term used to describe service that is accessible to non-ambulatory riders with disabilities. This includes fixed-route bus service with wheelchair-lifts or dial-a-ride service with wheelchair lift-equipped vehicles.

ADA (The Americans with Disabilities Act of 1990)—This federal act requires many changes to transit vehicles, operations and facilities to ensure that people with disabilities have access to jobs, public accommodations, telecommunications, and public services, including public transit.

ADA Paratransit Service—Non-fixed-route paratransit service utilizing vans and small buses to provide pre-arranged trips to and from specific locations within the service area to certified participants in the program.

Administration Expenditure—Expenditures for labor, materials and fees associated with general office functions, insurance, safety, legal services, and customer services.

Agency Fund—This fiduciary fund accounts for the assets held by the RTA in a trustee capacity or as an agent for the CTA, Metra, and Pace, rather than for the RTA's own programs. (Of the four types of fiduciary funds [Agency funds, pension (and other employee benefit] funds, investment trust funds, and private-purpose funds), the RTA uses only the first two.)

Ambulatory Disabled—A person with a disability that does not require the use of a wheelchair. This would describe individuals who use a mobility aid other than a wheelchair or have a visual or hearing impairment.

Appropriation—A legal procedure that permits a specified amount of funds for a given operating or capital purpose to be expended; the RTA appropriates funds for expenditures.

Balanced Budget—A budget in which expected revenues equal expected expenses during a fiscal period.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

Budget—Funds allocated by the RTA Board for a particular purpose; each year the RTA Board approves a budget document for the following year. Funds are allocated either by "programming" them or by "appropriating" them.

Budget Marks—The Regional Transportation Authority Act, as amended in 1983, requires the RTA to advise each of its Service Boards by September 15 of each year of its required revenue recovery ratio for the subsequent year, and the public funding estimated to be available for the next three years. These figures are referred to as budget marks.

Bus Bunching—A traffic scenario in which more than one bus arrives at the same time. This phenomenon is a subject of several CTA initiatives aimed at reducing service problems through improved field management of traffic and schedules.

Bus Rapid Transit (BRT)—BRT combines the quality of rail transit and the flexibility of buses. It can operate on exclusive transitways, High Occupancy Vehicle (HOV) lanes, expressways, or ordinary streets. A BRT system combines intelligent transportation systems technologies, priority for transit, cleaner and quieter vehicles, rapid and convenient fare collection, and integration with land use policies.

Capacity Utilization—The percentage of seats occupied in a train or bus at a given point in time.

Capital—Funds that finance construction, renovation, and major repair projects or the purchase of machinery, equipment, buildings, and land.

Capital Expenditure—Expenditures that acquire, improve, or extend the useful life of any item with an expected life of three or more years and a value of more than $5,000, e.g., rolling stock, track and structure, support facilities and equipment, and stations and passenger facilities.

Car Mile or Vehicle Mile—A single bus, rapid transit car, or commuter rail car traveling one mile.

CMAP (The Chicago Metropolitan Agency for Planning)—Formed in 2005, CMAP integrates planning for land use and transportation in northeastern Illinois. The new organization combined the region's two previously separate transportation and land-use planning organizations – Chicago Area Transportation Study (CATS) and the Northeastern Illinois Planning Commission (NIPC) – into a single agency.

CMAQ (Congestion Mitigation/Air Quality) Grant—A federal grant program designed to support transportation projects that reduce traffic congestion.

Cost Per Mile—Operating expense divided by vehicle miles for a particular program or in total.

Cost Per Passenger—Operating expense divided by ridership for a particular program or in total.

CTA (Chicago Transit Authority)—The CTA operates bus and rapid transit service in the City of Chicago and several suburbs. The CTA was created by state legislation and began operations in 1947.

Dead-Head—The time when a transit vehicle is traveling toward a yard, shop, or the start of a run but is not in revenue service. Car miles include dead-head miles.

Debt Service—The payment of interest on and the repayment of principal on long-term borrowed funds according to a predetermined payment schedule.

Defeasance of Bonds—a technique used to discharge older high-rate debt prior to maturity with new securities bearing lower interest rates.

Deficit—For a particular Service Board, the difference between system-generated revenues and system operating expenses. The deficit is sometimes referred to as the "public funding requirement." The RTA's current practice is to provide operating funds to each Service Board equivalent to their budgeted deficit for the year as opposed to the actual deficit. For the RTA, its deficit or surplus equals total revenues (sales tax, PTF, interest, and other income)

less operating funding, debt service, technology, and capital funding (RTA capital and RTA discretionary funding of Service Board capital).

Depreciation—Expiration in the service life of fixed assets, other than wasting assets, attributable to wear and tear, deterioration, action of the physical elements, inadequacy, and obsolescence. The portion of the cost of a fixed asset, other than a wasting asset, charged to expense during a particular period.

Dial-A-Ride Service—Paratransit service that requires the user to call ahead and schedule service.

Discretionary Funds—Funds that the RTA allocates, at its discretion, to the Service Boards. These funds include the PTF and a portion of the 15 percent of the RTA Sales Tax.

Elderly—A term used to describe individuals who are 65 years of age or older. This age is used to qualify for the RTA Senior Citizen Reduced Fare Card. Note that some paratransit services define elderly individuals at an age other than 65.

Express Bus (or route)—A suburban or intercity bus that operates a portion of its route without stops or with a limited number of stops.

Favorable Performance—In a comparison of actual results to budgeted levels, favorable performance describes the situation in which expenditures are less than budget or revenue exceeds budget.

Farebox Revenue—Revenue obtained from passengers and other fare subsidies except the state reduced fare subsidy program. Also referred to as "system-generated" revenue.

Fares—The amount charged to passengers for use of various services.

Feeder Bus Services—Pace bus routes that serve Metra stations.

Financial Plan—In addition to an annual budget, the RTA Act, as amended in 1983, requires the RTA and its Service Boards to develop a financial plan for the two years subsequent to the upcoming budget year. In combination with the annual budget, this provides a three-year projection of expenses, revenues, and public funding requirements.

Fiscal Year—The calendar year is the fiscal year for the RTA, CTA, Metra, and Pace. The fiscal year of the State of Illinois extends from July 1 through June 30 of the following year. The fiscal year of the federal government extends from October 1 through September 30 of the following year.

Fixed-Route Service—Buses that operate according to fixed schedules and routes.

Flexible Funds—Federal funds made available by TEA-21 that can be used for various transportation projects, including both highway and mass transit projects. Allocation of these funds is at the discretion of state and local agencies.

Fringes (Fringe Benefit Expenditures)—Pay or expenditures to or on behalf of employees in addition to salaries and wages, including sick pay, vacation pay, pension contributions, life and health insurance, unemployment and workers' compensation, social security costs, and other programs.

FTA (Federal Transit Administration)—The FTA is the federal agency that helps cities and communities provide mobility to their citizens. Through its grant programs, FTA provides financial and planning assistance to help plan, build, and operate rail, bus, and paratransit systems. Since 1988, the only FTA funding available to the RTA has been for capital projects.

Full Funding Grant Agreement (FFGA)—The FTA is required to use a FFGA to prove financial assistance for new start projects. The FTA also has the discretion to use an FFGA in awarding federal assistance for other major capital projects. The FFGA defines the project, including cost and schedule; commits to a maximum level of federal financial assistance (subject to appropriation); establishes the terms and conditions of federal financial participation; covers the period of time for completion of the project; and helps to manage the project in accordance with federal law. The FFGA assures the grantee of predictable federal financial support for the project (subject to appropriation) while placing a ceiling on the amount of that federal support.

Full-Time Equivalent Position (FTE)—A measurement equal to one staff person working a full-time work schedule for one year.

Fund Balance—The cumulative difference between revenues and expenses over the life of a fund. The excess of funding over deficit for a given period of time. In this document, the fund balance refers to the unreserved/undesignated funds in the Agency and general fund.

Funding Formula—A specific formula used to determine a subsidy level.

General Long Term Debt Account Group (GLTDAG)—This account group is not a fund but a separate list of certain long-term liabilities of the general government. Debt normally is recorded at its face value, without premium or discount. Additions to and deletions from GLTDAG are disclosed in the notes to the financial statements.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

General Fund—The operating fund that is used to account for all financial resources and normal recurring activities except for those required to be accounted for in another fund.

General Obligation Bonds (GO Bonds)—are bonds that are legally backed by the full faith, and credit of the issuing government. The government is legally obligated to use its full taxing power, if necessary, to repay the debt.

Gross Domestic Product (GDP)—Reported by the Bureau of Economic Analysis, this measure of economic activity is the sum of the market values of all of the final goods and services produced in the United States in a year.

Grants—Moneys received from local, federal, and state governments to provide capital or operating assistance.

Headway—The time span between service vehicles (bus or rail) on a specified route.

Illinois FIRST—A group of legislation passed by the Illinois Legislature to fund capital improvements for the state's infrastructure, roads, schools and transit.

Infrastructure—The physical assets of the RTA system, e.g., rail lines and yards, power distribution, signaling, switching, and communications equipment, passenger stations, information systems, and roadways, upon which the continuance and growth of transit depend.

In-Kind Service—These services are provided at no cost to a Service Board. For example, the City of Chicago provides free of charge dedicated security forces to the CTA.

Innovation, Coordination and Enhancement (ICE) Fund—A new fund created to award grants to Service Boards, transportation agencies, and local governments, for short-term, lower-cost projects and service enhancements.

Intelligent Bus System (IBS)—A bus communications system that uses advanced technology to monitor and improve performance on various levels. Pace's new bus communications system includes radio voice and data communications, Computer-Aided Dispatching (CAD) and Global Positioning Satellite (GPS)-based Automatic Vehicle Location (AVL) functions.

Intelligent Transportation Systems (ITS)—The application of advanced sensor, computer, electronics, and communication technologies and management strategies in an integrated manner to increase the safety and efficiency of the surface transportation system. ITS is a national effort designed to promote the use of advanced technologies in multimodal transportation.

Interest—The charge for borrowing money, typically expressed as an annual percentage rate.

ISTEA (Intermodel Surface Transportation Efficiency Act of 1991)—ISTEA amended the Federal Transit Act introducing new sources of flexible funds and increasing the funding authorized for public transit.

Joint Self Insurance Fund (JSIF)—The RTA

provides excess liability insurance to protect the self-insurance programs maintained by the CTA, Metra, and Pace. The service boards are obligated to reimburse the JSIF for any damages paid plus a floating interest rate.

Labor Expenditure—The cost of wages and salaries (including overtime) to employees for the performance of their work.

Line Item—An appropriation that is itemized on a separate line in a budget.

Linked Trip—A single, one-way trip without regard for the number of vehicles boarded to make the trip (i.e., a home-to-work trip taken by boarding a bus, to a train, to another bus represents one linked trip or three unlinked trips)

Maintenance Expenditure—Expenditures for labor, materials, services, and equipment used to repair and service transit and service vehicles and facilities.

Metra—The Commuter Rail Division of the RTA responsible for all rail public transit service with the exception of those services provided by the CTA. Metra was created in 1983 by an amendment to the RTA Act.

Mobility Limited—An individual who has a physical impairment, including impaired sensory, manual, or speaking abilities that result in functional limitations.

Modified Accrual Basis—A type of accounting whereby revenue and other financial resource increments (e.g., bond issue proceeds) is recognized when they become both "measurable" and "available" for finance expenditures of the current period. "Available" means collectible in the current period or soon enough thereafter to be used to pay liabilities of the current period. Similarly, expenditures (e.g., debt service payments and a number of specific accrued liabilities) are only recognized when payment is due because it is only at that time that they normally are liquidated with expendable available financial resources.

Moving Beyond Congestion—Jointly with the Chicago Transit Authority, Metra and Pace, the Regional Transportation Authority is leading a strategic planning effort to maintain, enhance and expand the northwestern Illinois region's transit system and to solve the current transit funding challenge, ensure financial viability and accountability, and meet the region's growing and changing transportation needs.

New Initiative—A new program or service that the RTA may approve separately from the Agency's or a Service Board's regular budget. The RTA may attach special criteria to measure the success of a new initiative.

Non-Ambulatory Disabled—A person who has a disability that requires use of a wheelchair.

Operating Assistance—Financial assistance for transit operations (as opposed to capital) expenditures. Such aid may originate with federal, state, or local governments.

Operating Budget—The planning of revenue and expenditures for a given period of time to maintain daily operations.

Off-Peak—Non-rush hour time periods.

Pace—The Suburban Bus Division of the RTA responsible for all non-rail suburban public transit service with the exception of those services provided by the CTA. On July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the RTA region. Pace was created in 1983 by an amendment to the RTA Act.

Paratransit Service—Any transit service that is not conventional fixed-route bus or rail service, including Dial-A-Ride, fixed-route deviation, shared-ride taxicab, and vanpool services.

Passenger Mile—A single passenger traveling one mile.

Peak Period—Morning or evening rush hour.

Principal—The amount borrowed or the amount still owed on a loan, separate from the interest.

Positive Budget Variance (PBV)—Calculated as the difference between a Service Board's budgeted and actual deficit, a positive budget variance results when the actual deficit is less than budgeted. Since

the RTA funds the budgeted deficit, a PBV represents available funds for the Service Boards.

Program (verb)—To commit funds, for a given capital purpose, without necessarily appropriating these funds for expenditure. When the RTA Board passes its official budget document, certain funds are "programmed" so that they may be obligated (i.e., contracts signed) during the upcoming year; these funds may be expended during the upcoming or subsequent years.

Program (noun)—Groupings of expenditure accounts with related expenditures (i.e., operations, maintenance, administration, and capital program).

Public Transportation Fund(s) (PTF) —Each month the state transfers from its General Revenue Fund into the Public Transportation Fund an amount equal to 25 percent of the RTA Sales Tax collected in the previous month. All funds deposited in the Public Transportation Fund are allocated to the RTA to be used at its discretion for the benefit of the Service Boards.

Public Funding—Funding received from the RTA. Generally refers to funding for operating expenditures.

Purchase of Paratransit Service—The amount of money paid to contractors to provide door-to-door transportation to certified participants in the ADA paratransit Service program.

Recovery Ratio—System-generated revenues divided by system operating expenditures as allowed by the RTA Act. This ratio is calculated for each of the Service Boards and for the RTA region as a whole. The RTA Act mandates that the RTA region attain an annual recovery ratio of at least 50 percent for mainline service. For ADA paratransit service, the Act requires a 10% recovery ratio in 2008 and 12% thereafter.

Reduced Fares—Discounted fares for children age 7-11, grade and high school students (with CTA ID), seniors 65 and older (with RTA ID), and riders with disabilities (with RTA ID) except paratransit riders.

Revenue Car Mile—Car mile during which the vehicle is in revenue service (i.e., picking up and/or dropping off passengers).

Reverse Commute—City-to-suburb commute. This phrase refers to the fact that most riders commute from the suburbs to the city.

Ridership (unlinked passenger trips)—Each passenger counted each time that person boards a vehicle.

Rolling Stock—Public transportation vehicles including commuter rail cars, locomotives, rapid transit cars, buses, and vans.

RTA Sales Tax—1 percent in Cook County, 0.25 percent in the collar counties of DuPage, Kane, Lake, McHenry and Will. 85 percent of the sales tax is fully distributed to the Service Boards by the RTA according to formulas established by the RTA Act. Fifteen percent of the sales tax is retained by the RTA, a portion of which is distributed to the Service Boards at the RTA's discretion.

SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users)—Signed into law on August 10, 2005, this legislation provides $286.4 billion in guaranteed funding for federal surface transportation programs through federal fiscal year (FFY) 2009 of which $52.6 billion is for federal transit programs over six years.

Sales Tax Designated for Capital or Transfer Capital-Statutory—The difference between a Service Board's entitlement (from the 85 percent of the RTA sales tax) and its budgeted or actual deficit, whichever is greater. These funds, which are over and above operating needs, are generally used for capital purposes. Metra is the only Service Board that has generated by statute sales tax for capital in more than a decade.

SCIP (Strategic Capital Improvement Program) Bonds—The RTA was authorized under the RTA Act to issue $500 million of bonds for public transportation projects approved by the Governor of the State as part of the RTA's Strategic Capital Improvement Program (SCIP). Effective January 1, 2000, the

Act was amended to authorize the RTA to issue an additional $260 million of SCIP bonds in each year for the period of 2000 through 2004.

Series B Bonds—State Transportation Bonds used as all or a portion of the local share required to match federal funds for public transportation capital projects.

Service Boards—The term refers to the region's three transit operators: CTA, Metra and Pace.

Signal Priority—Transit signal priority either gives or extends a green signal to transit buses under certain circumstances to reduce passenger travel times, improve bus schedule adherence, and reduce bus operating costs.

Special Service—A transportation service, as defined by the FTA, specifically designed to serve the needs of persons who, by reason of disability, are unable to use mass transit systems designed for the use of the general public.

State Financial Assistance (SFA)—This is a state authorized assistance to reimburse the debt service expenses for the RTA's Strategic Capital Improvement Program (SCIP) bonds, subject to the appropriation of funds by the State.

Subscription Service—Special services for users who ride on a frequent and regular basis and follow a prescribed schedule (a minimum of three times per week between the same origin and destination).

Subsidy—Funds received from another source that are used to cover the cost of a service or program that is not self-supporting.

System-Generated Revenue (Total Operating Revenue) —Total revenue generated from operations includes farebox revenue, local subsidies, state fare subsidies, advertising, interest and all other income (excludes RTA and federal subsidies).

Taxi Access Program (TAP)—Certified participants in the ADA paratransit service program can purchase taxi vouchers valued at up to $13.50 at a reduced price to pay for one-way taxi rides that originate within the City of Chicago.

TEA-21 (The Transportation Equity Act for the 21st Century)— Signed into law on June 9, 1998, this legislation provided a six-year reauthorization of the federal transit program and the necessary contract authority needed to fully fund the fiscal year 1998 obligation limitations contained in the fiscal year 1998 Department of Transportation Appropriations Act.

T-FLEx (Transit Finance Learning Exchange)—A strategic alliance of transit agencies formed to leverage mutual strengths and continuously improve transit finance leadership, development, training practices, and information sharing. Its purpose is to transform the finance function into a value-added business partner within each transit authority. Members meet twice annually in a facilitated workshop environment to develop and share best practices in active roundtable work sessions.

TOD (Transit-Oriented Development or Transit-Oriented Design)— Mixed use development of residential, office and retail uses within walking distance of a transit station or bus route.

Total Vehicle Miles—The sum of all miles operating by passenger vehicles, including mileage when no passengers are carried.

Unreserved Fund Balance—The balance of funds that have not been reserved, designated or programmed into the budget, financial plan, or capital program.

Vanpool—Pace's VIP (Vanpool Incentive Program) is a service where a group of 5 to 15 people commute to and from work together in a Pace-owned van.

Supplemental Data

National Economic Projections

During the fourth quarter of 2007, the Gross Domestic Product (GDP) grew at an annual rate of 0.6 percent, following 3.8 percent and 4.9 percent annual growth rates during the second and third quarters of 2007, respectively. The GDP is the value of the output of goods and services produced by labor and property located in the United States. Exhibit 8-3 highlights the annual real GDP growth from 2003 through 2008. The GDP climbed from 2.5 percent in 2003 to 3.6 percent in 2004, before declining to 2.9 percent in 2006 and 2.2 percent in 2007. GDP growth is expected to decline to 1.7 percent in 2008.

In 2007, the national unemployment rose from 4.7 percent in November to 5.0 percent in December. Exhibit 8-4 shows the U.S. annual unemployment rate from 2003 through 2008. The unemployment rate declined consistently from 6.0 percent in 2003 to 4.6% in 2006 and remained at 4.6% in 2007. The national unemployment rate is expected to rise to an annual average of 5.1 percent in 2008, matching the rate in 2005.

Exhibit 8-5 shows the annual trend in the growth of the U.S. Consumer Price Index (CPI) from 2003 through 2008. Improving overall economic activity resulted in increases in CPI annual growth from 2.3 percent in 2003 to 3.4 percent in 2005, followed by declines to 2.8 percent in 2007. CPI annual growth is expected to decline to 2.3 percent in 2008.

RTA Region

The following sections summarize population and employment trends in the six-county RTA region. These trends have a significant impact on public transportation ridership, as well as sales tax revenue.

Population

As shown in Exhibit 8-6, the population of the RTA region grew by 3.9 percent (from 8.1 million to 8.4 million) between 2000 and 2006. Population growth in the RTA region grew at slower pace than the overall population of the United States, which increased by 6.4 percent during this period.

Since 1990, most of the region's population growth has occurred in the suburbs. Exhibit 8-7 illustrates the annualized population growth rates for each of the region's six counties between 2000 to 2006. The highest growth rate occurred in Will

Exhibit 8-6: **Population Trend by County** (in thousands)

	1990	2000	2006	% Change
Cook	5,104	5,377	5,289	-1.6%
DuPage	786	904	933	3.2%

County, where the population increased at annual rate of 4.9 percent. The population of Kane and McHenry counties grew at annual rates of 3.4 percent and 3.1 percent, respectively, while the population of Lake and DuPage counties increased at annual rates of 1.7 percent and 0.5 percent, respectively. Cook County experienced a population decline at an annual rate of 0.3 percent. During this 6-year period, the population of the entire RTA region grew at an annual rate of 0.6 percent.

In 2006, Cook County accounted for 63 percent of the 8.4 million people living in the RTA region. DuPage County's population comprised 11 percent of the region, followed by Lake County and Will County (8 percent each), Kane County (6 percent), and McHenry County (4 percent). The population distribution for 2006 is illustrated in Exhibit 8-8.

Employment

Exhibit 8-9 provides a comparison between the national unemployment rate, the unemployment rate in the State of Illinois, and the unemployment rates in each of the counties of the RTA region from 2003 to 2007. Between 2003 and 2006, the national unemployment rate fell approximately 0.5 percentage points each year. From 2003 to 2005, the unemployment rate in Illinois averaged seven tenths of a percentage point greater than the national unemployment rate. In 2006, however, the State unemployment rate dropped 1.2 percentage points to 4.5 percent, while the national rate again fell only 0.5 percentage points to 4.6 percent. In December 2007, the State-wide unemployment rate of 5.5 percent was one half percent higher than the national unemployment rate of 5%.

Between 2003 and 2007, the unemployment rate in each county of the RTA region except Cook did not typically exceed that of the State of Illinois. Among the six counties in the RTA region, DuPage counties' December 2007 unemployment rate of

3.7 percent was the lowest in the region, while Cook County's rate of 5.1 percent was the highest in the region.

Suburban jurisdictions have led the region in employment growth since 1980. In 2000, employment in the five collar counties accounted for one-third of the RTA region's total. Cook County, which in 1980 accounted for 79 percent of the region's employment, accounted for only two-thirds of employment in 2000. Regional employment has increased from 3.7 million in 1980 to 4.3 million in 1990 and to 5.0 million in 2000 (Exhibit 8-10).

The trends in employment by economic sector in the RTA region are illustrated in Exhibit 8-11. Between 1980 and 2000, the greatest growth has occurred in the service sector. The manufacturing sector experienced the highest loss during this period. In 2000, services comprised 34 percent of employment, retail trade 15 percent, manufacturing 13 percent, government 11 percent, and finance, insurance, and real estate 10 percent. Combined, wholesale, transportation and public utilities, construction, and other comprised the remaining 17 percent.

The RTA region experienced steady growth in per capita income from 1980 to 2000. Within the region, per capita income was highest in DuPage and Lake Counties in 2000 and lowest in Kane and Will counties, as illustrated in Exhibit 8-12.

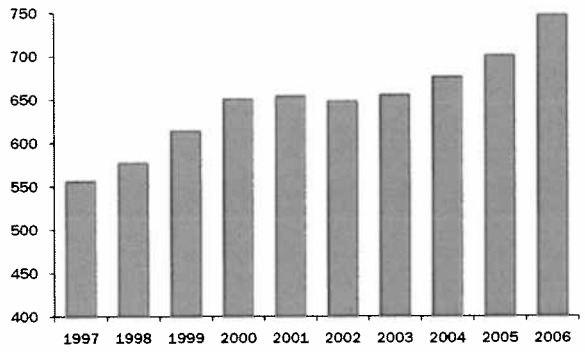
Exhibit 8-14: **Sales Tax Collections 1997-2006** (dollars in millions)



Sales Tax Trends

The RTA Sales Tax is the equivalent of one percent on sales in Cook County and one quarter percent on retail sales in the collar counties. Sales tax collections grew at a healthy pace from $555 million in 1997 to $650 million in 2000. However, between 2000 and 2003, sales tax collections fluctuated between $648 and $655 million. In 2004 and 2005, sales tax collections increased $21 million and $24 million to $676 million and $700 million, respectively. In 2006, sales tax collections increased $47 million, the largest annual increase since the RTA imposed a sales tax. Over the ten-year period, growth in sales tax collections has been greatest in the collar counties followed by Suburban Cook County and the City of Chicago. More recently, however, growth in sales tax collections in the City of Chicago has exceeded that of Suburban Cook County. Collections in Suburban Cook County continue to account for more than half of total collections, while collections in the City of Chicago account for slightly less than one third of the total. (Exhibit 8-13 and 8-14).

Ridership Trends

Total RTA ridership increased annually from 1997 to 2001 despite a decline in Pace ridership during this period. Reflecting the overall downturn in the economy, total RTA ridership declined in both 2002 and 2003. Metra and Pace lost riders in 2002, while all three Service Boards lost riders in 2003. Regional ridership changed little from 2003 to 2004 reflecting stagnant ridership on all three Service Boards. In 2005, however, all three Service Boards achieved significant ridership gains as the economy rebounded and gas prices climbed. Ridership continued to grow in 2006, particularly on Metra. (Exhibit 8-15 and 8-16).

Letter from the Executive Director

Enclosed is a copy of the 2009 Budget and Two-Year (2010-2011) Financial Plan from the Regional Transportation Authority (RTA), which includes the budgets for the Chicago Transit Authority (CTA), Metra and Pace. In January 2008, the General Assembly and the Governor enacted landmark reform and operating funding legislation that allowed the cancellation of massive service cuts, fare increases and layoffs. This 2009 budget reflects the first full year of the implementation of that legislation. It is a compilation of individual budgets of the CTA, Metra, Pace and the RTA (Agency), that still requires approval by the RTA Board in December. It is our collective intent to improve transparency and increase accountability in our budgets, and improve public understanding of the costs and benefits of transit to the region.

In response to unstable gas prices and severe traffic congestion choking our region, transit ridership is at historic highs. Despite this, the financial challenges facing the transit agencies in 2009 are significant due to a slowed economy, reduced tax revenues, high fuel prices and deteriorating capital infrastructure.

While advocating for the funding and reform bill, we always knew that small, periodic fare increases would be necessary. Since 1983, the RTA Act has required that 50% of our funding come from fares and other system generated revenue. Mass transit still remains a tremendous bargain compared with driving. Metra implemented a fare increase earlier this year and the CTA and Pace have to implement increases in 2009.

The regional transit system still faces a serious shortfall in capital funding. The State has not approved a capital infrastructure funding plan since 1999, and we have not received any state capital dollars since 2004. Aged trains and buses, deteriorating tracks and stations, and equipment that has exceeded its useful lifespan all result in higher operating costs. There is a dire need to make capital investments to maintain, enhance, and expand the transit system. With high gas prices, a struggling economy, record-high ridership, and a desire to better protect our environment, the need to invest in transit has never been greater than it is today. The RTA joins with others across Illinois to urge the General Assembly to pass a comprehensive capital plan that addresses not only transit infrastructure, but roads, bridges, schools and other critical needs.

Thank you once again for your continued support of transit and your partnership in implementing important management and fiscal reforms designed to enhance the coordination and efficiency of the regional transit system. For more information, visit www.MovingBeyondCongestion.org, and consider joining as a Partner for Transit so we can continue to provide you with updates.

Sincerely,

Stephen E. Schlickman

Executive Director, Regional Transportation Authority

Guide

The RTA 2009 Budget, Two-Year Financial Plan, and Five-Year Capital Plan consists of the Regional Transportation Authority (RTA/Agency), Chicago Transit Authority (CTA), Metra commuter rail, and Pace Suburban Bus Service and ADA Paratransit Service budget plan and data.

The outline below is presented as a guide to the organization of the RTA 2009 Budget, Two-Year (2010-2011) Financial Plan, and Five-Year (2009-2013) Capital Plan. The book is divided into the following eight sections.

1. **Introduction** provides a list of RTA Board of Directors, a letter from the RTA Executive Director explaining the key points of the 2009 budget, a guide to the overall structure of this document, a brief legislative update, key budget issues, RTA's vision and goals, the Strategic Plan outline, Governance including the 2009 budget ordinance (2008-83), and the 2008 GFOA Distinguished Budget Presentation Award.

2. **Budget in Brief** provides a snapshot of the RTA's role and summarizes the key elements of the 2009 budget.

3. **RTA** section is divided into four major categories: Region Operating Plan (RTA, CTA, Metra, and Pace consolidated budget and financial plan); Agency Operating Plan (budget and financial plan); Goals and Performance Measures (Estimates vs. Plan); and Reference (RTA bonds and fund types).

4. **CTA** information includes service characteristics, operating plans, budget and financial plan details, and organizational structure.

5. **Metra** section includes service characteristics, operating plans, budget and financial plan details, and organizational structure.

6. **Pace** information is divided into two operations – Suburban Bus Service and ADA Paratransit Service. Information about both operations includes service characteristics, operating plan, budget and financial plan details, and organizational structure.

7. **Capital** provides an overview and details about the capital program of each of the Service Boards (CTA, Metra, and Pace) and issues concerning bringing the system into the state of good repair.

8. **Appendices** include the Budget Call Calendar, Budget Hearing Schedule, Glossary, and Supplemental Ridership and Sales tax data.

Legislative Update

On January 18, 2008, Illinois lawmakers approved and the Governor signed into law, through an amendatory veto process House Bill 656 (Public Law 95-0708), an estimated $530 million (based on economic conditions at that time) in new annual operating funds to the region's public transportation system. The new law also includes reforms recommended by the Illinois Auditor General to enhance coordination and efficiency and reforms the CTA pension and retiree health care plans. The Governor's amendatory veto provides free rides to seniors 65 and older living in the RTA's service area, which began, March 17, 2008. Other provisions of the bill include:

New law provides increased operating funds. System-wide fare increases and service cuts avoided.

- A one-quarter percent increase in sales tax across the region
- An additional one-quarter percent increase in sales tax in the collar counties (DuPage, Kane, Lake, McHenry, and Will) controlled by each county board and used for public safety and transportation projects (roads and public transit)
- Authorizes the City of Chicago to increase the real estate transfer tax which provides additional funding for the CTA
- Expands the RTA Board from 13 to 16 members
- Expands Metra's Board from 7 to 11 members

While the new law addressed transit's operating needs across the region, the General Assembly is still considering a state capital funding plan that would address the system's infrastructure needs across the region. For a summary of the mass transit reform legislation, log on to www.rtachicago.com.

Budget Issues

In reading this document, it is important to note that the information provided reflects the Region's funding and service conditions when the RTA Board adopted Ordinance 2008-83 on December 18, 2008, which approved the 2009 budgets and 2010-2011 financial plans of the Service Boards, the Agency, and Region as a whole. It is also important to note that the funding marks (public funds to cover operating deficits) for each Service Board were set on September 15, 2008, prior to the severe decline in the economy. In the planning cycles the region is faced with two overriding issues: capital funding, which has been a growing concern over the past four years, and the more recent impact of the economy.

Capital Funding

While obtaining operating funding and reform, the legislative passage of P.A. 95-0708 was a critical step in remaking our transit. We cannot fully achieve our goal of having a world-class transit system unless there is an adequate capital investment to maintain, enhance and expand the system.

In has been nine years (1999) since the state of Illinois last addressed capital funding. Illinois FIRST provided urgently needed funds for roads, bridges, transit and other public infrastructure. The money allowed our state to address maintenance backlogs and build critical expansions to our road and transit system. However, Illinois FIRST funds expired in 2004, and for more than four years, no state infrastructure funding has been dedicated to transit.

Our transit system is the second largest in the nation. Collectively, the Service Boards infrastructure includes more than 3,800 buses and vans, 2,300 train cars, 1,490 miles of train track, 915 bridges and over 300 rail stations with an asset value of $35 billion. Just to maintain current levels of service and infrastructure, we should be investing over $1 billion each year and that does not include any funding for system expansions. Since funding has not been available, major overhauls have been delayed and replacement of aging vehicles has been put off. This has resulted in: slow zones creating less reliable service, less fuel efficient vehicles in the face of

volatile fuel prices, and delayed replacement of aging vehicles that have significantly increased operating costs (fuel, labor, and materials). A more in-depth account of our rolling stock identifies the percentage of each fleet type that is beyond its useful life.

Fleet Type	Useful Life	Current Age
Bus	12 years	50% more than 12 years
Heavy Rail Cars	25 years	40% more than 25 years
Commuter Rail Cars	35 years	24% more than 35 years

Economic Decline

As discussed earlier, funding for the Service Boards was established in September 2009, which at that time reflected a moderate downturn in anticipated public funding from Sales Tax and the Public Transportation Fund (PTF). However, since that time, the economy has continued its downward spiral with the floor still undetermined.

Looking ahead in 2007 for 2009, when legislative reform was emerging and the economy progressively on the rise, public funding subsidies from sales tax, public transportation funds, and the City of Chicago's real estate transfer tax were projected to add more than $530 million for bus, rail and ADA Paratransit services. Current estimates show figures that are down over 26% for revenues provided by new legislation and down nearly 14% for sales tax and PTF in place before legislative reform enacted by P.A. 95-0708, an overall decline of more than 18% or $276 million.

These results, coupled with an unfunded mandate to provide free rides on mainline service to seniors and disabled riders, and the impact of rising operating costs due to the lack of capital funds, point to an overall decline in 2009 in excess of $360 million.

Service Boards

The CTA's 2009 budget reflects a fare increase and decreases in administrative and support positions. Without these measures CTA will not be able to balance its budget. The CTA's 2009 budget reflects a new fare structure and 396 eliminated positions.

Metra's 2009 budget includes a need for new State capital program without which, Metra will continue to fall behind in its efforts to purchase new or rehab old rail cars and locomotives, replace aging bridges, and renew rail and track.

Pace's suburban service budget was accompanied by a general fare increase of 25 cents effective January 1, 2009. The first fixed route fare increase since 2001. Since then rising costs, inflation and other factors have undermined the contribution to the budget from farebox receipts.

Vision Statement & Strategic Plan

In 2007, the Regional Transportation Authority released its five-year strategic plan, Moving Beyond Congestion which presented the RTA's 30-year vision for maintaining, enhancing, and expanding public transit system in northeastern Illinois. With assets valued at $35 billion, the system provides two million rides each weekday and hundreds of thousands more on weekends.

Vision

The RTA, CTA, Metra, and Pace vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities.

Goals

I. Provide Transportation Option
II. Ensure Financial Viability
III. Enhance Livability and Economic Vitality
IV. Demonstrate Value

Governance

Overview

The RTA was established in 1974 upon approval of a referendum in its six-county northeastern Illinois region. The operating responsibilities of the RTA are set forth in the RTA Act. The RTA is a unit of local government, body politic, political subdivision and Municipal Corporation of the State of Illinois

As initially established, the RTA was an operating entity responsible for providing day-to-day bus and rail transportation services as well as a planning and funding agency. However, in 1983, the Illinois General Assembly reorganized the structure and funding of the RTA. The reorganization placed all operating responsibilities with three Service Boards—the Chicago Transit Authority (CTA) and two operating divisions of the RTA, a Commuter Rail Division (Metra) and a Suburban Bus Division (Pace)—each having its own independent board of directors. These divisions conduct operations and deal with subsidized carriers. The RTA became exclusively responsible for financial oversight and regional planning issues.

The Service Boards maintain separate management, exercise control over all operations including the passenger fare structure

The Service Boards operate within the RTA's region, but are separate legal entities. The Board of Directors of each Service Board is completely independent of the RTA Board. The RTA Board does not control the selection or in the appointment of any Service Board director or its management. Further, directors of the CTA, Metra and Pace are excluded from serving on more than one entity's board of directors, including that of the RTA.

The corporate authority and governing body of the RTA is the 16-member RTA Board of Directors. Fifteen directors are appointed from within the six-county region: five directors by the Mayor of the City of Chicago, one director by the president of the Cook County Board; four directors by the suburban members of the Cook County Board; and one director each from DuPage, Kane, Lake, McHenry and Will appointed by the Chairman or Executive of the Board; its 16th member is elected by at least 12 of the 15 appointed members.

To administer the Agency's statutory requirements, the Board hires officers and staff. One of its officers, who must be approved by the Board, is the Executive Director. The Executive Director executes the Board's policy decisions and staffs the Agency to carry out its mission and goals.

The RTA Act sets forth detailed provisions for the allocation of receipts by the RTA to the various Service Boards, and imposes a requirement that the RTA's system as a whole achieves an annual "system-generated revenue recovery ratio" (i.e., aggregate income for transportation services provided) of at least 50 percent of the cost of the operation of transportation services. The Service Boards achieve their required recovery ratios by establishing fares and related revenue to cover the required proportion of their proposed expenditures. The RTA is responsible for supervising the budgets and financial performance of the CTA, Metra, and Pace.

The Service Boards are considered fiscally independent of the RTA. Although the RTA reviews the budgets of the CTA, Metra and Pace, approval of the budgets is mandated by State statute if such budgets meet specified recovery ratios.

The Service Boards maintain separate management, exercise control over all operations (including the passenger fare structure), and are accountable for fiscal matters including ownership of assets, relations with federal and state transportation funding agencies, and the preparation of their operating budgets. They are also responsible for the purchase of services and approval of contracts relating to their operations.

The CTA, Metra and Pace provide services to different geographic areas within the six-county region. The CTA provides rail and bus service to the

City of Chicago and 38 neighboring suburbs within Cook County. Metra provides transit service to the six-county area, with the majority of the transit riders residing in the suburbs and commuting to the City of Chicago. Pace's primary bus service area is suburbs in the six-county region, with service to areas within the City of Chicago. Pace is also responsible for region-wide ADA paratransit service.

The RTA Act establishes the RTA as the primary public body with authority to apply for and receive grants, loans and other funds from the state or the federal government for public transportation programs in Cook, DuPage, Kane, Lake, McHenry and Will counties ("northeastern Illinois"). The RTA is responsible for the allocation of certain federal, state and local funds to finance both the operating and capital needs of public transit in the six-county region.

The Act confers upon the RTA Board powers to prescribe regulations requiring that the Service Boards submit to the RTA such information as the RTA may require. The Board has statutory authority to establish by rule or regulation financial, budgetary, or fiscal requirements for the system.

In addition to its annual budget and financial plan responsibilities, the RTA, each year, is required to prepare and adopt a five-year capital program. The RTA also conducts market research and coordinates planning for public transportation in northeastern Illinois. The RTA funds the development of new types of service, both in the suburbs and in the City of Chicago, on a demonstration basis.

Budget Process

As previously discussed, the Act requires that the RTA Board of Directors approve an annual budget, a two-year financial plan, and a five-year capital program. The budget calendar and statutory oversight and amendment requirements govern this process. The essential aspects of the budget calendar are outlined below. A detailed calendar is provided in the Appendices (Exhibit 8-1).

Budget Calendar

By July 1 of each year, the Office of Management and Budget (OMB) is to submit to the RTA an estimate of revenue to be collected from taxes for the next fiscal year.

Based upon this information and its own economic assessments, the RTA estimates tax receipts and revenue from other sources, and "the Board shall, not later than September 15, prior to the beginning of the Authority's next fiscal year, advise each Service Board of the amounts estimated to be available during the upcoming fiscal year and following two years. The Board is also required to advise the Service Boards of the times when the amounts will be available and the next year's cost recovery ratio.

Between September 15 and November 15, each Service Board must prepare and publish a comprehensive annual budget, program document and a two-year financial plan. "The proposed budget and financial plan shall be based on the RTA's estimate of funds to be available to the Service Boards, by or through the Authority, and shall conform in all respects to the requirements established by the Authority." Before submitting the budget to the RTA, the Service Boards must hold at least one public hearing in each of the counties in which it provides service and must hold at least one meeting with the affiliated county boards. After considering the comments from these meetings, it must formally adopt the budget prior to submitting it to the RTA on November 15. The RTA Act requires that the budgets submitted by each Service Board not project or assume receipt of revenue greater than that set in the estimates provided by the RTA.

The RTA Board must then hold at least one public hearing in the metropolitan region and one meeting with each county board on the proposed budget. At least 20 days prior notice is required for the public hearing. The public hearing notice for the 2009 budget may be reviewed in the Appendices Section (Exhibit 8-2).

After conducting these hearings and taking into consideration the comments, the RTA Board must adopt a budget (by 12 votes) that meets the statutory criteria. If the RTA does not find that a Service Board budget meets the criteria set forth under the RTA Act, the Board shall, five working days after the start of the Service Board's fiscal year, adopt a budget and financial plan meeting these criteria. The RTA, CTA, Metra, and Pace all report on a calendar-year basis.

Statutory Requirements

The RTA Act sets forth seven statutory criteria for Board approval of the budget and financial plan of each Service Board. These seven criteria are:

Balanced Budget

Such budget and plan shall show a balance between (a) anticipated revenue from all sources, including operating subsidies, and (b) the costs of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness.

Cash Flow

Such budget and plan shall show cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenditures as incurred.

Recovery Ratio

Such budget and plan shall provide for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board which allow the Service Board to meet its required recovery ratio.

Assumptions

Such budget and plan are based upon and use assumptions and projections, which are reasonable and prudent.

Financial Practices

Such budget and plan shall be prepared in accordance with sound financial practices as determined by the RTA Board.

Strategic Plan

Such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan.

Other Requirements

Such budget and plan shall meet such other financial, budgetary, or fiscal requirements that the RTA Board may by rule or regulation establish.

Oversight

After adoption of the operating budget, the RTA Board has continuing oversight powers concerning the budget and financial condition of each Service Board and region as a whole. The RTA monitors the budgetary and operations performance of the Service Boards on a monthly basis to ensure compliance with their budget and recovery ratio. On a quarterly basis, the following oversight is conducted:

- After the end of each fiscal quarter, each Service Board must report to the RTA "it's financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction" for that quarter. If in compliance, the RTA Board so states and approves each Service Board's compliance by adopted resolution.
- If "in the judgment of the Board" these results are not substantially in accordance with the Service Board's budget for that period, "the Board shall so advise the Service Board" and it "shall, within the period specified by the Board, submit a revised budget incorporating such results."
- Once a Service Board submits the revised budget plan, the RTA must determine if it meets the seven statutory budget criteria necessary to pass an annual budget. If not, the RTA does

not release any moneys to the Service Board(s), except for the statutory allocation of taxes.

- If a Service Board submits a revised budget and plan which shows that the statutory budget criteria will be met "within a four quarter period," the RTA "shall continue to release funds to the Service Board." The RTA may require the Service Board to submit a revised budget and plan that shows that the budget criteria "will be met in a time period less than four quarters."

Amendment

When prudent, the operating budget is amended due to shifts in the economic climate, governmental funding programs or new projects. Depending on the type of request, the proposed amendment may be presented to one or more of the RTA Board Committees for approval. However, the Board's Finance Committee must approve all proposed amendments before they are recommended to the RTA Board. The RTA Board ultimately approves or disapproves all proposals. If approved, the RTA and Service Board budgets are amended to include all changes and actual results and are then monitored against the amended budget.

Operations Funding

The RTA provides operating funds to each Service Board equivalent to its budgeted deficit for the year, as opposed to funding the actual deficit. This policy encourages cost efficiencies by the Service Boards and allows them to retain any budgeted funds that are not expended. Such funds are generally referred to as a positive budget variance or PBV.

Fund balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level on the unreserved and undesignated fund balance. The ordinance affirms that the annual budget adopted by the RTA each year will reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than five percent of the RTA's total operating expenditures for that year. If actual sales tax receipts or other RTA revenue falls short of the amounts reflected in the annual budget, then the succeeding year's annual budget and two-year financial plan will provide for the replacement of any shortfall in the unreserved and undesignated balance of the RTA general fund, by no later than the end of the three-year planning period.

The RTA established this policy to maintain financial stability in order to carry out the RTA's legislative mandates to plan, fund and oversee public transportation in the region. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods.

Financial Policies

Capital Expenditure

The RTA Five-Year Capital Program is adopted by the RTA after an affirmative vote of at least 12 RTA Directors, after consultation with the Service Boards, and after holding a minimum of three public hearings in Cook County and one public hearing in each of the other counties in the metropolitan region. Preparation of the RTA's capital budget is guided by the following policies found in the RTA Act.

A five-year program for capital improvements is updated annually.

Each capital improvement to be undertaken or on behalf of a Service Board should meet the criteria set in the Strategic Plan, and is not inconsistent with any subregional or corridor plan adopted by the RTA.

In reviewing proposals for improvements to be included in a Five Year Capital Program, the RTA may give priority to improvements that are intended to bring public transportation facilities into a state of good repair.

The Five Year Capital Program shall also identify capital improvements to be undertaken by a Service Board, a transportation agency, or a unit of local gov-

ernment and funded by the Authority from amounts in the Innovation, Coordination, and Enhancement Fund, provided that no improvement that is included in the Five Year Capital Program, as of the effective date of this amendatory Act of the 95th General Assembly, may receive funding from the Innovation, Coordination, and Enhancement Fund.

Fixed Assets

The RTA sets a fixed asset capitalization threshold of no less than $5,000 for any capital item(s). Capital assets are recorded at historical cost (or fair market value at the time of donation, if donated) and have a useful life of at least two years following the date of acquisition. Any acquisitions during the year are considered acquired at the beginning of that year for the purpose of computing depreciation.

Description	Useful life
Furniture and Equipment	5 years
Computer Equipment	5 years
Leasehold improvements	Life of the lease

General Obligation Bonds

The RTA's policy states that bonds should be payable from all revenue and all other funds received or held by the RTA that lawfully may be used for retiring the debt. Exceptions to this are amounts in the Joint Self-Insurance Fund (JSIF) and amounts required to be held or used with respect to separate ordinance obligations. The bonds are secured by an assignment of a lien on the sales taxes imposed by the RTA. All sales tax receipts are to be paid directly to the trustee by officials of the State of Illinois. In addition, RTA Sales Tax must be 2.5 times greater than the debt service requirement. If, for any reason, the RTA has not made the required monthly debt service payment, the trustee is to deduct it from the receipts. If all payments have been made, the funds are made available to the RTA for regular use. Under the Act, the CTA, Metra and Pace fare box receipts and funds on hand will not be used for payment of debt service.

Investment

The RTA's policy complies with Illinois law, addresses safety of principal, liquidity of funds, rate of return, public trust, and investments in local and disadvantaged institutions. It further permits investments and prescribes safekeeping, collateralization, and reporting requirements.

The RTA policy establishes the following objectives:

- Safety of Principal – Every investment will be made with safety as the primary and overriding concern. Each investment transaction shall ensure that loss of capital, whether from credit or market risk, is minimized.
- Liquidity – Maturity and marketability aspects of investments should be coordinated with the anticipated cash flow needs of the RTA
- Rate of Return – A secondary objective is to seek the highest return on investments consistent with preservation of principal and prudent investment principles.
- Public Trust – The RTA and its officers should avoid any investment transaction or practice which in appearance may impair public confidence in its stewardship of public funds.
- Investments in Local and Disadvantaged Institutions – Locally owned and disadvantaged business financial institutions contribute to economic development of the RTA service area. The RTA recognizes its interest in the vitality of the local economy by investing in local, minority, and female (if any) owned financial institutions.

Operating Budget

The RTA operating budget and two-year financial plan follows the guidelines below:

- Adoption requires an affirmative vote of at least 12 RTA Directors and hold at least one public hearing in the metropolitan region, and meet with the county board or its designee of each of the several counties in the metropolitan region.
- The Service Boards (CTA, Metra, and PACE)

prepare and publish, for public hearing and comment, a comprehensive budget document that is to conform to the RTA "marks". RTA marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

- All funds are required to balance. The total budgeted revenues must equal the sum of budgeted expenditures for each fund. Revenue sources include sales tax, state funds (e.g. PTF, SFA, and reduced Fare) and other revenue.
- The adopted budget should reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than five percent of the RTA's total operating expenditures for the year. If the amount is below five percent, the financial plan must show full replenishment by the end of the current planning cycle.
- The combined revenue from RTA operations should cover at least 50% of the system operating costs.

Pension Funding

The RTA, Metra, and Pace are required to contribute the amounts necessary to fund the benefits of their respective employees in the Plan using the projected unit credit actuarial method. Employer contribution and the income it earns through investments are used to operate the Plan and pay benefits. Assets are valued recognizing a portion of both realized and unrealized gains and losses in order to avoid wide swings in actuarially determined funding requirements from year-to-year.

ORDINANCE NO. 2008-83

APPROVING THE 2009 BUDGETS AND 2010 - 2011 FINANCIAL PLANS OF THE SERVICE BOARDS, ADOPTING THE 2009 BUDGET AND PROGRAM OF THE AUTHORITY, APPROPRIATING FUNDS FOR THE 2009 BUDGETS, ADOPTING THE FIVE-YEAR CAPITAL PROGRAM, ALLOCATING CERTAIN REVENUES OF THE RTA TO THE RESPECTIVE SERVICE BOARDS, AND TAKING CERTAIN OTHER ACTIONS WITH RESPECT TO THE BUDGET AND PROGRAM FOR FISCAL YEAR 2009

WHEREAS, Section 4.01 of the Regional Transportation Authority Act (the "Act") directs the Board of Directors of the Regional Transportation Authority (the "RTA") to appropriate money for the expenses and obligations of the RTA, including payment of certain public funds to the Service Boards, and to prepare and adopt a comprehensive budget and program document for fiscal year 2009; and

WHEREAS, Section 4.02 of the Act establishes certain requirements with respect to the allocation and payment of funds appropriated by the RTA to the Service Boards; and

WHEREAS, pursuant to Section 2.01b the Authority shall each year adopt a Five-Year Capital Program that shall include each capital improvement to be undertaken by or on behalf of a Service Board provided that the Authority finds that the improvement meets any criteria for capital improvements contained in the Strategic Plan, is not inconsistent with any sub-regional or corridor plan adopted by the Authority, and can be funded within amounts available with respect to the capital and operating costs of such improvement; and

WHEREAS, Section 4.11 of the Act authorizes and directs the RTA to review the budgets and financial plans of the Service Boards; and

WHEREAS, pursuant to Sections 4.01(a) and 4.11(d) of the Act the budget and financial plans shall contain estimated expenses for contributions to be made with respect to pension and other employee benefits, and the Service Boards are required to present to the Authority sufficient detail that fairly presents the condition of any pension plan or trust for health care benefits with respect to retirees established by the Service Board and describes the plans of the Service Boards to meet the requirements of Sections 4.02a and 4.02b; and

WHEREAS, pursuant to Sections 4.02a and 4.02b of the Act, the Authority shall continually review the payment of the required employer contributions to affected pension plans and beginning January 1, 2009, if at any time the Authority determines that the Service Boards payment of any portion of the required contributions to an affected pension plan is more than one month overdue, it shall as soon as possible pay the amount of those overdue contributions to the trustee of the affected pension plan on behalf of that Service Board out of moneys otherwise payable to that Service Board under Section 4.03.3, and the Authority shall thereafter have no liability to the Service Board for amounts paid to the trustee of the affected pension plan, and if the Authority's payment of such contributions is similarly overdue it shall pay such overdue amount out of its administrative expenses; and

WHEREAS, pursuant to Section 4.11 of the Act, the RTA has taken certain actions by ordinance identifying the amounts estimated to be available for expenditure by each Service Board during fiscal year 2009 and the two following fiscal years; and

WHEREAS, pursuant to Section 4.11 of the Act, each Service Board has presented its proposed fiscal year 2009 budget and proposed 2010-2011 financial plan to the RTA for its review and the RTA has conducted public hearings with respect to its Proposed Annual Budget and Five-Year Capital Program, and considered the proposed budgets and financial plans of the Service Boards and the

public comments with respect to those budgets and financial plans; and

WHEREAS, the amounts available to the Service Boards for 2009-2011 are predicated on the RTA continuing to receive from the State of Illinois funding as reimbursement for revenue losses from providing free or reduced fare rides; and

WHEREAS, pursuant to the RTA's policy regarding Service Board Financing Transactions ("Funding Policy") the RTA Board must approve the Service Boards' use of the proceeds from any Financing Transaction, as such term is defined in the Funding Policy, before such proceeds are used, and the primary use of such proceeds should be for capital programs; and further, such proceeds are excluded from the Service Boards' System-Generated Revenues Recovery Ratios; and

WHEREAS, the Five-Year Capital Program included with this Ordinance is based on capital program submittals from the Service Boards, and after the RTA Board makes any amendments to the estimates of capital funding available based on subsequent Federal or State action, the Service Boards will be required to adjust their capital programs to reflect such revised estimates; and

WHEREAS, the RTA will reimburse the purchase of excess liability and terrorism insurance by the RTA system's Loss Financing Plan to provide system protection against catastrophic loss; and

WHEREAS, the CTA will continue to receive $20.353 million of discretionary funds from the RTA available for operations but appropriated in this ordinance for the Capital Program; and

WHEREAS, Metra's capital farebox programs are considered as operating revenue for funding their operating deficit and in calculating the recovery ratio; and

WHEREAS, the financial plan submitted by the CTA presumes the receipt of public subsidies in excess of the amounts identified by RTA Ordinance 2008-58 for 2010 and 2011, and also presumes the receipt of public subsidies in excess of the amount of public subsidies provided by this Ordinance, and therefore does not meet the criteria set forth in Section 4.11 of the RTA Act; and

WHEREAS, the financial plan in this ordinance for the CTA reduces the presumed public subsidy to the amounts identified as available by the RTA, and the CTA must take deficit reduction actions to adjust their 2010 and 2011 financial plans to comply with the terms of this ordinances; and

WHEREAS, the financial plan submitted by Pace for Suburban Service presumes the receipt of public subsidies in excess of the amounts identified by RTA Ordinance 2008-58 for 2010 and 2011 and therefore does not meet the criteria set forth in Section 4.11 of the RTA Act; and

WHEREAS, the financial plan in this ordinance for Pace Suburban Service reduces the presumed public subsidy to the amounts identified as available by the RTA, and Pace must take deficit reduction actions to adjust their 2010 and 2011 financial plans to comply with the terms of this ordinances; and

WHEREAS, the budget and financial plan submitted by Pace for ADA Paratransit Service presumes the receipt of public subsidies in excess of the amounts identified by RTA Ordinance 2008-58, including the availability of ADA paratransit reserves, for 2011 and therefore does not meet the criteria set forth in Section 4.11 of the RTA Act; and

WHEREAS, the financial plan in this ordinance for Pace ADA paratransit service reduces the presumed public subsidy to the amounts identified as available by the RTA, and Pace must take deficit reduction actions to adjust their 2010 and 2011 financial plans to comply with the terms of this ordinances; and

WHEREAS, pursuant to Section 4.03.3 of the Act, the RTA has established public funding levels in 2009 through 2011 for ADA Paratransit, Suburban Community Mobility and Innovation, Coordination, and Enhancement (ICE) that change proportionately with the percentage change in RTA tax receipts; and

WHEREAS, the amount of public funding

estimated to be available to the Service Boards for the 2009 budget and 2010-2011 financial plan is contingent on compliance with Section 4.02a and 4.02b of the Act; and

WHEREAS, in 2008 the RTA issued working cash notes and loaned $16 million to the CTA to increase its public funding amount for operations to offset the shortfall in real estate transfer taxes and $40 million to Pace for ADA Paratransit service to make up for the interruption in public funding resulting from the transition from additional state assistance to new sales tax receipts enacted by P.A. 95-0708; and

WHEREAS, pursuant to Section 4.09 of the Act, such notes must be repaid within 24 months and constitute a reduction in funds that would otherwise have been allocated to CTA or Pace, respectively, by the RTA; and

WHEREAS, pursuant to Section 2.01c of the Act any grantee that receives funds from the Innovation, Coordination, and Enhancement Fund for the operation of eligible programs must implement such programs within one year of receipt of such funds and within two years following commencement of any program utilizing such funds, determine whether it is desirable to continue the program, and upon such a determination, either incorporate such program into its annual operating budget and capital program or discontinue such program; and

WHEREAS, unfavorable economic conditions have created the need to waive, for purposes of the adoption of the 2009 Budget and 2010-2011 Financial Plan, the provision of the RTA Funding Policy adopted by Ordinance No. 98-15 that requires that the RTA Annual Budget and Two-Year Financial Plan show a year-end unreserved and undesignated fund balance equal to 5% of the RTA general fund by no later than the end of the three-year planning period ("the 5% fund balance policy"), but such policy will be in effect for the development and adoption of the 2010 Budget and 2011-2012 Financial Plan unless further action is taken by the RTA Board to extend such waiver; and

WHEREAS, unfavorable economic conditions have required the RTA to allocate, rather than reserve, financial resources in an effort to preserve operating stability for the 2009 budget and 2010-2011 financial planning period; and

WHEREAS, the waiver of the 5% fund balance policy removes the ability of the RTA to fund the operating budgets of the Service Boards at the levels established in the operating marks, pursuant to the provisions of the RTA Funding Policy adopted by Ordinance No. 91-9 (the "funding to budget policy"), and therefore the funding to budget policy must be waived for purposes of the adoption of the 2009 Budget and 2010-2011 Financial Plan, but such policy will be in effect for the development and adoption of the 2010 Budget and 2011-2012 Financial Plan unless further action is taken by the RTA Board to extend such waiver; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take the following actions in order to carry out its powers and duties under the Act.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY that:

ARTICLE I - APPROVAL OF BUDGETS AND PROGRAMS

Section One:

Service Board Budgets and Financial Plans

1.1 In compliance with the Act, the RTA has received and reviewed proposed budgets for 2009, and financial plans for 2010 and 2011, of the Chicago Transit Authority (the "CTA"), the Commuter Rail Division ("Metra"), the Suburban Bus Division ("Pace") (each a "Service Board").

1.2 With respect to the proposed budget and financial plans of Metra (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Metra sufficient to allow Metra to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

1.3 With respect to the proposed budget and financial plan submitted by the CTA, the RTA finds as follows:

(a) The budget and financial plans submitted by the CTA presumed a receipt of public subsidies in 2010 and 2011 higher than the public funding identified as available by the RTA, and therefore does not meet the criteria established in Section 4.11 of the Act.

(b) The CTA must take deficit reduction actions to bring their financial plans into conformity with Schedule I-B.

With respect to the proposed 2009 budget for the CTA and the financial plans for 2010 and 2011 as summarized on Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of CTA sufficient to allow CTA to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

1.4 With respect to the proposed budget and financial plan submitted by Pace for suburban service, the RTA finds as follows:

(a) The budget and financial plans submitted by Pace presumed a receipt of public subsidies in 2010 and 2011 higher than the public funding identified as available by the RTA, and therefore does not meet the criteria established in Section 4.11 of the Act.

(b) Pace must take deficit reduction actions

to bring their financial plans into conformity with Schedule I-B.

With respect to the proposed 2009 budget for Pace and the financial plans for 2010 and 2011 as summarized on Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

1.5 With respect to the proposed budget and financial plan submitted by Pace for ADA paratransit service, the RTA finds as follows:

(a) The budget and financial plans submitted by Pace presumed a receipt of public subsidies in 2010 and 2011 higher than the public funding identified as available by the RTA, and therefore does not meet the criteria established in Section 4.11 of the Act.

(b) Pace must take deficit reduction actions to bring their financial plans into conformity with Schedule I-B.

With respect to the proposed 2009 budget for Pace and the financial plans for 2010 and 2011 as summarized on Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

1.6 Pursuant to Section 4.11 of the Act, the budgets for 2009 and financial plans for 2010 and 2011, for the Service Boards, as presented in the attached Schedule I-B, are hereby approved provided, however, in the event that a budget or financial plan

is inconsistent with the provisions of this Ordinance, the provisions of this Ordinance shall govern.

1.7 Pursuant to Section 4.11 of the Act, no more than 30 days after each fiscal quarter, each Service Board is directed to report to the RTA its financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction, as of the end of and for such quarter, for review by the RTA for conformity with the approved budget for such period.

Section Two:

RTA Annual Budget and Program

2.1 The RTA has received and reviewed the 2009 Annual Budget and Program of the Regional Transportation Authority as summarized in Schedule I-A. The 2009 Annual Budget and Program is hereby approved and the Board finds as follows:

(a) The 2009 Annual Budget and Program shows a balance between anticipated revenues from all sources and anticipated expenses, including the funding of operating deficits and the discharge of encumbrances incurred in prior periods and payment of principal and interest on outstanding indebtedness when due, as summarized in Schedule I-A.

(b) The 2009 Annual Budget and Program shows cash balances sufficient to pay with reasonable promptness all obligations and expenses as incurred, as summarized in Schedule I-F.

(c) The 2009 Annual Budget and Program shows that the level of fares and charges for public transportation provided by, or under grant or purchase of service contracts of, the Service Boards is sufficient to cause the aggregate of all projected system-generated revenues from such fares and charges received in 2009 apart from ADA paratransit services to equal at least 50 percent of the aggregate cost of providing such public transportation in 2009, and at least 10 percent for ADA paratransit service in 2009, as required by the Act, and as summarized in Schedule I-C.

(d) The 2009 Annual Budget and Program is based on and employs assumptions and projections which are reasonable and prudent.

(e) The budgeted "administrative expenses" of the RTA for 2009, as defined in Section 4.01(c) of the Act, do not exceed the maximum administrative expenses (Statutory Cap) permitted for 2009 of $16,125,371.

(g) The 2009 annual budget and program is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

Section Three:

Five-Year Capital Program

3.1 The Five-Year Capital Program of the RTA for the fiscal years beginning January 1, 2009, and ending December 31, 2013, has been the subject of public hearings in each county in the metropolitan region as required by Section 2.01b of the Act. The RTA has considered public comments on the proposed Five-Year Capital Program. The RTA hereby adopts the Five-Year Capital Program attached as Schedule II, subject to continuing review by the RTA. In accordance with Section 2.01b and Section 4.02(b) of the Act, no Service Board shall apply for or receive any capital grant or loan unless it is identified in the RTA Five-Year Program and is consistent with the RTA Strategic Plan.

Section Four

RTA 5% Fund Balance and Funding to Budget Policy

4.1 The provisions of the RTA Funding Policy adopted by Ordinance No. 98-15 that require that the RTA Annual Budget and Two-Year Financial Plan show a year-end unreserved and undesignated fund balance equal to 5% of the RTA general fund by no later than the end of the three-year planning period ("the 5% fund balance policy"), are hereby waived for purposes

	Collected Within Chicago	Collected Within Suburban Cook County	Collected in DuPage, Kane, Lake, McHenry and Will Counties
CTA	100 %	30 %	0 %
Metra	0 %	55 %	70 %
Pace	0 %	15 %	30 %
Total	**100%**	**100%**	**100%**

of the adoption of the 2009 Budget and 2010-2011 Financial Plan, but such policy will be in effect for the development and adoption of the 2010 Budget and 2011-2012 Financial Plan unless further action is taken by the RTA Board to extend such waiver.

4.2 The provisions of the RTA Funding Policy adopted by Ordinance No. 91-9 that establish that the RTA funds the operating budgets of the Service Boards at the levels established in the operating marks (the "funding to budget policy"), are hereby waived for purposes of the adoption of the 2009 Budget and 2010-2011 Financial Plan, but such policy will be in effect for the development and adoption of the 2010 Budget and 2011-2012 Financial Plan unless further action is taken by the RTA Board to extend such waiver.

ARTICLE II - APPROPRIATION OF FUNDS AND CERTAIN OTHER ACTIONS

Section One:

Appropriation for each Service Board

The following amounts for 2009 are appropriated for payment to each Service Board from the enumerated sources of funds and for the specified objects and purposes. The total appropriations as shown for each Service Board and on Schedule I-A for RTA Total for CTA Operations, RTA Total for Metra Operations, RTA Total for Pace Suburban Service. RTA Suburban Community Mobility Funding for Pace, RTA South Suburban Job Access Funding for Pace, and RTA Total for ADA Paratransit Service represents the legal level of budgetary control.

1.1 Statutory RTA Taxes

There is appropriated, for expenditure by each Service Board pursuant to the 2009 Budget approved in Article I, 85% of the RTA receipts from taxes imposed pursuant to Section 4.03 of the Act and allocated according to the percentages shown above and specified in Section 4.03.3 (a) of the Act, and from the Regional Transportation Authority Occupation and Use Tax Replacement Fund and the State and Local Sales Tax Reform Fund pursuant to Section 4.03.3(b) of the Act. The estimated amount of the appropriation is specified as Part I Allocation – "85% Sales Tax" on Schedule I-E.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified proportionate share of such proceeds.

1.2 Statutory RTA Sales Taxes and Public Transportation Funds

(a) There is appropriated for expenditure by Pace for ADA paratransit Services receipts from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified as Part II Allocation; RTA Total for ADA Paratransit Funding on Schedule I-E;

(b) There is appropriated for expenditure by the Service Boards pursuant to the Budget approved in Article I, RTA receipts from taxes imposed pursuant to Section 4.03 of the Act, and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified

as Remaining Balance to Service Boards in Part II Allocation on Schedule I-E, and allocated to each Service Board according to the percentages specified under Remaining Balance to Service Boards in Part II on Schedule I-E; and

(c) There is appropriated for expenditure by Pace's Suburban Bus Service funds for Suburban Community Mobility pursuant to the Budget approved in Article I, RTA receipts from taxes imposed pursuant to Section 4.03 of the Act, and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified as RTA Suburban Community Mobility Funding to Pace in Part II Allocation on Schedule I-E.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, and Public Transportation Fund receipts pursuant to Section 4.09 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified share of such proceeds pursuant to Section 4.03.3 of the Act.

1.3 Free and Reduced Fare Reimbursement

(a) There is appropriated, for expenditure by each Service Board pursuant to the 2009 Budget approved in Article I, amounts received from the State of Illinois for reimbursement of revenues lost from providing free or reduced fare rides.

After receipt by the RTA of such funds from the State of Illinois, the Executive Director shall provide for the payment to each Service Board its proportionate share of the proceeds estimated to be received from the State as identified on Schedule I-A.

1.4 Discretionary Funds of the RTA – Public Transportation Fund, 15% Sales Tax,

Other RTA Revenues

(a) There is appropriated, for expenditure by each Service Board pursuant to the 2009 Budget approved in Article I, the amounts specified as "RTA Discretionary Funds to CTA", and "RTA Discretionary Funds to Pace" on Schedule I-B from other receipts and revenues of the RTA; and

(b) There is appropriated, for expenditure by Pace pursuant to the amount specified as RTA South Suburban Community Job Access Funds on Schedule I-B from other receipts and revenues of the RTA, or so much as may be necessary such that the actual amounts appropriated for Pace equal the amount specified as "RTA South Suburban Community Job Access Funds" on Schedule I-B.

The Executive Director is hereby directed to provide for the payment of such funds as soon as may be practicable upon their receipt provided that each Service Board is in compliance with the requirements of Section 4.11 of the Act and this Ordinance.

(c) Capital Programs: There is appropriated, for expenditure by the Service Boards for projects, as specified on Schedule II, and pursuant to the first year of the Five-Year Capital Program approved in Article I, the amounts specified as Transfer Capital – RTA Funds on Schedule I-D from other receipts and revenues of the RTA.

(d) ICE Programs for Operating Projects: There is appropriated, for expenditure by the Service Boards and Other Grantees for projects, the amounts specified as RTA 2008 ICE Funds for 2009 Projects on Schedule I-D from RTA Statutory Sales Taxes and Public Transportation Funds. The appropriation and associated operating costs of the projects are excluded from the Service Boards' recovery ratio calculation.

The Executive Director is hereby directed to provide for payment of such funds pursuant to grant or intergovernmental agreements with each Service Board.

Section Two:

Appropriation to the Regional Transportation Authority

In 2009 there is appropriated, for expenditure for the operating purposes of the RTA (the "Agency")

the amounts specified on Schedule I-A as Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, pursuant to the 2009 Budget approved in Article I, from other receipts and revenues of the RTA.

In 2009 there is appropriated, for regional expenditure the amounts specified on Schedule I-A as RTA Funding for Innovation, Coordination, and Enhancement, pursuant to the 2009 Budget approved in Article I, from RTA Statutory Sales Taxes and Public Transportation Funds of the RTA the amount of the appropriation is specified as RTA Innovation, Coordination, and Enhancement (ICE) Funding in Part II Allocation on Schedule I-E.

In 2009 there is appropriated for reserve, funds for ADA paratransit service, the amount as specified on Schedule I-A as RTA Funds Reserved for ADA Paratransit, pursuant to the 2009 Budget provisions in Article I, from RTA Statutory Sales Taxes and Public Transportation Funds of the RTA, the estimated amount of the appropriation is specified as RTA Funds Reserved for ADA Paratransit on Schedule I-B.

In 2009 there is appropriated for transfer from the RTA's Fund Balance to the Joint Self Insurance Fund (JSIF), funds to reimburse the insurance premium and associated fees for liability and terrorism insurance for the RTA System's Loss Financing Plan the amount specified on Schedule I-A as RTA JSIF Funding.

The total appropriations as shown in Schedule I-A for 2009 Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, represent the legal level of budgetary control. The Executive Director is authorized to transfer up to 10% from and among each of these items.

ARTICLE III - IMPLEMENTATION

The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance and to prepare and disseminate the 2009 Annual Budget and Program of the RTA in accordance with the Act and the policies established herein.

The Executive Director shall organize the staff of the Authority, shall allocate their functions and duties, and shall fix compensation and conditions of employment. The Executive Director shall develop, and modify as may be necessary, Agency policies regarding travel, business and relocation expenses.

Nothing in this Ordinance estimating amounts available to the Service Boards is intended to or shall have the effect of waiving any discretion the RTA may have under law to appropriate amounts available to the Service Boards, subject to compliance by the Service Boards with terms and conditions established by the RTA. Furthermore, nothing in this Ordinance is intended to or shall have the effect of waiving any discretion the RTA may have under law to subject to review the determinations made in this Ordinance, including, but not limited to, setting recovery ratios for the Service Boards, establishing exclusions or inclusions of certain revenues or expenditures from the calculation of such recovery ratios, or determining the allowable uses of federal, state or local funds.

The Executive Director is authorized and directed to execute and file applications on behalf of the RTA with the United States Department of Transportation (USDOT), Federal Transit Administration (FTA), the Illinois Department of Transportation (IDOT), and any other funding agency (collectively the "funding agencies") for any monies available for funding of the RTA Annual Budget and Five-Year Capital Program. The Executive Director is authorized to furnish such additional information, assurances, certifications and amendments as the funding agencies may require in connection with such applications or the projects. The Executive Director is authorized and directed on behalf of the RTA to execute and deliver grant agreements and all subsequent amendments thereto between the RTA and the funding agencies. Further, the Executive Director is authorized and directed to

take such action as the Executive Director deems necessary or appropriate to implement, administer, and enforce said agreements and all subsequent amendments thereto on behalf of the RTA.

The Executive Director is authorized and directed to file the 2008 Budget and Program and a copy of this Ordinance with the Governor of Illinois, the Illinois General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago and the Auditor General of the State of Illinois, along with an appropriate certification that this budget and program meet the requirements of the Act.

Schedule 1-A: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in thousands)

	2009	2010	2011
System-Generated Revenue	Budget	Plan	Plan
RTA Sales Tax (Part I)	758,400	768,639	789,392
RTA Public Transportation Fund (Part I)	189,600	192,160	197,348
RTA Sales Tax (Part II)	281,746	285,549	293,259
RTA PTF (Part II subtotal)	126,651	128,361	131,827
RTA RETT PTF for CTA (Part II)	21,000	21,275	21,850

(1) The State appropriated $37.3 million; the figure shown reflects a State administrate fee of $.7 million yielding net RTA receipts of $36.6 million. (2) Operations funding to the CTA in 2010 and 2011 has been increased over the RTA funding marks by the respective amounts of $27.7 million and $31.7 million. However, the CTA deficit for the 2010-2011 Financial Plan still exceeds available funding by $20.4 million in 2010 and by $36.1 million in 2011. (3) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action.

Use of RTA Reserves for ADA Paratransit	-	403	-
Total Funding	**98,998**	**100,737**	**103,043**
RTA Funds Reserved for ADA Paratransit (6)	(403)	-	-
RTA Total for ADA Paratransit Service (6)	98,595	100,737	103,043

(1) The 2010 and 2011 financial plans submitted by the CTA, Pace Suburban Service, and Pace ADA Paratransit Service presumed the receipt of public funds in excess of the funding marks set by the RTA Board as required by the RTA Act. The financial plans adopted by this ordinance reduced public subsidies to the levels set by the marks for Pace Suburban Service and Pace ADA Paratransit Service. Pace must adjust their financial plans to reduce their deficits. The RTA increased CTA's discretionary funds in 2010 and 2011 by the respective amounts of $27.7 million and $31.1 million. However, the CTA deficit for the 2010-2011 financial plan still exceeds available funding by $20.4 million and $36.1 million. To achieve the statutory requirements the CTA must adjust their financial plans to reduce their deficits. (2) Excludes the 25% PTF on RETT. (3) The RETT figures represent RTA's "marks"; the CTA balanced its 2009 budget by using a lower RETT amount. The net impact of this change reduced CTA's funding by $16.4 million. In 2010 and 2011 the CTA estimated RETT to be $75 million and $90 million respectively. (4) The PTF on RETT equals 25% of the COC RETT figures. (5) Funds that exceed the operating deficit of a Service Board (except for ADA Paratransit service) are retained by the Service Board and reserved for their capital program unless approved for operating use by the RTA Board. (6) Public funding that exceeds the operating deficit for ADA Paratransit service, by statute, is held in reserve by the RTA to cover future operating needs.

Schedule I-C: **Recovery Ratio %**

	2009 Budget
CTA	
Recovery Ratio %	52.0%
Metra	
Recovery Ratio %	55.0%
Pace Suburban Service	
Recovery Ratio %	36.0%
Total System-Generated Revenue Recovery Ratio %	**54.7%**
Pace ADA Paratransit	
Recovery Ratio %	10.0%

The RTA Act allows certain expenditures to be excluded from the recovery ratio calculation including security, depreciation, CTA's pension obligation bonds, and facility leases. Metra's calculation includes capital farebox revenue. The total system-generated revenue recovery ratio includes a statutory expense credit of $160 million.

(1) Cash disbursements are subject to actual cash availability. (2) Assumes prompt payment from the State Public Transportation Fund (Part I and Part II) and a three month delay in State Financial Assistance payments. (3) Agency Administration, Regional Services and Programs, Regional Technology and Agency Capital. (4) Restricted and unrestricted cash.

The GFOA Distinguished Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) present an award of Distinguished Presentation to the Regional Transportation Authority, Illinois for its annual budget for the fiscal year beginning January 1, 2008.

In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan, and as a communication device.

The award is valid for a period of one year only. We believe our current budget book continues to conform to program requirements, and we are submitting it to the GFOA to determine its eligibility for another award.

The Government Finance Officers Association of the United States and Canada

presents this

CERTIFICATE OF RECOGNITION FOR BUDGET PREPARATION

to

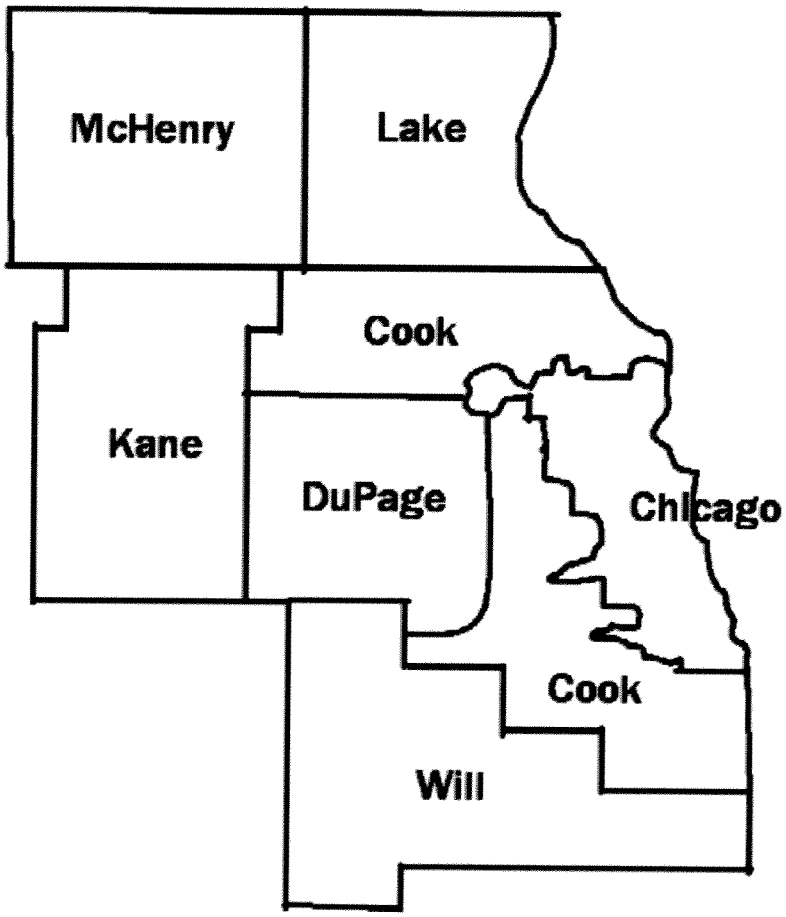
Financial Planning & Analysis Division
Regional Transportation Authority, Illinois

The Certificate of Recognition for Budget Preparation is presented by the Government Finance Officers Association to those individuals who have been instrumental in their government unit achieving a Distinguished Budget Presentation Award. The Distinguished Budget Presentation Award, which is the highest award in governmental budgeting, is presented to those government units whose budgets are judged to adhere to program standards.

Executive Director

Date July 21, 2008

2 Budget in Brief



System Overview

The Regional Transporhtation Authority (RTA) provides funding, planning and fiscal oversight for regional bus and rail operations in the six-county northeastern Illinois region as set forth by the RTA Act. The Act designates the Agency as the primary public body in the region to secure funds for public transportation. The Agency is authorized to impose taxes in the region, issue debt, and is responsible for the allocation of federal, state and local funds to finance both the operating and capital needs of public transportation in the region.

The RTA Board of Directors governs the Agency. Three independent Service Boards, the Chicago Transit Authority (CTA), Metra Commuter Rail and Pace Bus, have operational responsibility for public transportation within the six-county region and are governed by their own boards of directors. The CTA provides bus and rapid transit rail service in the City of Chicago and neighboring suburbs. Metra provides commuter rail service throughout the six-county region. Pace provides bus service in the suburbs and between the suburbs and the City of Chicago, and Pace provides ADA Paratransit service for the entire region (Exhibit 2-1).

Yearly, the RTA Board must adopt an annual budget, two-year financial plan and a five-year capital program for each Service Board. The principal features of this process are outlined in the following paragraphs. In September, the RTA Board approves the "marks" for each Service Board. The "marks" include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

Exhibit 2-1: **RTA Organization Structure**

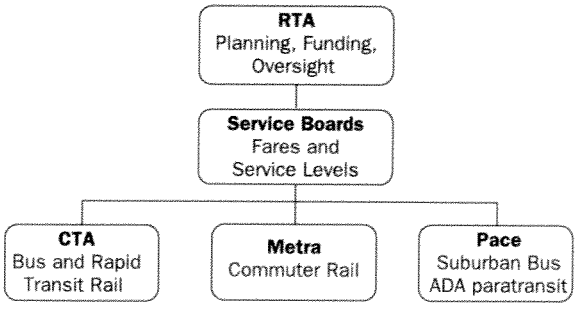


Exhibit 2-2: **Financial Relationship and Responsibilities of the RTA and Service Boards**

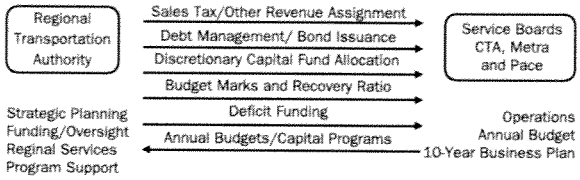

The "marks" guide the Service Boards' budgetary process. Each Service Board prepares and publishes, for public hearing and comment, a comprehensive budget document that is to conform to the RTA marks. After considering public comment, the CTA, Metra and Pace board members adopt their respective budgets.

In November, those budgets are forwarded to the RTA, which consolidates the Agency and the Service Board budgets into a proposed RTA budget document. The RTA Board distributes this document for public hearing and comment before adoption in December.

Exhibit 2-2 illustrates the principal responsibilities and interactions between the Authority and Service Boards in the annual budget and capital program process.

Service Characteristics

There are more than eight million residents in the six-county northeastern Illinois region, an area that covers 3,749 square miles. The RTA system deploys over 5,000 bus and rail cars on more than 400 routes to service its customers. In 2007, the regional public transportation system provided nearly 623 million trips.

The system has a replacement value of almost $35 billion (i.e., the asset value of the system's existing infrastructures). With an average asset life of over 20 years, the RTA system needs more than $1 billion

in capital funds each year just to keep the existing infrastructure in good repair.

Operating Budget

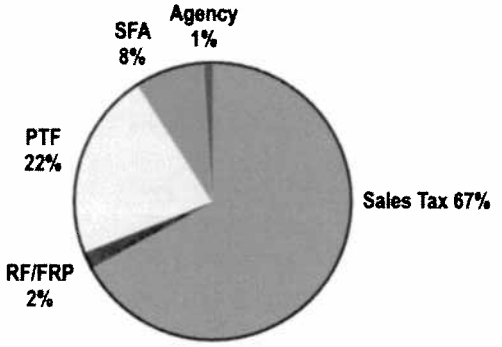
A statement of revenues and expenditures for the 2008 estimate and the 2009 budget is presented in Exhibit 2-3, and subsequent paragraphs summarize line item information. The statement of RTA revenues and expenditures from 2007 through 2011 is shown in the Region section.

Total Revenues

In 2009, total RTA revenues are projected at $1,549 million. This represents an increase of $182 million or 13% over the 2008 estimate of $1,367 mil-

lion. $1,040 million, or 67%, of these revenues will be generated from RTA Sales Tax; Public Transportation Fund (PTF) receipts of $337 million are 22% of the total. State financial assistance (SFA) of $116 million provides eight percent of revenues. State reduced fare reimbursement and free ride programs (RF/FRP) equal two percent of total revenues, or $37 million, and other RTA/Agency revenues account for the remaining balance of $19 million, or one percent. Exhibit 2-4 illustrates this distribution.

Exhibit 2-4: **2009 RTA Revenue** - $1,549 million



Sales Tax

Sales tax is the primary source of revenue for the RTA. The tax is authorized by Illinois statute, imposed by the RTA in the six-county region of northeastern Illinois and collected by the State.

RTA Sales Tax (Part I) and Public Transportation Funds (PTF)

The traditional RTA sales tax (identified in this document as "Old" or "Part I" Sales Tax) has been the major source of funding for public transportation in northeastern Illinois for nearly three decades. As much as 85 percent of the RTA sales tax receipts are apportioned to the Service Boards by statutory formula. Details of this apportionment can be found in the Region section of this document.

The 2008 sales tax estimate and the 2009 budget year sales tax projections were developed in August 2008, and were established after assessing state and regional economic data and national forecasts. Based on this information, the RTA estimated sales tax receipts for 2008 and 2009 to be $758 million. The estimate for 2008 in August was 1% below the RTA's initial budget figure of $766 million.

State Public Transportation Funds (PTF) from Part I sales taxes are based on a formula tied to Part I sales tax results. The fund provides the RTA with a 25% match of its sales tax proceeds, which means that for every $4 collected in old sales tax the RTA receives an additional $1 in PTF. The budgeted receipts for 2009 are $190 million.

RTA Sales Tax, Real Estate Transfer Tax (RETT), and PTF – (Part II)

In January 2008, Illinois Public Act 95-0708 increased the RTA sales tax rate throughout the region, increased the real estate transfer tax (RETT) in the City of Chicago, and raised the portion of RTA sales tax revenues matched by PTF (identified in this document as "New" or "Part II" Sales Tax). The RTA sales tax rate was increased 0.25% in Cook County and 0.50% in the Collar Counties effective April 1, 2008. Proceeds of the sales tax increase in the collar counties are divided evenly between the RTA and the county where the tax is collected. Effective April 1, 2008, the RETT in the City of Chicago was increased by 0.3% (e.g. for every $1,000 in sales price $3.00 in tax is collected).

In February 2008, the PTF match of the old RTA sales tax increased from 25% to 30%. In April 2008, the 5% PTF match was applied to the RETT and the RTA portion of the sales tax increase. Beginning in January 2009, the PTF match of both the RETT and the RTA portion of the sales tax increase will rise from 5% to 30%.

While RETT and the 25% PTF match of RETT funds only the CTA, the largest part of P.A. 95-0708 revenue provides funding for CTA, Metra, Pace and ADA Paratransit operations, as well as regional Innovation, Coordination, and Enhancement (ICE) and Suburban Community Mobility Funds (SCMF) initiatives. Funds for ADA Paratransit, ICE and SCMF are by statute set aside before distributions to the

Exhibit 2-5: **Funds Provided by P.A. 95-0708**
2009 Budget (dollars in millions)

Total Distribution	**496**	**100%**

CTA, Metra and Pace. Of this remaining balance, the CTA receives 48%, Metra 39% and Pace 13% (reference the Region section for additional information). In 2009, the budget for the additional funds provided by P.A. 95-0708 total $496 million (Exhibit 2-5).

State Financial Assistance

This revenue source is state-authorized assistance to reimburse the debt service expenses for RTA Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the state, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. Projected receipts for 2008 are $116 million.

Reduced Fare/Free Ride Programs

This operating assistance is partial reimbursement from the State to the Service Boards for discounts and free ride programs mandated by law. This includes discounts to students, elderly, and disabled riders as well as free ride programs for seniors 65 and older, and any disabled person who qualifies for the State's Circuit Breaker Program. The funds are distributed by the state through the RTA and then to the Service Boards. Receipts for 2009 are budgeted at $37 million, an amount equal to the 2008 funding level.

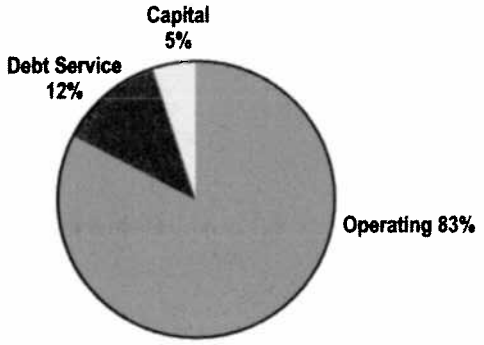
Other Revenue

This RTA revenue category includes sales tax interest, investment income, transit benefit program revenue, and grant funds from state and local agencies for regional coordination and technology initiatives which help defray the cost of these Agency sponsored programs. Total receipts in 2009 are budgeted at $19 million.

Total Expenditures

Total RTA expenditures (operating, debt service and capital) for 2009 are budgeted at $1,561 million. This amount is $175 million or 13% higher than the 2008 estimate of $1,386 million. Operating expenses account for 83% of the expenditures, 12% is used to cover the debt service on RTA bonds, and 5% is used to funds capital programs (Exhibit 2-6 illustrates this distribution).

Exhibit 2-6: **2009 RTA Expenditures** - $1,561 million



Operations Funding

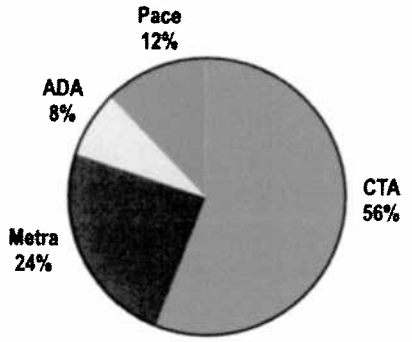
The RTA's primary expenditure is the funding of Service Board operating deficits.

The RTA Board establishes "marks" for each Service Board to use in its proposed budget and program. The marks are set in September for the next fiscal (calendar year) period. Operating marks include a recovery ratio for the next budget year and operating funds for the budget and following two-year financial planning period.

Operating deficits are primarily sourced from RTA sales tax, the State's PTF, and the City of Chicago's RETT. Secondary sources include program funds, and intermittent use of fund balances.

In 2009 funds for operations are budgeted at

Exhibit 2-7: **Funds for Service Operations - $1,290 million**



$1,290 million. The CTA will use 56%, Metra 24%, and Pace 20 % (12% for suburban bus service and 8% for regional ADA Paratransit service (Exhibit 2-7). The source of funds and amount of funds (Exhibit 2-8) used for each Service Board's operation are identified in more detail in subsequent paragraphs.

CTA

The CTA's operations funding level (deficit) in 2009 is budgeted at $723 million. This figure includes statutory sales tax (sales tax based on formulas set by state law) totaling $437 million, $198 million from discretionary RTA funds (sales tax and PTF funds the RTA receives for operating and capital expenditures as set forth by state law), and $88 million from City of Chicago RETT and corresponding 25% statutory PTF. (Note: City of Chicago RETT funds flow directly from the City to the CTA and therefore are not included in the revenue or funding figures on Exhibit 2-3).

Metra

Metra's funding in 2009 is budgeted at $369 million with all funds provided by statutory formula. $316 million is appropriated for operations with the remaining balance of $53 million retained by Metra and set aside for capital programs (in this document statutory funds that exceed Metra's operating needs may be referenced as Transfer Capital or Retained Earnings).

Pace Suburban Service

Pace's funding for operations in 2009 is budgeted at $150 million. Pace will receive statutory sales tax from the old sales tax and new sales tax formulas totaling $119 million. The RTA will provide $3 million in discretionary funds; Suburban Community Mobility and South Suburban Job Access funding (provided by P.A. 95-0708 and discussed in more detail in the region section) total $27 million, and Federal Job Access Reverse Commute (JARC) and Congestion Mitigation Air Quality (CMAQ) funds total $2 million. The remaining balance of $1 million will be retained by Pace for future operating and/or capital expenditure.

Exhibit 2-8 **2009 Service Board Deficit Funding** (dollars in millions)

	2009				
			Pace

Total Funding for Operations	**723**	**316**	**151**	**100**	**1,290**

(1) Metra's amount ($53 million) represents funds retained for Capital initiaitves. Pace's amount is the net of Federal CMAQ/JARC funds ($2 million) less funds retained by Pace totaling $1 million..

Pace ADA Paratransit Service

Funding for ADA Paratransit service in 2009 is budgeted close to $100 million. All funds are statutorily provided by P.A. 95-0708 and increase or decrease each year by the percentage change in sales tax revenue. Statutory funds that exceed the operating deficit are by statute retained by the RTA and reserved to fund future ADA Paratransit service; in 2009 less than $1 million is to be retained by the RTA.

Innovation, Coordination and Enhancement (ICE) Funding

Included in P. A. 95-0708 legislation was a provision that set aside $10 million in 2008 for operating or capital programs for use by the Service Boards or units of local government that advance the goals and objectives identified by the RTA in its Strategic Plan. The funds may only be used to enhance the coordination and integration of public transportation and develop and implement innovations to improve the quality and delivery of public transportation in the region. The $10 million set aside in 2008 was captured as an operating expense pending development of a program and grantee process. In the fourth quarter of 2008 the RTA adopted the use of funds for operations (38%) and capital (62%). The 2009 budget based the distribution of funds on these same percentages and calls for operating funds totaling nearly $4 million with the balance of $6 million allocated to capital programs.

Reduced Fare/Free Ride Programs and Sales Tax Interest

State reduced fare/free ride reimbursements are received as revenue by the RTA, as previously described, and flow directly to the Service Boards to help defray program costs. The 2009 budgeted reimbursement level of $37 million remains at par with the 2008 funding amount.

There is a lag in time between when the State collects RTA sales tax and when it distributes the funds to the RTA. The RTA receives interest on this sales tax, and then disburses earnings on Part I sales tax to the Service Boards using the same formula as the Part I sales tax distribution formula. Payments in 2009 are budgeted at $1 million.

Agency Administration and Regional Initiatives

Agency administration represents on-going RTA functions to execute its funding and financial oversight responsibilities. Budgeted 2009 administrative expenses totaling $9 million are significantly below the 2009 statutory cap of $16 million permitted by the RTA Act.

The RTA coordinates and funds several region-wide initiatives that bring together public transportation services. These programs include system maps, local advertising, the transit benefit program, the Travel Information Center (TIC), ADA certification, Reduced Fare, and the Customer Service Center. In addition, the RTA supports continued demands for technical assistance initiatives and coordination programs that encourage transit oriented improvements in the region. Programs supported include various community planning and sub-regional programs.

Debt Service and Capital Expenditures

Total expenditures in this category are projected to increase from $239 million in 2008 to $267 million in 2009, an increase of 11.8 %. This change basically reflects the increase of statutory funds Metra has available for capital expenditure.

Principal and Interest

Principal and interest (debt service) expenditures in the 2009 budget total $183 million. Payments cover the debt incurred on bonds (authorized by the state), which help pay for Service Board capital projects, and pay for the occasional issuance of working cash notes to cover extended accounts receivable cycles from the State. The State's financial assistance for SCIP bond programs covers roughly 62% of the RTA's debt service costs with the remaining balance paid from RTA funds.

Regional Technology/Agency Programs and ICE

The 2009 budget continues the RTA's commitment to fund region-wide capital driven technology initiatives and Agency programs. The 2009 Agency budget of $5 million for these initiatives includes funds for new TIC telephone equipment, leasehold improvements for the RTA board room, a condition assessment of Service Board assets, an improved Agency information system, and regional technology initiatives such as multi-modal information kiosks. As previously discussed, ICE funds for capital initiatives in the 2009 Budget total $6 million.

Total RTA revenues less total RTA expenses produce an annual change to the fund balance.

Transfer Capital

Since 1995, the RTA has transferred a portion of its discretionary funds, available for region-wide capital or operating initiatives, to the CTA for capital investment. Annual funding for this program during the next three-year financial planning period continues at over $20 million. In addition, the statutory apportionment of sales tax to a Service Board can exceed its operating needs. When this occurs, the Service Board retains the funds for their capital program. Over the years Metra has been the only Service Board that has been able to retain such funds for capital investment. The budget for 2009 includes $53 million available for Metra's capital program.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a 5% minimum level in the unreserved and undesignated fund balance. If the amount is below 5% the financial plan must show full replenishment by the end of the current three-year planning cycle. The percentage is based on total operating expenditures for the year (as shown on Exhibit 2-3). The purpose of the ordinance was to formalize a practice of maintaining a level of available financial resources for funding during unfavorable economic periods. The policy proved its value as sluggish economic conditions over the past several years' limited growth of sales tax receipts.

However, continued unfavorable economic conditions have created the need to waive, the provision for the 2009-2011 planning period. This waiver also removes RTA's ability to fund the operating budgets of the Service Boards at the levels established in the operating marks, (a provision of the RTA Funding Policy) and therefore the funding to budget policy must be waived for purposes of the adoption of the 2009 Budget and 2010-2011 Financial Plan. The ending fund balance for 2009 is estimated to be $7 million or 0.5% of total operating costs of $1.6 billion.

Beginning Balance

The beginning fund balance is the amount of funds in the undesignated and unreserved (General Fund) fund balance after the previous year's results have been audited and the accounting records are closed. All statements in this document reflect 2007 actual results for the 2008 beginning balance.

Change in Fund Balance

Total RTA revenues less total RTA expenses produce an annual change to the fund balance. When revenue exceeds expense, the remainder or surplus is added to the fund balance. If expenses exceed revenues, the fund balance is reduced by the deficit amount. Projections indicate that expenses will exceed revenues in 2008 by $22 million which includes $4 million to fund the regions Joint Self Insurance Fund (JSIF).

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal (calendar) year for each Service Board. The RTA Act further requires that the combined revenues from RTA operations cover at least 50% (apart from ADA Paratransit service) of the system operating cost. The RTA's system-generated

revenue recovery ratio for 2009 is nearly 55%. A detailed breakdown of this calculation is provided in the Region section.

In meeting the 50% recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50% requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/leaseback transactions. The Act further requires a recovery ratio for ADA Paratransit service of 10%, the 2009 budget for this service meets this stipulation.

Statutory Compliance

The RTA Act requires that the CTA, Metra and Pace each have a balanced budget; the region's recovery ratio is at least 50% (apart from ADA Paratransit that requires a recovery ratio of 10%); and the RTA's (Agency's) administrative expenses do not exceed an established statutory cap (CAP). The CAP is over $16 million, and the Agency's administrative expenses of slightly less than $9 million are well below the statutory amount. The Act also requires that prudent fiscal practice be followed such as proper cash management, use of reasonable assumptions, and sound accounting and financial practices. Each Service Board, the Agency and the region as a whole have budgets presented in this document that comply with these stipulations.

Source and Use of Funds

Each section of the 2009 Program and Budget Book presents the source of funds (public funding and/or operating revenues) and the use (expenditure) of funds for the respective operation. The subsequent paragraphs and exhibits summarize the source and use of these funds for the 2009 budget.

In 2009, total revenue estimates of $2,579 million include: $1,040 million in receipts from RTA sales tax; State funding totaling $490 million from PTF, financial assistance, reduced fare reimbursement/free ride programs, and $35 million from Other

RTA revenues and the use of its fund balance; $67 million from RETT, CTA, Metra and Pace mainline operating receipts of $938 million; and $9 million in ADA operating revenue.

The use of $2,579 million in funds includes $2,265 for service operations (ADA paratransit $107 million, and mainline CTA, Metra and Pace Suburban Bus service $2,158 million); $183 million for debt service; $84 million for capital programs, and $47 million for agency administration and regional initiatives (including ICE, South Suburban Job Access and JSIF funding). (Exhibits 2-9 though 2-12).

Capital Program

The capital program "marks" set by the RTA Board in September include estimated figures that the Service Boards use in the budget and program documents that they present for public hearing. When final federal appropriations numbers are determined and local funds revised, the RTA Board will consider ordinances that incorporate all changes and bring the marks and program in balance. The five-year program currently totals more than $4 billion with 2009 totaling $482 million (Exhibits 2-13 and 2-14). Details on their current programs are provided in the Capital section of this document.

3 RTA

Region Operating Plan

Budget and Financial Plan

The RTA must prepare and publish a document every year that includes a one-year operating budget, a two-year financial plan, and a five-year capital program that meets specific statutory requirements.

This document fulfills the responsibility. Exhibit 3-1 provides a summary of the RTA's statement of revenue and expenditures for 2007-2011. Throughout this document, 2007 is actual data, 2008 is the estimate of year-end results, 2009 is the operating budget, and 2010-2011 is the two-year financial plan.

Revenue

Total revenue is projected to grow from $1,173.7 million in 2007 to $1,605.3 million in 2011 (Exhibit 3-1). This is an increase of $431.6 million over the four-year period, or an 8.1 percent compound annual growth rate. This increase is primarily the direct result of new legislation passed in 2008 by the State of Illinois (P.A. 95-0708).

The RTA retains 15 percent of Part I sales tax and distributes the remaining 85 percent to the Service Boards

The RTA Sales Tax is the primary source of revenue for the RTA. In 2007, traditional RTA Sales Tax (Old or Part I) receipts of $752.9 million comprised 64 percent of the RTA's total revenue. Public Transportation Funds (PTF – Part I), State Financial Assistance (SFA), State Reduced Fare (RF), and other revenue, which includes state funds totaling $54.3 million for ADA Paratransit service, provided the balance of RTA revenue totaling $420.8 million, or 36 percent (Exhibit 3-2).

Sales Tax

The RTA Sales Tax is authorized by Illinois statute and imposed by the RTA in the six-county northeastern Illinois region. The RTA Sales Tax is collected by the Illinois Department of Revenue, paid to the Treasurer of the State of Illinois and held in trust for the RTA outside the State Treasury. Proceeds from the RTA Sales Tax are paid directly to the RTA on a monthly basis, without appropriation, by the State Treasury on the order of the State Comptroller.

The traditional (Old) sales tax is the equivalent of 1 percent on sales in Cook County and 0.25 percent on sales in DuPage, Kane, Lake, McHenry and Will counties. The 1 percent sales tax in Cook County is comprised of 1 percent on food and drugs and 0.75 percent from all other sales, with the State then providing a "replacement" amount to the RTA equivalent to 0.25 percent of all other sales. The RTA retains 15 percent of the total sales tax and distributes the remaining 85 percent to the Service Boards according to the formula specified in the RTA Act (Exhibit 3-3).

Exhibit 3-4 breaks out the 2007 sales tax distribution by Service Board. In 2007, the $752.9 million in sales tax was broken out in the following manner; CTA 40 percent, Metra 34 percent, Pace 11 percent, and RTA 15 percent. Sales tax is projected to increase from $752.9 million in 2007 to $789.4 million in 2011, a compound growth rate of 1.2 percent.

Sales tax (New or Part II) from legislation passed in January 2008 (P.A. 95-0708) is projected to increase from $281.7 million in 2009 (the first full year receipts are collected) to $293.3 million in 2011, an increase of $11.5 million or 2.0% annually (Exhibit 3-5). The legislation increased RTA sales tax from 1% in Cook County to 1.25%, and increased the sales tax in the collar counties (DuPage, Kane, Lake, McHenry and Will) from .25% to .75%. The collar county tax increase is divided evenly between the RTA and the county where the tax is collected, which means the sales tax the RTA receives in the collar counties doubled (to .50% from 0.25%).

The 2009 sales tax budget was developed mid-year 2008 after assessing state and local economic trends. After reviewing this data, the RTA decreased its original 2008 budget figure of $766.1 million for old sales tax to $758.4 million (a 1% decrease) and carried this estimate forward for the 2009 budget.

(1) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action. (2) Includes $10.4 million designations/reserves in 2007.

From a geographic standpoint, the City of Chicago accounted for 31 percent of the Part I sales tax collected in 2007, suburban Cook 53 percent, and the collar counties 16 percent (Exhibit 3-6). In 2009, combining the estimate for new and old sales tax the distribution is as follows: the City of Chicago 28%, suburban Cook 48% and the collar counties 24% (Exhibit 3-7). RTA Ordinance 2008-83 Schedule I-E (Introduction Section) illustrates the source and distribution of funds provided by the new legislation.

Public Transportation Funds (PTF)

Revenue from this special fund may be paid to the RTA only upon state appropriation. In accordance with the RTA Act, the State Treasurer is authorized and required to transfer from the State's General Revenue Fund an amount equal to 25 percent of net revenue realized from Part I sales taxes. These receipts are based on a formula tied to sales tax results and are, therefore, projected to increase at the sales tax growth rate. For every four dollars

Exhibit 3-2: **2007 RTA Revenue** - $1,174 million

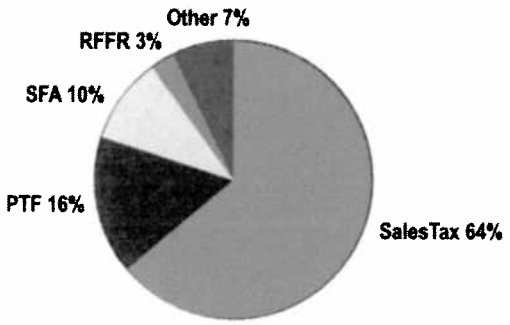

Exhibit 3-3: **RTA Sales Tax (Part 1) Collected** (in percent)

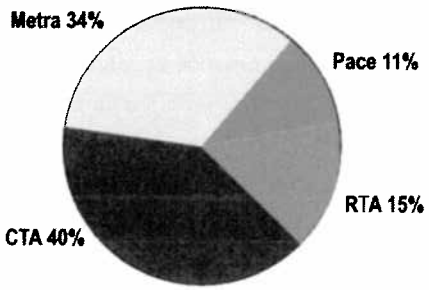
	CTA	Metra	Pace	Total
Chicago	100	0	0	100
Suburban Cook	30	55	15	100
Collar Counties	-	70	30	100

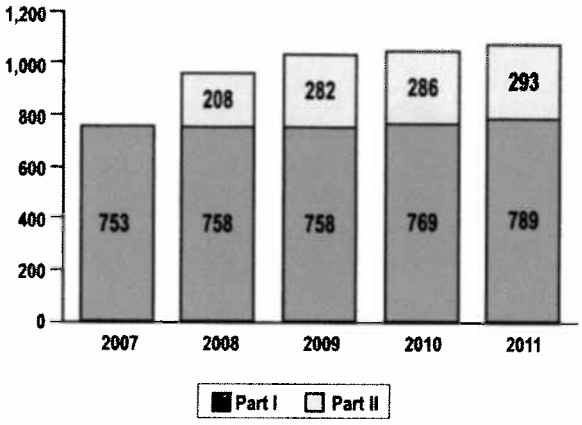
Exhibit 3-4: **RTA Sales Tax (Part I) Distribution** - $753 milion



that is collected in sales tax, the RTA receives an additional dollar in PTF. The 2009 estimated amount is $189.6 million (Exhibit 3-1). The amount of funds that each Service Board receives through the RTA from the PTF is allocated at the discretion of the RTA Board upon the review and approval of each Service Board's annual or revised budget.

In 2009 revenues from this special fund provided by P.A 95-0708 (Part II receipts of $147.7 million) are combined with the new sales tax generated by P.A. 95-0708 and designated for certain operations and programs before formula allocation to the Service Boards. Money set aside before allocations include funding for ADA Paratransit operations, Suburban Community Mobility (SCMF), and Innovation, Coordination and Enhancement (ICE) initiatives. Funding

Exhibit 3-5: **RTA Sales Tax** (dollars in millions)



for these initiatives, as set by statute, increase or decrease with the annual change in sales tax with 2008 set as the base year. The 2008 appropriation for ADA Paratransit was $100 million, SCMF $20 million and ICE $10 million. The remaining balance is allocated as follows: CTA 48%, Metra 39% and Pace suburban service 13%.

In 2009, the new legislation increases PTF on old sales tax to 30% with 5% becoming part of the group of funds just described. The new legislation also increased the real estate transfer tax (RETT) in the City of Chicago by 0.3%, which yields $3 in public funding for the CTA for every $1,000 paid for the property. This funding flows directly from the City to the CTA and is not included in the RTA schedule of revenues and expenditures (Exhibit 3-I). However, PTF funds associated with RETT (i.e. 25% of RETT) transactions flow through the RTA and by statute become part of the CTA's funding as illustrated in the Introduction Section (Ordinance 2008-83 - Schedule I-B)

None of the PTF revenue is payable to the RTA until it certifies to the Governor, State Comptroller and Mayor of the City of Chicago that it has adopted a budget and financial plan as called for by the RTA Act.

State Financial Assistance (SFA)

This revenue source is state-authorized assistance to reimburse the debt service expenses for the RTA's Strategic Capital Improvement Program (SCIP)

Exhibit 3-6: **2009 Part I Sales Tax by Area** - $753 million

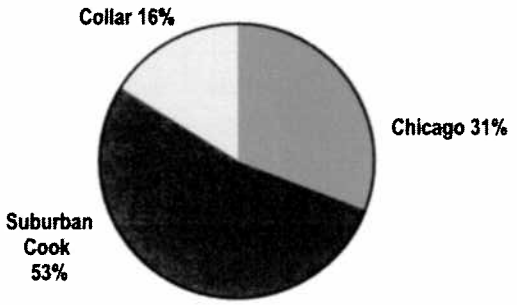


Exhibit 3-7: **2009 Part I & Part II Sales Tax by Area** - $1,040 million

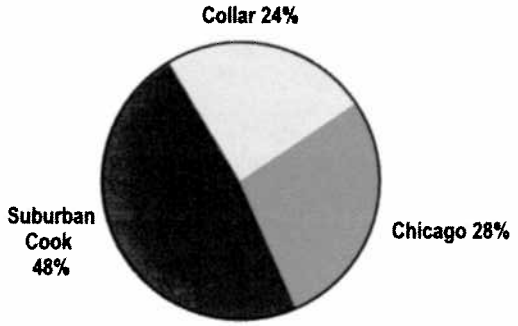


bonds. Subject to the appropriation of funds by the State, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. The RTA received $117.8 million in 2007 and estimates $116.5 million from 2008 through 2011.

Reduced Fare/Free Ride Programs

This operating assistance is partial reimbursement from the State to the Service Boards for discounts mandated by law. This includes discounts to students, elderly, and disabled individuals who qualify for the State Circuit Breaker Program. For more information regarding this program please access the State of Illinois web page (www.state.il.us).

The reduced fare/free ride funds are distributed by the State through the RTA and then to the Service Boards. Funding in 2007 was $36.7 million and is expected to average $36.6 million from 2009 through 2011.

Other Revenue

The other revenue category generally consists of sales tax interest, investment income, and Agency revenue. From 2005 through 2007 the State of Illinois appropriated funds totaling $54.3 million for ADA Paratransit Service and other costs and services. This amount is included in the $77.4 million figure on Exhibit 3-I. This separate source of funds was superseded by P.A. 95-0708. The amount in 2008 includes $16 million representing continued working cash needs.

The State pays interest on sales tax receipts to the RTA from the time of collection until it is disbursed to the RTA. The RTA then disburses the interest on Part I sales tax receipts to the Service Boards based on the same formula used to allocate the Part I sales tax receipts. In 2009 the interest is budgeted at $1.7 million. RTA investment income is dependent on available cash balances and prevailing market rates. The RTA's cash balance is primarily composed of funds reserved in prior years for various Service Board capital projects and associated RTA financial transaction proceeds. Additional revenue in this category includes fees charged to employers for RTA Fare Checks that help offset the costs of administering the program. Also included in Agency revenue are matching funds obtained under federal, state and local programs for regional planning, development and new technology efforts. The sum of investment earnings, transit check fees and matching funds is estimated to average $16.8 million; combined with interest on sales tax yields a total of $18.5 million during the current (2009-2011) planning cycle.

Operating Expenditures

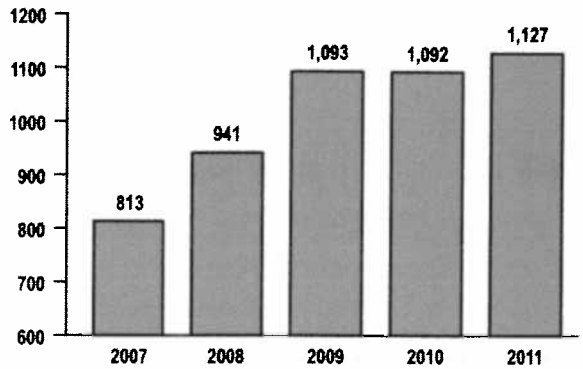
Exhibit 3-1 provides a summary of the RTA's operating expenditures from 2007 through 2011. Total operating expenditures are projected to grow from $961.1 million in 2007 to $1,342.0 million in 2011. This is an increase of $381 million over the four-year period, or an 8.7 percent compound annual growth rate.

Operations Funding

The RTA's primary expenditure is the funding of the Service Boards' operating deficits. An operating deficit is the difference between a Service Board's system-generated revenue (fare box and other revenue) and system operating expenditures. Exhibit 3-8 presents the operations funding level for the three Service Boards. From 2007-2011, Service Board operations funding from the RTA is expected to increase from $813.1 million to $1,127 million. This $313.9 million increase represents a compound annual growth rate of 8.5 percent.

RTA operations funding to the Service Boards in 2007 compared to 2011 is as follows: The CTA's funding (including PTF from RETT) increases from $464.3 million in 2007 to $664.7 million in 2011, an annual increase of 9.4%. Metra's amount increases from $256.6 million in 2007 to $338.8 million in 2011, a compound growth of 7.2%, and Pace's suburban service amount (excluding Suburban Community Mobility Funds and South Suburban Job Access funds) increase from $92.2 million in 2007 to $123.5 million in 2011, annual increase of 7.6% (Exhibit 3-I). With Suburban Community Mobility and South Suburban Job Access Pace's funding for suburban operations increase at a growth rate of 13.2% through the three-year planning compared to the level of funding received in 2007. Total funding for the 2009 budget and 2010-2011 financial plan is provided in the Introduction Section (Ordinance 2008-83, Schedule I-B). A detailed discussion of each Service Board's revenues and expenditures is provided in the CTA, Metra and Pace sections of this document.

Exhibit 3-8: **RTA Operations Funding** - Excludes ADA
(dollars in millions)



Suburban Community Mobility Funding

Each year, as provided by P.A. 95-0708, the RTA shall deposit into this fund an amount that increases of decreases with the percentage change in sales tax receipts. This change is indexed from the 2008 statutory base year amount of $20 million. As shown on Exhibit 3-1 the amount declines to $19.8 million in 2009. Funding from 2009 through 2011 increases from $19.8 million to $20.6 million an annual growth rate of 2%.

The amount on deposit including interest and earnings shall be used by the RTA to make grants to Pace for operating transit services, other than traditional fixed route services, that enhance suburban mobility, including, but not limited to, demand-response services, ride sharing, van pooling, service coordination, centralized dispatching and call taking, reverse commuting, service restructuring and bus rapid transit (BRT).

South Suburban Job Access Funding

Another provision of P.A. 95-0708 is the establishment of a fund that provides financial resources to Pace, in cooperation with the RTA, for the development of operating programs that enhance access to job markets for residents in south suburban Cook County. Funding was set at $3.75 million for 2008 increasing to $7.5 million annually going forward, however, an additional source of funds is not provided by P.A. 95-0708.

ADA Paratransit Service

As previously discussed, the State of Illinois appropriated additional funds to the RTA in the amount of $54.3 million for ADA paratransit service and other costs and services in 2005, 2006, and 2007. In 2005, the CTA received the full appropriation. In 2006 the CTA and Pace shared the appropriation because

Pace acquired responsibility for all ADA paratransit service in the RTA region effective July 1, 2006. In 2007, Pace received the full appropriation from the State. Because of growing service demands and increased operating costs, Pace also received $19.8 million of RTA Discretionary Funds producing a total funding for ADA Paratransit in 2007 of $76.1 million.

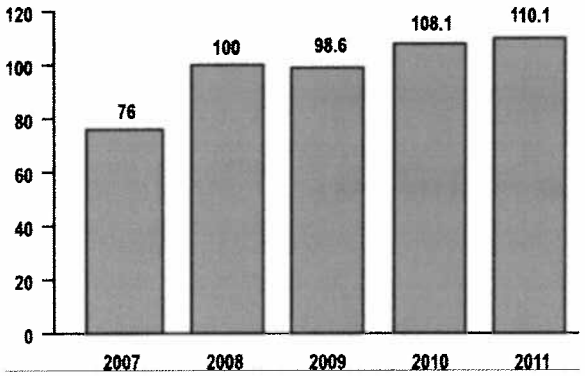
In 2008 the additional state funding for ADA paratransit service ($54.3 million) was terminated with the passage of P.A. 95-0708. Provisions in the ACT set aside a base amount of $100 million for 2008 operations that changes annually with the annual percentage change in sales tax receipts. During the three-year (2009-2011) planning period funding is estimated to increase from $98.6 million in 2009 to $110.1 million in 2011 (Exhibit 3-9), an annual growth rate of 5.7%.

Innovation, Coordination and Enhancement (ICE) Funding

The new legislation also established a fund for innovation, coordination, and enhancement. In 2008, as the initial amount was set at $10 million, which then changes annually with the amount of regional sales tax receipts. The distributions of funds from 2008 through 2011 are apportioned respectively to operations and capital on ratio of 39% and 61% (Exhibit 3-1).

With the affirmative vote of 12 directors, and after a public participation process, service boards, transportation agencies, or units of local government may receive ICE operating on capital grants or loans to advance the goals and objectives of the RTA's Strategic Plan, provided that an improvement is not in a five-year capital program as of the effective date of the new legislation. However, if the RTA Board determines that an emergency exists, by an affirmative vote of 12 members, funds may then be used for urgent operating or capital needs.

Exhibit 3-9: **ADA Paratransit Funding** - (dollars in millions)



Reduced Fare/Free Ride Programs, and Sales Tax Interest

State reduced fare/free ride programs reimbursements are received as revenue by the RTA and flow directly to the Service Boards to help defray program costs. In 2007, the State's Reimbursement was $36.7 million. During the three-year planning period (2009-2011), the reimbursement is estimated to be $36.6 million, which is not expected to fully cover the cost of the program.

There is a lag between when the State collects the RTA Sales Tax and when the State transfers it to the RTA. The RTA receives interest on this sales tax, and then disburses 85 percent of the interest on Part 1 sales tax receipts to the Service Boards according to the same formula used for sales tax distribution. In 2007 receipts were $2.7 million compared to an estimate of $0.9 million in 2008. From 2009 through 2011 the amount is projected to hold at an annual amount of $1.7 million.

Agency Administration, Regional Services and Programs

Spending for Agency administration, regional services and regional programs is discussed further in the Agency portion of this section. Expenditures in 2007 were $32.7 million and are projected to increase to $34.6 million in 2011, an increase of $1.9 million, or an annual increase of 1.4%.

Debt Service and Capital Expenditures

Exhibit 3-1 provides a summary of the RTA's debt service and capital expenditures from 2007-2011.

Total expenditures in this category are projected to increase from $205.9 million in 2007 to $259.7 million in 2011. The increase is the direct result of increased statutory funds that Metra receives.

Principal and Interest

Principal and interest payments reflect the RTA's expenditures and projected expenditures from 2007 through 2011. Payments are expected average $183.3 million during the three-year planning period with State Financial Assistance (SFA) for the SCIP bond program expected to defray about 63 percent of the total Principal and Interest expenditures during this timeframe. Additional bond information is provided at the end of this section.

Regional Technology, Agency Capital and ICE

The 2009 budget continues to fund region-wide capital-driven technology enhancements. Like regional technical assistance programs, the regional technology programs are coordinated efforts with other state and local agencies, reducing RTA funding. At the end of the year, any funds that have not been spent are reserved. Included in this category are expenditures for the Agency's capital needs. The funds are used to enhance various information technology programs and preserve the office environment.

The budget for 2009 totals $4.6 million, primarily a level amount though the planning period. More details are spelled out in the Agency's share of this section. ICE funding details were previously discussed; the amount budgeted for 2009 is $6 million.

Transfer Capital

Two funding sources cover this category of expenditure, statutory and RTA discretionary. The statutory apportionment of sales tax to a Service Board can exceed its operating marks, when this occurs a Service Board can transfer these funds to its capital program. During the planning period Metra continues to be the only Service Board that can assign funds that could be used for operating purposes to its capital program. From 2009 through 2011, Metra's plans to average a transfer of statutory funds to its capital program totaling $48.4 million annually.

Since 1995, the RTA has transferred a portion of its discretionary funds, available for operations, to the CTA for capital investment. From 1995 through 1997 the program was funded at an annual level of $11.0 million. In 1998, CTA's funding for this program was increased to $16.5 million. The CTA transfer capital program was funded at $19.2 million in 1999 and increased to $20.4 million in 2000 and remains at this level through the 2011 planning period.

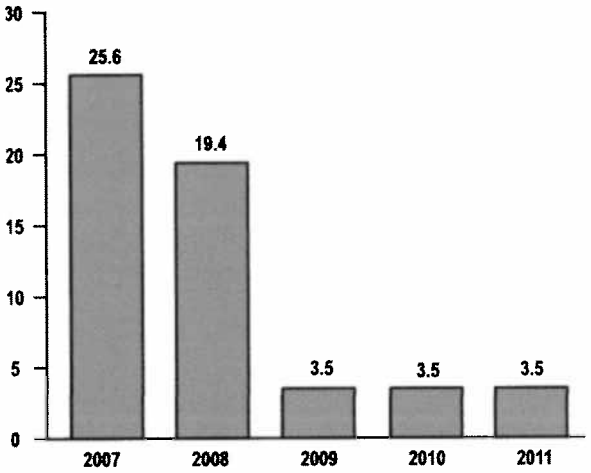
Total Expenditures

Total RTA expenditures include all operating, debt service and capital program costs. From 2007 through 2011, these expenses are projected to increase from $1,167 million to $1,601.8 million. This $434.8 million increase represents a compound growth rate of 8.2 percent driven by the increase for service operations.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level in the unreserved and undesignated fund balance of 5 percent of total operating expenditures. (Fund balance policy details are outlined in the Introduction Section.) The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods. Unfortunately, unfavorable economic conditions have created the need to waive, for purposes of the adoption of the 2009 Budget and 2010-2011 Financial Plan, the provision of the ordinance that requires the RTA to show a year-end unreserved and undesignated fund balance equal to 5% of the RTA general fund by no later than the end of the three-year planning period. However, this policy will be in effect for the development and adoption of the 2010 Budget and 2011-2012 Financial Plan unless further action is taken by the RTA Board to extend such waiver.

Exhibit 3-10 **Fund Balance** - (dollars in millions)



The 2007 ending balance was $25.6 million. The estimated ending balance for 2008 is $19.4 million. The ending balance for the 2009 budget and two-year financial plan (2010 to 2011) remains at $3.5 million (Exhibit 3-10).

Beginning Balance

The beginning balance is the amount of funds in the undesignated and unreserved fund balance after the previous year's results have been audited and the accounting books are closed. All statements in this document reflect 2007 actual results of $25.6 million as the 2008 beginning balance.

Change In Fund Balance/Ending Fund Balance

Total RTA revenue less total RTA expenditures produces a change to the fund balance. When revenue exceeds expenditures, the gain is added to the fund balance. If expenditures exceed revenue, the deficit reduces the fund balance. In 2007, total revenues exceeded total expenditures on a budgetary basis by $6.7 million.

Funding provided by P.A. 95-0708 that exceeds the operating needs of ADA Paratransit operations is by statute reserved by the RTA for future needs. The amount reserved in 2009 is $403 thousand. Funds reserved in 2008 reflect the remaining balance of ICE funds not programmed from the total appropriation of $10 million. The funds will be reserved until allocated to future programs. Also expended from RTA's fund balance is the payment of the premium for the Joint Self Insurance Fund (JSIF). The RTA provides excess liability insurance to protect the self-insurance programs maintained by the Service Boards. The Service Boards are obligated to reimburse the fund for any damages paid plus interest. The 2009-2011 Budget and Financial Plan provides for an annual payment of premium totaling $3.5 million

At year end changes in revenue over expenditures, other financing uses, and capital grant expenditures are reconciled on a GAAP versus budgetary basis with the balance in the general fund then reflecting a GAAP based undesignated/unreserved balance. The year-end unreserved/undesignated fund balance in 2007 was $25.6 million (Exhibit 3-1).

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal year for each Service Board. The RTA Act further requires that the combined revenue from RTA operations cover at least 50 percent of the system operating cost. The RTA's system-generated revenue recovery ratio in 2009 is 54.7 percent. This statutory calculation computes to 4.7 percentage points above the mandated 50 percent.

In meeting the 50 percent recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50 percent requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/lease-back transactions, and Metra's 2008 fare increase—which was restricted for capital investment. A detailed breakout of this calculation is provided in Exhibit 3-34 at the end of this section.

2008 Budget versus 2008 Estimate

Total RTA revenue of $1,383.3 million is projected to be $200.7 million more than the 2008 budget of $1,182.6 million set before the passage of P.A. 95-0708 (Exhibit 3-11).

Total expenditures of 1,385.5 million increased $224.9 over an original budget of $1,160.7 million reflecting the benefit of the additional funds provided by P.A. 95-0708. Without the additional funds provided by this statute the Service Boards were faced with the need to significantly raise fare, decrease service and curtail infrastructure improvements by shifting capital funds to operations.

Capital Program

At the present time, the 2009-2013 capital program funding marks total $2.575 billion. When federal, state or local appropriation figures change, the Service Boards' capital programs may not match the program marks.

When this occurs, the RTA Board considers ordinances that incorporate all changes and bring the Service Board programs in balance with the marks. Detailed Service Board program information is provided in the Capital Section of this publication.

Exhibit 3-11: **RTA Statement of Revenues and Expenditures - General & Agency Fund** (dollars in thousands)

1) Budget Ordinance 2007-63 (adopted December 2007). (2) August estimate to meet 2009 budget and two-year financial planning cycle (Marks set by September 15, and Budget adoption by year-end) as set by state statute. (3) Includes State funding for ADA Paratransit service and other costs and services totaling $54.3 million. (4) Includes $11.7 million of RTA discretionary funds. (5) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action. (6) Additional interest for working cash loan. (7) Estimate includes loss of $2.2 million as total expenses exceed total revenue, $3.9 million to fund the JSIF, an ICE reserve of $120 thousand for balance of funds not programmed and available for future year funding.

Agency Operating Plan

Budget and Financial Plan

The RTA (the Agency) performs planning, coordination, oversight, and funding responsibilities for the RTA public transportation system. Recent recommendations from the Illinois Office of the Auditor General (OAG), as well as changes to the state laws governing the RTA, enhanced the role of the RTA. Planning-related responsibilities include the following:

Agency budget reflects legislative mandates.

- Develop a regional Strategic Plan and update it to meet changing conditions
- Improve planning and coordination within the RTA system
- Implement new regional programs
- Advance bus rapid transit and universal fare card initiatives

Oversight-related responsibilities include the following:

- Review system performance and establish performance measures
- Improve the capital programming process
- Increase ADA Paratransit service oversight
- Improve the annual budgeting process to ensure consistency with the Strategic Plan

In addition, the Agency operates regional programs such as the Travel Information Center (TIC), Customer Service Center, ADA certification, and the senior and disabled free ride programs.

The Agency budget is constructed in alignment with these responsibilities – representing the resources needed in 2009 implement these responsibilities. These responsibilities are the agency program priorities – described more fully later in this section, including details on staff and costs by department, along with an organization chart.

In 2009, Agency expenditures total $36.7 million, which is a 3.5% increase over the 2008 budget of $35.5 million. The increase reflects resources – staff and outside expertise – to implement the responsibilities of the new legislation and OAG recommendations.

The budget in 2008 of $35.5 million reflects the increased resources needed to implement the recommendations from the Illinois Auditor General's audit – many of which were included in the state legislation enacted on January 18, 2008.

Overall, the amendments to the RTA Act looked to achieve a better coordinated and more efficient regional transit system, including implementation of many of the recommendations of the Illinois Office of the Auditor General (OAG), by enhancing the RTA's responsibilities and accountability with respect to regional planning, fiscal oversight, and fare and service coordination.

In the last couple of years, the Agency shifted to a performance-based budgeting approach. Rather than using a formula-based approach, the budget is developed by identifying the performance objectives for the upcoming year and assessing the resources needed to accomplish those objectives.

Based on this approach, the next section outlines each department's expenditures and program priorities in 2009, followed by a general description of each department.

Agency Departments and Staffing

In 2007, the RTA began to chart a new course for the agency and started to re-organize the RTA staff to improve planning, coordination, and oversight focus. We have added positions directed towards those efforts, as well as the ride free programs.

The staffing plan for 2008 was 113 positions, and as we continue our efforts, we continue to assess our staffing needs. The 2009 budget contemplates five additional positions for a total of 118.

The RTA organization chart (Exhibit 3-12) illustrates the agency departments and their divisions or functional units.

Exhibits 3-13 and 3-14 show the staffing plan by department. The department breakdown reflects that 46% of our efforts provide various regional services and planning programs and that 32% of our efforts

Exhibit 3-12: **RTA Organization Chart**

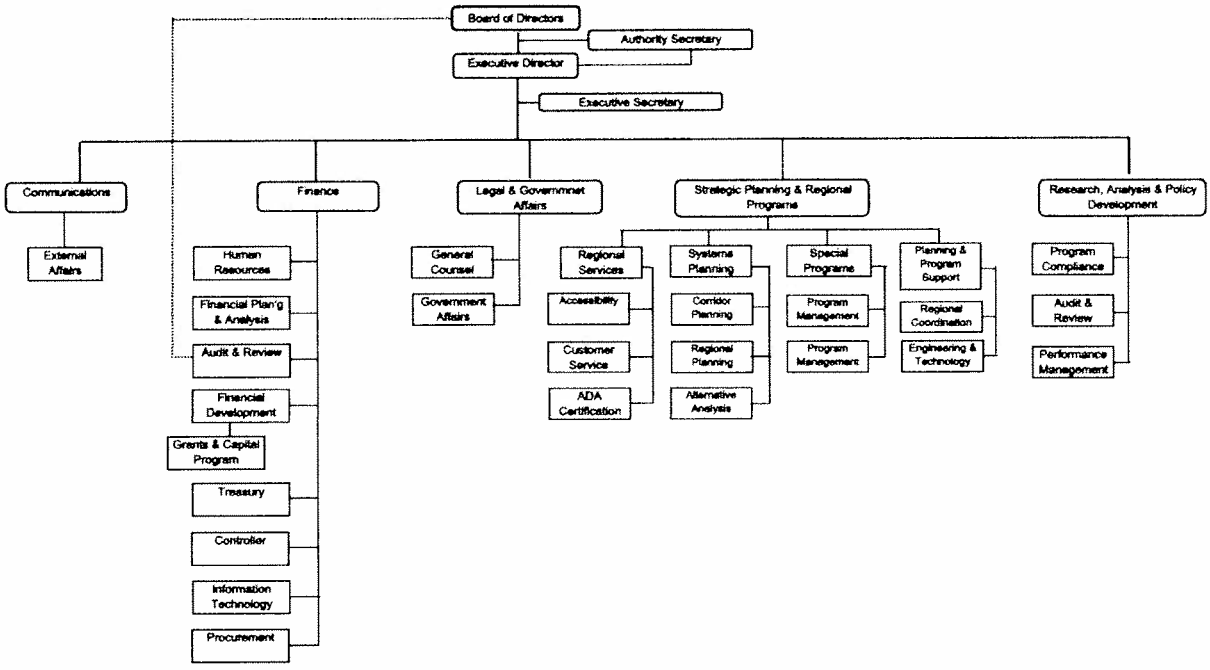

Exhibit 3-13: **Agency Staffing by Department** - budgeted positions

	2008	2009	Change
Executive Office	3	3	-
Communications	5	6	1
Legal & Governmental Affairs	6	6	-
Finance & Administration	37	38	1
Planning	22	25	3
Regional Services	29	29	-
Research, Analysis & Policy Development (RAP)	11	11	-
Total RTA Staffing Plan	**113**	**118**	**5**

are for finance and administration initiatives. The remaining 22% is dedicated for various management services such as executive services, communications, legal & governmental affairs, and research, analysis and policy development.

Exhibits 3-15 and 3-16 show agency expenses by department. As previously discussed, the total 2009 agency budget is $36.7 million. Since the Research, Analysis & Policy Development department was formed in 2007, it reflects only a partial year of expenditures for that year; the organization's first full year of operation occurred in 2008.

The following sections outline each department's organizational structure, program priorities, and analyze their expenditures in more detail.

Exhibit 3-14: **Agency Staffing by Department** - budgeted positions

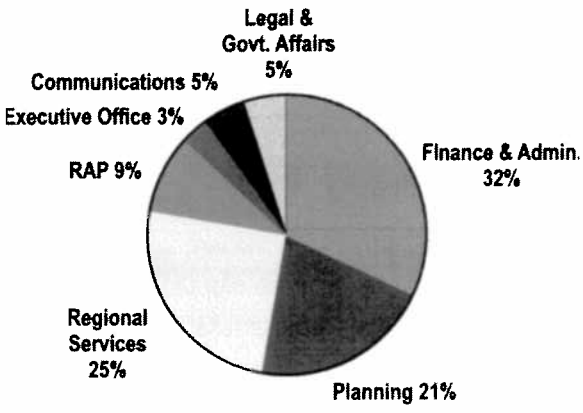

Exhibit 3-15: **Agency Expense by Department** - (in dollars)

	2007 Actual	2008 Budget	2009 Budget
Executive Office	1,269,607	1,617,973	1,466,700
Planning & Regional Programs	25,536,267	21,757,341	19,951,326
Research, Analysis & Policy Development	124,481	1,366,829	1,834,542
Finance & Administration	7,043,234	6,083,433	8,597,362

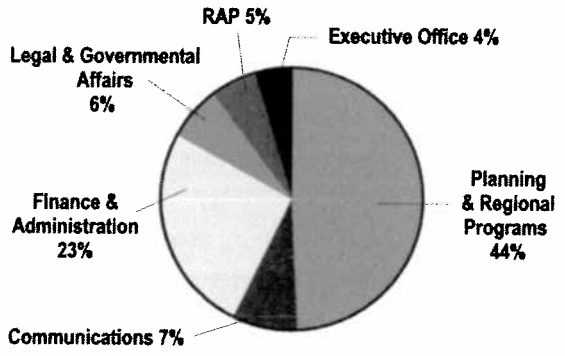
Communications	1,796,443	2,520,509	2,541,437
Total	**37,973,648**	**35,483,012**	**36,724,660**

Exhibit 3-16: **Agency Expense by Department** - (in dollars)



Executive Office

This structure includes the RTA Board of Directors and organizations that support the RTA Chairman and Board of Directors, and administer day-to-day agency activities.

The RTA Board of Directors consists of 15 members and a chairman. The RTA Board has the statutory authority to establish, by rule or regulation, financial, budgetary, or fiscal requirements for the region's public transit system. The RTA Board and its committees set policy, consider matters relating to RTA operations and compliance with the ADA Act, supervise audits, and consider planning studies and capital program investments. The Board has six standing committees that review and recommend policy to the entire Board.

The Executive Director executes the policy decisions of the RTA Board and staffs the agency to administer its statutory mission and implement Board policy. The Executive Director informs and assists the RTA Chairman and the Board in the development of policy, and is the principal contact with executive staffs of the CTA, Metra, and Pace to ensure effective administration of the RTA's regional planning and oversight responsibilities.

The Secretary to the Authority provides Board support functions by assisting with the information, documentation, and logistical needs of the RTA Board. The Secretary works with staff to supply Board members with the information and documentation needed to fulfill their statutory role and to obtain quorums for meetings of the Board and its six standing committees.

Program priorities:

- Manage the departments continued implementation of the RTA Act mandates and Illinois Auditor General recommendations
- Oversee the departments achievement of their 2009 program goals
- Work closely with the RTA Board to obtain the necessary Board direction for the achievement of the over-all 2009 program

2009 expenditures of $1.5 million represent 4% of the total agency budget, which include personnel related expenses for the board and the executive area. There will be no change in the budgeted positions in 2009. The total executive office staff of 3 - without the board members - will remain the same.

Planning and Regional Programs

The department consists of four principal organizational areas. Three areas, Strategic & Long

Total Coordination Program Expenses	**749,500**
Grand Total	**10,969,599**

Range Planning, Special Programs, and Regional Coordination, provide strategic, regional, sub-regional and corridor planning, and coordination between Service Boards. The fourth area, Regional Services is responsible for the following RTA-operated regional services and programs: the RTA Travel Information Center, Accessibility, ADA Paratransit Certification program, RTA reduced fare program, senior and disabled ride free program, and the RTA Customer Service Center.

Program priorities:

- Develop Amendments to the Strategic Plan
- Market Analysis: Produce a regional analysis of travel markets with rider and non-rider surveys; a detailed regional perspective not available anywhere else.
- Regional/Corridor Planning Process: Define the regional planning process and relevant work such as corridor planning, local area planning and how it relates to project prioritization.
- Regional System Analysis: Review the performance of the existing system and develop guidance for RTA selection of Enhance and Expand projects in the business plan and capital program processes.
- Improve Planning & Operating Coordination Between RTA, CTA, Metra, & Pace
  - Multimodal Trip planner: Launch and manage the state-of-the-art multimodal regional information system; implement new features such as incident reporting and real time next bus/train.
  - Improve Service Planning Coordination initiatives.
- Refine Grant Management of RTA's Regional Funding Programs

  This initiative includes Sub-regional Planning, Community Planning and Transit Oriented Development (TOD) coordination for the region; Job Access Reverse Commute/New Freedom (JARC/NF) programs; Innovation Coordination & Enhancement (ICE) funding for Service Boards

and local community initiatives; Suburban Community Mobility Funding, South Suburban Job Access Funding; and the 2010 Call for Projects.

- Advance Bus Rapid Transit (BRT) Initiative
  - Develop and Implement two to four BRT demonstration projects.
- Advance Universal Fare Card Initiative
  - Define goals and criteria for implementing a seamless fare system that ensures open architecture and region-wide applicability with appropriate fare policy. Identify the short and long term goals and begin implementation with the Service Boards.
- Travel Information Center Relocation
  - Relocation of space to the Metra building.
- Administer New Free Rides
  - Senior Ride Free and Disabled Ride Free Programs.

Planning and regional programs represent more than half, 55%, of the total agency budget. Most of the expenditures are for regional services initiatives such as TIC operations, the ADA certification program, and the ride free programs. The 2009 expenses reflect an 8% decrease from the 2008 budget due to a lower TIC operations fee and a more careful selection of planning programs. The TIC operation will be managed by a new vendor resulting in a $1.3 million savings over the 2008 budget.

To meet all of the legislative requirements, the planning department is adding three new staff positions to its existing 22 positions. There are no changes planned for the regional services area that totals 29 budgeted positions in 2009.

Research, Analysis and Policy Development (RAP)

The RAP organization was created in 2007 to better meet the RTA's oversight responsibilities and address the recommendations of the Auditor General. It is responsible for coordinating interdepartmental resources to perform this mission. Departmental divisions include Program Compliance, External Audit, and Performance Management. The department will ensure RTA staff has adequate finance, administration, and operations information, as well as the resources to lead the development of policies for a more effective and efficient regional mass transit system. The department is also responsible for the CTA Rail Safety Oversight and Capital Project Management Oversight (PMO) for each Service Board. As the designated oversight agency for safety and security on the CTA's rapid transit system, the RTA assures compliance with the Federal State Safety Oversight Rule for Rail Fixed Guideway Systems.

Program priorities:

- Expand Review & Assessment of Performance of All Transit Agencies and Establish and Implement Agency Specific & Sub-Regional Measures and Standards
  - Measure, analyze, and critique performance of all transit agencies. Conduct and analyze performance utilizing measures and peer analysis to ensure consistency with and support of the Moving Beyond Congestion (MBC) Strategic Plan.
- Continue to Establish and Implement Regional Performance Measures and Standards
  - Implement methodologies to measure and monitor.
- Manage ADA Paratransit Oversight
  - Perform ADA Paratransit oversight as required by the FTA and State.

- Report on ADA Legislative Compliance Review
  - Report and present policy and financial issues to the RTA Board for discussion and resolution with the goal of maintaining ADA service standards with cost effective and efficient service.
- Develop and Implement a New Regional Capital Programming Process
  - Improve the regional capital program process to reflect RTA reform legislation mandates and OAG recommendations. Perform Project Management Oversight of the Service Boards' capital improvement plans and capital project developments. Establish a capital evaluation process that will provide an estimate of capital needs for each of the Service Boards based on a complete assessment of the current asset inventory and the age and condition of those assets and then develop a prioritization process for the selection of capital improvement projects.
- Coordinate Cross-Department Integration
  - Manage interdepartmental task forces to address priority matters that cross departmental lines.

Department expenses of $1.8 million in 2009 represent 5% of the total agency budget. This is an increase of 34% over the 2008 budget. The increase reflects a budget of $1.0 million for the capital condition assessment of Service Board assets. The total costs for this assessment is $1.2 million; $200,000 was budgeted in 2008. Other program expenses such as rail safety oversight and program management oversight are listed in Exhibit 3-17. The department's 11 budgeted positions in 2009 does not change from the level set in 2008.

Finance and Administration

The Finance office executes the funding and oversight responsibilities of the RTA. It works to maintain financial stability in the region and ensures that the agency and Service Boards execute their statutory requirements for fiscal responsibility. The finance department includes the following divisions: Controller, Financial Planning and Analysis, Audit and Review, Financial Development/Grants and Capital Program, and Treasury. Administrative offices include Human Resources, Procurement, and Information Technology. These areas are responsible for compensation and benefits, purchasing, and information systems management.

Program priorities:

- Improve the Regional Operating Budget Program, and Mitigate and Seek to Resolve Threats to the Financial Stability of the System
  - Develop assumptions for ongoing operations and "baselines" for the 10-year business plan data and related projections.
  - Perform analysis of obligations including pension, leasing, borrowing (capacity, debt service coverage/affordability, and interest earnings), injury and damages/joint self-insurance fund. Develop strategy for financial documents released for public review: short term "business plan" documents, and public relations information.
- Implement an Improved Integrated Management System
  - Recent legislation strengthened the RTA planning and oversight responsibility. The OAG also recommended that the RTA prepare and adopt annually a ten-year financial plan that includes the agency's cash position and all known obligations for the region. In order to accomplish these recommendations, an improved integrated management system is planned to be implemented in 2009. The new system will enhance our ability to provide information to the Board, and we will be able to respond quicker to requests for Ad-Hoc analysis.
- Develop and Implement a More Robust Capital Program Analysis, Monitoring, and Reporting Process

- Adapt the capital program management process to new parameters developed with the Research, Analysis and Policy Development and Planning & Regional Programs departments regarding project selection and funding distribution. Implement new procedures for grant management associated with new RTA programs related to new legislation.

- Improve Administrative Support for All Departments
  - Develop a vision for agency human resources, information technology, and procurement operations that support the RTA's strategic plan positions the RTA as a valued partner with its Service Boards, and provides the RTA with the tools it needs to maximize its effectiveness.

The 2009 expenditures of $8.6 million reflect a $2.5 million increase over the 2008 budget primarily due to the implementation of a new integrated management system of $1.1 million and office renovation and board room relocation of $0.9 million. The department's capital programs are listed in Exhibit 3-17. Increased cost of health benefits and a modest increase in personnel and office services contributed to the other $0.5 million growth over the 2008 budget. The department's expenses represent 23% of the Agency's total budget.

In order to respond quicker to various ad-hoc analyses to the RTA Board and management, the department is adding an Analyst position in 2009 to the existing 37 positions.

Legal and Governmental Affairs

The Legal and Governmental Affairs Department provides legal advice and counsel to the RTA Board, Executive Director, and staff regarding the statutory and regulatory provisions governing the Authority, as well as overseeing all RTA contracts and litigation. The Department also develops and promotes the RTA's federal, state and local government affairs agenda in coordination with the Service Boards.

Program priorities:

- Enact and implement comprehensive, long-term capital funding legislation in Springfield
  - With the passage of the reform and operating funding legislation in 2008, our focus in Springfield in 2009 will be on passing a state capital bill. Our capital program is significantly underfunded, and our ability to advance our other priorities depends on securing capital funds. We are developing coalitions, drafting legislation, and advocating with the Legislature. The 2009 budget contains funding for lobbyists to help advance this objective.
- Increase the region's transit funding in the federal authorization of surface transportation programs
  - In the short-term, we are working with our Congressional delegation and with the Obama transition team to develop economic recovery legislation that provides funding to invest in ready to go transit infrastructure projects. In the longer term, the authorization for federal transportation funding will expire in 2009, and the federal transportation programs are expected to undergo the most significant reform in decades. We have developed and are leading a national coalition of large transit systems, working with industry associations such as APTA, advising legislators with policy and program design, and advocating directly with Congress and the Obama Administration. The 2009 budget contains funding for lobbyists to help advance this objective.
- Enhance the RTA's Disadvantaged Business Enterprise and Regional Title VI Programs
  - The RTA will continue to work to enhance the opportunities for diverse firms to participate in its procurement processes, both as prime contractors and as sub-contractors. The RTA will also work with the Service Boards to evaluate the regional application of Title VI equity principles in the Strategic Plan and capital program development.

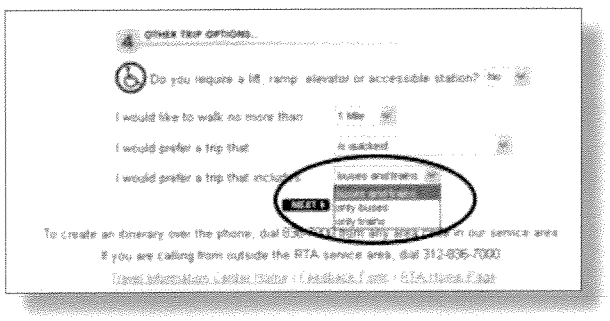
Departmental expenses for 2009 represent 6% of the total agency budget. Budgeted expenses of $2.3 million are 9% higher than the 2008 budget reflecting increased legislative and legal expenses for capital program funding as well as CTA pension oversight. The department's staffing plan of 6 people will remain the same in 2009.

Communications

Communications assists management in the formulation and execution of communications and marketing initiatives. The department manages the RTA's internal and external production of reports, speeches, video presentations, advertising, and publications that explain and promote agency initiatives and goals. The department also leads public outreach and hearings, media relation efforts, marketing and sales information, advertising initiatives, and efforts to coordinate marketing opportunities with the Service Boards. Starting in 2009, the transit benefit program will be supervised by the department.

Program priorities:

- Advance Joint Regional Marketing Programs
  - As a follow up to the 2008 marketing summit, manage and implement coordinated sales, marketing, advertising and public information programs in conjunction with the Service Boards. Programs include the Transit Benefit program, the Drive Less/Live More campaign, the Congestion Mitigation campaign, BRT, the new generation Multi-Modal Trip Planner, and initiatives stemming from the Fall 2008 Marketing Summit with the Service Boards.



- Develop Marketing rules & regulations
  - Develop rules and regulations in conjunction with the Service Boards to be adopted by the RTA board that will serve as guidelines to present a coordinated marketing effort.
- Continue and Expand Outreach to the General Public and Partners for Transit
  - Conduct public hearings and factor in feedback obtained in efforts to secure a capital investment campaign;
  - Help obtain input and support for the comprehensive strategic plan being adopted by the Board in 2009;
  - Broaden outreach to obtain input, involvement, and support for Planning and Regional Program's management of RTA Funding Programs;
  - Continue to enhance efforts to obtain public input into the budget planning process;
  - Demonstrate transparency and accountability by publicizing and obtaining input and support for capital program management and performance measures;
  - Obtain input and feedback on Pace service and operations that relate to the audit of ADA Paratransit being conducted by the RTA.

Expenses of $2.5 million in 2009 are 7% of the total agency budget and remain at the 2008 budget level. Major communications program initiatives are listed in Exhibit 3-17. In order to meet increased outreach program needs, the department is adding one new position in 2009, an Outreach Specialist, to its existing base of five positions.

Agency Expenses by Expense Type

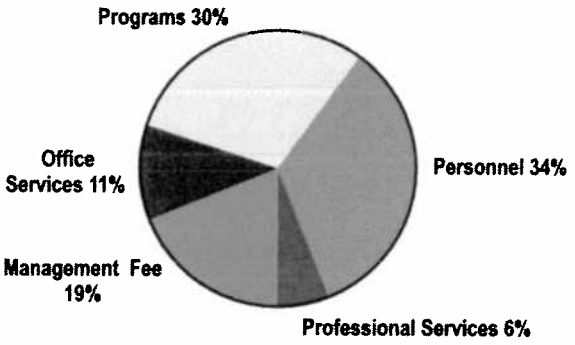
Exhibit 3-18 shows an Agency summary by major expense type from 2007 to 2009. The 2009 budget of $36.7 million reflects a 3.3% reduction compared to 2007 actual results, and a 3.5% modest increase to the 2008 budget.

Exhibit 3-19 shows the 2009 Agency expense by type. $12.6 million or 34% of the total expenses

Exhibit 3-18: **Agency Expense by Type** - (in dollars)

	2007 Actual	2008 Budget	2009 Budget
Compensation/ Benefits/Personnel	9,852,755	11,625,655	12,630,104
Professional Services	1,357,036	1,934,400	2,110,350
Management Fee	8,061,802	8,203,000	6,870,000
Office Services	3,259,044	5,255,621	4,144,607
Program Expenses	15,443,011	8,464,336	10,969,599
Total Agency	**37,973,648**	**35,483,012**	**36,724,660**

Exhibit 3-19: **Agency Expense by Type** - (in dollars)



represent personnel related expenditures, such as compensations, benefits, recruitment, training, and travel expenses. This is an 8.6% increase over the 2008 budget, reflecting the five proposed new positions, higher health insurance costs, and increased pension contributions. Eleven million or 30% of the total Agency budget is used to fund various program expenses. Nineteen percent or $6.9 million of our budget is dedicated to operate the Travel Information Center, the ADA certification program, senior and disabled ride free programs, and the transit benefit program. $4.1 million or 11% is projected for office services including rent and utilities, and the CTA card stock for the ride free programs. The remaining balance of $2.1 million or 6% will cover various legal and consulting fees that are necessary for the CTA pension oversight, internal, external, and task order audits, and legal fees for capital program funding and other legal matters.

Exhibit 3-20 also shows the Agency expenses by type but at a more detailed (category) level. The Program Expense category represents the largest level of expenditure.

As illustrated on Exhibit 3-20 the cost of temporaries has increased for 2008 and 2009 reflecting the temporary staff needed for the senior and disabled free ride programs. Office and equipment maintenance increases for 2009 reflect planned office renovating services as well as normal maintenance on fax, AV room and other equipment. Card stock for the reduced fare programs is included in the office services expense category. Other office services include office supplies, graphic design, data services, furniture, bank charges, public meetings, leased auto expenses, property and liability insurance, security and other miscellaneous items.

In 1985, a statutory cap for administrative spending was set at $5 million, with a growth rate of 5 percent per year. The proposed 2009 administrative expenditures of $8.8 million are 45.5% below the cap allowance of $16.1 million as it shown on Exhibit 3-21.

Major Mandates

The 2009 budget was developed to reflect legislative mandates enacted by Public Act 95-0708 on January 18, 2008. Exhibit 3-22 shows budget expenditures corresponding with this legislation. The following list describes the major mandates and how they align with 2009 agency initiatives.

1) Strategic Plan development and improved coordination of fares and service

The RTA Act requires the RTA Board to adopt a comprehensive, long-term Strategic Plan for regional transit, to be reviewed and updated periodically and develop amendments to the Strategic Plan such as market analysis and regional system analysis. For these efforts our 2009 budget includes a total amount of $905,000. The RTA is authorized to adopt sub-regional and corridor plans, and the 2009 budget includes $481,900 for these initiatives. In addition, the plan must include a 10-year assessment of the transit system's financial condition.

The Agency is authorized to make recommenda-

tions to the RTA Board regarding fare coordination, transfers, service coordination, and duplication of service and to evaluate the feasibility of implementing new bus rapid transit services using expressway and tollway systems in the metropolitan region. For the bus rapid transit and the universal fare card studies our budget includes $412,500 and $150,000, respectively.

2) Improved oversight

The recent legislation further empowered the RTA with stronger business planning and oversight

Exhibit 3-21: **2009 Administrative Expense/Statutory Cap**
(in dollars)

	2009 Budget
Administration Expenses	**8,783,985**
Regional Expenses	23,375,176
Capital Expenses	4,565,499
Total RTA	**36,724,660**
Statutory Cap Allowance	16,125,371
Percent under Cap	**(45.5)%**

responsibility of the region's public transportation system. However, given the stand-alone features of RTA and Service Board systems, our ability to meet these requirements is hampered because our current systems:

- Lack significant integration of RTA and Service Board financial systems (Treasury, Budget, Accounting, Grants, and Capital).
- Lack significant integration of RTA and Service Board operational data (service plans, ridership, and performance data).
- Experience significant redundancies in processing, storing, analyzing and reporting data throughout the RTA, which represents a significant investment in staff time and sets up opportunities for conflicting analysis and reporting.
- Lack efficient approval processes. The current process flow is time-consuming, primarily because each division checks/approves invoices against its own set of records.
- Do not provide efficient methods to retrieve and analyze information that is stored in multiple single source (silo) data systems.

The integrated system solution will provide single source data for business planning and analysis, and will be the central repository for core data system-wide. The system will provide the following benefits:

- Enhanced functionality to support all divisions and departments
- Single data entry at point of origin
- Electronic interface with the Service Boards for financial, operational, and capital project data
- Flexible ad-hoc reporting, and analytical and decision support capabilities
- Effective and efficient workflow management (on-line routing and approval)
- Data warehouse and business intelligence modules for management information
- Adaptability to address RTA's evolving business requirements

To implement the new Integrated Management System will cost $1.8 million for the 3-year project period. For 2009 we budgeted $1.1 million for implementation of the core system. In 2010 will plan to complete the management information/business intelligence phase, and in 2011 we will take care of any final work to ensure proper functioning of the system.

The RTA is required to ensure ongoing financial oversight to stabilize the long-term financial health of the CTA pension and retiree health care system. The RTA staff also must ensure that annual Service Board budgets are consistent with the Strategic Plan and that budgets include details of long-term obligations. The RTA is required to audit the Service Boards no less than every five years; such audits may include management, performance, financial and infrastructure condition audits. The RTA is also required to audit ADA Paratransit costs every three years. For these efforts we budgeted $1.5 million.

An additional initiative is the relocation of the RTA board room. We have added additional public hearings for adopting the Strategic Plan and for adopting the annual Budget/Two-Year Financial Plan and Five-Year Capital Program. In order to provide more space for the public and to improve access to people with disabilities for RTA board meetings and public hearings, due to increased interest, we are planning to move the board room to the 2nd floor. The relocation is budgeted at $900,000.

3) Capital Program

A top priority in 2009 will be to enact and implement comprehensive, long-term capital funding

legislation in Springfield that will enable us to maintain, enhance and expand the region's transit system. (Capital projects can only be in the RTA Five-Year Capital Program if they meet the criteria in the Strategic Plan.) To assist this effort we budgeted $881,000 for various legislative consulting and legal fees.

To establish a capital evaluation process that will provide an estimate of capital needs for each of the Service Boards, based on a complete assessment of the current asset inventory and the age and condition of those assets, we budgeted $1 million for 2009.

4) Coordinated sales and marketing

In order to develop and adopt a coordinated sales, marketing, advertising and public information program for all transit in the region, meet increased outreach needs, assist efforts with the capital campaign, and update the strategic plan, we budgeted $687,500. Administration of the transit benefit program, which will be coordinated by the RTA, is budgeted at $815,000.

5) Senior and disabled ride free programs

The RTA is required to provide free rides for seniors as well as the disabled who are eligible for the Circuit Breaker Program. The costs for this program will be $3.5 million, which includes $1.2 million to manage the initiatives and issue new reduced fare cards and $2.3 million to meet the increased demand for the ADA Paratransit certification program (represents transportation costs to the certification centers and the operations costs of the certification site).

6) Other agency and planning programs and the Travel Information Center

From a regional perspective the Agency coordinates and funds several initiatives that bring together public transportation services across the region. One of the region-wide programs includes the operation of the Travel Information Center (TIC). The TIC operations and the proposed TIC relocation to Metra's headquarters building will cost $4.5 million in 2009. The TIC operation, which will be managed by a new firm, will result in a $1.3 million savings over our 2008 budget of $5.3. The budget for this operation in 2009 is $4.0 million.

The RTA plans to continue to support strategic planning and coordination initiatives which develop transit options in the region such as sub-regional and community planning programs. The 2009 budget also continues to fund region-wide capital-driven technology initiatives and agency programs. The 2009 budget for these other regional programs (regional technical assistance, regional technology, coordination, and other regional programs) is $3.6 million.

Exhibit 3-22 shows these direct expenditures allocated by legislative mandate in a total amount of $20.4 million. Out of the total 2009 Agency budget of $36.7 million, the remaining of $16.3 million represents personnel and office services expenditures. Exhibits 3-23 and 3-24 show our staffing plan by legislative initiative. Out of the 118 positions 40% are dedicated for improved oversight, while 30% of our efforts go to the strategic plan, coordination of fares, and services initiatives. 19% of our staff is focused on the senior and disabled ride free programs as well as the ADA Paratransit certification program. 6% of our staff will work to enact and implement comprehensive, long-term transit capital funding legislation, and to establish a capital evaluation process. The remaining 5% of staff will work on coordinated sales and marketing initiatives.

Goals and Performance Plan (1)

Strategic Goals	Short-Term Goals	Departments
I. Provide Transportation Option Provide public transportation choices that link to jobs and deliver cost-effective, dependable and on-time commutes.	Update the Strategic Plan to incorporate the mandates of the RTA reform legislation	Planning and Regional Programs
	Revise and adopt Planning and Coordination Requirements, Policy, and Process	
II. Ensure Financial Viability Ensure the sustained financial viability of public transportation as intrinsic to the region's multimodal transportation system.	Improve the regional operating budget program to reflect the RTA reform legislation mandates and OAG recommendations.	Finance and Administration
	Improve the capital program to reflect RTA reform legislation mandates and OAG recommendations	Research, Analysis, and Policy Development (RAP)
	Measure, analyze, and critique performance of all transit agencies.	
	Seek enactment of a state transit operating and capital funding and reform	Legal & Government Affairs
	Protect and increase the region's transit funding share in the federal reauthorization of the surface transportation programs.	
	Support the implementation of the RTA reform legislation mandates	
III. Enhance Livability and Economic Vitality Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.	Establish the Innovation, Coordination and Enhancement (ICE) fund policy and criteria.	Planning and Regional Programs
	Strongly manage ADA paratransit oversigth of the Service Boards.	
IV. Demonstrate Value Create and sustain public understanding of the benefits of public transportation to individual health and well-being, regional economic vitality and sustainability, and as a catalyst for new opportunities for users and non-users alike.	Develop framework for more effective oversight of the Service Boards.	Research, Analysis, and Policy Development (RAP)
	Create an integrated marketing program.	Communications
	Develop and manage an on-going public participation on the Partners for Transit Program.	
	Manage departments' implementation of new RTA Act mandates	Executive Director
	Oversee departments' achievement of their 2009 Program Goals	
	Ensure effective Board involvement in the program.	

(1) Reference Agency Operating Plan on page 53-64 and Goals and Performance Measures on page 67-70.

Goals and Peformance Measures

In 2007, Regional Transportation Authority released its five-year strategic plan, Moving Beyond Congestion that presented our 30-year vision for maintaining, enhancing and expanding our public system now valued at $35 billion dollars and provides two million rides each weekday and thousands more on weekends. It also addresses several major issues across the region which includes congestion and mobility, changing travel markets, service coordination and integration, capital and operations funding, and the risks without additional funding. Formal process for goals and performance measures will be presented to the RTA board for adoption in 2009. Some of the informal processes are summarized below.

Vision

The RTA, Metra, CTA and Pace vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities.

Goals

I. Provide Transportation Option
   - Provide public transportation choices that link to jobs and deliver cost-effective, dependable and on-time commutes.

II. Ensure Financial Viability
   - Ensure the sustained financial viability of public transportation as intrinsic to the region's multimodal transportation system.

III. Enhance Livability and Economic Vitality
   - Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.

IV. Demonstrate Value
   - Create and sustain public understanding of the benefits of public transportation to individual health and well-being, regional economic vitality and sustainability, and as a catalyst for new opportunities for users and non-users alike.

Objectives and Specific Performance Measures

The specific objectives and performance measures will be presented to the Board of Directors for adoption in 2009. In the interim, some of the temporary measures placed by the Service Boards are as follows:

I. Provide Transportation Options

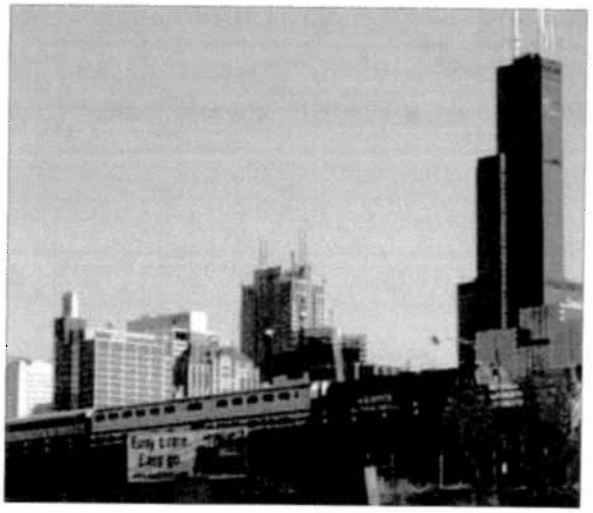
Objectives:

1. Improve on-time performance
2. Provide seamless public transportation
3. Increase ridership

Performance Measures

1. Improve on-time performance (96.6%–5 year average) (METRA)

Year	% On-Time	Goal (%)
2004	96.9%	>0.3
2005	96.3%	<0.3
2006	96.3%	<0.3
2007	95.7%	<0.9
2008	96.0%	<0.6



2. Provide Seamless public transportation (January-November) (in thousands)

Options	2006	2007	2008	'07 vs. '08
Link-up (issued by Metra—use on peak period for CTA & most Pace services)	80,222	87,472	87,329	143
PlusBus (issued by Metra– unlimited use on most Pace Routes	13,962	13,213	12,756	457
Pass (e.g. 7-day pass, UPass, 1,2,3,5 day pass issued by CTA—unlimited use on CTA & Pace)	152,716	168,944	178,689	9,745

3. Increase Ridership

Service Boards	2007 Actual	2008 Estimate	2009 Plan	'08 vs. '09
CTA	499,540,000	524,304,000	517,860,000	<1.2
Metra	83,346,000	87,736,000	89,082,000	>1.5
Pace	38,000,000	38,900,000	40,772,000	<4.8

II. Ensure Financial Viability

Objectives:

1. Demonstrate measurable achievement in the provision of clean, attractive, affordable, safe, reliable and convenient public transportation services.

Metric	2009 Goal (%)
CTA Major Delays, Rail Transportation	≤11/mo.
CTA Major Delays, Rail Vehicle Maintenance	≤22/mo.
CTA General Cleans: % of Fleet Past Due	0%

2. Continually enhance efficiencies through effective management, innovation, and technology.
1. Provide a public transportation system that protects the environment and supports the livability and economic vitality of the region.

Options	2007 Actual	2008 Estimate	2008 Plan	2009 Goal (%)
Travel Information Center Call Capture Rate (%)	92.2	93.6	94.0	>0.4
Automated CTA Bus announcement	2,033	2,175	2,175	0

Options (in thousands)	2007 Actual	2008 Estimate	2008 Plan	Est. vs. Plan (%)
ADA Ridership	2,799,000	2,658,000	3,253,000	<22
CTA Bus Lifts	2,033	2,175	2,175	0
Pace Fixed Route Accessible stations	232	240	240	0
RTA Reduced Fare Permit (used by senior & ADA for fixed route)	320,000	320,000	320,000	0
RTA ADA Certification (used by seniors & ADA paratransit)	10,428	13,130	10,000	>31

2. Provide mobility to aging populations and people with disabilities.

IV. Demonstrate Value

1. Increase public outreach
2. Develop public-private partnerships

Options	2007 Actual	2008 Estimate	2009 Plan
Public Hearings	35	37	37

2008 Public Hearing with RTA Executive Director, Stephen E. Schlickman

In the future, specific performance measures will follow the matrix below

Measure	MBC Goals
Service Supplied **(the amount of service scheduled and/or actually operated**	
Vehicle revenue hours (hours that vehicles travel while in revenue service, including layover/ recovery time, but excluding deadhead time) • Per capita (population for the Chicago UZA &/or six county service area—US Census)	I. Provide Transportation Options
Vehicle revenue miles (Miles that vehicles travel while in revenue service, including layover/ recovery time, but excluding deadhead time) • Per capita (population for the Chicago UZA &/or six county service area—US Census). • Per service area/square miles (square miles within geographic boundary for the Chicago UZA &/or 6 county service area—US Census).	I. Provide Transportation Options
Transit Capacity (total person space miles: seating capacity (plus standees based on loading standards) multiplied by vehicle revenue miles. • Per capita (population for the Chicago UZA &/or six county service area (US Census)	I. Provide Transportation Options
Service Consumed **(the amount of service actually used by passengers)**	
Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination). • Per capita (population for the Chicago UZA &/or six county service area (US Census).	IV. Demonstrate Value
Passenger miles (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips). • Per capita (population for the Chicago UZA &/or six county service area (US Census)	I. Provide Transportation Options
Transit capacity utilization (Percent of transit capacity that is actually used: Passenger miles divided by transit capacity).	IV. Demonstrate Value
Service Efficiency **(Achieving the desired result (service delivery) with the minimum use of resources)**	
Operating cost (The expenses associated with the operation of the transit agency) • Per vehicle revenue hour (Hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per unit of transit capacity (Total person space miles: seating capacity (plus standees based on loading standards) multiplied by vehicle revenue miles)	Ii. Ensure Financial Viability
Service Effectiveness **(The extent to which passengers are using public transit service in relation to the amount of service available).**	IV. Demonstrate Value
Passenger trips (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination) • Per vehicle revenue hour (Hours that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Per vehicle revenue mile (Miles that vehicles travel while in revenue service, including layover/recovery time, but excluding deadhead time) • Passenger miles (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	I. Provide Transportation Options

Cost Effectiveness **(Economically worthwhile in terms of what is achieved for the amount of money spent).**	
Operating Cost (The expense associated with the operation of the transit agency)	
• Per passenger mile (Cumulative sum of the distances ridden by each passenger: average trip length multiplied by total passenger trips)	II. Ensure Financial Viability
• Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination.	
Service Delivery **– Customer Service (The provision of service to customers before, during and after a purchase that is designed to enhance the customer experience and level of satisfaction)**	
• On-time Performance (Percentage of the times a transit vehicle departs a location within a certain number of minutes after and/or before the scheduled time and/or interval maintenance for frequent service)	II. Ensure Financial Viability
• Customer satisfaction index score (A market research tool, administered through a survey, that identifies criteria and establishes a rating system for the measurement of customer satisfaction)	II. Ensure Financial Viability
Service Delivery **– Safety (Protection from the risk of harm or injury)**	
Major Security Incidents (Occurrences of bomb threats, robbery, larceny, burglary or arrests/ citations for fare evasion, trespassing, vandalism, and assault)	II. Ensure Financial Viability
• Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination.	
Major Safety Incidents (Any event involving the operation of a transit system if, as a result, one or more of the following occurs: an individual dies either at the time of the event or within 30 days of the event; one or more persons suffer bodily damage as a result of the event requiring immediate medical attention away from the scene; property damage in excess of $25,000.	
• Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles and are counted each time they board a vehicle used to travel from their origin to their destination.	
Service Level Solvency **– Operations (The operating budget)**	
Short-term financial viability (The ability to fund operations over a three year period so as not adversely impact service delivery)	II. Ensure Financial Viability
• Operating reserves (the amount of unallocated unreserved fund balance).	
Fare Revenue (All income received directly from passengers, either paid in cash or through pre-paid tickets, passes, etc. and the reduced fares paid by passengers in a user-side subsidy arrangement)	II. Ensure Financial Viability
• Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles that are counted each time they board a vehicle used to travel from their origin to their destination)	
Subsidy (Government financial assistance)	II. Ensure Financial Viability
• Per passenger trip (Unlinked passenger trips: The number of passengers who board public transportation vehicles that are counted each time they board a vehicle used to travel from their origin to their destination)	
Recovery ratio	II. Ensure Financial Viability
• Percentage of the actual operating cost of service delivery that is covered by passenger fare revenue (NTD)	
• Total system-generated revenue recovery ratio as required by the RTA Act	

Reference

RTA Bonds

The bonds issued by the RTA carry a rating of "AAA" from Standard & Poor's and Fitch IBCA and "Aaa" from Moody's Investors Service, Inc., based on the RTA having the principal and interest guaranteed by an insurance policy. These rating agencies have indicated that they would have rated the bonds "AA", "AA", and "A1", respectively, without such insurance. These represent strong investment grade ratings. The RTA has the distinction of being one of the highest rated public transportation agencies in the United States.

All bonds are general obligations of the RTA to which the full faith and credit of the RTA are pledged. These general obligation bonds, with a balance of $2,351.4 million as of December 31, 2006, are divided into two types: $1,646.3 million in Strategic Capital Improvement Program (SCIP) bonds and $705.1 million in RTA bonds (Exhibit 3-25 and Exhibit 3-26).

On June 21, 1993, the RTA issued an advance refunding of a portion of its 1990A Series general obligation bonds. The RTA issued $23,265,000 of general obligation refunding bonds (1993C Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On January 30, 1996, the RTA also issued an advance refunding of a portion of its 1994B and 1994D Series general obligation bond issues. The RTA issued $151,235,000 of general obligation refunding bonds (1996 Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On September 18, 1997, the RTA issued an advance refunding of a portion of its 1990A, 1991A, 1992B and 1993B Series general obligation bond issues. The RTA issued $98,385,000 of general obligation refunding bonds (1997 Series). Proceeds from the issuance amounted to $105,570,935, in-

cluding a premium of $7,185,935. The proceeds are to fund an irrevocable trust for generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On August 10, 1999, the RTA made an advance refunding of a portion of its 1992A, 1993A, 1994A, and 1994C Series general obligation bond issues. The RTA issued $298,725,000 of general obligation (1999) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunded bonds are as follows: $113,895 of the 1992A Series, $9,720,000 1993A, $142,615,000 1994A, and $21,955,000 1994C. The refunding was undertaken to reduce debt service over the next 26 years by $22 million, an economic gain of $11.4 million, which represents a 3.9 percent savings on the previous debt service.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 to 2004. In March 2001, the RTA issued $100 million in SCIP bonds.

During 2002, the RTA issued two bond offerings. The first issue was a $160 million SCIP bond offering. The second issue was a $200 million non-SCIP issue.

During 2003, the RTA issued three bond offerings. On January 1, the RTA issued $150,000,000 of general obligation (2003B) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. The second issue was a $260 million SCIP bond offering on April 1. On the same day, RTA currently refunded the remaining portion ($19,055,000) of its 1993C Series general obligation bond issue. As a result the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunding was undertaken to reduce debt service through 2009 by $ 1.6 million (an economic gain of $ 1.6 million) which is a 6.9 percent savings on the previous debt service.

On October 13, 2004, the RTA issued one bond offering (Series 2004A) for $260 million in SCIP bonds. The Series 2004A Bonds are also secured by the Series 2004A debt service reserve account.

		Total	**$60,699**

On May 2,2005, the RTA issued $148,110,000 of general obligation bonds (2005B) to defease the remaining balance of the 1996 refunding. As a result, the 1996 refunding bonds have been removed from the financial statement.

On September 13, 2006, the RTA issued a general obligation bond for $250,350,000 (2006A) to be used to finance a portion of the costs incurred in connection with the construction, acquisition, repair and replacement of certain public transportation facilities.

RTA Sales Tax must be 2.5 times greater than the debt service requirement. As shown over the last ten years (Exhibit 3-27 and 3-28), the RTA meets this test. Any differences between debt service amounts presented and amounts shown in general purpose financial statements represent timing differences between payments made to trustees and payments made to bondholders. Also, investment income earned in the debt service accounts may lower actual cash transfers from the General Fund.

The RTA and its Service Boards have put an emphasis on making sure that the bond proceeds are spent in a timely and efficient manner. Exhibit 3-29 highlights recent bond issues with the largest project-to-date expenditures.

Fund Accounting

The accounts of the RTA are organized on the basis of funds and account groups, each of which is considered a separate accounting entity. The operations of each fund are separated in its own set of accounts that comprise its assets, liabilities, fund equity, revenues and expenditures or expenses, as appropriate. RTA resources are allocated to and accounted for in individual funds based upon the purposes for which they are to be utilized and the means by which spending activities are controlled.

Governmental Fund Types

The RTA's governmental fund types are the General Fund, Debt Service Fund and Capital Projects Fund (Exhibit 3-30).

General Fund

The General Fund is the general operating fund of the RTA. It is used to account for all financial

transactions that are not specifically required to be accounted for in another fund such as the Agency Fund. Exhibit 3-1 shows the balance in the General Fund from 2007 through 2011. The General and the Agency Funds are the only two funds that have annual budgets. Exhibit 3-31 highlights the 2009 budget for these funds.

Debt Service Fund

The Debt Service Fund is used to account for the accumulation of resources for, and the payment of, general long-term debt principal, interest and related costs. The interest earned is generated from the funds being held for payment to the bondholders. The difference between the transfer and payment expenditures reflects the year-over-year timing variance.

Capital Projects Fund

In 1989, the Illinois General Assembly authorized the RTA to issue a maximum of $500 million of SCIP bonds, and to have a maximum of $500 million RTA bonds outstanding. Capital Projects Fund is utilized for the receipt and disbursement of the proceeds of the bond issues. The first Capital Projects Fund was established in 1990 with the issue of $100 million of RTA bonds to fund capital projects at the Service Boards. The RTA allocated the proceeds from the bonds issued under the General Assembly's authorization as follows: 50 percent for CTA capital

projects; 45 percent for Metra capital projects; and 5 percent for Pace capital projects. Projects included in approved five-year capital programs will be eligible for reimbursements from these proceeds by the RTA without further review or action by the RTA Board of Directors.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 through 2004 and to issue and have outstanding an additional $300 million of non-SCIP Bonds. These amounts have been issued.

Proprietary Fund

Proprietary Funds are used for activities that are similar to those found in the private sector and to account for the financing of goods or services provided by a department or agency to other departments or agencies of the governmental unit, or to other

governmental units on a cost-reimbursement basis. The RTA has one Proprietary (Enterprise) Fund—the Joint Self-Insurance Fund.

Joint Self-Insurance Fund

The Joint Self-Insurance Fund is used to finance claims incurred by the Service Boards and the RTA on a cost-reimbursement basis. This fund is reported as an enterprise fund since the predominant participants are outside of the RTA.

Fiduciary Fund Types

Fiduciary Funds account for assets held by a governmental entity in a trustee capacity or as an agent for others. The RTA's Fiduciary Funds consist of an Agency Fund and a Pension Trust Fund.

Agency Fund

The Agency Fund records the receipt and disbursement of amounts due to the CTA, Metra and Pace, including Retailers' Occupation and Use Tax (sales tax), interest on this tax, reduced fare reimbursement grants and federal operating assistance grants. Sales tax revenues are recorded in the fund and are equally offset by expenditures recording the pass through to the Service Boards.

Pension Trust Fund

The Pension Trust Fund is used to account for all accumulation of resources for and payments of, retirement benefits to employees participating in the RTA Pension Plan and Trust.

Basis of Budgeting

The basis of budgeting refers to the conventions for the recognition of costs and revenues in budget development and in establishing and reporting appropriations. The RTA's annual budget and related appropriations are prepared on the modified accrual basis of accounting in conformity with generally accepted accounting principles except for capital grants/expenditures and debt service payments. Capital grants/expenditures are budgeted for on a project basis, which normally exceed one year. Debt service payments are budgeted as transfers from the General Fund.

Although appropriations are adopted for individual line items, the legal level of control is restricted to total appropriations/expenditures and total administration (statutory cap) appropriations/expenditures. Management has the authority to exceed any line appropriation without Board approval, provided it does not exceed the legal levels of control. It has been the policy of the RTA to fund the budgets of the Service Boards up to the amount appropriated in the Budget Ordinance. However due to unfavorable economic conditions and the waiver of the 5% fund balance policy, this policy is also waived.

Budgetary reporting is balanced with accounting records on a monthly basis and is fully reconciled to the accounting system on an annual basis in the Comprehensive Annual Financial Report and for the annual Municipal Bond Disclosure Reports required by the Securities and Exchange Commission (Exhibit 3-32 and 3-33).

4 CTA Operating Plan

Overview

The Chicago Transit Authority (CTA) was created by the Illinois State legislature in 1945 and began operations in 1947. It became the sole operator of Chicago transit in 1952 when it purchased the Chicago Motor Coach System. The CTA is the region's largest transit operator providing service on 153 bus routes and eight rapid transit routes. A seven-member Chicago Transit Board governs the CTA.

Service Characteristics

The CTA operates the second largest public transportation system in the United States. Average weekday ridership on its bus and rail system is 1.8 million. The CTA's service area encompasses 220 square miles in the City of Chicago and 40 surrounding suburbs.

Bus operations provide 2,100 buses traveling over 153 routes covering 2,529 miles, with approximately 11,833 bus stops. Rail service on eight routes has 1,190 train cars traveling over 224.1 miles of track. The CTA transferred all paratransit service to Pace in July 2006. During the first half of 2006, CTA provided more than 1.2 million rides at a cost of about $26 per ride.

Ridership

Ridership is estimated at 524.3 million trips by the end of 2008 (Exhibit 4-1). This is 4.9 percent or 24.8 million trips higher than 2007 ridership. Bus ridership is forecasted at 327.8 million trips in 2008, which is 18.5 million trips or 5.8 percent higher than 2007. Rail ridership is projected at 196.5 million in 2008 and is higher than the prior year by 6.2 million or 3.3 percent (Exhibit 4-2).

Exhibit 4-1: **CTA Ridership** (in millions)

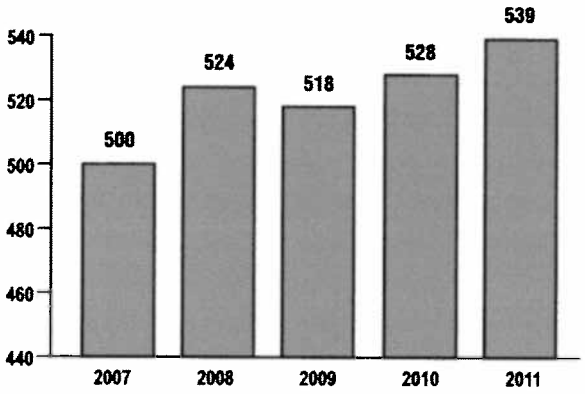

Exhibit 4-2: **CTA Annual Ridership by Mode** (in millions)

	2005	2006	2007	2008	2009
Bus	303.2	298.4	309.3	327.8	309.5
Rail	186.8	195.2	190.3	196.5	208.3
Paratransit/Taxi	2.4	1.2	-	-	-
Total Ridership	**492.4**	**494.8**	**499.6**	**524.3**	**517.8**

Exhibit 4-3: **CTA Average Daily Ridership** (in thousands)

	2005	2006	2007	2008	2009
Weekday	1,482	1,596	1606	1,644	1630
Saturday	899	966	977	988	973
Sunday	621	662	675	812	807

Average weekday ridership on the CTA is 1.6 million, while Saturday and Sunday average ridership is at 988,000 and 812, 000, respectively (Exhibit 4-3). The CTA expects its ridership levels to increase by a compound growth rate of 1.9 percent from 2007 through 2011. Total vehicle miles in 2009 are expected to experience a slight increase due to bus service enhancements such as extension of several existing routes, increased frequency, and additional service supporting rail temporary station closure and then remain flat from 2010 through 2011 (Exhibit 4-4).

Exhibit 4-4: **CTA Ridership and Miles** (Riders and Miles in thousands)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan
Ridership	499,540	524,304	517,860	528,217	538,782
Vehicle Miles	135,244	133,013	135,784	135,784	135,784
Passengers Per Mile	3.7	3.9	3.8	3.9	4.0

Service Quality

The CTA has continued to work on improving the core components of its business that impact its customers directly. Some of its efforts include the implementation of performance management initiatives that ensure the delivery of safe, clean, on-time, courteous and efficient service; the restructuring and consolidating of customer service and customer communications providing timely and accurate information to the riders; and concrete repairs made to improve the safety of bus turnarounds and rail stations.

Challenges

In 2008, after months of a dedicated effort to create fiscal stability, the Illinois General Assembly in January passed a landmark funding package (P.A. 95-0708) for mass transit in Northeastern Illinois, increasing financial support for the region's public transit providers and creating long-term financial stability to CTA's pension and retiree health plans. The funding package provide financial assurance that led CTA to embark upon a series of initiative that improves customer experience and ensures that benefits provided to its 10,500 employees are viable and affordable for the long term. Although the state legislation brought welcome funding to the region, the CTA 2009 budget was pressured by a sluggish economy, higher fuel prices, increase power, higher material costs, and the impact of the unanticipated free ride programs. To alleviate the pressure, 2009 budget includes fare increases, 396 eliminated positions, and additional belt tightening measures.

Capital Investments

The CTA spent $731 million on capital programs in 2007. The CTA is expected to spend $1.3 billion on capital projects in 2008 and 2009 (Exhibit 4-5).

The Brown Line Capacity Expansion project of $529.9 million began in 2004 and continued to progress throughout 2008. In August 2006, the fully renovated Kedzie and Rockwell stations were re-opened to customers for service. The station boasts a new glass station houses, new platforms, brighter lighting and accessible features including ramps, tactile edging and accessible gates. The station is also ADA accessible which brings the total number of accessible CTA rail stations to 85 out of 144, or 59% of the system. In addition, at Fullerton and Belmont stations, the most complex station rehabilitations on the Brown Line, northbound trains are operating on newly constructed rail bed and passengers board from new platforms even as structural work is proceeding to create new track and platforms for the southbound station areas. The project is expected to be completed in December, 2009, on time and within budget.

Bus System

The CTA continues to upgrade its bus fleet. Through September 2008, CTA received 850 standard 40 foot New Flyer buses equipped with air-conditioner, low-floor, and fully ADA accessible. In fall 2008, an order was placed for the new 150 air-conditioned, articulated hybrid buses that will be used in the heavily trafficked routes. Delivery completion is set in summer, 2009.

Exhibit 4-5: **CTA Capital Statistics** (dollars in thousands)

	2005	2006	2007	2008	2009
CTA Total Capital Expenditures	$402,951	$640,447	$730,819	$793,400	$498,559
CTA Bus Vehicles	2,033	2,089	2,175	2,110	2,087
Average Age of Buses (in years)	9.4	9.4	9.3	5.6	5.6
CTA Rail Cars	1,190	1,190	1,190	1,190	1,190
Average Age of Rail Cars (in years)	22.0	23.0	24.0	25.0	26.0
Bus Routes Offering Lift Service	150	154	154	154	154
ADA Accessible Stations	72	76	82	85	85

The bus vehicle overhaul program continues to improve service through regular replacement of major mechanical components subject to extensive wear. In 2008, the Flexible 600 Series buses were completed and the overhaul of the Nova 6400 series began. Bus mid-life overhaul activities are programmed for $10.5 million in 2009 and $160 million during the period 2010-2013. With overhauls, the fleet will demonstrate increased reliability and fewer instances of expensive breakdown-based repair.

The Bus tracker project has improved data communication between buses and the Control Center and on-street supervision. The project tracks CTA buses in real time and provides estimated bus arrival times for customer. Global positioning satellite (GPS) technology is used to identify bus locations and provides that information via a dedicated web site www. ctabustracker.com and can also be accessed in any mobile devices.

Rail System

The CTA has committed to an aggressive slow zone rehabilitation schedule. As of October 2008 slow zones on CTA's rail system have been reduced to 9.1 percent. A total of 141,577 feet of slow zones have been removed from a high point of 22.3 percent (263,526 feet).

Work continues on the signal upgrade and replacement for the Blue Line. This project, which began in 2006, will replace the entire signal system in the Dearborn Subway, on the Congress (Forest Park) Branch and a portion of the O'Hare Branch. This will result a smoother train operation, reduced travel times and greater reliability.

The CTA has 406 railcars currently on order with an expected delivery between 2010 and 2012. These railcars will replace the aging 2200 and 2400-Series fleet placed into service in 1969 and 1978. Both series have already exceeded their expected service life of 38.3 years and 30.3 years respectively.

System-Wide Improvements

The CTA continued to invest in new technology to further improve service and safety. Through technology, CTA was able to complete the installation of the infrastructure necessary to enhance communication capability on the Red and Blue Line subway system. In addition, stations are also being outfitted with cameras to provide a comprehensive view of the transit system to the CTA Control Center, and through redundant fiber optic links to Chicago's 911 Center. Other systems improvements include better lighting, rehabilitation of station escalators and elevators, replacement of station roofs and canopies, and upgraded passenger public address systems.

Partnerships

The CTA works to maintain partnerships with many groups. The CTA's efforts to strengthen its relationship with its riders have been illustrated in previous sections. The CTA also works to create partnerships with its workforce, vendors, the mobility impaired, the city of Chicago, the legislature and its security agencies.

Vendors

The CTA Purchasing Department pursues an aggressive Disadvantaged Business Enterprise Program (DBE) to encourage minority participation in CTA contracts. The CTA has set a minimum level of 30 percent for minority participation for projects requiring outside vendors.

The CTA has also pursued cost savings in its purchasing practices by finding the best prices for the good and services procured. These efforts have saved the CTA several million dollars over the past few years.

City of Chicago

The CTA maintains a strong working relationship with the City of Chicago and various suburban entities. It continues to work with law enforcement agencies in both Chicago and the suburbs to reduce crime on its bus and rail systems. The CTA has also worked with the City of Chicago on various real estate matters, especially rail station construction. And it has worked with Chicago's Health and Human Services Department to reduce the number of homeless individuals using trains for shelter.

Over the past decade, the City of Chicago has provided the CTA $828.5 million in capital improvements. This substantial investment in the CTA's infrastructure includes the Roosevelt Connector project, replacement of the elevated span at Wacker Drive and Wells Street, the renovated Chicago Avenue station on the Red Line, the elevated Library-State/Van Buren station, and the rehabilitation of the underground transfer tunnel that provides a pedway connection between the Red and Blue Line platforms at Jackson.

In 2007, the Chicago Department of Transportation (CDOT) will begin renovation work on the Grand Station on the Red Line. The renovation includes mezzanine expansion, platform with glazed ceramic tile, and vaulted ceiling panels, additional turnstiles, and installation of new exit-only rotogates.

Legislators

State and federal funding has been crucial to the CTA's ability to rebuild its system. Specifically, Chicago Mayor Richard M. Daley, U.S. House Speaker Dennis Hastert, Governor Rod R. Blagojevich, the Illinois Congressional delegation, and the Illinois General Assembly have supported efforts to maintain

and improve the infrastructure of CTA bus and rail systems. While federal legislators have made a financial commitment to the future of public transit, state and local legislators must identify the matching funds required to secure the federal funds. In 1999, the State established Illinois FIRST, a $12 billion matching program to improve the State's infrastructure, which included $2.1 billion for transit. The CTA received more than $1 billion of Illinois FIRST funding over four years for capital improvements to its rail and bus systems.

Budget and Financial Plan

The 2009 budget as submitted by the CTA conforms to the 2009 marks however, 2010 and 2011 financial plan exceeded the marks set by the RTA on September 15, 2008. The CTA's operating funding marks were set at $723.3 million for 2009, $729.4 million for 2010, and $752.0 million for 2011. The CTA's recovery ratio was set at 52.0 percent for 2009 by the RTA, which the CTA has exceeded. The CTA's statement of revenue and expenditures, which includes the recovery ratio, is presented in Exhibit 4-6. The following portrays the outlook for the 2009-2011 planning period.

System-Generated Revenue

Total system-generated revenue is expected to increase from $546 million in 2007 to $689 million in 2011. This is an increase of $143 million over

Exhibit 4-6: **CTA 2009 Budget and 2010-2011 Financial Plan (1)** (dollars in thousands)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan
System-Generated Revenues:					
Passenger Revenue	$457,299	$466,707	$519,213	$533,812	$565,841

Recovery Ratio % (3)	53.1%	49.0%	52.7%	53.1%	53.4%

(1) As released by the CTA with exceptions noted. (2) Public funding that exceeds the marks set by the RTA Board. (3) Items excluded from expenses are for security and POB debt service. Grant revenue and In kind revenues and expenditures from the CPD of $22,000 are included In the recovery ratio.

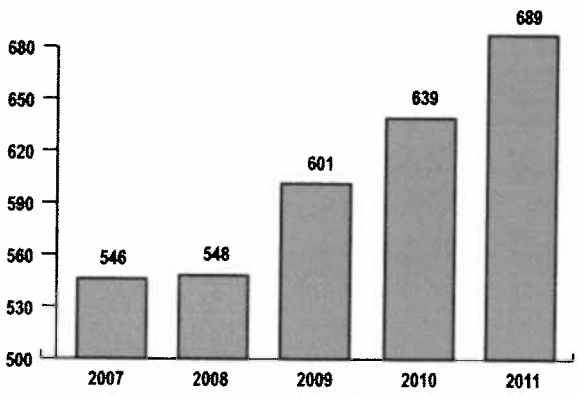
the four-year period, or a compound annual growth rate of 6.0 percent (Exhibit 4-7). System-generated revenue includes passenger revenue, reduced fare reimbursement, and other revenue. Passenger revenue comprises 86 percent of the CTA's total operating revenue. The reduced fare subsidy and other revenue account for the remaining 14 percent (Exhibit 4-8).

Passenger Revenue

Passenger revenue is expected to increase from $457 million in 2007 to $566 million by 2011, a $109 million increase or an average increase rate of 5.5 percent (Exhibit 4-9) due to higher average fare as a result of the proposed fare increase and increased in ridership.

Fare revenue is estimated at $519.2 million in 2009, $52.0 million higher than the 2008 forecast. The CTA fare structure is shown in Exhibit 4-10.

Exhibit 4-7: **CTA System-Generated Revenue** (dollars in millions)



Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the CTA for the cost of providing reduced fares for the elderly, students, and the disabled. Fare reimbursement is included as revenue and became available in July 1989. However in 2009, State eliminated half of the funding for this program thereby leaving CTA estimating its share at $16.1 million in 2009. For 2010 and 2011, CTA assumed that the program will be fully restored to $32.3 million.

Exhibit 4-8: **2009 CTA Revenue** - $601 million

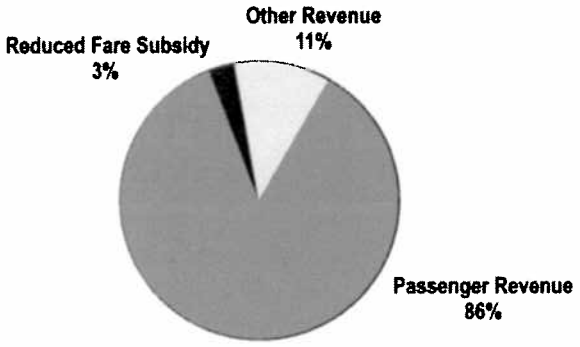


Exhibit 4-9: **CTA Average Fare Calculation** (revenue and ridership in thousands)

	2007	2008	2009	2010	2011
Passenger Revenue	$457,299	$466,707	$519,213	$533,812	$565,841

128 Soldier Field Express	$1.00	$0.50	
154 Wrigley Field Express	$5.00		Per carload.

Note: (1) Reduced fares are for children 7 through 11 years old. Grade and high school students with CTA riding permit. Seniors age 65+ and riders with disabilitites with RTA reduced fare riding permit.

Exhibit 4-11: **All Other Revenue** (dollars in thousands)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan
All Other Revenues:					
Advertising, Charter, & Concessions	$23,164	$28,200	$40,500	$41,715	$58,401
Investment Income	10,495	5,600	6,300	11,700	12,285
Contribution from Local Govt. Units	5,000	5,000	5,000	5,000	5,000
All Other Revenue	16,654	10,600	14,000	14,420	14,853
Total All Other Revenues	**$55,313**	**$49,400**	**$65,800**	**$72,835**	**$90,539**

Other Revenue

This category includes advertising, charters, concessions, contributions from local governments, investment income, and other revenue (Exhibit 4-11). Also included are essential contributions from the City of Chicago and Cook County. Annual funds provided by the City are $3 million and the County contributes an additional $2 million. Revenue for this category was approximately $55 million in 2007 and is expected at $91 million in 2011. Reasons for this increase include additional revenue from sale of excess property, increase in advertisements placed on buses, trains, and in stations, as well as income from concessions and charters.

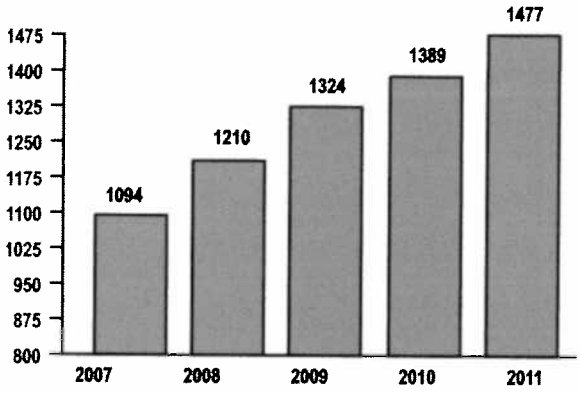
Operating Expenditures

Total operating expenditures are forecasted to increase from $1,094 million in 2007 to $1,477 million in 2011. This $383 million increase represents a 7.8 percent compound growth rate from 2007 through 2011 (Exhibit 4-12).

For 2008, operating expenditures are estimated at $1,209.6 million. This is 10.6 percent higher than 2007 actual expenditures of $1,094.2 million. The increase is due mainly to higher labor and pension costs, fuel, security and all other costs.

Budgeted 2009 expenditures of $1,324.4 million are 9.4 percent higher than 2008 projections. The projections for 2010 and 2011 show operating expenditures of $1,388.7 million and $1,476.8 million, respectively. The 2010 projection represents an increase of 4.8 percent over the 2009 operating budget. The 2011 projection represents an increase of 6.3 percent over the 2010 financial plan.

Exhibit 4-12: **CTA Total Operating Expenditures** (dollars in millions)



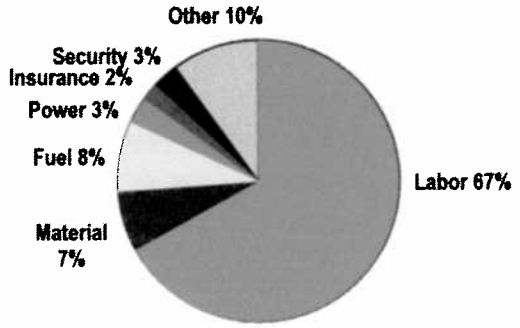
Expenditure Elements

The 2009 operating expenditure elements include labor, material, fuel, power, insurance and claims, security, paratransit services, and other costs. Labor expenditures, including fringe benefits, represent 67 percent of the CTA's total expenditures. Base wages represent about two thirds of that total, while fringe benefits, which are primarily medical insurance and pension costs, represent the remaining one third. Materials, used primarily for maintenance, are 7 percent of total expenditures. Fuel and power represent 11 percent of the CTA's expenditures. Security, insurance and claims represent 5 percent of total spending. Other expenditures comprise the remaining 10 percent. The other expenditure category includes items such as lease, utility, and contractual services (Exhibit 4-13).

Labor Costs

Labor expenditures are expected to increase from $784 million in 2007 to $1,003 million in 2011.

Exhibit 4-13: **CTA Operating Expenditures - $1,324 million**



This is a $219 million increase, or an average growth rate of 5.9 percent annually (Exhibit 4-14). Labor expenditures for 2008 are estimated at $884.7 million, which is $99.9 million more, or 12.7 percent higher, than last year. This increase is due to the rising costs of healthcare, workers compensation, and wages. Labor expenditures are forecasted to be $890.6 million in 2009, an increase of $5.9 million or 0.7 percent higher than 2008. This modest increase is due to a five-year labor union agreement between CTA and labor union. The numbers of budgeted positions for 2009 is lower than 2008 (Exhibit 4-15). Overall, labor expenditures of $926.2 million are projected to rise by 4.0 percent in 2010 and then increase to $1,003 million in 2011, an 8.3 percent change.

Material

The material category covers all repair parts for buses, trains, track, structure and signals in the system. Material expenditures are forecasted at approximately $89.5 million in 2008, $94.8 million in 2009, $96.7 million in 2010, and $98.6 million in 2011. The increase in material expenditures is mainly due to the higher replacement costs for major fleet components such as doors, brakes, and wheels of the aging fleet.

Fuel

Assuming 25.5 million gallons at $3.57 per gallon, the CTA estimates fuel expenditures at $91.1 million for 2008 (Exhibit 4-16). The cost per gallon is higher than 2007 actual results.

The CTA forecasts the need for 25.5 million gallons of diesel fuel in the 2009 budget. Due to the uncertainty surrounding energy prices, the CTA estimates that the cost of fuel will be about $4.03 per gallon. The 2010 and 2011 financial projections hold diesel fuel costs at $4.39 per gallon and $4.52 per gallon respectively.

Power

Electric power expenditures for the rail system are forecasted at $38.3 million in 2008. This increase is due to unusually cold weather experienced during winter. Expenditures for power increase by $1.6 million in 2009, higher by $2.0 million in 2010 and higher by $0.9 million in 2011.

Insurance and Claims

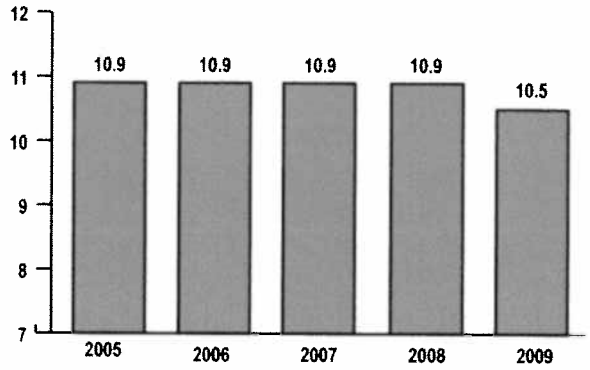
The Provision for Injuries and Damages represents the expenditure for claims and litigation for injuries and damages that occur on CTA property, or with CTA vehicles.

The CTA 2008 forecast is $14.0 million and is $11.0 million lower than the prior year. The CTA utilized increased fare revenues to fully fund the reserve for injuries and damages as projected by the 2006 actuarial analysis. The 2009 funding is $30.0 million versus an estimate of $14.0 million for 2008. In 2010 and 2011, the CTA projects these expenditures to be $30.6 million and $31.2 million respectively.

Exhibit 4-14: **CTA Labor Expense Growth** (in thousands)

	2007	2008	2009	2010	2011
Labor Expense	$784,841	$884,683	$890,623	$926,248	$1,003,000
% Change from Prior Year	3.2%	12.7%	0.7%	4.0%	8.3%

Exhibit 4-15: **CTA Budgeted Positions** (in thousands)



Purchase of Security Services

Security is strategically deployed throughout the CTA system to provide 24-hour coverage, seven days a week. Security services are provided by Chicago, Evanston and Oak Park Police departments, Wells Fargo Guard Service and National K-9 Security.

Expenditures are forecasted at $32.4 million in 2008, which is a slight increase from prior year (Exhibit 4-17). The 2009 budget is $33.4 million and for 2010 and 2011, expenditures are expected to increase $1.7 million and $0.7 million. These modest increases are due to investments made in new surveillance cameras and sensors for the rail system.

All Other Expenditures

All other expenditures include utilities, rents, maintenance and repair, advertising, commissions, consulting, insurance, and other general expenditures. For 2008, $59.6 million is forecasted, which is $9.9 million or 1.7 percent lower than the prior year.

TThe 2009 budget is $132.8 million, which is higher than the 2008 estimate by $72.9 million. The increase is primarily due to inflation, increases in contractual services, and the inclusion of Pension Obligation Bond (POB) interest required by the 2008 legislation that enabled the CTA to issue bonds to regain long-term solvency in its pension funds. Expenditures are forecasted to increase from 2009 levels in 2010 and 2011 due to increase in the POB debt service requirement.

Deficit

System-generated revenue (fares and other revenue) total more than half of the CTA's operating budget, with the remainder (operating deficit) covered by public funding. The operating deficits are derived from total system generated revenue minus total operating expenditures. The deficit for the budget and two-year financial plan is $723 million, $729 million and $752 million, respectively (Exhibit 4-6).

Funding

RTA Sales Tax and RTA discretionary funding represent the major sources of public funds to the CTA and are usually less than half of the CTA's operating budget. The RTA Sales Tax is a primary source of the CTA's operating funding. The RTA retains 15 percent of the Part I sales tax revenue, and distributes the remaining 85 percent to the Service Boards. The CTA receives 100 percent of the RTA Sales Tax collected in Chicago and 30 percent of the sales tax collected in suburban Cook County. RTA discretionary funds for the CTA are expected to range between $198 million and $188 million from 2009 to 2011. Apportionments from the RTA's 15 percent share of the sales tax revenue and the State's public transportation fund (PTF) are the source of the RTA's discretionary funds. The Region Section provides the details for this funding calculation.

Exhibit 4-16: **CTA Fuel Cost per Gallon** (cost and gallons in thousands)

	2007	2008	2009	2010	2011
Fuel Cost	$71,181	$91,095	$102,852	$112,109	$115,472
Gallons	25,225	25,545	25,545	25,545	25,545
Cost Per Gallon	$2.822	$3.566	$4.026	$4.389	$4.520

Recovery Ratio

The CTA's recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2009, the CTA's recovery ratio estimate is 52.7 percent and exceeds the mark of 52 percent set by the RTA. The Region Section provides the detailed recovery ratio calculation.

The following factors affect the recovery ratio for the 2008 estimate and 2009-2011 plans. First is the inclusion of $22 million of in-kind security services provided by the Chicago Police Department, which is included as both revenue and expenditure in the recovery ratio calculation. Second is the exclusion of additional security expenditures from the recovery ratio. The CTA's recovery ratio was 53.1 percent in 2007 and is expected to be at 49.0 percent in 2008 (Exhibit 4-6).

2008 Budget versus 2008 Estimate

The CTA expects a balanced budget in 2008 based on an amended budget.

Revenue

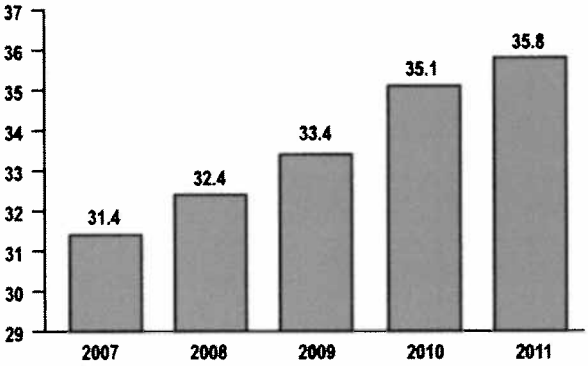
Revenue from fares is forecasted at $466.7 which is higher than budget by $3.2 million, or 0.7 percent (Exhibit 4-18). The higher fare revenue is due to higher average fare and higher ridership.

The reduced fare subsidy is the State's re-imbursement to the CTA for providing discounted fares to the disabled, the elderly, and students. The reduced fare reimbursement is even with budget.

Other revenue is expected to be $2.9 million unfavorable to plan. The categories listed below reflect this line item.

Contributions from local governments of $5 million are on par with budget. The RTA Act requires the City of Chicago to contribute $3 million and Cook County to contribute $2 million annually to the operations of CTA.

Exhibit 4-17: **CTA Purchase of Security Service** (dollars in millions)



All other revenues which include parking fees, sale of real estate, and rentals are projected to be $2.2 million lower than budget.

Investment income is estimated at $5.6 million, which is $0.7 million lower than budget. The CTA benchmarks its investments against the rates for the 90-day Treasury bond.

Expenditures

Calendar year 2008 operating expenditures are estimated at $1,209.6 million and are projected to be unfavorable to budget by $20.0 million or 1.7 percent. Expenditures for labor, fuel, power and all other costs are expected to be over budget for the year, while material and security costs are forecasted to finish under budget.

Labor expenditures are projected at $884.7 million, which is $8.3 million or 9.5 percent over budget. The increase is due to higher wage rates, increased pension contributions and higher health care expenses.

Material expenditures are forecasted at $89.5 million, which is lower than budget by $3.0 million. The decrease in material expenditures is due to lower prices on building materials, vehicle replacement parts and other materials CTA uses in day-to-day system maintenance.

Fuel expenditures for revenue equipment are expected to be $91.1 million at the end of 2008. This is $1.2 million or 1.3 percent higher than budget. The 2008 budget assumed an average price of $3.52 per gallon for 25.2 million gallons. Fuel prices have been running above budget and are estimated to end the year at an average price of $3.57.

Electric power expenditures for the rail system are forecasted at $38.3 million or $3.0 million higher than budget. The increase can be attributed to unusually cold weather during winter.

Expenditures for insurance, claims and litigation for injuries and damages that occur on CTA property or with CTA vehicles are forecasted at $14.0 million for 2008 which is par to budget.

Security is deployed strategically throughout the system to provide 24-hour coverage, seven days a week. These services are provided by the Chicago, Evanston, and Oak Park Police departments and contracts with private security firms. Full year expenditures are estimated at $32.4 million, which is lower than budget. This lower spending level reflects the CTA's decision to utilize alternative security measures, such as increasing the number of CTA employees deployed to rail stations and the installation of additional surveillance cameras, to maintain a safe environment to riders. In addition to the services contracted by CTA, the Mass Transit Unit of Chicago Police Department (CPD) continues to provide services to CTA at an estimated cost of $22 million.

All other costs are forecasted at $59.6 million, which is $11.6 million higher than budget. The increase is primarily due to higher contractual services for Oracle, facilities, and equipment maintenance service.

Statutory Compliance

The RTA Act requires that each Service Board meet the six criterions detailed in the Region Section for their budgets to be approved. The CTA budget, as submitted, meets all criteria.

Organizational Structure

The CTA organization chart is shown in Exhibit 4-19 and consists of the following divisions.

CTA Board

The CTA's governing arm is the Chicago Transit Board, consisting of seven board members. The Mayor of Chicago appoints four board members who are subject to the approval of the City Council and the Governor. The Governor appoints three board members who are subject to the approval of the State Senate and the Mayor of Chicago.

The Citizens Advisory Board, the CTA Board Members, the Chief of Staff to the Chairman, and the Secretary of the CTA Board report to the Chairman of the Board.

General Counsel

The General Counsel handles appellate matters, claims and tort litigation, and workers compensation matters.

Office of Inspector General

The Office of Inspector General reviews and analyzes the integrity of financial, operating, and computer system activities and any other organizational activity that management requires. This office is also responsible for financial and general investigations.

Treasurer

The Treasurer manages cash and handles investment.

Office of the President

The CTA President is the agency's chief executive and is charged with executing the policy decisions made by the CTA Board of Directors and providing direction to the CTA staff as they work to fulfill the mission and goals of the Service Board.

Revenue and Marketing

Revenue and Marketing includes two departments: Planning and Development, and Customer Communications. The Planning and Development department oversees route scheduling and strategic service planning for the Agency. The Customer Communications department is responsible in providing accurate, consistent and timely information to the general public via maps, brochures, fliers, news releases, and a cable television show.

Security and System Safety

Security and System Safety administers the Destination Safety program with aims to reduce employee and third party accidents and injuries.

Facilities

Facilities Maintenance includes system maintenance support, power and way maintenance, rail station appearance, and facility maintenance.

Performance Management

Performance management includes developing strategic goal for each business unit that focuses on five goals namely, safety, on-time, cleanliness, efficiency, and courtesy.

Transit Operations

Transit Operations, which represents the largest percentage of CTA employees, is responsible for bus and train operations, customer and paratransit services (prior to July 1, 2006), planning, security, control center, and training.

Bus and Rail Operations manages a fleet of 2,100 buses and 1,190 rail cars that cover 690,000 bus miles and 225,400 rail miles driven every day. They employ approximately 4,700 full-time equivalent

Exhibit 4-18: **CTA 2008 Amended Budget versus 2008 Estimate** (dollars in thousands)

	2008 Amended Budget	2008 Estimate	Variance
System-Generated Revenues			
Passenger Revenues	$463,466	$466,707	$3,241
Reduced Fare Subsidy	32,000	32,000	0
Other Revenue	52,340	49,400	(2,940)
Total Revenues	**$547,806**	**$548,107**	**$301**
Operating Expenditures			
Labor	$876,350	$884,683	($8,333)
Material	92,435	89,469	2,966
Fuel	89,918	91,095	(1,177)
Power	35,335	38,326	(2,991)
Insurance & Claims	14,000	14,000	0
Purchase of Security Services	33,600	32,442	1,158
All Other	48,000	59,625	(11,625)
Total Operating Expenditures	$1,189,638	$1,209,640	($20,002)
Operating Deficit	**$641,832**	**$661,533**	**($19,701)**

bus operators and 1,500 rail operators that provide service to the customers.

The Control Center monitors passenger and facility security and maintains accident statistics and monitors environmental affairs. The Control Center operates 24 hours per day, 7 days a week.

Operations Support

Public Affairs department is responsible for marketing, media relations, identity development, and publications.

Finance is responsible for budgeting, general accounting, investment support, program development, and the management and control of property, grants, and funding.

The Government Affairs and Affirmative Action department monitors transit legislation that affects the CTA on both regional and national levels.

The Human Resources department includes recruiting, hiring, benefit services, medical services, and program compliance.

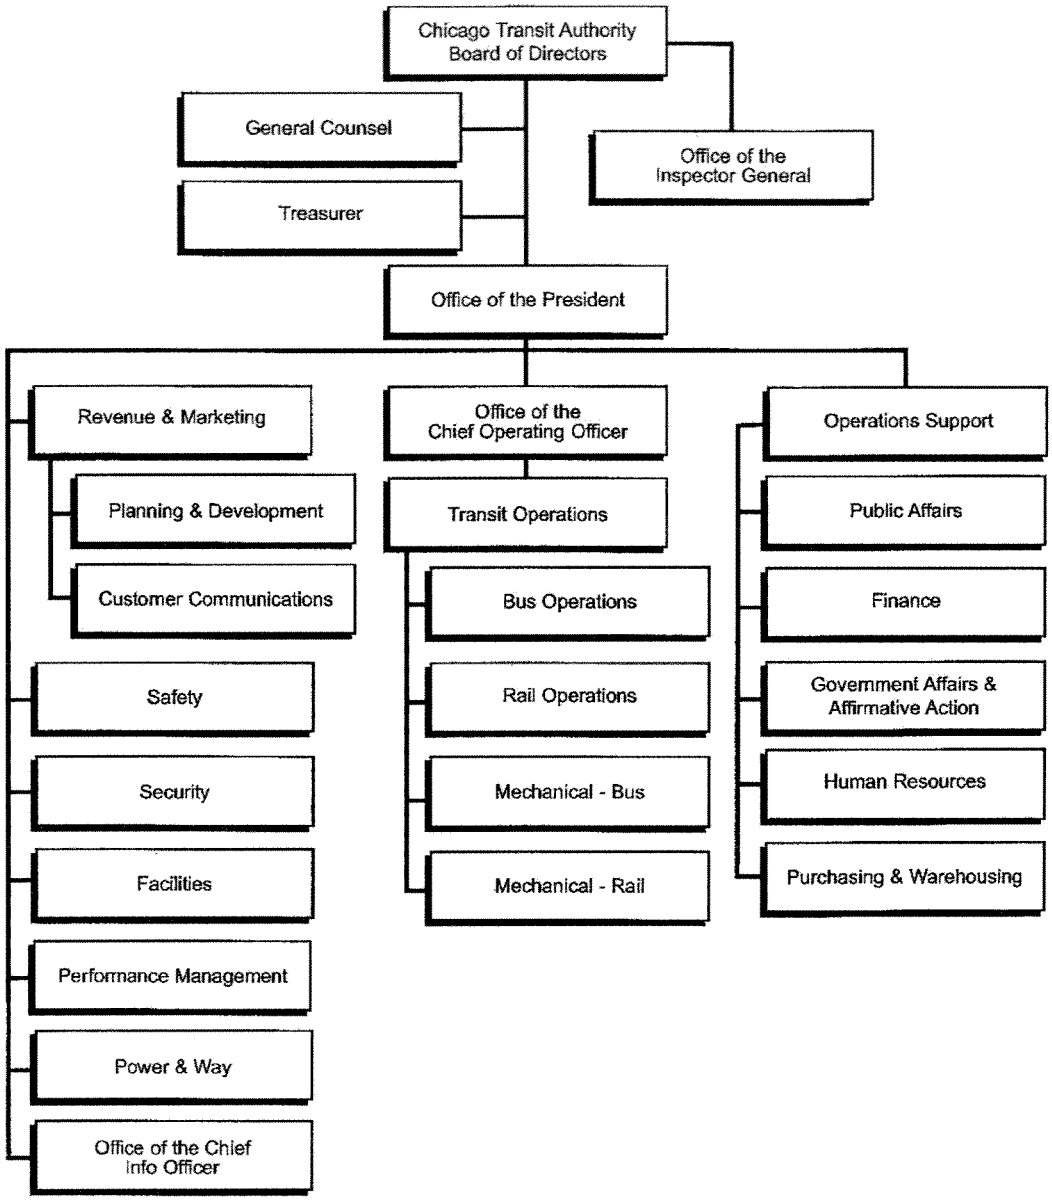
The Purchasing/Warehousing department includes inventory management.

CTA Brown Line Francisco Station

Office of the Chief Info Center

Office of the Chief Info Center Department includes maintenance and upgrades of all CTA technology infrastructure and management information systems.

Exhibit 4-19: **CTA Organization Chart**



5 Metra Operating Plan

Overview

Metra was formed in November 1983 as part of the reorganization of the RTA by the State of Illinois. Metra (the commuter rail division) is responsible for the day-to-day operations of the region's commuter rail system including fare and service levels, capital improvements, finances, passenger services, safety, and systems planning. Service is operated by private carriers under contract to Metra and by Metra directly.

Metra is governed by an eleven-member board of directors. Four of the directors are appointed by the suburban members of the Cook County Board. The chairman or executive of the County Boards of Cook, DuPage, Kane, Lake, McHenry and Will counties each appoint one director, and the Mayor of the City of Chicago also appoints one director. The Chairman of Metra's board of directors must be one of the eleven directors, and is appointed by the concurrence of eight directors.

Metra operates 61 percent of its trains on weekdays, 25 percent on Saturdays and 14 percent on Sundays and holidays.

Service Characteristics

The Metra rail system is comprised of eleven separate lines, which run north, west, and south of the Chicago central business district. The system extends 488 route-miles to the limits of the six-county area and serves 238 local rail stations in more than 100 communities. The network itself is made up of more than 1,100 pieces of rolling stock, 800 bridges, more than 2,000 signals, 18 rail storage yards, and seven major maintenance facilities. Geographically, the Metra system is the largest in the United States; and its operational interface with extensive freight network makes it arguably the nation's most complex. A system of such magnitude requires continual maintenance and renewal in order to preserve operational performance, safety, and service efficiency.

Metra provides safe, reliable commuter rail service with an average weekday ridership of 317,200. Peak period ridership represents 76 percent of the total average weekday trips.

Metra operates 61 percent of its trains on weekdays, 25 percent on Saturdays and 14 percent on Sundays and holidays. Average scheduled train operating speeds are 5 percent higher during the weekday peak period than during off-peak hours and weekend/holiday periods.

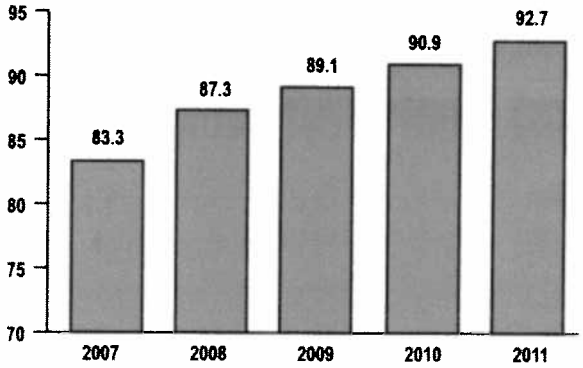
Metra serves the region on routes owned by Metra or freight carriers and through purchase of service agreements with Union Pacific and Burlington Northern Santa Fe, the two largest freight carriers in the nation. The South Shore Line, operated by the Northern Indiana Commuter Transportation District (NICTD), is another Metra partner, providing service between Chicago and South Bend, Indiana.

Metra's hub is the downtown Chicago business district. Four downtown terminals serve Metra's eleven lines. Approximately one-half of all commuter trips from the suburbs to downtown Chicago are made on Metra.

Ridership

In 2007, Metra's ridership, excluding South Shore service, totaled 83.3 million passenger trips (Exhibit 5-1), representing a 4.3 percent increase from the corresponding 2006 ridership of 79.9 mil-

Exhibit 5-1: **Metra Ridership** (in millions) (1)



(1) Based on ticket sales. Includes free senior rides. Excludes South Shore (NICTD) service.

Exhibit 5-2: **Riders and Miles** (in millions) (1)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan
Ridership (2)	83.3	87.3	89.1	90.9	92.7
Revenue Car Miles	34.1	34.3	34.3	34.3	34.3
Passenger Miles (3)	1,877.2	1,956.8	1,995.9	2,035.8	2,076.6

(1) Ridership, Revenue Car Miles, and Passenger Miles exclude South Shore (NICTD) service. (2) Based on ticket sales. Includes free Senior rides.
(3) Based on ticket sales. Excludes Senior free rides.

lion. Metra's ridership is expected to continue to grow with 87.3 million passenger trips in 2008 and 89.1 million in 2009. (Exhibit 5-2)

Metra's primary customer base remains providing work trips for the downtown Chicago market. Passenger loads on peak period, peak direction trains have realized an increase of 6.1 percent compared to five years earlier. Surveys indicate that although an increased number of riders are using Metra for non-work-related purposes, work trips still account for more than 90 percent of all trips.

Metra has successfully marketed off-peak and reverse commute trips. Compared to five years earlier, reverse peak travel has increased 56.1 percent, while midday and evening travel has increased 25.5 percent and 34.5 percent, respectively (Exhibit 5-3). These gains are attributable to Metra's efforts to broaden its ridership base, including the weekend ticket, enhanced off-peak service, targeted promotion of service to suburban employers, marketing travel to cultural and entertainment attractions, and Metra's Bikes on Train program. Metra's Bike on Train program was implemented on June 1, 2005.

Exhibit 5-3: **Average Daily passenger Loads by Service Period** (in thousands)

	July 2002-June 2003 (1)	July 2007-June 2008 (1)	Change	% Change
Peak Direction	227.5	241.3	13.8	6.1
Reverse Peak	13.2	20.6	7.4	56.1
Midday	28.2	35.4	7.2	25.5
Evening	14.8	19.9	5.1	34.5
Total Weekday	283.7	317.2	33.5	11.8
Saturday	48.4	71.1	22.7	46.9
Sunday	27.3	42.0	14.7	53.8

(1) Excludes South Shore (NICTD) service.

In 2006, the program was expanded to allow three bikes in each diesel rail accessible car and two in each electric rail car.

Service Quality

To deliver on its objective to provide customer-driven, flexible and personalized service Metra must understand the needs and interests of its customers. Metra periodically conducts on-board surveys to measure various service attributes. Metra not only measures general rider satisfaction, but also collects information on the service attributes that are most effective at attracting and retaining riders. This data provides direction for planning, scheduling and marketing activities. For example, Metra's goal to provide safe, reliable, clean and on-time service is derived directly from the most important service characteristics identified through these customer surveys.

Metra measures service reliability using on-time performance. A delay is recorded if the train arrives at its final destination more than five minutes later than scheduled. Exhibit 5-4 presents system-wide annual on-time performance since 2003. Metra's on-time performance in 2007 was 95.7 percent.

To be responsive to changing customer needs, Metra continuously looks for ways to expand and improve its service within financial constraints.

Matching the supply of service to the demand is one means of maintaining system efficiency. Metra measures capacity utilization train-by-train, which allows it to track average daily passenger load by service period by line and to analyze trends. In addition, Metra monitors and reports trains with occupancy rates exceeding 95 percent. This information is valuable support for service change decisions.

Another more general measurement of system-wide effectiveness is made by relating the number of passengers to the number of miles of service, thereby calculating passengers per revenue car mile. Metra's ratio of passengers per revenue car mile is projected to increase from 2.44 in 2007 to 2.71 in 2011 (Exhibit 5-5). In the case of a new service, the number of miles increases faster than ridership, thereby decreasing the passenger per mile ratio.

Another measurement used to evaluate whether costs are being contained and efficiency maintained, is cost per revenue car mile. This measure recognizes that costs tend to vary with the amount of service provided. As seen in Exhibit 5-6, Metra pojects that its cost per revenue car mile will increase from $15.84 in 2007 to $19.18 in 2011, corresponding to compound annual growth rate of 5.5 percent.

The cost per passenger ratio measures cost effectiveness and is designed to examine how well vehicles are deployed to serve riders. As Exhibit 5-6 illustrates, Metra projects that its cost per passenger ratio will increase from $6.58 in 2007 to $7.36 in 2011, corresponding to a compound annual growth rate of 2.8 percent. Historically, the Consumer Price Index (CPI) has increased slightly more than 3 percent per year.

Exhibit 5-4: **On-time Performance**

Year	% On-Time
2003	97.1
2004	96.9
2005	96.3
2006	96.3
2007	95.7

Exhibit 5-5: **Passengers Per Revenue Car Mile** (in millions)

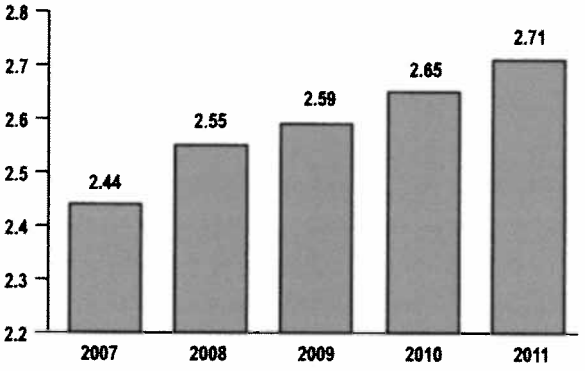


Exhibit 5-6: **Metra Cost Efficiency**

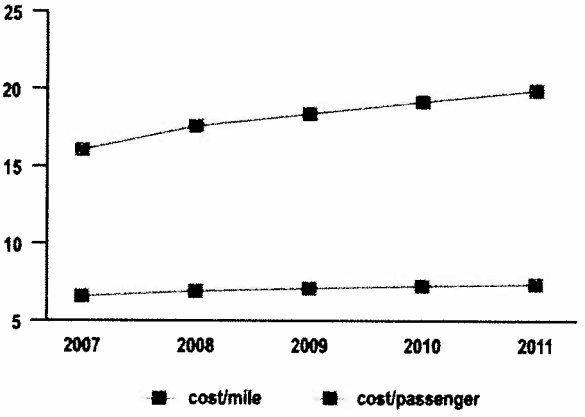

Maintenance and Modernization

Since Metra was formed in 1984, Metra has overseen a comprehensive program to improve and grow the regional commuter rail network in support of the twin objectives of core system maintenance and strategic service expansion. Metra has expended more than $5 billion to overhaul and modernize the system and to create a cyclical program of preventive maintenance and renewal. Such investment has led to the emergence of one of the nation's premier commuter rail operations, with Metra enjoying a near unparalleled record of sustained ridership growth and operational excellence.

State legislation passed in January 2008 increased public funding for the public transit operations in Northeastern Illinois providing much needed funding to maintain Metra's current level of operations. However, without legislation that addresses capital funding, Metra does not possess adequate resources to maintain, upgrade or expand the commuter rail system. During the previous three years, Metra bridged shortages of operations funding through a variety of cost containment strategies and by shifting capital resources to operations. The diversion of $134.7 million in capital funding to cover operating expenses made it more difficult for Metra to maintain existing service levels because of delays in completing required infrastructure projects, equipment overhauls, and new rolling stock purchases.

Safety and Security

Metra provides employee incentives to those regularly meeting goals. Key among these goals is workplace safety. A safe workplace correlates into a safe environment for Metra employees and passengers.

Metra's investments in staff training programs and incentive plans have resulted in substantial dividends, including commuter satisfaction and industry recognition.

In addition to routine workplace safety training, Metra employees have also been trained to recognize and observe potential safety hazards in and around trains, stations and tracks. Metra is the only railroad

organization in the nation to train all of its 4,000 employees in terrorism awareness and emergency procedures. As part of these investments, security cameras are being installed at several downtown train stations. Metra is also installing emergency signage involving LED technology in strategic locations throughout Metra's downtown terminals. The signs will alert passengers to emergency situations and can display pre-programmed or free form messages to assist Metra in communicating with customers.

In addition, Metra installed a train tracking system using Global Positioning System (GPS) technology in 2001. GPS monitors the real time position and movement of all trains on Metra's routes.

GPS offers Metra's operations professionals a snapshot that details the performance of every train during an operational day. The real-time information supports and delivers a more effective response to any service disruptions or emergencies and leads to enhanced overall safety.

Metra also encourages and provides safety training and education opportunities within the community.

Budget and Financial Plan

The Metra budget and financial plan presented in Exhibit 5-7 meets the 2009, 2010, and 2011 funding marks set by the RTA Board on September 15, 2008. The RTA Board set Metra's 2009 recovery ratio mark at 55.0 percent and adopted this mark on December 18, 2008. Metra's 2009 budget reflects a recovery ratio of 55.0 percent.

System-Generated Revenue

Total system-generated revenue is expected to increase from $291.8 million in 2007 to $353.3 million in 2010. This represents an increase of $61.5 million or a compound annual growth rate of 4.9 percent (Exhibits 5-7 and 5-8).

Metra's system-generated revenue has three major components: passenger revenue, reduced fare subsidy, and other revenue. In 2009, passenger revenue of $262.0 million comprises 81 percent of the total revenue budget (Exhibit 5-9).

Passenger Revenue

Passenger revenue or farebox revenue is estimated to increase from $227.2 million in 2007 to $272.5 million by 2011. This increase of $45.3 million represents a 4.7 percent compound annual growth rate. Metra's passenger revenue increase results from projected ridership growth and a 10% fare increase effective February 1, 2008.

The strength of the local economy and higher of gasoline prices earlier in 2008, as well as continued major road reconstruction projects and the 2006 service expansions or extensions of the North Central Service, Union Pacific West, and SouthWest Service Lines also contributed to higher ridership and therefore higher passenger revenue.

Changing rider and ticket trends, such as longer trip length and increased one-way conductor and weekend ticket sales (Exhibit 5-10) also contributed to the higher passenger revenue.

Metra's fare structure is presented at the end of this section (Exhibit 5-14).

Exhibit 5-7: **Metra 2009 Budget and 2010-2011 Financial Plan** (dollars in thousands)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan
System-Generated Revenue					
Passenger Revenue	$227,185	$254,400	$262,000	$267,200	$272,500

Health Insurance	53,622	56,000	59,360	62,300	65,800
Pension	4,840	4,800	4,740	4,900	5,200
Electricity	12,733	16,200	17,600	18,000	18,300
Total Expenditures	**$548,470**	**$603,500**	**$631,660**	**$658,600**	**$682,110**
Operating Deficit	**$256,629**	**$286,000**	**$305,860**	**$317,200**	**$328,810**
Deficit Funding					
RTA Sales Tax	257,374	261450	259,951	263,460	270,573
RTA Sales Tax & PTF (PA95-0708)	-	46,237	109,083	110,556	113,541
RTA Discretionary	-	3,074	-	-	-
Funds Available for Capital (1)	58,156	(24,761)	(63,174)	(56,816)	(55,304)
Total Deficit Funding	**315,530**	**286,000**	**305,860**	**317,200**	**328,810**
Recovery Ratio % (1)	56.6%	55.9%	55.0%	N/A	N/A

(1) Recovery ratio revenue includes credits for Senior free rides in 2008 - 2011, half year of reduced fare reimbursement not funded by the State of Illinois in 2008 and 2009, and $10 million of capital farebox revenue in 2007 - 2011. Recovery ratio expenditures exclude costs related to the acquisition and use of transportation facilities, security and depreciation.

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 providing funds to reimburse Metra for the cost of providing reduced fares for the elderly, students, and persons with disabilities. The fare reimbursement is included in revenue and is contingent upon annual approval by the State. In 1999, the Assembly passed new reduced fare legislation, which doubled the reimbursement level of previous years. In 2008, the State of Illinois eliminated funding for the reduced fare reimbursement program in the State Fiscal Year ending June 30, 2009, an annual reduction for Metra of $3.4 million. Assuming this program will be restored for the State Fiscal Year beginning July 1, 2009, Metra budgeted $1.7 million in 2009 and $3.4 million in 2010 and 2011.

Other Revenue

The other revenue category represents 19 percent of Metra's total revenue for 2009. The components of this category are investment income, joint facility and lease revenue, advertising income, capital credits, and miscellaneous non fare-generated income. Other revenue is expected to increase from $60.8 million in 2007 to $77.4 million in 2011, due mostly to increased capital credits.

Operating Expenditures

Total operating expenditures are forecast to increase from $548.5 million in 2007 to $682.1 million in 2011. This $133.6 million increase represents a 5.6 percent compound annual growth rate (Exhibit 5-11).

Exhibit 5-8: **Metra System-Generated Revenue** (dollars in millions)

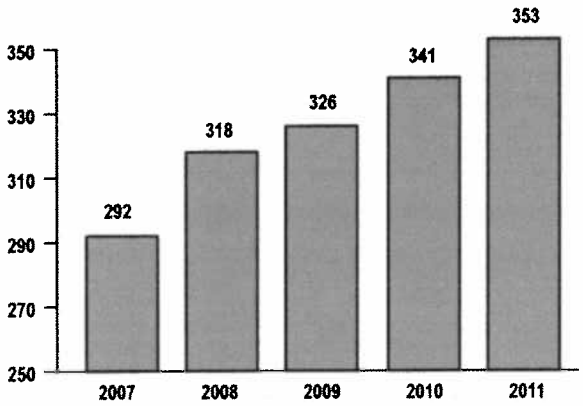

Exhibit 5-9: **2009 Metra Revenues** - $326 million

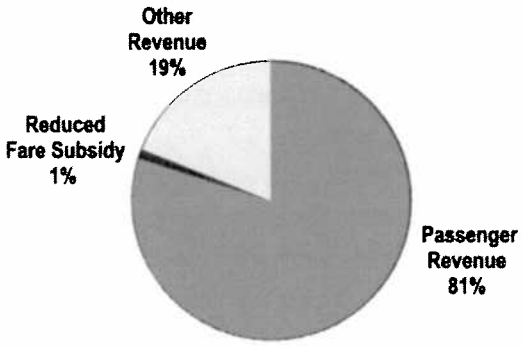

Exhibit 5-10: **Ticket Sales by Ticket Type** (in thousands)

	July 2006-June 2007	July 2007-June 2008	Change	% Change
Monthly	1,153.0	1,180.9	27.9	2.4%
Ten-Ride	1,800.5	1,933.3	132.8	7.4%
Regular One-Way	5,923.2	5,917.7	(5.5)	(0.1%)

Link-Up	92.8	94.5	1.7	1.8%
PlusBus	15.3	13.5	(1.8)	(11.8%)

*Excludes South Shore (NICTD) service.

Metra's 2009 operating expenditures of $631.7 million are projected to grow by $28.2 million or 4.7 percent from the 2008 estimate.

In 2009 and 2010, total expenditures will increase by 4.3 percent and 3.6 percent respectively, compared to the previous year (Exhibit 5-7). Higher maintenance expense due to lack of capital funding is the major contributing factor.

Expenditure Elements

The components of operating expenditures are transportation and maintenance, administration and pension, diesel fuel and electricity, security, health insurance and all other, including claims and risk management, regional services and downtown stations. In the 2009 budget, Metra's expenditures

comprise transportation and maintenance 59 percent, administration and pension 5 percent, fuel and electricity 17 percent, security 3 percent, health insurance 9 percent, and all other 7 percent (Exhibit 5-12).

Exhibit 5-11: **Metra Operating Expenditures** (dollars in millions)

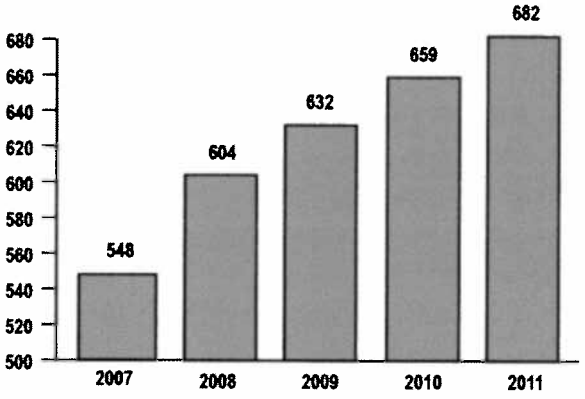

Exhibit 5-12: **Metra Operating Expenditures** - $573.3 million

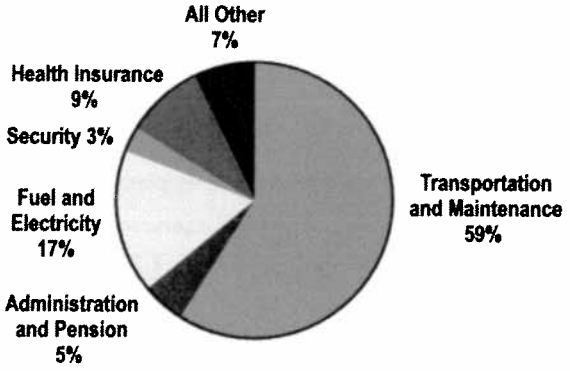

Transportation and Maintenance

Transportation includes the functions and activities directly responsible for the operation of the commuter trains. The major functions include train and engine crew work, dispatching, tower operations, ticket sales, police and security services, employee safety, and supervisory support. The main objective of this area is to run service consistent with the published train schedules in a safe and efficient manner and in accordance with federal and state regulations.

Maintenance includes two types of activities: maintenance of way and maintenance of equipment. Maintenance of way activities include the maintenance of track, structures, communications and facilities to preserve operational safety, reduce travel times and service interruptions, and increase passenger comfort. Maintenance work is concentrated on safety inspections and short-term projects to safeguard overall track and structure conditions.

Maintenance of equipment activities includes regular repairs, inspection and preventive maintenance on passenger train equipment to ensure that this equipment is safe and in good working order to meet train schedules and passenger demand for seating.

Transportation and maintenance expenditures are expected to increase from $342.1 million in 2007 to $405.9 million in 2011. This $63.8 million increase represents a compound annual growth rate of 4.4 percent (Exhibit 5-7).

Administration and Pension

Administration activities include general support functions for the organization to ensure overall corporate goals and regulations are met. Administrative activities include human resources, labor management committee, information systems, training, accounting and other support areas. Management of the Metra owned and operated rail services are also included in this category.

Administration and pension expenditures are projected to decrease $0.5 million or 0.4% from $29.1 million in 2007 to $28.6 million in 2011 (Exhibit 5-7).

Diesel Fuel and Electricity

Diesel fuel is one of the most volatile components of the operating expenditures. Diesel fuel was budgeted at $2.65 per gallon for 2008 but is expected to average $3.41 per gallon for a total of $87.4 million, an increase of $33.7 million or 62.7% over 2007. Metra is estimating an average price of $3.60 per gallon in 2009 for a total cost of $92.6

million, $5.2 million or 5.9% more than the 2008 estimate. Metra is projecting an average fuel price of $3.70 and $3.75 per gallon for 2009 and 2010, respectively.

Rates for Metra electric motive power and power at Metra's large yards are under contract until May 2009. For 2009, Metra budgeted motive power and electric utility costs to increase $1.4 million or 8.6% from the 2008 estimate.

Combined fuel and electric power is projected to increase from $66.4 million in 2007 to $114.6 million in 2011. This $48.2 million increase represents a compound annual growth of 14.6 percent (Exhibit 5-7).

Security

Security has become a significant concern for Metra as it seeks to safeguard riders and employees alike. This expense category includes police and contract security services as well as planning, coordination, and training with other agencies. For 2009, the budget is $16.0 million, which is 4.6 percent above the 2008 estimate of $15.3 million. Security expenses are expected to increase by $1.0 million per year in 2009 and 2010 (Exhibit 5-7).

Health Insurance

Health insurance costs for 2009 of $59.4 million are assumed to increase by 6.0% over the 2008 estimate of $56.0 million, with annual growth rates of 5.0 percent and 5.6 percent in 2010 and 2011, respectively (Exhibit 5-7).

All Other

Expenditures for risk management and claims are expected to decrease from $19.0 million in 2007 to $10.8 million in 2008 before increasing to $20.2 million in 2011.

Metra is also responsible for setting fares and service levels, capital improvement planning and oversight, and service planning. Expenditures for these functions are included in the regional services and downtown stations category.

Expenditures in this category are expected to increase from $23.3 million in 2007 to $29.0 million by 2011. This $5.7 million increase represents a compound annual growth rate of 5.6 percent (Exhibit 5-7).

Deficit

The operating deficit is derived from total system-generated revenue minus total operating expenditures. Metra's 2009 budget deficit is $305.9 million (Exhibit 5-7). This deficit is offset by public funding to reach a balanced budget.

Funding

The operating deficit is offset by public funding to reach a balanced budget. Metra projects a funding surplus of $63.2 million in 2009, $56.8 million in 2010, and $55.3 million in 2010, which will be transferred to the capital program.

RTA Sales Tax (enacted by 1983 legislation) is the major source of public funds used to cover the budgeted operating deficit. By statute, the RTA re-

tains 15 percent of the sales tax receipts and passes the remaining balance of 85 percent to the Service Boards. Of this remaining amount, Metra receives 55 percent of the RTA Sales Tax dollars collected in suburban Cook County, and 70 percent of the RTA Sales Tax collected in the collar counties.

Illinois Public Act 95-0708, increased the RTA sales tax rate throughout the region, effective April 1, 2008, created a real estate transfer tax in the City of Chicago to fund the CTA, and raised from 25% to 30% the portion of RTA tax revenues matched by the State Public Transfer Fund (PTF). With this new funding source Metra's budgeted statutory sales tax receipts are $369.0 million in 2009, $374.0 million in 2010, and $384.1 million in 2011.

Recovery Ratio

Metra's recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2009 Metra's recovery ratio is 55.0 percent, matching the mark set by the RTA. The RTA Region section provides a detailed recovery ratio calculation.

Statutory Compliance

The RTA Act requires that each Service Board meet six criteria, which are detailed in the RTA Region section, for Board approval of its budget. The Metra budget meets each of these criteria

2008 Budget versus 2008 Estimate

Total revenue is expected to finish $11.2 million favorable to budget for 2008. Passenger revenue is projected to be favorable to budget by $11.6 million or 4.8 percent due to higher ridership. Reduced fare subsidy is projected to be unfavorable to budget by $1.7 million or 49.6% because the State of Illinois eliminated funding for the reduced fare reimbursement program in the State Fiscal Year beginning July 1, 2008. Other revenue is expected to exceed budget by $1.2 million.

Expenditures are forecast to finish $17.1 million or 2.9 percent unfavorable to budget for 2008. Transportation and diesel fuel are expected to finish the year $13.4 million (3.8 percent) and $20.0 million (29.7 percent) unfavorable to budget. The

Exhibit 5-13: **Metra 2008 Budget versus 2008 Estimate** (dollars in thousands)

	2008 Budget	2008 Estimate	Variance
System-Generated Revenue			
Passenger Revenue	$242,770	$254,400	$11,630
Reduced Fare Subsidy	3,370	1,700	(1,670)
Other Revenue	60,160	61,400	1,240
Total Revenue	**$306,300**	**$317,500**	**$11,200**
Operating Expenditures			
Transportation and Maintenance	$350,525	$363,900	(13,375)
Administration	29,175	22,800	6,375
Risk Mgmt. & Claims	19,930	10,800	9,130
Regional Services and Downtown Stations	26,380	26,300	80

Security	17,000	15,300	1,700
Health Insurance	55,980	56,000	(20)
Pension	4,840	4,800	40
Electricity	15,190	16,200	(1,010)
Total Expenditures	**$586,400**	**$603,500**	**($17,100)**
Operating Deficit	**$280,100**	**$286,000**	**($5,900)**
Recovery Ratio %	**55.6%**	**55.9%**	**0.3%**

2008 budget assumed an average fuel cost of $2.65 per gallon, significantly lower than the 2008 estimate of $3.41 per gallon. Administration and risk management & claims are expected to finish the year $6.4 million and $9.1 million favorable to budget, respectively. Exhibit 5-13 details the variance between the 2007 budget and 2007 estimate.

Fare Structure

Commuter rail fares are based upon travel between designated fare zones. These zones are set at five-mile intervals beginning at each rail line's downtown Chicago station. The zone system does not apply to the South Shore fares set by the Northern Indiana Commuter Transportation District (NICTD).

A uniform base fare is charged for travel within a zone and increments are added to this base fare as fare zone boundaries are crossed. Effective February 1, 2008, the base fare is $2.15 for a one-way trip. The incremental charge is 40¢ or 45¢ for additional zones (Exhibit 5-14). Metra's administrative organization chart is presented in Exhibit 5-15

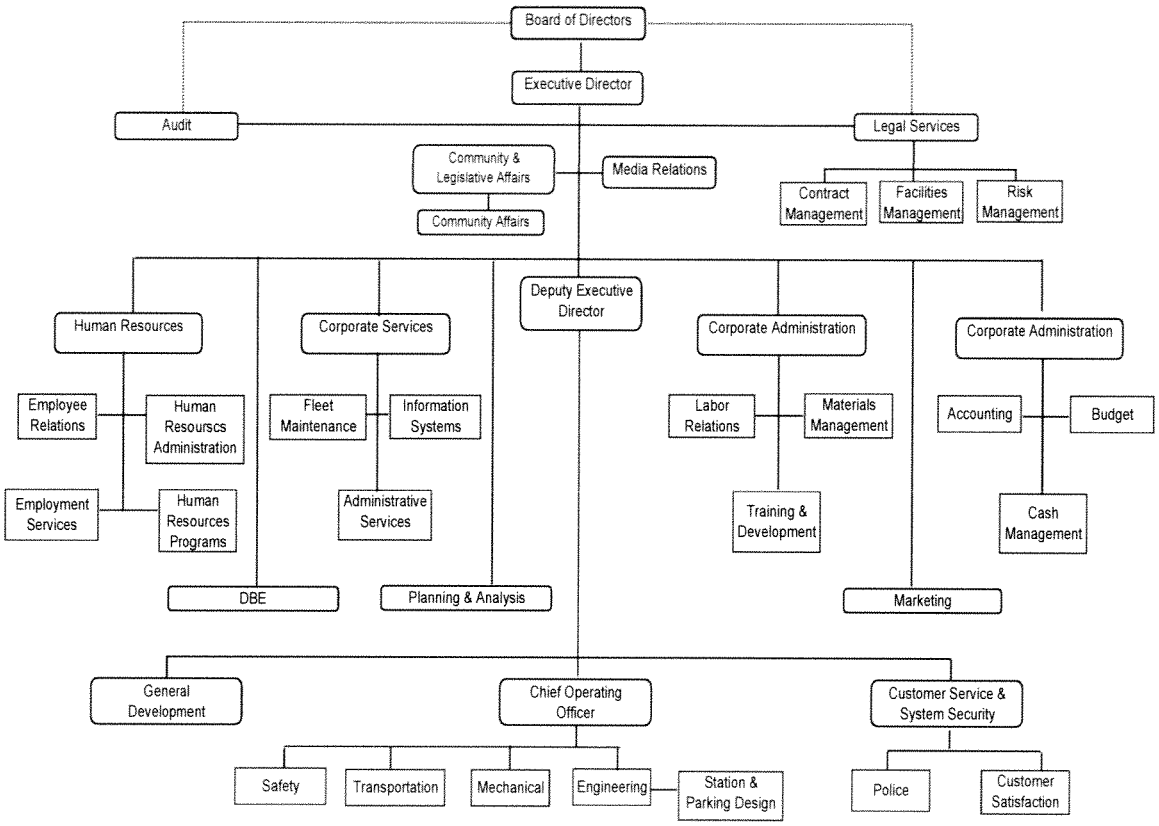
Exhibit 5-14: **Metra Ticket Pricing Formula**

Ticket Type	Period of Validity	Number of Rides	Pricing Basis
Monthly (2)	Calendar Month	Unlimited	27 times one-way fare
10-Ride (2)	One Year	Ten	8.5 times one-way fare
One-Way(2) (3)	One Year	One	Base fare plus increments
Weekend	Saturday/ Sunday	Unlimited	Flat rate $7/day

(1) Effective March 17, 2008, seniors citizens age 65 or older living in the six-county RTA region are eligible to ride free. Effective October 24, 2008, people with disabilities enrolled in the Illinois Circuit Breaker program are eligible to ride free. (2) These ticket types are offered at a reduced rate to senior citizens, persons with disabilities, children, and students through high school traveling to and from school. Military personnel in uniform are entitled to reduced one-way ticket rates. (3) Effective February 1, 2008, the base fare for a one-way trip is $2.15.

Organizational Structure

Exhibit 5-15: **Metra Organization Chart**



6 Pace Operating Plan

Suburban Service

Overview

Pace was formed in 1983 as part of the reorganization of the Regional Transportation Authority (RTA), and began service in 1984. A 12-member board of directors made up of current and former village presidents and mayors governs Pace.

Beginning July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the RTA region. Pace's regional ADA paratransit service is discussed separately later in this section.

Service Characteristics

Pace's mission is to provide efficient well-integrated transportation services that meet the travel needs of the suburban Chicago area. Effective suburban mobility supplies line-haul and community-based services that provide access between both nearby and distant origins and destinations. To attract riders in an automobile-oriented market requires coordination of infrastructure, service, information, and travel demand. Achieving this mission will also require the continued restructuring of Pace's current fixed-route service.

Pace suburban service includes 143 regular routes, 65 feeder routes, 23 shuttle routes, and 767 vanpool vehicles.

Pace's suburban service area measures 3,446 square miles. The suburban area is divided among the six counties and incorporates 284 municipalities. Transportation needs in this broad area are as unique as the individual communities Pace serves. Pace service includes approximately 147 regular routes, 51 feeder routes, 18 shuttle routes, 696 vanpool vehicles, 158 Pace-owned Dial-A-Ride vehicles, and 182 Pace-owned ADA paratransit vehicles. The suburb-to-suburb travel market is the largest service area in the region and is primarily served by the automobile.

Employment and residential shifts outward from central business districts have resulted in longer commutes, greater single-occupant automobile use, increased traffic congestion, and declining air quality. Changing travel needs are the result of the growing suburban job market, welfare-to-work initiatives, and greater work-hour, workday, and work-location flexibility. However, increased support for smart growth, transit-oriented development, and environmental concerns has accompanied these trends. In light of these factors, Pace is working to better serve various suburban travel markets.

To attract more riders, Pace will need to gain consensus among a diverse group of stakeholders, communities, and organizations interested in transportation and smart growth; create viable community and regional partnerships; develop service plans for specific communities and groups of communities; and gain funding from local, regional, state and federal sources.

In April 2002, Pace unveiled a new long range comprehensive operating plan called Vision 2020. The plan outlines the goals and overall direction for Pace for the 21st century and a strategy to create a true suburban transportation network through route restructuring. Vision 2020 also includes plans for transit signal priority, bus-only lanes, localized flexible transit services and regional transportation centers that provide coordinated links between the region's transit services.

Pace already works with 210 communities to plan, design, and deliver services. Vision 2020 identifies nearly 100 service areas for further study in partnership with communities. To better support a service area that spans walkable suburban neighborhoods, satellite cities, and rural communities, Pace will expand its current offerings (e.g., fixed-route, commuter rail feeder, employer shuttle, and route-deviation services) and further customize the mix of tailored, flexible community-based services (e.g., demand response, curb-to-curb van service, and subscription routes) based on detailed studies of travel markets and local interests and conditions. Vision

2020 addresses three service levels—low, medium, and high—which reflect the spectrum of population and employment density found in Pace's service area. To achieve high service levels at low cost, Pace will apply Bus Rapid Transit (BRT) features, limited stops, simple routes, frequent service, off-board fare payment, electronic next-stop announcements, traffic signal priority, and bus lanes on expressway/tollway and arterial line haul routes.

To develop an effective regional arterial and community-based transit system, Pace began route-restructuring initiatives in 2000. Consistent with Vision 2020, the goals of route restructuring include faster, more efficient, and more effective service, as well as an enhanced image of transit as an alternative to the automobile. Pace restructured routes in Elgin, along the Halsted Corridor, and in the vicinity of Orland Square Mall. In 2005, Pace completed its restructuring of eleven routes in North Shore communities to serve new trip generators, reduce transfers, and eliminate unproductive segments and route duplication.

Late in 2005, Pace implemented an initial round of service changes in the Aurora area as part of its restructuring efforts in the Fox Valley/Southwest DuPage region. After Metra increased service on its North Central Line, Pace added three new Shuttle Bug routes for employees of several nearby companies. Pace has completed most of the planning for the redesign of service in southern and southwestern Cook County and all of Will County. Initially, service changes will improve service coverage and reliability, strengthen connections between major destinations, introduce innovative types of service, and expand service hours. In the next few years, Pace plans restructuring initiatives in the Waukegan area and in western Cook County.

Pace is seeking to implement a regional Transit Signal Priority (TSP) program along major arterial routes. Implementation of the Harvey Transportation Center TSP initiative will improve the operation of the transit terminal and increase the reliability of Pace routes traveling along nearby 154th Street, 159th Street, and Halsted Street. Initially focusing on expanding Pace's existing express bus service and new express bus service between southern Cook County and the Rosemont/O'Hare area, implementation of a suburban expressway/tollway service express bus network will connect major regional activity centers and park-n-ride lots. Pace's Bus Rapid Transit (BRT) Corridor Implementation will develop Pace's Arterial Rapid Transit Network for the Region (PARTNER) Program. Integrated with Pace's express bus service, the PARTNER Program will operate on major arterials and utilize TSP and queue jump lanes to increase travel speed and route reliability.

Ridership

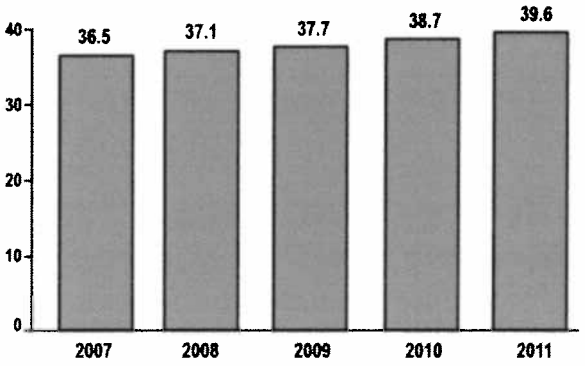
In 2007, Pace ridership of 39.2 million included suburban service ridership of 36.5 million. Pace estimates 2008 suburban service ridership of 37.1 million.

Pace projects suburban service ridership of 37.7 million in 2009. Pace projects suburban service ridership to increase 2.5 percent annually to 38.7 million in 2010 and 39.6 million in 2011 (Exhibit 6-1).

Marketing Strategies

Pace's 2009 marketing strategy implementation will emphasize work commute trips, which comprise 80 percent of Pace's customer base, and encourage non-riders to try Pace service. Pace plans to augment

Exhibit 6-1: **Pace Suburban Service Ridership** (in millions) (1)



(1) Ridership in 2010 and 2011 assumes no deficit reduction actions.

existing successful tactical route marketing campaigns and to promote extensively express routes to popular destinations. Pace's 2009 marketing efforts will also emphasize outreach to the disabled and Latino communities and support of the South Cook restructuring project, the ride share program, and special projects.

Cost Efficiency

Matching the service supply to demand is one means of achieving system effectiveness. One way to measure supply versus demand is to relate the number of passengers to the number of miles serviced. Pace's passengers per mile ratio for suburban service is projected to continue to decline from 0.91 in 2008 to 0.89 in 2009 (Exhibit 6-2). Part of this decline results from route restructuring that reduces transfers.

The cost per mile measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-3). Suburban service cost per mile is expected to increase from $4.06 in 2007 to $4.52 in 2008. Pace projects the cost per mile for suburban service to rise to $4.81 in 2009.

Exhibit 6-2: **Pace Suburban Service Passengers Per Mile**
(in millions)

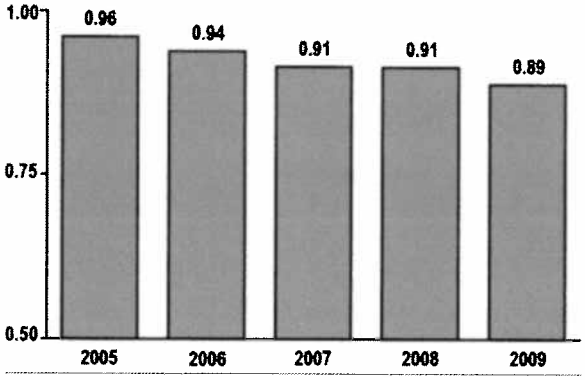


Exhibit 6-3: **Pace Suburban Service Cost Efficiency**

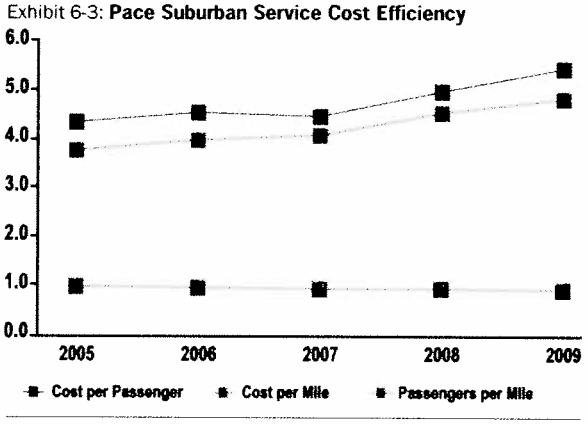

Capital Investment

The capital program funds the purchase and maintenance of rolling stock, support facilities and equipment (including new technologies), and project management.

Rolling Stock

In 2009, Pace intends to replace 37 fixed-route buses which have exceeded their useful life. The new vehicles will be 30-foot vehicles. Pace will also purchase buses for local municipal service in the Village of Oak Park.

Pace plans to replace 128 paratransit replacement vehicles which have exceeded their useful life. The new vehicles, a combination of buses and vans, will be operated to provide dial-a-ride services in Pace's suburban service area.

Pace plans to retrofit bus engines with mechanical components and software upgrades, and install diesel multi-state filters that will reduce engine emissions.

Electrical, Signal & Communications

The capital program contains funds to for the continued development and purchase of transit signal priority (TSP) systems in major corridors.

Support Facilities & Equipment

The capital program includes continued funding of the HPe3000 computer system replacement project and the routine replacement of computer hardware and software. The program also contains funds to make critical repairs and improvements to

garages and facilities, purchase garage equipment and replace non-revenue vehicles, and to implement the first of three region-wide paratransit call centers to coordinate transportation services for people with disabilities, the elderly, and low income individuals.

Budget and Financial Plan

The Pace suburban service budget and financial plan presented in Exhibit 6-4 meets the funding marks set by the RTA Board on September 15, 2008. To meet these funding levels, Pace will need to implement deficit reduction actions that will increase revenues and/or decrease expenditures by $6.8 million in 2010 and $12.6 million in 2011. The RTA Board set Pace's 2009 recovery ratio mark for suburban service operations at 36.0 percent and adopted this mark on December 18, 2008. Pace's 2009 budget reflects a recovery ratio of 36.0 percent.

From 2004 to 2007, the RTA provided additional funding to Pace to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes. In 2008, the RTA has not included additional funding for Pace to accept these passes. Pace has decided not to honor these passes effective January 1, 2009.

System-Generated Revenue

In 2007, Pace's system-generated revenue from suburban service totaled $52.2 million. Pace estimates 2008 suburban service system-generated revenue will decline to $52.1 million. Pace projects suburban service system-generated revenue of $54.2 million in 2009,$56.0 million in 2010, and $58.9 million in 2011, corresponding to a compound annual growth rate of 4.2 percent from 2009 through 2011 (Exhibit 6-5). These revenue figures do not incorporate required deficit reduction actions in 2010 and 2011. In 2009, passenger revenue is projected to account for 55 percent, local share/other 30 percent, advertising 9 percent, investment income 2 percent, and new initiatives/fare change 3 percent of total suburban service revenue (Exhibit 6-6).

Passenger Revenue and Local Share

In 2007, Pace suburban service passenger revenue totaled $28.2 million. Pace expects that in 2008 suburban service will result in passenger revenue of $29.0 million. In 2008, fare box revenue is expected to increase 2.6 percent from fixed route ridership growth and the expansion of Pace's van pool programs. Pace expects this trend to continue in 2009 with passenger revenue growth of 2.5 percent from existing service plus revenue of $1.9 million from new or expanded service. Pace projects suburban service passenger revenue of $29.7 million in 2009 will grow to $31.6 million in 2011, a $1.9 million increase corresponding to a compound annual growth rate of 3.2 percent (Exhibit 6-7). Passenger revenue includes fixed route farebox deposits (using cash, passes, and cards) and payments for vanpool, dial-a-ride, and other services.

Along with its budget, Pace took to public hearing

Exhibit 6-4: **Pace Suburban Service 2009 Budget and 2010-2011 Financial Plan** (dollars in thousands)

	2007 Actual	2008 Estimate	2009 Budget	2010 Plan	2011 Plan

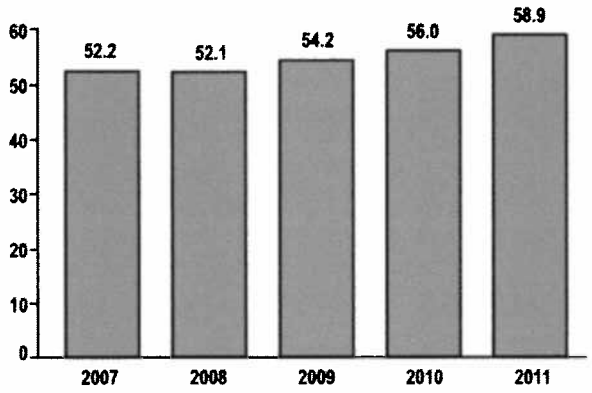
(1) Passenger revenue includes fixed route, vanpool, Dial-A-Ride, Ride DuPage, Ride in Kane, and other services. (2) Excludes ADvAntage Program–in-kind revenue and expense (of equal amount) that are included in Pace's recovery ratio calculation. (3) Pass reimbursement is considered revenue for Pace's recovery ratio calculation. (4) Federal Section 5307 funding (preventive maintenance) transferred from the capital program tarations. (5) The recovery ratio in 2007 includes ADvAntage program–in-kind revenue and expense credits (of equal amount). The recovery ratio in 2008 includes ADvAntage program–in-kind revenue and expense credits (of equal amount), as well as revenue credits for lost revenue from the Seniors Ride Free program and for accepting the CTA 7-Day Pass, U-Pass, and Visitor/Fun Passes. The recovery ratio in 2009-2011 includes ADvAntage program–in-kind revenue and expense credits (of equal amount), as well as revenue credits for lost revenue from the Seniors Ride Free program. The recovery ratio in 2009 meets the 36% mark set for Pace by the RTA Board on September 15, 2008.

Exhibit 6-5: **Pace Suburban Service System-Generated Revenue**
(dollars in millions) (1)



(1) In 2007, Revenue excludes RTA pass reimbursement. In 2009 through 2011, revenue reflects fare increases and new initiatives. In 2010 and 2011, revenue does not reflect deficit reduction actions.

Exhibit 6-6: **2009 Pace Suburban Service Revenue**
$54.2 million

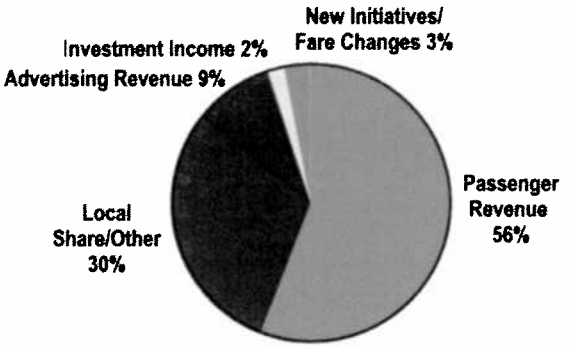


Exhibit 6-7: **Pace Suburban Service Farebox Revenue**
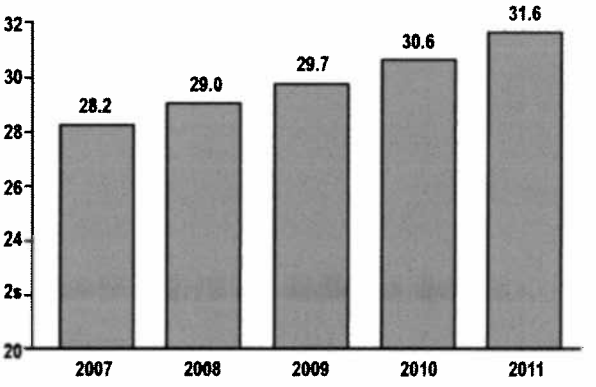
(dollar in millions) (1)



(1) In 2009 through 2011, revenue reflects fare increases and new initiatives. In 2010 and 2011, revenue does not reflect deficit reduction actions.

a proposal to increase bus, Dial-A-Ride, and vanpool fares. Pace has also decided to stop accepting CTA 7-Day Passes, U-Passes, and Visitor/Fun Passes effective January 1, 2009. A new Pace/CTA 7-Day Pass sold at a $5 premium will be valid on Pace and CTA. However, no fare increases or pass acceptance changes were assumed in Pace's revenue or ridership projections.

In 2007, Pace's local share contributions and other revenue totaled $14.4 million. Pace expects that in 2008 suburban service will result in local share contributions and other revenue of $15.7 million. Suburban service local share contributions and other revenue are projected to grow from $16.5 million in 2009 to $19.3 million in 2011, a $2.8 million increase that corresponds to an 8.2 percent compound annual growth rate.

Pace's suburban service fare structure is presented at the end of this section (Exhibit 6-10). Pace raised its base fare from $1.50 to $1.75, its monthly pass from $75.00 to $86.00, and its van pool fares by 10 percent. Pace also raised the price of its other full-fare and reduced fare single-ride fares, ten-ride tickets, and passes.

Reduced Fare Subsidy

With uncertainty looming in the State's reduced fare reimbursement program, Pace excluded this source of revenue during the 2009-2011 planning period. Pace also reduced its estimate of its 2008 reduced fare reimbursement to the amount advanced by the State in the fall of 2007. The State 2009 budget has since been amended to include funds for reduced fare reimbursement.

Advertising

Advertising revenue is expected to increase from $4.6 million in 2007 to $4.7 million in 2008. Pace projects that advertising revenue will grow from $5.0 million in 2009 to $5.6 million in 2011, a $0.6 million increase corresponding to a 6.1 percent compound annual growth rate.

Investment

Investment income is expected to decrease from $2.2 million in 2007 to $1.4 million in 2008 resulting from smaller cash balances and declining interest rates. Pace projects that advertising revenue will continue to decline from $1.2 million in 2009 to $0.3 million in 2011.

Operating Expenditures

Pace suburban service operating expenditures totaled $162.5 million in 2007. In 2008, Pace expects suburban service operating expenditures of $184.2 million. Pace projects suburban service operating expenditures of $204.6 million in 2009 to grow to $223.7 million in 2011, an increase of $19.1 million corresponding to a compound annual growth rate of 4.6 percent (Exhibit 6-8). These expenditure totals include a regional ADA support credit of approximately $3.7 million annually that reflects many of the administrative and overhead costs to be incurred throughout Pace in support of ADA paratransit. Growth of labor/fringe benefits and health care costs is the primary factor behind the increases in suburban service operating expenditures. Figures for individual expenditure elements do not incorporate required deficit reduction actions in 2010 and 2011.

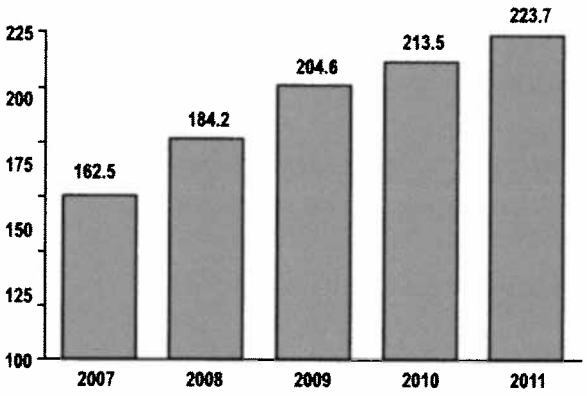
Expenditure Elements

Operating expenditure elements include labor/fringe benefits, health insurance, parts/supplies, purchased transportation, fuel, utilities, insurance/claims, other, new initiatives, and ADA indirect overhead credit (Exhibit 6-4).

Labor/Fringe Benefits and Health Insurance Costs

Labor/fringe and health insurance expenditures are projected to account for 51.2 percent of total suburban service operating expenditures in 2009. Combined labor/fringe benefits and health insurance expenditures for suburban service are projected to grow from $104.8 million in 2009 to $114.7 million in 2011, a $9.9 million increase that corresponds to a 4.6 percent compound annual growth rate.

Exhibit 6-8: **Pace Suburban Service Operating Expenditures**
(dollars in millions) (1)



(1) In 2010 and 2011, expenditures do not reflect deficit reduction actions.

Parts/Supplies

Parts/supplies expenditures are projected to account for 3.3 percent and of total suburban service operating expenditures in 2009. These expenditures are projected to grow from $6.8 million in 2009 to $7.1 million in 2011, a $0.3 million increase that corresponds to a 2.2 percent compound annual growth rate.

Purchased Transportation

Expenditures for purchased transportation are projected to account for 13.8 percent of total suburban service operating expenditures in 2009. These expenditures are projected to grow from $28.3 million in 2009 to $31.5 million in 2011, a $3.2 million increase that corresponds to a 5.4 percent compound annual growth rate.

Fuel

Fuel expenditures are projected to account for 14.4 percent of total suburban service expenditures in 2009. These expenditures are projected to grow from $29.5 million in 2009 to $30.2 million in 2011, a $0.7 million increase that corresponds to a 1.1 percent compound annual growth rate.

Utilities

Utilities expenditures are projected to account for 1.5 percent of total suburban service operating expenditures in 2009. These expenditures are projected to grow from $3.0 million in 2009 to $3.3 million in 2011, a $0.3 million increase that corresponds to a 4.9 percent compound annual growth rate.

Insurance/Claims

Insurance/claims expenditures are projected to account for 6.1 percent of total suburban service operating expenditures in 2009. These expenditures are projected to grow from $12.5 million in 2009 to $15.6 million in 2011, a $3.2 million increase that corresponds to a 12.0 percent compound annual growth rate.

Other

Other expenditures are projected to account for 7.7 percent of total suburban service operating expenditures in 2009. These expenditures are projected to grow from $15.7 million in 2009 to $17.0 million in 2010, a $1.2 million increase corresponding to a 3.8 percent compound annual growth rate.

New Initiatives

The 2008 funding legislation was expected to provide an opportunity for Pace to implement new or expanded service. Pace planned to spend $7.5 million to implement new initiatives in 2009. By 2011, this amount is projected to grow by $0.7 million, corresponding to a 4.5 percent compound annual growth rate.

Regional ADA Support Credit

In 2007, Pace charged $1.3 million of administrative and overhead expenses to the regional ADA paratransit budget and expects to charge $3.4 million in 2008. Pace projects that this amount will increase from $3.6 million in 2009 to $3.8 million in 2011.

Deficit

The operating deficits are derived from total system-generated revenue minus total operating expenditures. Although Pace suburban service achieved a funding surplus of $6.1 million in 2007, Pace expects a suburban service funding deficit of $3.4 million in 2008. Pace projects a funding surplus of $1.2 million in 2009. In 2010, a deficit reduction action of $6.8 million is projected to result in a funding deficit of $1.2 million. In 2011, a deficit reduction action of $12.6 million is projected to result in deficit funding matching the operating deficit.

Funding

The traditional RTA sales tax is the primary source of funding for Pace suburban service. The RTA retains 15 percent of these sales tax funds for discretionary funding and allocates the remainder to the Service Boards by statutory formula. Of this remaining amount, Pace receives 15 percent of the sales tax collected within suburban Cook County and 30 percent of the sales tax collected in the collar counties. Pace's portion of the traditional RTA sales tax is expected to increase 2.0 percent from $81.2 million in 2007 to $82.9 million in 2008. This amount is projected to decline 0.7 percent to $82.3 million in 2009 before increasing 1.4 percent to $83.4 million in 2010 and 2.7 percent to $85.7 million in 2011. In 2007, Pace also received from the RTA $7.0 million of discretionary funding and $4 million to reimburse Pace for accepting the CTA's 7-Day Pass, U-Pass, and Visitor Fun Passes. The RTA does

not plan to fund Pace to accept these CTA passes after 2007. The RTA expects to provide Pace with discretionary funds in the amount of $4.1 million in 2008 and $3.2 million in 2009. The RTA does not plan to provide discretionary funding to Pace after 2009. In 2007, federal funding for Pace suburban service operations included $22.6 million of Section 5307 funds transferred from Pace's capital program and $1.6 million of combined Congestion Mitigation Air Quality (CMAQ), Job Access Reverse Commute (JARC) and New Freedom funds. Combined CMAQ, JARC, and New Freedom funds for Pace suburban service are expected to increase to $2.5 million in 2008 before declining to $0.5 million by 2011.

Illinois Public Act 95-0708 increased the RTA sales tax rate throughout the region beginning on April 1, 2008, created a real estate transfer tax in the City of Chicago to fund the CTA, and raised from 25 percent to 30 percent the portion of RTA tax revenues matched by the State Public Transfer Fund (PTF). From this new funding source, RTA sales tax & PTF (PA95-0708) and RTA Suburban Community Mobility Funds (SCMF) will increase support for Pace suburban service operations beginning in 2008. RTA sales tax & PTF (PA95-0708) is projected to increase from $15.4 million in 2008 to $37.8 million in 2011. SCMF of approximately $20 million are projected for 2008 through 2011. The legislation also required that the RTA provide Pace suburban service with RTA South Suburban Job Access Funds in the amount of $3.8 million in 2008 and $7.5 million annually thereafter.

Recovery Ratio

The recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. With the inclusion of reimbursement from the RTA to accept the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes and ADvAntage Program in-kind revenue and expense credits, Pace achieved a recovery ratio of 36.0 percent in 2007. With the inclusion of ADvAntage program in-kind revenue and expense credits, as well as revenue credits for lost revenue from the Seniors Ride Free program and for accepting the CTA 7-Day Pass, U-Pass, and Visitor Fun Passes, Pace expects to achieve a recovery ratio for suburban service of 36.0 percent in 2008. With the inclusion of ADvAntage program in-kind revenue and expense credits, as well as revenue credits for lost revenue from the Seniors Ride Free program and the People with Disabilities Ride Free program, Pace projects a recovery ratio for suburban service of 36.0 percent in 2009 which matches the 36 percent recovery ratio mark set by the RTA Board on September 15, 2008. Exhibit 6-4 provides the detail used in these calculations.

2008 Budget versus 2008 Estimate

Pace expects 2008 operating revenue for suburban service to finish the year $1.1 million or 2.1 percent unfavorable to budget. Passenger revenue is expected to finish the year $0.8 million or 2.8 percent favorable, while local share/other revenue is expected to be $0.4 million or 2.4 percent unfavorable. Advertising revenue is projected to finish the year at budget, while investment income is expected to be $0.2 million or 12.5 percent unfavorable. The reduced fare reimbursement was projected to finish the year $1.3 million or 50.0 percent unfavorable to budget. However, the State 2009 budget has since been amended to include funds for reduced fare reimbursement.

Total expenditures are expected to finish the year $8.7 million or 5.0 percent unfavorable to budget. Expenditures for labor/fringe benefits, health insurance, other, and the regional ADA support credit are each expected to be $0.5, $0.3, $6.2, $0.8 million favorable to budget, respectively, while expenditures for parts/supplies, purchased transportation, fuel, utilities, and insurance/claims are expected to be $0.7, $4.2, $10.6, $0.2, and $0.7 million unfavorable to budget, respectively.

From a funding perspective, Pace expects a favorable variance of $0.3 million in 2008 because of higher than budgeted federal CMAQ & JARC funding (Exhibit 6-9).

Exhibit 6-9: **Pace 2008 Budget vs. 2008 Estimate** (dollars in thousands)

	Amended 2008 Budget (1)	2008 Estimate	Variance

Shuttle Routes 535	0.50		1.75	

Vanpool

New monthly VIP and other van pool services fares range from $73 to$174 depending on the daily round trip van miles and the number of passengers. This range represents a 10% increase from 2008.

*Effective January 1, 2006, the CTA discontinued issuing or accepting cash transfers.

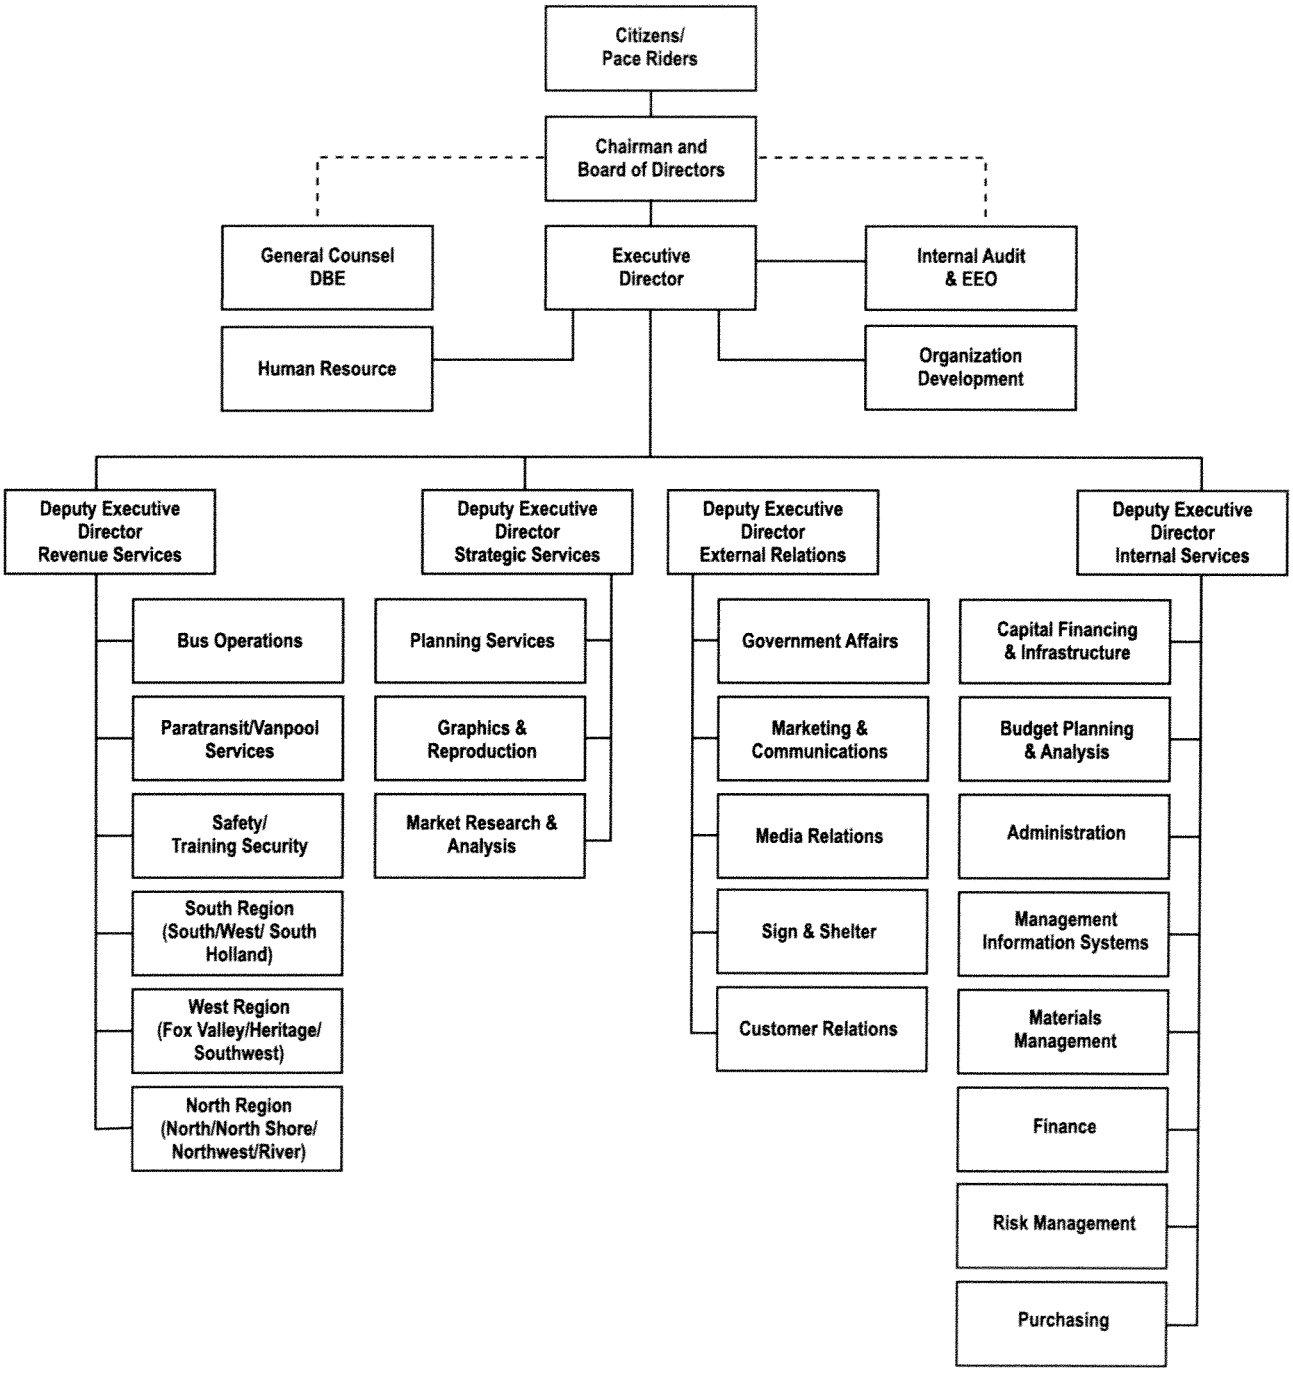
Statutory Compliance

Pace's proposed 2009 budget and 2009 recovery ratio submitted to the RTA comply with the operating marks set by the RTA Board on September 15, 2008. Pace's 2010 and 2011 financial plan exceeded the operating marks by $6.8 million and $12.6 million, respectively. To meet the operating marks, Pace will need to implement deficit reduction actions that will increase revenues and/or decrease expenditures by $6.8 million in 2010 and $12.6 million in 2011. Effective January 1, 2009, Pace increased bus, Dial-A-Ride, and vanpool fares (Exhibit 6-10).

Organizational Structure

Pace is organized into four main areas: Revenue Services, Strategic Services, External Relations, and Internal Services (Exhibit 6-11). Pace's organizational structure comprises four primary elements: administration, central support, Pace-owned divisions, and regional ADA paratransit services. Within each element, employees are classified into four areas: operations, maintenance, non-vehicle maintenance and administration. These activity areas are defined by the National Transit Database reporting requirements, which apply to all public transit operators.

Exhibit 6-11: **Pace Organization Chart**



ADA Paratransit

Overview

Effective July 1, 2006, aace has provided all ADA paratransit service in the RTA region. Beginning in 2007, Pace's revenue and expenditures are separated into suburban service and regional ADA paratransit service.

Service Characteristics

The RTA administers a regional certification program that determines if individuals with physical or cognitive disabilities are eligible for ADA paratransit service. If eligible, passengers can arrange for travel within three quarters of a mile of Pace or CTA bus routes or CTA or Metra rail stations, as described in the Americans with Disabilities Act (ADA).

In the suburban area where Pace provides fixed route service, Pace contracts with private operators to provide ADA paratransit service. These operators use Pace-owned lift-equipped vehicles to provide curb-to-curb service to ADA-certified passengers within a portion of the suburban area of the RTA region.

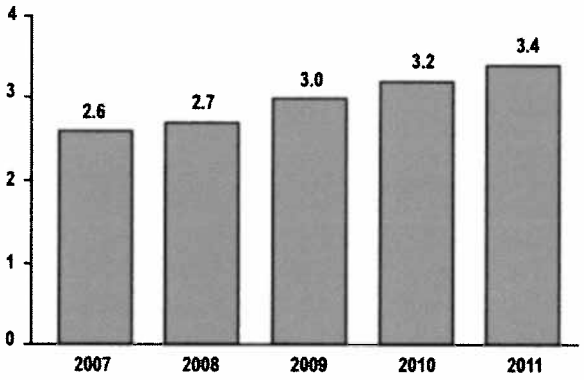
In the CTA service area, Pace contracts with private operators to provide ADA paratransit service. The operators use contractor-owned vehicles to provide service to ADA-certified passengers throughout the City of Chicago and the suburban communities served by CTA bus and rail operations. Pace also administers two subsidized taxi programs in the City of Chicago (the Taxi Access Program (TAP) and the Mobility Direct program) for ADA-certified passengers, although these programs are not required by the Americans with Disabilities Act.

The CTA and Pace fixed route services are described earlier in this document.

Ridership

In 2007, Pace's regional ADA paratransit ridership totaled 2.6 million. In 2008, Pace expects regional ADA paratransit ridership of 2.7 million. Pace projects that in 2009, ADA paratransit ridership will grow 10.8 percent (11.7 percent in the CTA service area and 6.8 percent in the suburban service area) to 3.0 million and then 5.8 percent annually (6.0 percent in the CTA service area and 5.0 percent in the suburban service area) to 3.2 million in 2010 and 3.4 million in 2011. (Exhibit 6-12)

Exhibit 6-12: **Pace Regional ADA Paratransit Ridership**
(in millions)



Cost Efficiency

The cost per passenger measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-13). Cost per passenger for Regional ADA paratransit service is projected to increase from $35.32 in 2009 to $37.44 in 2011. This $2.12 increase corresponds to a compound annual growth rate of 3.0 percent. Pace projects that during this period contractor costs will grow 8.5 percent and 14.3 percent annually in the CTA service area and suburban service area, respectively.

Exhibit 6-13: **Pace ADA Paratransit Cost Efficiency**

Recovery Ratio % (2)	***8.4%***	***10.0%***	***10.0%***	-	-

(1) Pace must take actions to achieve a deficit of no more than $100.0 million in 2008, $100.7 million in 2010, and $103.0 million in 2011. (2) On August 26, 2008, the Governor signed Senate Bill 1920 that allows the RTA Board to exempt from the farebox recovery ratio formula a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

Budget and Financial Plan

The Pace ADA paratransit service budget and financial plan presented in Exhibit 6-14 meets the 2009 recovery ratio mark set by the RTA on September 15, 2008, and the three year funding levels as amended by the RTA on December 18, 2008. In compliance with the RTA Act, the RTA set the ADA paratransit recovery ratio for 2009 at 10.0 percent. The RTA set the funding for ADA paratransit at $98.6 million for 2009, $100.7 million for 2010, and $103.0 million for 2011. To meet these funding levels, Pace will need to implement deficit reduction actions that will increase revenues and/or decrease expenditures by $7.3 million in 2010 and $14.6 million in 2011.

System-Generated Revenue

In 2007, regional ADA paratransit revenue of $7.0 million comprised passenger revenue of $6.2 million and reimbursements from the RTA for transporting paratransit applicants to assessment sites of $0.8 million (Exhibit 6-15 and Exhibit 6-16). In 2008, Pace expects total regional ADA paratransit revenue to reach $7.7 million with passenger revenue accounting for $6.8 million of this amount. Pace projects that Passenger revenue will account for 94 percent of total revenue in 2009 (Exhibit 6-17). Pace projects total ADA paratransit system-generated revenue of $8.6 million in 2009, $9.0 million in 2010,

Exhibit 6-15: **Pace ADA Paratransit Service System-Generated Revenue** (dollars in millions)

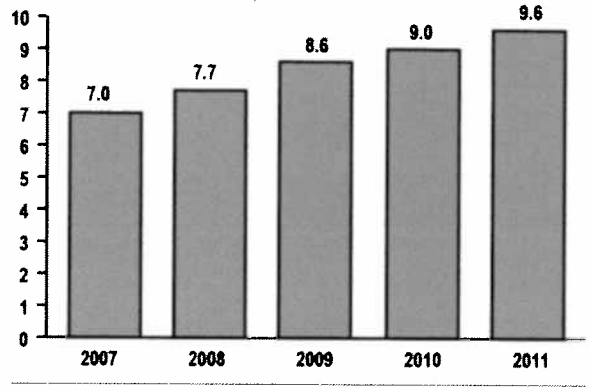

Exhibit 6-16: **Pace ADA Paratransit Farebox Revenue** (dollars in millions)

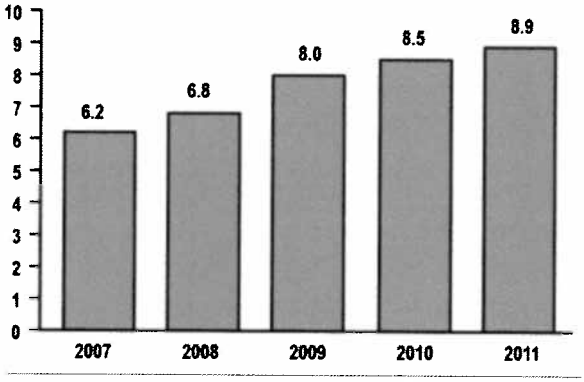


and $9.6 million in 2011. These revenue figures do not incorporate required deficit reduction actions in 2008, 2010, and 2011. Pace's regional ADA paratransit fare structure is presented at the end of this section (Exhibit 6-20). No fare increases were assumed in Pace's revenue or ridership projections.

Operating Expenditures

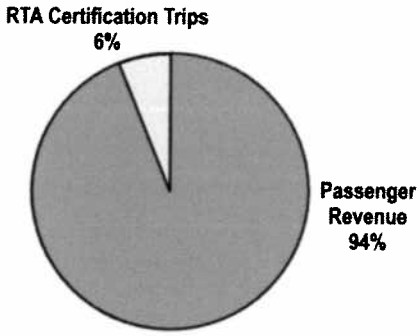
In 2007, regional ADA paratransit service operating expenditures totaled $83.7 million. In 2008, Pace expects total regional ADA paratransit operating expenditures to reach $109.6 million. Pace projects total operating expenditures of $107.2 million in 2009, $117.1 million in 2010, and $127.2 million in 2011. Growth in purchased transportation costs is the primary factor behind these increases in operating expenditures (Exhibit 6-18).

Expenditure Elements

Operating expenditure elements include labor/fringe benefits, health insurance, administrative expense, fuel, insurance/claims, RTA certification, suburban ADA purchased transportation, CTA service area ADA purchased transportation, and an indirect overhead allocation (Exhibit 6-14). Figures for individual expenditure elements do not incorporate required deficit reduction actions in 2008, 2010, and 2011.

Labor/Fringe and Health Insurance Costs

Exhibit 6-17: **2009 Pace ADA Paratransit Revenue**--$8.6 million

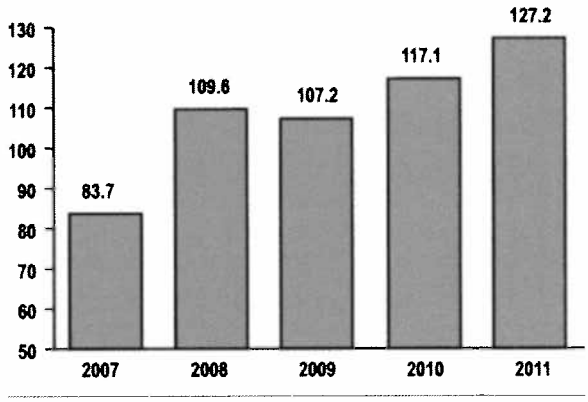


Labor/fringe benefits and health insurance expenditures are expected to account for 2.5 percent of regional ADA paratransit service operating expenditures in 2009. Labor/fringe benefits and health insurance expenditures are projected to grow from $2.7 million in 2009 to $2.9 million in 2011, corresponding to a 4.6 percent compound annual growth rate.

Administration

Administration expenditures are projected to account for 1.7 percent of regional ADA paratransit service operating expenditures in 2009. Pace leases its operations center for ADA paratransit services in Metra's downtown Chicago headquarters at 547 W. Jackson Blvd. Administrative expenditures are projected to grow from $1.8 million in 2009 to $1.9 million in 2010 at a 2.4 percent compound annual

Exhibit 6-18: **Pace Total Operating Expenditures**
(dollars in millions)



growth rate.

Fuel

Pace purchases fuel for the private operators who provide ADA paratransit service using Pace-owned vehicles in Pace's suburban service area. Fuel expenditures are projected to account for 2.5 percent of regional ADA paratransit service operating expenditures in 2009. Fuel expenditures are projected remain at $2.6 million from 2009 to 2011, declining from 2.5 percent to 2.1 percent of regional ADA paratransit operating expenditures.

Insurance and Claims

Insurance/claims expenditures are projected to account for 0.3 percent of regional ADA paratransit service operating expenditures in 2009. Insurance/claims expenditures are projected to remain near $0.4 million from 2009 to 2011.

RTA Certification

RTA certification expenditures comprise the cost of transporting applicants for ADA certification to and from assessment centers. These expenditures are projected to account for 0.6 percent of regional ADA paratransit service operating expenditures in 2009. RTA certification expenditures are projected remain near $0.6 million from 2009 to 2011.

Suburban ADA purchased transportation

Suburban ADA purchased transportation expenditures are projected to account for 16.7 percent of regional ADA paratransit service operating expenditures in 2009. These expenditures are projected to increase from $17.9 million in 2009 to $23.3 million in 2011, a $5.5 million increase that corresponds to a 14.3 percent compound annual growth rate. Pace assumes that demand for suburban ADA paratransit service will increase 5.0 percent in both 2010 and 2011.

CTA service area ADA purchased transportation

CTA service area ADA purchased transportation expenditures are projected to account for 72.5 percent of regional ADA paratransit service operating expenditures in 2009. These expenditures are projected to increase from $77.7 million in 2009 to $91.5 million in 2011, a $13.8 million increase that corresponds to an 8.5 percent compound annual growth rate. Pace assumes that demand for CTA service area ADA paratransit service will increase 6.0 percent in both 2010 and 2011.

Regional ADA support allocation

In 2007, Pace charged $1.3 million of administrative and overhead expenses to the regional ADA paratransit budget and expects to charge $3.4 million in 2008. Pace projects that this amount will increase from $3.6 million in 2009 to $3.8 million in 2011.

Deficit and Funding

The operating deficits are derived from total system-generated revenue minus total operating expenditures. In 2007, funding for regional ADA paratransit service consisted of State funding of $54.3 million and RTA funding of $21.8 million, resulting in a shortfall of $0.7 million. In 2008, Illinois Public Act 95-0708 allocated to the funding of ADA paratransit service $100 million of the revenue from the increase in the RTA sales tax rate and the increase in the portion of RTA tax revenues matched by the State Public Transfer Fund (PTF). According to the legislation, this amount will vary in future years in proportion to annual RTA sales tax collections, and funding not required for the current year deficit will be applied to regional ADA paratransit operating deficits in future years. In 2008, all of the $100.0 million allocated for public transit is expected to fund the 2008 regional ADA paratransit service deficit. Based on the projections of sales tax collections in 2009, 2010, and 2011, the amounts to be allocated to the funding of ADA paratransit service are $99.0 million, $100.3 million, and $103.0 million, respectively.

Suburban service area and CTA service area purchased transportation expenses account for 16.4% and 74.4%, respectively, of total regional ADA paratransit expenditures.

RTA paratransit funding is projected to increase from $98.6 million in 2009 to $103.0 million in 2011, an increase of $4.4 million corresponding to a compound annual growth rate of 2.2 percent. In each year, the funding level is projected to match the corresponding operating deficit, contingent on deficit reduction actions in the amount of $7.3 million in 2010 and $14.6 million in 2011.

The budget and financial plan for regional ADA paratransit service presented in Exhibit 2-4 meet the 2009 through 2011 funding levels as amended by the RTA on December 18, 2008. The levels set annual funding for regional ADA paratransit funding at $98.6 million for 2009, $100.7 million for 2010, and $103.0 million for 2011.

Recovery Ratio

The recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. The RTA Act requires that regional ADA paratransit service meet a recovery ratio of 10 percent. In 2008 and 2009, Pace's projected recovery ratio for regional ADA paratransit service is 10 percent. These recovery ratios are reached by exempting from the recovery ratio calculation a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

2008 Budget versus 2008 Estimate

Pace projects 2008 regional ADA paratransit service operating revenue that will be $0.6 million or 7.6 percent unfavorable to budget. Passenger revenue is expected to finish the year $0.7 million or 8.7 percent unfavorable.

Total expenditures are expected to finish the year $15.6 million or 16.6 percent unfavorable to budget. Expenditures for CTA service area purchased transportation are expected to be unfavorable to budget by $15.3 million (22.5 percent), and expenditures for fuel for suburban service area purchased transportation are expected to be unfavorable to budget by $0.6 million (33.7 percent).

From a funding perspective, Pace expects an unfavorable variance of $14.4 million in 2008 because of higher than expected expenditures (Exhibit 6-19). Funding for 2008 regional ADA paratransit service

Exhibit 6-19: **Pace Regional ADA Paratransit Service 2008 Budget vs. 2008 Estimate** (dollars in thousands)

	Amended 2008 Budget (1)	2008 Estimate	Variance

(1) Pace Regional ADA Paratransit Service 2008 Budget approved by the RTA Board on April 17, 2008, following enactment of PA 95-0708
(3) On August 26, 2008, the Governor signed Senate Bill 1920 that allows the RTA Board to exempt from the farebox recovery ratio formula a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

was subsequently increased to $100.0 million, still requiring deficit reduction actions in the amount of $1.8 million.

Statutory Compliance

Pace's proposed 2009 budget and 2010 plan met the regional ADA paratransit operating funding marks set by the RTA Board on September 15, 2008, but Pace's proposed 2011 plan did not. These marks set the total funding levels at $98.6 million in 2009, $108.1 million in 2010 and $110.1 million in 2011. After the RTA revised the 2010 and 2011 funding level for regional ADA paratransit service, neither Pace's 2010 plan nor the 2011 plan met the required funding level. The revised regional ADA paratransit service funding levels for 2010 and 2011 were $100.3 million and $103.0 million, respectively.

To meet the 2010 and 2011 required funding levels, Pace's deficit projections were reduced $7.3 million and $14.6 million, respectively. Pace's projected recovery ratio of 10 percent in 2009 complies with the recovery ratio marks set by the RTA Board on September 15, 2008.

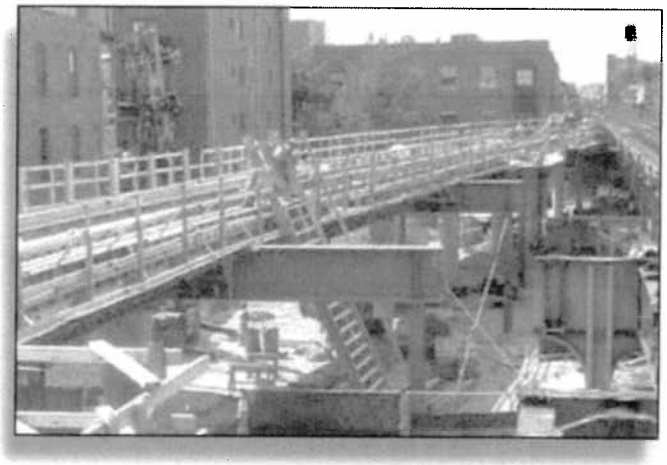
Local Route analog	$2.50

7 Capital Program



Regional Overview

The RTA Act requires that the capital expenditures of the CTA, Metra and Pace be subjected to continuing review so that the RTA may budget and expend funds available to the region with maximum efficiency. The RTA Board must adopt a five-year capital program every year. The RTA's five-year capital program describes the nature, location, and budget by project and by fiscal year of all anticipated Service Board capital improvements. Public hearings are held in each county in the northeastern Illinois region to inform the public and government officials of the Authority's capital development plans.

The RTA emphasizes the need to preserve and enhance the RTA system's valuable infrastructure. This includes bringing the system's $34.7 billion in assets (as measured in terms of replacement value) to good condition and extending or expanding service when demand is justified and funding available. This translates into a need over $1 billion per year just to maintain and preserve the existing system. In 2005, Congress passed a reauthorization of federal funding for transportation projects. Although this legislation provided an increase over previous levels of funding, it stills leave a substantial shortfall.

In January 2008, the Illinois State Legislature passed legislation which amended the RTA Act. This amendment increased funding for public transit operations, but it did not address capital funding for public transportation in northeastern Illinois. Without a state-sponsored capital program, the Service Boards do not have the resources to maintain, enhance or expand the RTA system.

With funding needs for capital improvements and rehabilitation greatly exceeding expected resources, the RTA and the Service Boards must actively pursue additional funding opportunities to preserve and enhance the economic viability of the RTA system. It is critical that the RTA allocate our available capital resources consistent with long-range plans and short-range needs.

Continued financial support for public transit is vital to the region's economic health. However, the region's current transit needs, based upon bringing the entire system to a state of good repair, continue to outpace projected funding levels. The $34.7 billion asset of trains, buses, vans and stations and tracks belongs to the people of northeastern Illinois.

On April 17, 2008, the RTA approved the 2009 Business Plan Call that included a request for information regarding the Five-Year (2009-2013) Capital Program and Ten-Year (2009-2018) Capital Plan. The Business Plan Call established forms and schedules, assumptions and projections, and information that the RTA requires from the Service Boards in order to execute its responsibilities and authority under the RTA Act. In addition, the Five-Year Capital Program will be developed in concert with RTA Resolution 2008-46 adopted on July 17th that endorsed the work done by the RTA and Service Boards' task forces on the interim capital evaluation process for the 2009 budget. On July 17th, the RTA Board amended the previously adopted Business Plan Call (RTA Ordinance 2008-17) to include a uniform capital process and criteria to use in the 2009 RTA capital plan development.

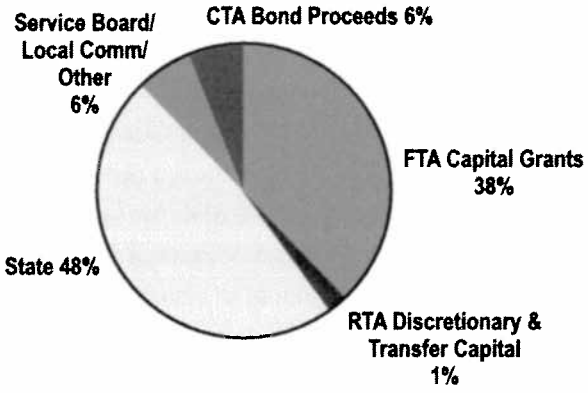
Consistent with the amended RTA Act, the Moving Beyond Congestion Strategic Plan and the recommendations of the management and performance audit by the Illinois Auditor General, the Business Plan Call has been enhanced to provide a more comprehensive evaluation of longer-term operating and capital program trends. The RTA is also developing a comprehensive set of performance measurements that will track and report at a frequency appropriate for each measurement. The Service Boards are to incorporate these measurements in the proposed business plan and capital program documents they provide for public hearing and submit to the RTA in November. As required by the amended RTA Act, the RTA is working with the Service Boards on the development of a new system for prioritizing projects based on regional goals that is intended eventually to replace fixed allocation percentages. The Capital Evaluation task force is reviewing existing processes

at the individual Service Boards and selecting and prioritizing common criteria. The use of these common capital criteria represents an interim evaluation process for the development in 2008 of the 2009 Capital Plan - which the RTA Ordinance 2008-44 incorporated into the Business Plan Call for this year. To begin to institute these capital criteria, the Service Boards will evaluate projects for this Capital Program in a review process based on customers' needs. Evaluation criteria included customer and employee safety, reductions to travel time, increased comfort and convenience, system security, impact on system reliability, compliance with regulations and community impact. The development of a regional criteria-based capital investment evaluation process is currently underway as part of the development of a comprehensive update to the Strategic Plan.

Sources of Funds

The funding sources for the RTA Capital Program include the U.S. Department of Transportation's Federal Transit Administration (FTA), the Illinois Department of Transportation (IDOT), the RTA, and the Service Boards. The total estimated new capital funds available for 2009 are projected at $551.3 million. After deducting $74.7 million to provide for the CTA's repayment of principal and interest on borrowed funds, $476.6 million is available for capital projects. At this time, the final federal appropriation figures for 2009 have not been determined. Once this amount is established, the capital program will be adjusted to reflect the available funding.

Exhibit 7-1: **RTA 2009-2013 Capital Program Marks—** $5 billion



On September 15, 2008, the RTA adopted preliminary capital funding marks for 2009-2013. When the RTA adopts its budget on December 18, 2008, these marks will be revised to update various federal and local funding sources based on the latest information from the Service Boards and the RTA. (Exhibits 3-1 and 3-2). Of the estimated $476.6 million of new funding sources for 2009, federal funding accounts for $396.4 million or 83 percent, RTA funds account for $20.3 million or 4 percent, and Service Board and other funds account for $59.9 million or 13 percent (Exhibits 3-3 and 3-4).

Federal

The RTA receives federal funds authorized under federal sections 5307, 5340 and 5309 of the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU).

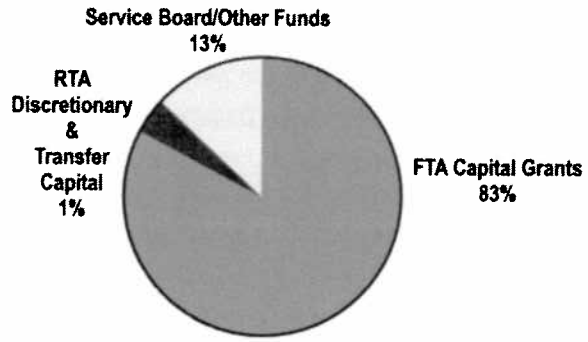
Exhibit 7-3: **Capital Funding in 2009**—$477 million



SAFETEA-LU provides funding for federal surface transportation programs, including transit through federal fiscal year (FFY) 2009. For planning purposes, the RTA preliminary marks assume the continued availability of federal funds in 2010 through 2013. Note, because of reduced balances in the federal Highway Trust Fund, which is the source of money for federal transit funding, and general budget shortfalls, the RTA is cautious regarding future rates of growth. Therefore, the RTA is using the historic annual average growth rate of 4% beyond 2009 for federal formula funds.

On September 30, 2008, President Bush signed into law a Continuing Resolution (CR) to fund federal agencies until March 6, 2009. The CR funds the Department of Transportation at FFY 2008 levels until the new Congress convenes next year. The CR includes the full FFY 2009 appropriation bill for Homeland Security.

Certain federal funding programs are allocated to urbanized areas based on statuatory defined formulas. The RTA region receives federal Section 5307 Urbanized Area Formula funds and federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds in this fashion. SAFETEA-LU included a new program, federal Section 5340 Growing and High Density States, also distributed by formula that will provide funds to northeastern Illinois. All of these formula-based funds are allocated by the RTA to the Service Boards according to the historical distribution of 58 percent to the CTA, 34 percent to Metra, and 8 percent to Pace. However, while the RTA is using these distribution percentages for the 2009-2013 Capital Program, these amounts may be adjusted based on regional priorities for future programs.

Funds from federal discretionary programs are made available on a competitive basis nationally. The RTA traditionally receives funding from the Section 5309 Discretionary Bus program. The region is expected to receive all funds earmarked for the Service Boards in SAFETEA-LU for this program. The Service Boards will develop projects in the future to compete for additional federal resources.

At this time, with insufficient capital funding, the region must concentrate the Capital Program on the preservation of existing facilities and equipment. Therefore, no New Starts funding for construction will be allocated for the Five-Year programming period. In the event federal funds are available for plan-

ning purposes, including Alternatives Analysis and Preliminary Engineering, the marks may need to be revised.

Other Federal Flexible funds, such as the Congestion Mitigation and Air Quality (CMAQ) and Surface Transportation Program (STP) funds, are sought by the Service Boards through a regional competitive process.

In addition, the CTA and Metra have requested to program $6.5 million and $5 million, respectively for each year in the RTA's Five-Year funding marks from the Department of Homeland Security based on amounts they have received in the past for security projects.

Finally, other federal funds will be made available to the region by formula but may be allocated among a variety of agencies, including but not limited to transit operators, on a competitive basis. These programs include the Section 5316 Job Access and Reverse Commute (JARC) Program and Section 5317 New Freedom Program (for services supplemental to ADA requirements). Since projects using funds for these programs will be selected in 2009 based on a competitive selection process led by the RTA, in cooperation with the MPO Policy Committee, no funding marks have been proposed at this time. In 2009, the RTA Capital Program marks will be amended to include JARC and New Freedom funding for capital projects only.

In summary, the 2009 RTA preliminary federal estimates reflecting the SAFETEA-LU legislation are $167.1 million for federal Section 5309 (m)(2)(B) Fixed Guideway Modernization funds, $244.6 million for federal Section 5307 Urbanized Area Formula funds combined with Section 5340 Growing and High Density States, $30.5 million for federal Section 5309 (m)(2)(A) New Start funds, $5.2 million for federal Section 5309 (m)(2)(C) Bus and Bus Facility funds, $12.2 million for federal flexible including CMAQ and other funds, and $11.5 million for Department of Homeland Security funds for systemwide security projects for the CTA and Metra. Furthermore, the CTA requested to reduce their federal funding by $74.7 million for the payment of debt principal and interest for 2009 and $423.7 million for this purpose in the out years.

State

State funds historically are awarded to the Service Boards by the Illinois Department of Transportation (IDOT) on a discretionary basis and are used primarily for federal match purposes to ensure that sufficient local funds are made available for critical transit projects in the region. The State of Illinois has historically provided capital support of public transportation in northeastern Illinois. This funding was provided through IDOT's Series B Bond program and RTA's Strategic Capital Improvement Program (SCIP) Bonds. As background, in 1999, the RTA Act was amended as part of Illinois FIRST legislation. The legislation increased the RTA borrowing authority by $1.6 billion for capital infrastructure improvements. This amount included $1.3 billion in authorization for SCIP Bonds. The State of Illinois reimburses the RTA for the principal and interest expense on these bonds. The remaining $300 million represented RTA Bonds for which the RTA does not receive State reimbursement. All of these funds (SCIP and RTA bonds) have been programmed to the Service Boards since 2004. Also, there has been no commitment on the part of the State to fund a major new capital program for public transportation. This means no State Series B Bonds, the traditional source of local match for federal funds, and no successor to the successful SCIP Bond programs. However, the RTA, CTA, Metra and Pace, as well as other supportive partners, are working with members of the General Assembly and the Governor's Administration to secure funding to support this level of investment.

The marks assume $3 billion in state funding will become available beginning with the 2010 budget year, therefore, the 2009-2013 Capital Program includes $2.4 billion in state funding. This amount maintains the same value in today's dollars as the Illinois FIRST program in 1999. These funds are distributed among the Service Boards in the same proportion as has been historically used for RTA bond

programs: 50% to the CTA, 45% to Metra and 5% to Pace. This allocation represents a distribution for planning purposes at this time and not a commitment for the future. It must be noted that even the $3 billion of new state funding is unlikely to bring the assets of the region's public transportation system to a state of good repair much less allow investment in capacity improvements to meet market demands.

However, without an adequate State capital program, the transit system will have insufficient funds to maintain, let alone enhance and expand the transit system. The RTA had shown in its Regional Transportation Strategic Plan that $10 billion is needed in order to fully fund all needed system maintenance and to initiate all authorized system expansion projects.

RTA

Since 1995, the RTA has funded a Transfer Capital (TC) program. Transfer Capital are funds that can be used for operations but have, through cost containment, been reallocated for use on capital improvement projects. A total of $20.4 million has been allocated to transfer capital for the CTA for 2009. The 2010-2013 out-year Capital Program includes $81.4 million for the CTA from Transfer Capital funds.

The RTA discretionary funds are yet another source of capital funding. Discretionary funds, which are the portion of the 15 percent of the RTA Sales Tax receipts that remain after funding RTA Agency operations, can be used to match federal funds or to fully fund Service Board projects. In the past, the RTA has used these discretionary funds to address the backlog of unfunded capital needs. In the last several years, due to limited RTA Sales Tax receipts, the RTA deferred an allocation of any discretionary funds to the Service Boards for capital projects and the funds have been used primarily to fund operations.

Service Boards

Five-Year funding for this category includes Service Boards' own funds, local community and other non-traditional funding from state and federal agencies based on information supplied by the Service Boards. Historically, the Service Boards have occasionally transferred monies from current revenues or fund balances to the Capital Programs. These marks contain estimates provided by the Service Boards of funds that will be available from these sources.

CTA Financing

The CTA is proposing to borrow funds of $150 million in 2010 and $175 million in 2011 from the proceeds of bonds which would be repaid with future federal formula funds. The CTA will secure all funds and pay for all borrowings from their federal Section 5307 formula funds and federal Section 5309 Fixed Guideway Modernization funds.

Tollway Revenue Credits

Without the needed new state funds discussed previously, the Service Boards will not have sufficient

funds available to provide the entire local match for federal funding in 2009. Therefore, the Service Boards may exercise the toll revenue credit provision that was established in the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA), incorporated in TEA-21 and continued in SAFETEA-LU. The toll revenue credit provision permits states to use certain expenditures of toll revenue as a "credit" toward the required local match for certain highway and transit programs. These credits are not actually funds that can be used; rather they are a mechanism to count toll revenues already spent for tollway capital projects as local matching dollars for federal capital funds for transit.

Use of Funds

The RTA Capital Program increased dramatically in 2000 primarily as a result of the increased funding included in the Illinois FIRST program. The 1999 program totaled $552.7 million. The average funding level from 2000 through the 2004 program was $918.8 million, a 60 percent increase. The CTA, Metra and Pace have responded by significantly increasing their project implementation performance. An average of $418 million was obligated annually by the Service Boards from 1995 through 1999. From 2000 through 2008 (estimated), the Service Boards have awarded an annual average of $806 million in contracts. Project spending has also increased substantially, from an average of $420 million per year from 1995 through 1999 to $801 million from 2000 through 2008 (estimated). Exhibits 3-5 and 3-6 illustrate these trends. These results show that the Service Boards are putting the monies available to good use, providing benefits to public transportation riders. Obligations and expenditures for Metra in recent years are showing the effects of the elimination of state funding since 2004 and the diversion of federal monies to operations in 2005 through 2007. The CTA has been able to ameliorate these trends through the issuance of a substantial amount of debt to fund capital projects which must be repaid with future federal funds.

The primary emphasis of the 2009 Capital Program is to continue efforts to bring the system's assets to a state of good repair. When replacing worn out items, it is imperative to utilize modern technologies that often result in improved functionalities of equipment, facilities and rolling stock. In addition, a balanced capital program is responsive to customer needs and shifting markets by including investment in system expansion. For the 2009 Capital Program, the percent of the budget for capital projects to maintain the system is 89 percent. While the current funding level does not satisfy all needs, an appropriate balance of investment is achieved in light of the current condition of the RTA system.

Investments in the Capital Program can also be broken down by various asset categories. Exhibits 3-7 and 3-8 show that $2.8 billion or 56 percent of the program is spent on rolling stock and $1.1 billion or 23 percent for track and structure which are considered to have the greatest direct impact on transit users. Substantial investment in other infrastructure is also critical to maintaining safe, reliable transportation services.

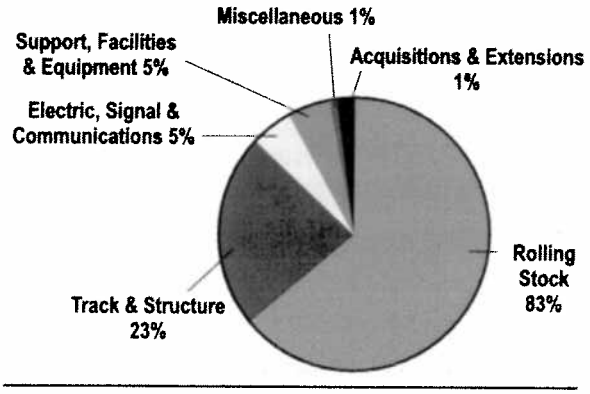
The 2009-2013 Capital Programs for the CTA, Metra, and Pace are presented by major asset categories in Exhibits 3-9—3-12. Some of the more significant projects included in the proposed 2009-2013 capital program are:

- $593.4 million for the repair of CTA track and structure;
- $543.4 million for the purchase of 406 CTA rail cars;
- $488.2 million for the rehabilitation and overhaul of CTA rail cars;
- $364.3 million for the continuation of the purchase of CTA buses;
- $200 million for the rehabilitation and overhaul of CTA buses;
- $133 million for the improvement of CTA facilities;
- $42.3 million for the expansion of the CTA Ravenswood Brown Line;
- $540.5 million to purchase 160 bi-level cars for the Metra Electric District;
- $349.7 million for Metra bridge rehabilitation and renewal;
- $177.1 million for the rehabilitation of Metra commuter rail cars;
- $146.6 million for the construction and renewal of Metra yards, shops and facilities;
- $127 million for the rehabilitation and improvement of Metra locomotives;
- $80 million to purchase 50 bi-level commuter cars;
- $74.6 million for the upgrade of Metra signal systems;
- $86.3 million for the purchase of 261 Pace fixed route buses;
- $42.6 million for the purchase of Pace vans and community vehicles;
- $42 million for improvements to Pace garages and facilities;
- $32.4 million for the purchase of 376 Pace paratransit vehicles;
- $30.5 million for the purchase of a replacement Pace farebox system;
- $20 million for the purchase of a replacement of Pace's fixed route radio system;
- $16.8 million for the construction of Pace passenger and transfer facilities;
- $10.2 million for the purchase of the replacement for the HPe3000 computer system; and
- $4.5 million for the implementation of Transit Signal Priority projects.

CTA Overview

The proposed projects in the CTA's portion of the 2009-2013 capital program total $2.5 billion. The CTA's portion of the capital program continues the rehabilitation and replacement of their capital assets. The percentage for the general categories of capital improvements of the total program are: rolling stock at 64 percent, track and structure at 23 percent, electric, signal and communications at 5 percent, support facilities and equipment at 5 percent, acquisitions and extensions at 2 percent and miscellaneous at 1 percent. The general categories of capital improvements comprising the CTA's portion

Exhibit 7-9: **CTA Five-Year Assets by Category**—$2,538 million



of the capital program are illustrated in Exhibit 7-9.

Highlights of the CTA's portion of the 2009-2013 Capital Program are as follows:

Rolling Stock

The CTA's portion of the 2009-2013 Capital Program includes $564.3 million in the bus rolling stock category. The CTA's bus fleet consists of approximately 2,100 vehicles. The CTA's portion of the 2009-2013 capital program contains $364.3 million for replacement of overage buses with low-floor, fully accessible and air-conditioned buses. The buses that will be replaced will have reached the industry standard retirement age of 12 years by the end of the five-year program. Continued operation of these buses imposes unnecessarily high maintenance and operating costs and reduces service reliability for the CTA's customers.

In addition, $200 million is budgeted for capital-eligible bus maintenance activities and life extending overhauls over the five-year program with $19.8 million planned in 2009. The CTA will continue its aggressive Bus Capital Maintenance Program to schedule the replacement of parts nearing the end of their useful life. This program will improve the comfort, quality and reliability of the CTA's bus service and will reduce operating expenses by avoiding service disruptions and unscheduled maintenance of buses. Buses placed into service in 1999 through 2004 will be overhauled and returned to a state of good repair.

The rail rolling stock category includes over $1 billion in 2009-2013 to rehabilitate or purchase CTA rail cars. The CTA's rail fleet consists of approximately 1,190 rail cars. The average car in the CTA rail fleet is over 24 years of age in 2008 and approximately 46% of the fleet exceeds the 25-year FTA standard life.

The five-year program includes $543.4 million for the replacement of aging 2200 and 2400 Series rail cars and the purchase of additional cars to meet the service requirements associated with the Brown Line capacity expansion. The CTA is proposing $78.5 million towards the purchase of new rail cars in 2009. Also, the 2009-2013 capital program contains $522.9 million for the CTA systematic maintenance and upgrade of rapid transit rolling stock including the overhaul and mid-life rehabilitation for rail cars. The CTA anticipates new rail cars will be delivered between 2010 and 2012. Until this occurs, the CTA must continue to use the 2200 and 2400 Series cars. The 2200 Series cars have been in service for more than 38 years and the 2400 Series cars have been in service for more than 30 years; both have already exceeded their expected service life. Funding is provided in the proposed program to complete life extending overhauls for the 2200 and 2400 Series cars to permit the CTA to keep them in service until they will be replaced.

In addition, the CTA plans to perform quarter life overhauls for the 2600 Series rail cars and mid-life overhauls of the 3200 rail cars as a part of the program for rail car overhaul and rehabilitation. By performing these scheduled maintenance activities and replacing rail cars at the appropriate time, generally at 25 years of age, the CTA will improve the comfort, quality and service reliability of the rail cars while reducing operating maintenance costs.

Track and Structure

The track and structure category includes $593.4 million in 2009-2013 to rehabilitate and expand existing rail lines with $9.8 million programmed in 2009 to continue the systematic rehabilitation of the CTA right-of-way, ties, track and structure to reduce slow zone restrictions. The CTA rail system contains over 287.8 total track miles, including yard track. The rail system provides 620,000 rides each weekday; customers depend on the CTA's rail system to deliver them to their destinations quickly and safely. The CTA has committed to an aggressive slow zone rehabilitation schedule. As of October 2008, slow zones on the CTA's system have been reduced to 9.1 percent. While these are considerable achievements, the rest of the CTA's rails and ties are continuing to age. Many of the remaining ties in the subways are past their useful life and will need replacement soon.

Electrical, Signal, and Communications

The electrical, signal, and communications category totals $119.1 million for the CTA's portion of the proposed five-year program, with $26.1 million programmed in 2009. The CTA's five-year program includes $86.6 million for systemwide replacement and upgrade of signals and power distribution and $32.5 million for systemwide security and communication enhancements. The CTA is proposing $19.6 million for upgrading and replacing the signal system for the entire Dearborn Subway, the Congress Branch and a portion of the O'Hare Branch on the Blue Line, and $6.5 million for security and communication enhancements in 2009.

Support Facilities and Equipment

The CTA's portion of the 2009-2013 capital program includes $133 million in the support facilities and equipment category with 2009 funding of $13.3 million. During this capital program period, the CTA will make significant progress in increasing rail station accessibility.

The CTA's five-year program includes upgrades and improvements to various CTA facilities that need repair and require security enhancements. A significant number of rail stations and bus turnarounds have not been improved or enhanced in many years and are in need of upgrades that will improve appearance and give customers a greater sense of security. Many roofs and canopies are nearing or are at the end of their service life and require replacement in order to avoid safety hazards and prevent damage to building interiors and roof structures.

Acquisitions & Extensions

The CTA's portion of the 2009-2013 capital program includes $42.3 million in the acquisition and extensions category in 2009 to complete the funding for the capacity expansion of the Ravenswood Brown Line from Kimball Terminal to Tower 18 in the Loop by extending platforms to accommodate eight-car trains.

Metra Overview

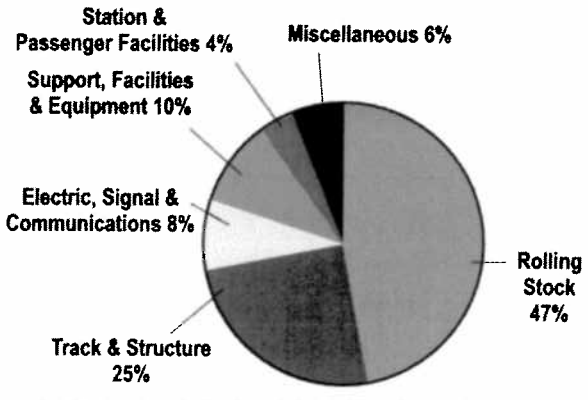
Metra's portion of the proposed 2009-2013 capital program totals $2.2 billion. During this five-year period, Metra will continue to renew its extensive commuter rail infrastructure and replace aging rolling stock. The percentage for the general categories of capital improvements of the total program are: rolling stock at 47 percent; track and structure at 25 percent; electric, signal, and communications at 8 percent; support facilities and equipment at 10 percent; stations and passenger facilities at 4 percent; and contingencies, administration and miscellaneous at 6 percent (Exhibit 7-10).

Highlights of Metra's portion of the 2009-2013 Capital Program are as follows:

Rolling Stock

The five-year rolling stock program totals $1 billion, with $26.4 million planned for 2009. Metra's fleet includes 144 locomotives, 818 non-electric bi-level cars and 171 electric-propelled highliner cars. In order for Metra to maintain a state of good repair, rail cars must undergo rehabilitation every 15 years, meaning that 50 rail cars per year must go through our rehab program. Without a state capital program, Metra has been able to rehab 23 cars per year since 2005, resulting in an 18 to 19-year rehabilitation cycle. Metra's locomotives must be rehabbed every ten years to maintain a state of good repair. Cur-

Exhibit 7-10: **Metra Five-Year Assets by Category** – $2,163 million



rently, that cycle has been extended from 10 to 12 years.

Most pressing is Metra's need to replace 160 highliner cars used on the Metra Electric District. These cars are nearly 40 years old and must be replaced. Replacement costs are currently estimated at $585 million.

In addition to the highliner cars, Metra's five-year capital program calls for the replacement of 50 bi-level gallery cars at $80 million, ten new locomotives at $40 million, the rehab/remanufacture of 130 locomotives at $127 million and the rehab of 213 bi-level cars at $177 million.

Track and Structure

The track and structure category totals $537.1 million over the five years of the program, with $85.1 million planned for 2009.

Track and structure are the foundation of the Metra system. Without the continual renewal of track components, retaining walls and bridges, Metra's reliable on-time service would decline and the wear and tear on our rail cars and locomotives would increase.

To maintain a state of good repair, Metra has established a continual cycle of inspection and renewal for its track and structures. Metra currently replaces 80,000 ties and 45 rail crossings per year. Ballast and track resurfacing is performed on a 4-year cycle, and since 1980, 82 bridges on the Metra system have been replaced.

Track and structure projects includes $350 million for the replacement of bridges, including 29 on the Union Pacific-North Line that are more than 100 years old. Tie and ballast replacement is set at $48 million, railroad crossing replacement is set at $17 million, rail renewal at $28 million, structural upgrades at $30 million and other improvements at $65 million.

Electrical, Signal and Communications

A total of $176.4 million is planned for the five-year program for electric, signal and communications projects that include upgrades and improvements to existing facilities such as interlockers, switches, signal systems, and electrical power control facilities. The 2009 program provides $25 million for numerous projects throughout the system.

Signals and communications systems are vital to safe railroad operations. These signal systems are aging and replacement parts are limited in availability. Although the five-year capital program includes $39.6 million to upgrade our signal systems, without a new state program Metra will be unable to sufficiently fund these necessary upgrades.

The Metra system has 534 at-grade crossings, including 148 that are interconnected with traffic signals. Maintaining and upgrading crossing signal systems is also critical for safety. The 2009–2013 program includes $13 million for crossing signal improvements.

The 2009-2013 program also includes $34 million to upgrade interlockings, which will improve operations efficiency and enable increased capacity on the Metra system; $11 million to upgrade electrical substations on the Metra Electric District; and $35 million for the installation of a communications based train control on the Metra Electric District, Milwaukee District and SouthWest Service Lines. Communications-based train control will provide an added level of safety for their train crews and passengers. In addition, $9 million is allocated for passenger communications improvements, including upgrades to the GPS-based train monitoring system.

Support Facilities and Equipment

The support facilities and equipment category totals $208.7 million for the 2009-2013 planning period, with $17.9 million in the 2009 capital program. Support facilities and equipment includes rail car and locomotive maintenance buildings, storage yards, work crew headquarters, maintenance vehicles and equipment, office buildings, and associated computer hardware and software.

Metra has 18 rail yards and seven maintenance facilities. When Metra took over commuter rail opera-

tions in northeastern Illinois in 1984, most of these facilities were out of date and inefficient. Additional capital investments must be made so that Metra can efficiently repair track, service their rail cars and locomotives and respond to failures such as a signal problem or a broken crossing gate. Equipment and vehicles have reached the end of their useful life and must be replaced

Upgrades and expansions are also necessary to accommodate system expansion. The five-year program includes upgrades to the Weldon Yard on the Electric District. These projects can have an immediate impact on Metra's operating budget since operational costs increase when equipment doesn't run at optimum efficiency.

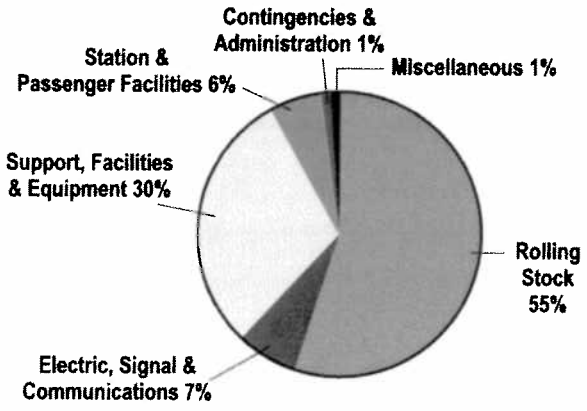
Stations and Passenger Facilities

Station and parking improvements are some of the most visible capital improvements to our customers. The 2009-2013 Capital Program allocates $75.7 million for station and parking improvements. Due to constraints in capital funding, station improvements are being limited to necessary rehabilitation to maintain the integrity of the facilities and upgrades that meet the requirements of the Americans with Disabilities Act (ADA). Parking improvements will be limited to areas where Metra currently owns property that will enable expansion.

Miscellaneous, Contingencies and Administration

Metra's portion of the 2009-2013 capital program includes $138.7 million for station studies, project management and oversight, security improvements, advertising, material additives, insurance, support engineering, unanticipated capital, administration and contingencies, with $26 million programmed in 2009.

Exhibit 7-11: **Pace Capital Program by Category** – $335 million



Pace Overview

Pace's portion of the proposed 2009-2013 capital program totals $335 million. A majority of the funding is provided for the replacement and expansion of rolling stock. The percentage for the general categories of capital improvements of the total program are: rolling stock at 55 percent; electric, signal and communications at 7 percent; support facilities and equipment at 30 percent; stations and passenger facilities at 6 percent, miscellaneous, contingencies and administration at 2 percent. These allocations are illustrated in Exhibit 7-11.

Highlights of Pace's portion of the 2009-2013 capital program are as follows:

Rolling Stock

In the five-year capital program, Pace plans to purchase up to 1,664 transit vehicles for replacement and expansion at a cost of $161.3 million. Pace's fleet consists of 702 fully accessible fixed-route buses, 355 fully accessible paratransit vehicles and 789 vanpool vehicles. Pace's 2009 fixed route bus purchase budget of $11.5 million includes the replacement of 37 fixed route buses. The new 30 foot vehicles will replace buses that have exceeded their useful life.

In 2012 and 2013, Pace also plans to spend $22.1 million to purchase up to 248 paratransit vehicles. In 2009, Pace plans to spend $10.2 million to purchase up to 128 paratransit buses to replace vehicles that have exceeded four years of useful lives or 100,000 miles of service. These vehicles will replace 112 Eldorado buses and add 16 vehicles

to the spare fleet to bring the spare fleet ratio up to 20 percent which is within FTA guidelines. These vehicles will be a combination of buses and vans.

In addition, Pace's portion of 2009-2013 capital program includes $39.9 million for the purchase of vanpool vans. The vanpool program includes 656 vans for the replacement of the vanpool vehicles which have exceeded their useful life and 341 vans for the expansion of service. Pace's vanpool program is comprised of four elements: the Vanpool Incentive Program (VIP), the Corporate Shuttle, the Advantage Program and the Community Transit Program.

Furthermore, this program contains $5.7 million in 2009 to retrofit Detroit Diesel Series 50 engines in existing buses with improved mechanical components and software upgrades that reduce engine exhaust emission through the installation of a diesel multi-stage filter (DMF).

Electrical, Signal and Communications

Pace's portion of the five-year capital program includes $20 million for the purchase and installation of a new systemwide radio system to replace Pace's existing radio system. The existing system is 13 years old, has exceeded its useful life, and parts are becoming difficult to find. The new radio system will not only save operating money, the technology will provide Pace with better communication coverage.

Support Facilities and Equipment

Pace proposes to program $101.2 million over five years for support facilities and equipment. Pace's portion of the capital program includes $42 million for critical improvements to facilities such as the replacement of overhead doors and concrete and upgrade of underground storage tanks. The replacement of facility systems and equipment must be addressed based on a life cycle cost approach, otherwise system failures will result in using operating funds for these repairs which will have a negative impact on the operating budget. Pace's proposed out-year capital program includes $30.5 million for the purchase of a replacement farebox system and $1.7 million for the purchase of bus safety equipment. Pace installed the current farebox system in 1994. Parts for the system are now obsolete. Pace is finding that it is becoming more difficult to find replacement parts due to the age of the system. In addition, the proposed capital program includes $6.1 million in 2010-2012 for the continuation of funding for the purchase and installation of a computer system to replace the existing HPe3000 system with $4.1 million proposed for 2009. Phase IV of this project involves implementing the Human Resources module which will replace the legacy human resources system and the legacy safety sub-system. The HPe3000 technology is no longer supported by Hewlett Packard.

Stations & Passenger Facilities

The five-year program includes $19.8 million for Pace stations and passenger facilities. This funding will provide for improvement to transportation centers and transfer facilities, expansion of the Homewood Park-n-Ride facility and construction of a new Park-n-Ride facility in Plainfield, as well as the purchase of bus stop signs, shelters and other passenger amenities.

Miscellaneous and Project Administration

The 2009-2013 capital program contains Congestion Mitigation and Air Quality (CMAQ) funding of $1 million for the I-GO Car Share Program. The CMAQ committee has authorized Pace to apply for $1 million to launch an I-Go Car Share Program in the suburbs. Pace will work with the Center for Neighborhood Technology (CNT) in the development of this program. The City of Chicago has a similar program in place since 2002. Pace's CMAQ grant will allow 75 cars to be leased for use in the suburbs. This program has no operating cost impact.

Addendum

On October 23, 2008, the RTA Board approved the RTA 2009 Programs of Projects consistent with legislative mandates and RTA's updated Strategic Plan. Innovation, Coordination and Enhancement (ICE) Program is available to units of local government, transportation agencies and the RTA Service Boards for operating and capital projects that enhance the coordination and integration of public transportation, or that develop and implement innovations to improve the quality and delivery of public transportation. Funding for the program was provided through $10 million from the regional 2008 budget as mandated by the new RTA Act amendments, matched by the project sponsor 50/50% for operating projects and 80/20% for capital projects. This Addendum adds seven capital projects totaling $7.6 million to the previously published Exhibit 7-13, Five-Year Capital Program.

Exhibit 7-13 (Addendum): **CTA Five-Year Capital Program/ICE Projects**—(dollars in thousands)

	Project & Title	**Classification**	**2009**
Electrical, Signal & Communications—Bus			
073.171	Purchase/Install Automatic Bay Reading System for Bus Garages -- Systemwide	Enhance	1,600
110.014	Install up to 100 Bus Arrival Signs -- Systemwide	Enhance	2,371
	Subtotal Electrical, Signal & Communications-Bus		3,971
	Total for CTA ICE Projects		3,971

Exhibit 7-12 (Addendum): **Non-Service Board Five-Year Capital Program/ICE Projects** — (dollars in thousands)

Support Facilities & Equipment-Bus			
	Provide for Improvements to Bus Facilities for Circulator Routes -- DuPage County	Enhance	778
	Purchase Dispatching System for Paratransit Service -- Rich Township	Enhance	190
	Subtotal Support Facilities & Equipment-Bus		968
Stations & Passenger Facilities-Rail			
	Provide for Access Improvements at Metra Station -- Village of Riverside	Enhance	665
	Provide for Station Area Improvements at Oakton Station -- Village of Skokie	Enhance	1,622
	Provide for Sheltered Bike Parking at CTA and Metra Stations -- City of Chicago	Enhance	375
	Subtotal Stations & Passenger Facilities-Rail		2,662
	Total for Non-Service Board ICE Projects		3,630
	Grand Total for ICE Projects		7,601

Capital Impact on Operations

Capital investments by the three Service Boards are intended to improve public transit service while reducing operating costs. Procurement of replacement vehicles for bus and rail fleets will improve service reliability, while reducing maintenance costs and fuel consumption. Similarly, investment in vehicle overhaul and preventive maintenance programs will reduce service failures and vehicle down time. Rail line expansion and infrastructure improvements will increase passenger capacity and travel speed, as well as improve safety. System-wide improvements, including upgrades in passenger and maintenance facilities, communications and computer equipment, and security systems will improve employee productivity, operating efficiency, and passenger safety (Exhibits 7-14, 7-15, and 7-16).

The RTA public transit network has faced significant operating and capital funding challenges in recent years. Insufficient operating and capital funding in recent years have forced the RTA and the CTA, Metra, and Pace to make tough spending decisions in order to maintain vital transportation services for millions of passengers throughout northeastern Illinois. Despite these challenges, the system was able to fulfill its critical responsibilities to the people, businesses, and institutions of the nation's third largest metropolitan region.

CTA

The proposed 2009 Capital Program for CTA totals $232.1 million divided among the following: Rolling Stock $136.5 million; Track & Structure $9.8 million; Electrical, Signal & Communications $26.1 million; Acquisition and Extension $42.3 million; Support Facilities and Equipment $13.3 million; and Miscellaneous $4 million. CTA's 2009 Capital Program also includes $4 million of RTA Innovation, Coordination & Enhancement funds for Electrical, Signal & Communications projects.

Exhibit 7-14: **CTA Capital Impact on Operations** (includes some of the major programs only)

Rolling Stock	
Replacement of Buses ($6.7 million)	• Improve service reliability • Increase customer satisfaction • Reduce maintenance and operating costs
	• Enhance safety
Replacement Rail Cars ($78.5 million)	• Increase fleet reliability (Rail cars to be replaced exceed the 25-year FTA standard life of a rapid transit car by at least 5 years.)
	• Reduce maintenance costs
Track & Structure	
Rehabilitation of existing rail lines ($9.8 million)	• Raise travel speed by reducing slow zone restrictions
	• Enhance safety • Improve on-time performance • Increase customer satisfaction
Support Facilities & Equipment	
Upgrade rail stations and bus turnarounds ($7.1 million)	• Prevent damage and reduce maintenance costs • Enhance safety and customer satisfaction
Acquisitions & Extensions	
Brown Line capacity expansion ($42.3 million)	• Increase ridership by extending platforms to accommodate eight-car trains • Improve accessibility

Metra

The proposed 2008 Capital Program for Metra totals $166.0 million which is divided among the following: Rolling Stock for $24.4 million; Track & Structure for $63.5 million; Electrical/Signal/Communications for $24.7 million; Support Facilities & Equipment for $22.5 million; Stations & Passenger Facilities for $12.7 million; and Miscellaneous for $18.2 million.

Ballast, track, and signal upgrade at Metra's Milwaukee West line

Exhibit 7-15: **Metra Capital Impact on Operations** (includes some of the major programs only) Rolling Stock

Rehabilitation of Commuter Bi-level cars ($14.5 million)	• Maintain on-time performance • Reduce maintenance cost • Enhance safety • Increase customer satisfaction
Track & Structure	
Rehabilitation of Bridges ($50.1 million)	• Preserve uninterrupted service – higher on-time performance • Improve vertical clearances • Improve traffic flow and pedestrian safety
Electrical Signal & Communication	
Signal system upgrade ($10.5 million)	• Improve travel times resulting in higher on-time performance • Enhance safety
Stations and Passenger Facilities	
Rehabilitate/improve/construct stations ($13.0 million)	• Increase other revenue by providing more commercial and retail space
Expand commuter parking ($7.7 million)	• Increase ridership

Pace

The proposed 2009 Capital Program for Pace totals $43.3 million divided among the following: Rolling Stock $31.1 million; Electrical, Signal & communications $1.0 million; Support Facilities & Equipment $6.8 million; Stations & Passenger Facilities $0.6 million; and Miscellaneous, Contingencies & Administration $1.6 million.

NABI bus - Pace Rapid Transit project

Exhibit 7-16: **Pace Capital Impact on Operations** (includes some of the major programs only)

Rolling Stock	
Purchase of 37 fixed route accessible buses ($11.5 million)	• Reduce maintenance costs • Improve travel time • Enhance safety • Lower fuel consumption
Diesel engine retrofit with improved mechanical components, software upgrades, and diesel multi-stage filters ($5.7 million) and Bus Overhaul Maintenance ($2.0 million)	• Reduce operating expenses • Lower maintenance costs • Reduce engine exhaust emissions
Purchase of 128 paratransit Dial-A-Ride buses and vans ($11.5 million)	• Increase ridership • Reduce maintenance costs • Improve travel time • Enhance safety • Lower fuel consumption
Electrical, Signal & Communication	
Transit Signal Priority projects ($1.0 million)	• Shorten travel time • Improve schedule reliability • Increase customer satisfaction • Reduce vehicle requirement to operate service while maintaining headway
Support Facilities and Equipment	
Computer Systems ($5.1 million)	• Operating labor investment of $1.1 million, primarily staff time associated with implementation of new system
Regional Call Center ($2.2 million)	• Improve access to transportation services for disabled individuals • Integrate and coordinate services for individuals with disabilities, older adults, and individuals with low incomes.

8 Appendices

Exhibit 8-1: **2009 Business Plan Calendar (dates listed are in 2008)**

Apr 17	RTA Finance Committee meets for Business Plan Call release.
May-Jul	RTA holds Community and County outreach meeting to review legislative actions and collect suggestions for consideration in business plan development.
Jul 11	Service Boards submit environment assessments to the RTA for review and discussion.
Aug 1 - 15	Service Boards submit ten-year business plan documents (budget, two-year financial plan, seven-year view, and capital program plans) to the RTA.
Aug 21	The RTA Executive Director submits a report to the RTA Board regarding the adequacy of the Service Boards' Business Plan submittals for its review and discussion at the August 21, 2008 RTA Board meeting.
Aug-Sep	The RTA Executive Director prepares the finance and ordinance information required to: (1) establish the operating funding amounts for the budget for the upcoming year and the financial plan for the subsequent two years for each Service Board, (2) set the budget recovery ratio for the upcoming year for each Service Board, (3) set the preliminary capital program amounts for the upcoming five years, and (4) set the preliminary ten-year capital plan funding marks.
Sep 15	RTA Finance Committee and Board meet to discuss and consider adoption of ordinances which (1) establish the operating funding amounts for the budget for the upcoming year and the financial plan for the subsequent two years for each Service Board, (2) set the budget recovery ratio for the upcoming year for each Service Board, and (3) set the preliminary capital program amounts for the upcoming ten years.
Sep-Oct	RTA evaluates Service Boards' current year performance for consistency with the adopted budget and the Strategic Plan, and provides guidance to the Service Boards to use in preparing their Business Plan Documents (defined below).
Sep-Oct	Based on RTA Board action, Service Boards develop the following materials (going forward referenced as Business Plan Documents): • detailed annual operating budgets, • two-year financial plans, • seven-year long-term financial view, • preliminary five-year capital programs, and • preliminary ten-year capital plan.
Oct-Nov	Service Boards release proposed Business Plan Documents to the RTA, the public, and present to the Counties in the region. RTA Executive Director analyzes Service Board Business Plan Documents and provides comments to Service Boards.
Oct 23	RTA Board Committees and the RTA Board review the RTA Agency Budget.
Nov 15	Service Boards adopt Business Plan Documents and submit them to the RTA no later than November 15.
Nov 20	RTA prepares consolidated Business Plan Documents and the Chairman and of the RTA Board and/or the Chairman of the RTA Board Finance Committee approve the release of such documents.
Nov 28	RTA proposed consolidated Business Plan Documents are made available for public inspection.
Nov-Dec	RTA presents operating and capital program information to the Counties in the region in November and December. RTA holds public hearings in December on the proposed consolidated Business Plan Documents.
Dec 18	RTA Finance Committee meets to review and approve consolidated Business Plan Documents, and the Board will review and consider concurrence with the 2012-2018 long-term financial view and the 2014-2018 Capital Plan. RTA Board meets to review and approve consolidated Budget, Financial Plan and Capital Program Documents, and the Board will review and consider concurrence with the 2012-2018 long-term financial view and the 2014-2018 Capital Plan.

Exhibit 8-2.1: **RTA August Community Meetings/Budget Hearings Schedule**

The RTA is seeking public input regarding the 2009 budget and summarizing the new transit legislation and RTA governance reforms. Input will also be invited on the strategic plan update of how transit projects will be assessed and prioritized as well as the status of capital investment needs to fund transit projects.

For more information, visit www.MovingBeyondCongestion.org.

Public Hearing Overview

Section 4.01 of the RTA Act directs the RTA to hold public hearings on its annual consolidated budget and financial plan prior to Board consideration of the ordinance adopting the budget and plan. In 2008, the RTA held thirteen public hearings from August 4 through August 14, twelve from November 10 through November 19 and one on December 15. The hearings in August as well as the hearings in November/December took place as follows: five in the City of Chicago (north, east, south, west and central), three in suburban Cook (north, south and west), and one each in Lake, Will, DuPage, Kane and McHenry counties. The meetings were publicized in press releases issued to the media, paid half-page ads in newspapers across the region, e-mails and calls to Moving Beyond Congestion Partners for Transit, the RTA's InTransit newsletter, a special communication to elected officials, as well as through the Service Boards, at reduced fare presentations, and on MovingBeyondCongestion, RTA, all service boards and many Partners For Transit websites. Additionally, we conducted over a dozen radio interviews, had three television mentions and one cable TV show interview (in Spanish and English).The hearing schedules are detailed in Exhibit 8-2.

At these meetings, the RTA briefed the public on the proposed RTA 2009 Budget, provided an update on the Moving Beyond Congestion strategic plan, briefed the public on the new transit legislation, underscored the need for capital investment, provided an overview of the RTA Funding Program grant awards and responded to over 750 comments and questions. Presenters included Executive Director Steve Schlickman and RTA senior management who were joined by RTA board members at all the hearings as well as 19 staff volunteers. The approximately 380 attendees included members of the general public, representatives of municipalities, Partners for Transit organizations, and State and local elected officials.

The majority of comments on record were supportive of State legislation that calls for additional transit funding, a call for more effective RTA oversight, requests for new services and an appreciation for Funding Programs awards. Strong opposition to fare increases was also expressed along with concerns about paratransit service. Court reporters were present to take testimony, and transcripts of this testimony are on file at the RTA.

Glossary

Accessible—As defined by FTA, a site, building, facility, or portion thereof that complies with defined standards and that can be approached, entered, and used by persons with disabilities.

Accessible Service—A term used to describe service that is accessible to non-ambulatory riders with disabilities. This includes fixed-route bus service with wheelchair-lifts or dial-a-ride service with wheelchair lift-equipped vehicles.

ADA (The Americans with Disabilities Act of 1990)—This federal act requires many changes to transit vehicles, operations and facilities to ensure that people with disabilities have access to jobs, public accommodations, telecommunications, and public services, including public transit.

ADA Paratransit Service—Non-fixed-route paratransit service utilizing vans and small buses to provide pre-arranged trips to and from specific locations within the service area to certified participants in the program.

Administration Expenditure—Expenditures for labor, materials and fees associated with general office functions, insurance, safety, legal services, and customer services.

Agency Fund—This fiduciary fund accounts for the assets held by the RTA in a trustee capacity or as an agent for the CTA, Metra, and Pace, rather than for the RTA's own programs. (Of the four types of fiduciary funds [Agency funds, pension (and other employee benefit] funds, investment trust funds, and private-

purpose funds), the RTA uses only the first two.)

Ambulatory Disabled—A person with a disability that does not require the use of a wheelchair. This would describe individuals who use a mobility aid other than a wheelchair or have a visual or hearing impairment.

Appropriation—A legal procedure that permits a specified amount of funds for a given operating or capital purpose to be expended; the RTA appropriates funds for expenditures.

Balanced Budget—A budget in which expected revenues equal expected expenses during a fiscal period.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

Budget—Funds allocated by the RTA Board for a particular purpose; each year the RTA Board approves a budget document for the following year. Funds are allocated either by "programming" them or by "appropriating" them.

Budget Marks—The Regional Transportation Authority Act, as amended in 1983, requires the RTA to advise each of its Service Boards by September 15 of each year of its required revenue recovery ratio for the subsequent year, and the public funding estimated to be available for the next three years. These figures are referred to as budget marks.

Bus Bunching—A traffic scenario in which more than one bus arrives at the same time. This phenomenon is a subject of several CTA initiatives aimed at reducing service problems through improved field management of traffic and schedules.

Bus Rapid Transit (BRT)—BRT combines the quality of rail transit and the flexibility of buses. It can operate on exclusive transitways, High Occupancy Vehicle (HOV) lanes, expressways, or ordinary streets. A BRT system combines intelligent transportation systems technologies, priority for transit, cleaner and quieter vehicles, rapid and convenient fare collection, and integration with land use policies.

Capacity Utilization—The percentage of seats occupied in a train or bus at a given point in time.

Capital—Funds that finance construction, renovation, and major repair projects or the purchase of machinery, equipment, buildings, and land.

Capital Expenditure—Expenditures that acquire, improve, or extend the useful life of any item with an expected life of three or more years and a value of more than $5,000, e.g., rolling stock, track and structure, support facilities and equipment, and stations and passenger facilities.

Car Mile or Vehicle Mile—A single bus, rapid transit car, or commuter rail car traveling one mile.

Circuit Breaker Program—The Illinois Department on Aging's Circuit Breaker program provides assistance to low-income senior citizens and persons with disabilities. Illinois residents with a qualifying disability who meet the income eligibility requirements of the Circuit Breaker program are eligible for free rides on regularly scheduled fixed-route public transit service.

CMAP (The Chicago Metropolitan Agency for Planning)—Formed in 2005, CMAP integrates planning for land use and transportation in northeastern Illinois. The new organization combined the region's two previously separate transportation and land-use planning organizations -- Chicago Area Transportation Study (CATS) and the Northeastern Illinois Planning Commission (NIPC) -- into a single agency.

CMAQ (Congestion Mitigation/Air Quality) Grant—A federal grant program designed to support transportation projects that reduce traffic congestion.

Cost Per Mile—Operating expense divided by vehicle miles for a particular program or in total.

Cost Per Passenger—Operating expense divided by ridership for a particular program or in total.

CTA (Chicago Transit Authority)—The CTA operates bus and rapid transit service in the City of Chicago and several suburbs. The CTA was created by state legislation and began operations in 1947.

Dead-Head—The time when a transit vehicle is traveling toward a yard, shop, or the start of a run but

is not in revenue service. Car miles include deadhead miles.

Debt Service—The payment of interest on and the repayment of principal on long-term borrowed funds according to a predetermined payment schedule.

Defeasance of Bonds—a technique used to discharge older high-rate debt prior to maturity with new securities bearing lower interest rates.

Deficit—For a particular Service Board, the difference between system-generated revenues and system operating expenses. The deficit is sometimes referred to as the "public funding requirement." The RTA's current practice is to provide operating funds to each Service Board equivalent to their budgeted deficit for the year as opposed to the actual deficit. For the RTA, its deficit or surplus equals total revenues (sales tax, PTF, interest, and other income) less operating funding, debt service, technology, and capital funding (RTA capital and RTA discretionary funding of Service Board capital).

Depreciation—Expiration in the service life of fixed assets, other than wasting assets, attributable to wear and tear, deterioration, action of the physical elements, inadequacy, and obsolescence. The portion of the cost of a fixed asset, other than a wasting asset, charged to expense during a particular period.

Dial-A-Ride Service—Paratransit service that requires the user to call ahead and schedule service.

Discretionary Funds—Funds that the RTA allocates, at its discretion, to the Service Boards. These funds include the PTF and a portion of the 15 percent of the RTA Sales Tax.

Elderly—A term used to describe individuals who are 65 years of age or older. This age is used to qualify for the RTA Senior Citizen Reduced Fare Card. Note that some paratransit services define elderly individuals at an age other than 65.

Express Bus (or route)—A suburban or intercity bus that operates a portion of its route without stops or with a limited number of stops.

Favorable Performance—In a comparison of actual results to budgeted levels, favorable performance describes the situation in which expenditures are less than budget or revenue exceeds budget.

Farebox Revenue—Revenue obtained from passengers and other fare subsidies except the state reduced fare subsidy program. Also referred to as "system-generated" revenue.

Fares—The amount charged to passengers for use of various services.

Feeder Bus Services—Pace bus routes that serve Metra stations.

Financial Plan—In addition to an annual budget, the RTA Act, as amended in 1983, requires the RTA and its Service Boards to develop a financial plan for the two years subsequent to the upcoming budget year. In combination with the annual budget, this provides a three-year projection of expenses, revenues, and public funding requirements.

Fiscal Year—The calendar year is the fiscal year for the RTA, CTA, Metra, and Pace. The fiscal year of the State of Illinois extends from July 1 through June 30 of the following year. The fiscal year of the federal government extends from October 1 through September 30 of the following year.

Fixed-Route Service—Buses that operate according to fixed schedules and routes.

Flexible Funds—Federal funds made available by TEA-21 that can be used for various transportation projects, including both highway and mass transit projects. Allocation of these funds is at the discretion of state and local agencies.

Fringes (Fringe Benefit Expenditures)—Pay or expenditures to or on behalf of employees in addition to salaries and wages, including sick pay, vacation pay, pension contributions, life and health insurance, unemployment and workers' compensation, social security costs, and other programs.

FTA (Federal Transit Administration)—The FTA is the federal agency that helps cities and communities provide mobility to their citizens. Through its grant programs, FTA provides financial and planning assistance to help plan, build, and operate rail, bus,

and paratransit systems. Since 1988, the only FTA funding available to the RTA has been for capital projects.

Full Funding Grant Agreement (FFGA)—The FTA is required to use a FFGA to prove financial assistance for new start projects. The FTA also has the discretion to use an FFGA in awarding federal assistance for other major capital projects. The FFGA defines the project, including cost and schedule; commits to a maximum level of federal financial assistance (subject to appropriation); establishes the terms and conditions of federal financial participation; covers the period of time for completion of the project; and helps to manage the project in accordance with federal law. The FFGA assures the grantee of predictable federal financial support for the project (subject to appropriation) while placing a ceiling on the amount of that federal support.

Full-Time Equivalent Position (FTE)—A measurement equal to one staff person working a full-time work schedule for one year.

Fund Balance—The cumulative difference between revenues and expenses over the life of a fund. The excess of funding over deficit for a given period of time. In this document, the fund balance refers to the unreserved/undesignated funds in the Agency and general fund.

Funding Formula—A specific formula used to determine a subsidy level.

General Long Term Debt Account Group (GLTDAG)—This account group is not a fund but a separate list of certain long-term liabilities of the general government. Debt normally is recorded at its face value, without premium or discount. Additions to and deletions from GLTDAG are disclosed in the notes to the financial statements.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

General Fund—The operating fund that is used to account for all financial resources and normal recurring activities except for those required to be accounted for in another fund.

General Obligation Bonds (GO Bonds)—are bonds that are legally backed by the full faith, and credit of the issuing government. The government is legally obligated to use its full taxing power, if necessary, to repay the debt.

Gross Domestic Product (GDP)—Reported by the Bureau of Economic Analysis, this measure of economic activity is the sum of the market values of all of the final goods and services produced in the United States in a year.

Grants—Moneys received from local, federal, and state governments to provide capital or operating assistance.

Headway—The time span between service vehicles (bus or rail) on a specified route.

Illinois FIRST—A group of legislation passed by the Illinois Legislature to fund capital improvements for the state's infrastructure, roads, schools and transit.

Infrastructure—The physical assets of the RTA system, e.g., rail lines and yards, power distribution, signaling, switching, and communications equipment, passenger stations, information systems, and roadways, upon which the continuance and growth of transit depend.

In-Kind Service—These services are provided at no cost to a Service Board.
For example, the City of Chicago provides free of charge dedicated security forces to the CTA.

Innovation, Coordination and Enhancement (ICE) Fund—A new fund created to award grants to the Service Boards, transportation agencies, and local governments, for short-term, lower-cost projects and service enhancements.

Intelligent Bus System (IBS)—A bus communications system that uses advanced technology to monitor and improve performance on various levels. Pace's new bus communications system includes radio voice and data communications, Computer-Aided Dispatching (CAD) and Global Positioning

Satellite (GPS)-based Automatic Vehicle Location (AVL) functions.

Intelligent Transportation Systems (ITS)—The application of advanced sensor, computer, electronics, and communication technologies and management strategies in an integrated manner to increase the safety and efficiency of the surface transportation system. ITS is a national effort designed to promote the use of advanced technologies in multimodal transportation.

Interest—The charge for borrowing money, typically expressed as an annual percentage rate.

ISTEA (Intermodel Surface Transportation Efficiency Act of 1991)—ISTEA amended the Federal Transit Act introducing new sources of flexible funds and increasing the funding authorized for public transit.

Joint Self Insurance Fund (JSIF)—The RTA provides excess liability insurance to protect the self-insurance programs maintained by the CTA, Metra, and Pace. The service boards are obligated to reimburse the JSIF for any damages paid plus a floating interest rate.

Labor Expenditure—The cost of wages and salaries (including overtime) to employees for the performance of their work.

Line Item—An appropriation that is itemized on a separate line in a budget.

Linked Trip—A single, one-way trip without regard for the number of vehicles boarded to make the trip (i.e., a home-to-work trip taken by boarding a bus, to a train, to another bus represents one linked trip or three unlinked trips)

Maintenance Expenditure—Expenditures for labor, materials, services, and equipment used to repair and service transit and service vehicles and facilities.

Metra—The Commuter Rail Division of the RTA responsible for all rail public transit service with the exception of those services provided by the CTA. Metra was created in 1983 by an amendment to the RTA Act.

Mobility Limited—An individual who has a physical impairment, including impaired sensory, manual, or speaking abilities that result in functional limitations.

Modified Accrual Basis—A type of accounting whereby revenue and other financial resource increments (e.g., bond issue proceeds) is recognized when they become both "measurable" and "available" for finance expenditures of the current period. "Available" means collectible in the current period or soon enough thereafter to be used to pay liabilities of the current period. Similarly, expenditures (e.g., debt service payments and a number of specific accrued liabilities) are only recognized when payment is due because it is only at that time that they normally are liquidated with expendable available financial resources.

Moving Beyond Congestion—Jointly with the Chicago Transit Authority, Metra and Pace, the Regional Transportation Authority is leading a strategic planning effort to maintain, enhance and expand the northwestern Illinois region's transit system and to solve the current transit funding challenge, ensure financial viability and accountability, and meet the region's growing and changing transportation needs.

New Initiative—A new program or service that the RTA may approve separately from the Agency's or a Service Board's regular budget. The RTA may attach special criteria to measure the success of a new initiative.

Non-Ambulatory Disabled—A person who has a disability that requires use of a wheelchair.

Operating Assistance—Financial assistance for transit operations (as opposed to capital) expenditures. Such aid may originate with federal, state, or local governments.

Operating Budget—The planning of revenue and expenditures for a given period of time to maintain daily operations.

Off-Peak—Non-rush hour time periods.

Pace—The Suburban Bus Division of the RTA responsible for all non-rail suburban public transit service with the exception of those services provided

by the CTA. On July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the RTA region. Pace was created in 1983 by an amendment to the RTA Act.

Paratransit Service—Any transit service that is not conventional fixed-route bus or rail service, including Dial-A-Ride, fixed-route deviation, shared-ride taxicab, and vanpool services.

Passenger Mile—A single passenger traveling one mile.

Peak Period—Morning or evening rush hour.

Principal—The amount borrowed or the amount still owed on a loan, separate from the interest.

Positive Budget Variance (PBV)—Calculated as the difference between a Service Board's budgeted and actual deficit, a positive budget variance results when the actual deficit is less than budgeted. Since the RTA funds the budgeted deficit, a PBV represents available funds for the Service Boards.

Program (verb)—To commit funds, for a given capital purpose, without necessarily appropriating these funds for expenditure. When the RTA Board passes its official budget document, certain funds are "programmed" so that they may be obligated (i.e., contracts signed) during the upcoming year; these funds may be expended during the upcoming or subsequent years.

Program (noun)—Groupings of expenditure accounts with related expenditures (i.e., operations, maintenance, administration, and capital program).

Public Transportation Fund(s) (PTF) —Each month the state transfers from its General Revenue Fund into the Public Transportation Fund an amount equal to 25 percent of the RTA Sales Tax collected in the previous month. All funds deposited in the Public Transportation Fund are allocated to the RTA to be used at its discretion for the benefit of the Service Boards.

Public Funding—Funding received from the RTA. Generally refers to funding for operating expenditures.

Purchase of Paratransit Service—The amount of money paid to contractors to provide door-to-door transportation to certified participants in the ADA paratransit Service program.

Recovery Ratio—System-generated revenues divided by system operating expenditures as allowed by the RTA Act. This ratio is calculated for each of the Service Boards and for the RTA region as a whole. The RTA Act mandates that the RTA region attain an annual recovery ratio of at least 50 percent for mainline service. For ADA paratransit service, the Act requires a 10% recovery ratio in 2008 and 12% thereafter.

Reduced Fares—Discounted fares for children age 7-11, grade and high school students (with CTA ID), seniors 65 and older (with RTA ID), and riders with disabilities (with RTA ID) except paratransit riders.

Revenue Car Mile—Car mile during which the vehicle is in revenue service (i.e., picking up and/or dropping off passengers).

Reverse Commute—City-to-suburb commute. This phrase refers to the fact that most riders commute from the suburbs to the city.

Ridership (unlinked passenger trips)—Each passenger counted each time that person boards a vehicle.

Rolling Stock—Public transportation vehicles including commuter rail cars, locomotives, rapid transit cars, buses, and vans.

RTA Sales Tax—1 percent in Cook County, 0.25 percent in the collar counties of DuPage, Kane, Lake, McHenry and Will. 85 percent of the sales tax is fully distributed to the Service Boards by the RTA according to formulas established by the RTA Act. Fifteen percent of the sales tax is retained by the RTA, a portion of which is distributed to the Service Boards at the RTA's discretion.

SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users)—Signed into law on August 10, 2005, this legislation provides $286.4 billion in guaranteed funding for federal surface transportation programs through federal fiscal year (FFY) 2009 of which $52.6 billion is for federal transit programs over six years.

Sales Tax Designated for Capital or Transfer Capital-Statutory—The difference between a Service Board's entitlement (from the 85 percent of the RTA sales tax) and its budgeted or actual deficit, whichever is greater. These funds, which are over and above operating needs, are generally used for capital purposes. Metra is the only Service Board that has generated by statute sales tax for capital in more than a decade.

SCIP (Strategic Capital Improvement Program) Bonds—The RTA was authorized under the RTA Act to issue $500 million of bonds for public transportation projects approved by the Governor of the State as part of the RTA's Strategic Capital Improvement Program (SCIP). Effective January 1, 2000, the Act was amended to authorize the RTA to issue an additional $260 million of SCIP bonds in each year for the period of 2000 through 2004.

Series B Bonds—State Transportation Bonds used as all or a portion of the local share required to match federal funds for public transportation capital projects.

Service Boards—The term refers to the region's three transit operators: CTA, Metra and Pace.

Signal Priority—Transit signal priority either gives or extends a green signal to transit buses under certain circumstances to reduce passenger travel times, improve bus schedule adherence, and reduce bus operating costs.

Special Service—A transportation service, as defined by the FTA, specifically designed to serve the needs of persons who, by reason of disability, are unable to use mass transit systems designed for the use of the general public.

State Financial Assistance (SFA)—Subject to appropriation by the State, this assistance reimburses the debt service expenses of the RTA's Strategic Capital Improvement Program (SCIP) bonds.

Subscription Service—Special services for users who ride on a frequent and regular basis and follow a prescribed schedule (a minimum of three times per week between the same origin and destination).

Subsidy—Funds received from another source that are used to cover the cost of a service or program that is not self-supporting.

System-Generated Revenue (Total Operating Revenue) —Total revenue generated from operations includes farebox revenue, local subsidies, state fare subsidies, advertising, interest and all other income (excludes RTA and federal subsidies).

Taxi Access Program (TAP)—Certified participants in the ADA paratransit service program can purchase taxi vouchers valued at up to $13.50 at a reduced price to pay for one-way taxi rides that originate within the City of Chicago.

TEA-21 (The Transportation Equity Act for the 21st Century)— Signed into law on June 9, 1998, this legislation provided a six-year reauthorization of the federal transit program and the necessary contract authority needed to fully fund the fiscal year 1998 obligation limitations contained in the fiscal year 1998 Department of Transportation Appropriations Act.

T-FLEx (Transit Finance Learning Exchange)— A strategic alliance of transit agencies formed to leverage mutual strengths and continuously improve transit finance leadership, development, training practices, and information sharing. Its purpose is to transform the finance function into a value-added business partner within each transit authority. Members meet twice annually in a facilitated workshop environment to develop and share best practices in active roundtable work sessions.

TOD (Transit-Oriented Development or Transit-Oriented Design)— Mixed use development of residential, office and retail uses within walking distance of a transit station or bus route.

Total Vehicle Miles—The sum of all miles operating by passenger vehicles, including mileage when no passengers are carried.

Unreserved Fund Balance—The balance of funds that have not been reserved, designated or programmed into the budget, financial plan, or capital program.

Vanpool—Pace's VIP (Vanpool Incentive Program) is a service where a group of 5 to 15 people commute to and from work together in a Pace-owned van.

Supplemental Data

National Economic Projections

During the third quarter of 2008, the Gross Domestic Product (GDP) contracted at an annual rate of 0.5 percent, following 0.9 percent and 2.8 percent annual growth rates during the first and second quarters of 2008, respectively. The GDP is the value of the output of goods and services produced by labor and property located in the United States. Exhibit 8-3 highlights the annual real GDP growth from 2004 through 2009. GDP growth declined from 3.6 percent in 2004 to 2.0 percent in 2007. The GDP is expected to grow 1.2 percent in 2008 and then contract 2.2 percent in 2009.

In 2008, the national unemployment rose from 6.8 percent in November to 7.2 percent in December. Exhibit 8-4 shows the U.S. annual unemployment rate from 2004 through 2009. The annual average unemployment rate declined from 5.5 percent in 2004 to 4.6 percent in 2006, remained at 4.6% in 2007, and then rebounded to 5.7 percent in 2008. The national unemployment rate is expected to climb to 8.3 percent in 2009.

Exhibit 8-5 shows the annual growth of the U.S. Consumer Price Index (CPI) from 2004 through 2009. The CPI annual growth rate increased from 2.7 percent in 2004 to 3.4 percent in 2005, before declining to 2.8 percent in 2007. CPI annual growth is expected to jump to 4.1 percent in 2008 before falling to 0.1 percent in 2009.

RTA Region

The following sections summarize population and employment trends in the six-county RTA region. These trends have a significant impact on public transportation ridership, as well as sales tax revenue.

Population

As shown in Exhibit 8-6, the population of the RTA region grew by 4.0 percent (from 8.1 million to 8.4 million) between 2000 and 2007. Population growth in the RTA region grew at slower pace than the overall population of the United States, which increased by 6.7 percent during this period.

Since 1990, most of the region's population growth has occurred in the suburbs. Exhibit 8-7 illustrates the annualized population growth rates for each of the region's six counties between 2000 and 2007. The highest growth rate occurred in Will

Exhibit 8-6: **Population Trend by County** (in thousands)

	1990	2000	2007	% Change
Cook	5,105	5,377	5,285	-1.7%
DuPage	782	904	929	2.8%
Kane	317	404	501	24.0%
Lake	516	644	710	10.2%
McHenry	183	260	316	21.5%
Will	357	502	674	34.1%
Total	**7,261**	**8,092**	**8,415**	**4.0%**

Source: United States Census Bureau

County, where the population increased at annual rate of 4.3 percent. The population of Kane and McHenry counties grew at annual rates of 3.1 percent and 2.8 percent, respectively, while the population of Lake and DuPage counties increased at annual rates of 1.4 percent and 0.4 percent, respectively. Cook County experienced a population decline at an annual rate of 0.2 percent. During this 7-year period, the population of the entire RTA region grew at an annual rate of 0.6 percent.

In 2007, Cook County accounted for 63 percent of the 8.4 million people living in the RTA region. DuPage County's population comprised 11 percent of the region, followed by Lake County and Will County (8 percent each), Kane County (6 percent), and McHenry County (4 percent). The population distribution for 2007 is illustrated in Exhibit 8-8.

Employment

Exhibit 8-9 provides a comparison of the national unemployment rate, the unemployment rate in the State of Illinois, and the unemployment rates in each of the counties of the RTA region from 2004 to 2008. Between 2004 and 2006, the national unemployment rate declined from 5.5 percent to 4.6 percent, remaining at that rate in 2007. Between 2004 and 2006, the unemployment rate in Illinois fell from 6.2 percent to 4.5 percent before rebounding to 5.0 percent in 2007. In November 2008, the State-wide unemployment rate of 7.3 percent was 0.6 percentage points higher than the national unemployment rate of 6.7 percent.

Between 2004 and 2008, the Illinois state-wide unemployment rate exceeded those of most of the counties of the RTA region except Cook. Among the six counties in the RTA region, DuPage County's November 2008 unemployment rate of 5.0 percent was the lowest in the region, while Lake County's rate of 7.7 percent was the highest in the region.

Suburban jurisdictions have led the region in employment growth since 1980. In 2000, employment

in the five collar counties accounted for one-third of the RTA region's total. Cook County, which in 1980 accounted for 79 percent of the region's employment, accounted for only two-thirds of employment in 2000. Regional employment has increased from 3.7 million in 1980 to 4.3 million in 1990 and to 5.0 million in 2000 (Exhibit 8-10).

The trends in employment by economic sector in the RTA region are illustrated in Exhibit 8-11. Between 1980 and 2000, the most growth has occurred in the service sector. The manufacturing sector experienced the greatest loss during this period. In 2000, services comprised 34 percent of employment, retail trade 15 percent, manufacturing 13 percent, government 11 percent, and finance, insurance, and real estate 10 percent. Combined, wholesale, transportation and public utilities, construction, and other comprised the remaining 17 percent.

The RTA region experienced steady growth in per capita income from 1980 to 2000. Within the region, per capita income was highest in DuPage and Lake Counties in 2000 and lowest in Kane and Will counties, as illustrated in Exhibit 8-12.

Sales Tax Trends

In April 2008, the RTA sales tax increased from the equivalent of one percent on retail sales in Cook County and one quarter percent on retail sales in

the collar counties to the equivalent of one and one quarter percent on retail sales in Cook County and one half percent on retail sales in the collar counties. Also in 2008, a real estate transfer tax of three tenths of one percent was imposed in the City of Chicago to fund the CTA.

Sales tax collections grew at a healthy pace from $577 million in 1998 to $650 million in 2000. However, between 2000 and 2003, sales tax collections fluctuated between $648 and $655 million. From 2004 to 2006, sales tax collections increased from $676 million and $747 million. In 2007, sales tax collections increased only 0.8% to $753 million. Over the ten-year period, the rate of sales tax growth has been greatest in the collar counties followed by the City of Chicago and Suburban Cook County. However, more recently, the rate of sales tax growth in the City of Chicago has exceeded that of the collar counties. Collections in Suburban Cook County continue to account for more than half of total collections, while collections in the City of Chicago account for slightly less than one third of the total. (Exhibit 8-13).

Ridership Trends

Total RTA ridership increased annually from 1998 to 2001 despite a decline in Pace ridership during this period. Reflecting the overall downturn in the economy, total RTA ridership declined in both 2002 and 2003. Metra and Pace lost riders in 2002, while all three Service Boards lost riders in 2003. Regional ridership changed little from 2003 to 2004 reflecting stagnant ridership on all three Service Boards. In 2005, however, all three Service Boards achieved significant ridership gains as the economy rebounded and gas prices climbed. Albeit at a slower rate, regional ridership continued to grow in 2007 and 2008. On July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the region. Regional paratransit ridership is shown separately beginning in 2007 (Exhibit 8-14).

Executive Director

Letter from the Executive Director

Enclosed is the 2010 budget and operating plan for the Regional Transportation Authority (RTA), which includes Chicago Transit Authority (CTA), Metra and Pace. The severe economic crisis that began in late 2008, and intensified throughout most of 2009, deeply affected the regional transit system. Thankfully, the operating funding and reform legislation that became law in January 2008 provided the regional transit system with the necessary resources to work through this crisis. Without it, the transit system would have been unable to meet the demands of out more than 2 million daily riders.

Over the last year, the RTA worked with CTA, Metra and Pace to maintain reliable, affordable service for our riders while managing the severe economic crisis. The RTA re-allocated resources and helped the transit agencies avoid significant service cuts and fare increases in 2009. While the economy has shown some signs of recovery, we anticipate that significant economic challenges will remain in 2010. Due to the ongoing recession, some service changes and fare increases will be part of the transit agencies' 2010 budget and operating plans.

Despite the economic turmoil experienced over the last year, both the Illinois General Assembly and the federal government approved critical capital investments in our transit system. These important funds will be used to replace aging vehicles, rebuild and replace track and stations and help us improve the overall condition of the system. Just as importantly, the RTA will complete an update to our Regional Strategic Plan next year that will help guide transit investments and operations in the future and will ensure we make the most efficient and accountable use of our resources.

Thank you for your support and confidence in the regional transit system. The RTA is looking forward to a successful year of growth and rejuvenation. We will continue to meet challenges head-on and work to provide reliable, quality service for the region's transit riders. For more information and to receive important updates, visit www.MovingBeyondCongestion.org, and register as a Partner for Transit.

Thank you again for your support.

Sincerely,

Steve Schlickman

Stephen E. Schlickman
Executive Director, Regional Transportation Authority

Guide

The outline below is presented as a guide to the organization of the RTA 2010 Budget, Two-Year (2011-2012) Financial Plan, and Five-Year (2010-2014) Capital Plan. In reading this document it is important to note that the information provided reflects the Region's funding and service conditions when the RTA Board adopted Ordinance 2009-93 on December 17, 2009, which approved the 2010 budgets and 2011-2012 financial plans of the Service Boards, the Agency, and Region as a whole. It is also important to note that the funding marks (public funds to cover operating deficits) for each Service Board were set on September 15, 2009. The book is divided into the following eight sections.

1. **Introduction** that provides a list of the members of the RTA Board of Directors, a letter from the RTA Executive Director explaining the key points of the 2010 budget, a guide to the overall structure of this document, key budget issues, RTA's Vision, Governance including the 2010 budget ordinance (2009-93), and the 2009 GFOA Distinguished Budget Presentation Award.
2. **Budget in Brief** provides a snapshot of the RTA's role and summarizes the key components of the 2010 budget.
3. **RTA** section is divided into four major categories: Region Operating Plan (RTA, CTA, Metra, and Pace Suburban Service and ADA Paratransit Service); Agency Operating Plan (budget and financial plan); Goals and Performance Measures; and Reference (RTA bonds and fund types).
4. **CTA** information includes service characteristics, operating plans, budget and financial plan details, and organizational structure.
5. **Metra** section includes service characteristics, operating plans, budget and financial plan details, and organizational structure.
6. **Pace** information is divided into two operations – Suburban Bus Service and ADA Paratransit Service. Information about both operations includes service characteristics, operating plan, budget and financial plan details, and organizational structure.
7. **Capital** provides an overview and details of the capital program of each of the Service Boards (CTA, Metra, and Pace), and the capital impact on operations.
8. **Appendices** include the Budget Call Calendar, Budget Hearing Schedule, Glossary, and Supplemental Ridership and Sales tax data.

Service Operations and Capital Funding Issues

In the planning cycle the region is faced with two predominant issues: capital funding, and operations funding due to the economic downturn.

Operations Funding with Capital Transfers

In recent years increasing amounts of federal capital funds have been diverted to ameliorate operating deficits due to the economic downturn, and similar transfers are taken from the 2010-2012 capital plans and transferred to operations. Continued transfers of scarce capital resources will exacerbate capital shortfalls as reduced capital funding over the long term while maintaining constant levels of service will likely add to increases in operating costs.

Service Board Bonding for Capital

Service Board bonding has provided additional capital funding for many projects over the last ten years, however since debt service requirements are often paid out of federal formula funds, a significant percentage of future funding is locked up and not available for future needs.

State Capital Funding

Historically the State has provided capital funding in five year programs approximately every ten years. After the current State program is exhausted in 2014, capital funding levels drop to dangerously low levels which points to the need for the RTA system to have a dedicated source of capital funding.

System Expansion

Projections of future funding did not include any federal New Starts monies. Historically the RTA region has been success in acquiring funds from this discretionary program. Such federal funds generally require a local match of up to 40 percent of total project costs which would divert existing federal and local resources from more basic state of good repair needs.

Vision

In 2007, the Regional Transportation Authority released a long-range plan "Moving Beyond Congestion" that presented the RTA's 30-year vision for maintaining, enhancing, and expanding public transit system in northeastern Illinois. The vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities.

Governance

The RTA was established in 1974 upon approval of a referendum in its six-county northeastern Illinois region. The operating responsibilities of the RTA are set forth in the RTA Act. The RTA is a unit of local government, body politic, political subdivision and Municipal Corporation of the State of Illinois.

As initially established, the RTA was an operating entity responsible for providing day-to-day bus and rail transportation services as well as a planning and funding agency. However, in 1983, the Illinois General Assembly reorganized the structure and funding of the RTA. The reorganization placed all operating responsibilities with three Service Boards—the Chicago Transit Authority (CTA) and two operating divisions of the RTA, a Commuter Rail Division (Metra) and a Suburban Bus Division (Pace)—each having its own independent board of directors. These divisions conduct operations and deal with subsidized carriers. The RTA became exclusively responsible for financial oversight and regional planning issues.

In reviewing this document it is important to note that the Service Boards operate within the RTA's region, but are separate legal entities. The Board of Directors of each Service Board is completely independent of the RTA Board. The RTA Board has control neither in the selection nor

in the appointment of any Service Board director or its management. Further, directors of the CTA, Metra and Pace are excluded from serving on more than one entity's board of directors, including that of the RTA

The corporate authority and governing body of the RTA is the 16-member RTA Board of Directors. Fifteen directors are appointed from within the six-county region: five directors by the Mayor of the City of Chicago, one director by the president of the Cook County Board; four directors by the suburban members of the Cook County Board; and one director from DuPage, Kane, Lake, McHenry and Will appointed by the Chairman or Executive of the County Board, its 16th member, is elected by at least 12 of the 15 appointed members.

To administer the Agency's statutory requirements, the Board hires officers and staff. One of its officers, who must be approved by the Board, is the Executive Director. The Executive Director executes the Board's policy decisions and staffs the Agency to carry out its mission and goals.

The RTA Act sets forth detailed provisions for the allocation of receipts by the RTA to the various Service Boards, and imposes a requirement that the RTA's system as a whole (apart from ADA Paratransit service) achieves an annual "system-generated revenue recovery ratio" (i.e., aggregate income for transportation services provided) of at least 50 percent of the cost of the operation of transportation services. The Service Boards achieve their required recovery ratios by establishing fares and related revenue to cover the required proportion of their proposed expenditures. By statute the recovery ratio for ADA Paratransit service has been set at 10 percent. The RTA is responsible for supervising the budgets and financial performance of the CTA, Metra, and Pace.

The Service Boards are considered fiscally independent of the RTA. Although the RTA reviews the budgets of the CTA, Metra and Pace, approval of the budgets is mandated by State statute if such budgets meet specified recovery ratios.

The Service Boards maintain separate management, exercise control over all operations (including the passenger fare structure), and are accountable for fiscal matters including ownership of assets, relations with federal and state transportation funding agencies, and the preparation of their operating budgets. They are also responsible for the purchase of services and approval of contracts relating to their operations.

The CTA, Metra and Pace provide services to different geographic areas within the six-county region. The CTA provides rail and bus service to the City of Chicago and 38 neighboring suburbs within Cook County. Metra provides transit service to the six-county area, with the majority of the transit riders residing in the suburbs and commuting to the City of Chicago. Pace's primary bus service area is suburbs in the six-county region, with service to areas within the City of Chicago. Pace is also responsible for region-wide ADA paratransit service.

The RTA Act establishes the RTA as the primary public body with authority to apply for and receive grants, loans, and other funds from the state or the federal government for public transportation programs in Cook, DuPage, Kane, Lake, McHenry and Will counties ("northeastern Illinois"). The RTA is responsible for the allocation of certain federal, state and local funds to finance both the operating and capital needs of public transit in the six-county region.

The Act confers upon the RTA Board powers to prescribe regulations requiring that the Service Boards submit to the RTA such information as the RTA may require. The Board has statutory authority to establish by rule or regulation financial, budgetary, or fiscal requirements for the system.

In addition to its annual budget and financial plan responsibilities, the RTA, each year, is required to prepare and adopt a five-year capital program. The RTA also conducts market research and coordinates planning for public transportation

in northeastern Illinois. The RTA funds the development of new types of service, both in the suburbs and in the City of Chicago, on a demonstration basis.

Budget Process

As previously discussed, the Act requires that the RTA Board of Directors approve an annual budget, a two-year financial plan, and a five-year capital program. The budget calendar and statutory oversight and amendment requirements govern this process. The essential aspects of the budget calendar are outlined below. A detailed calendar is provided in the Appendices (Exhibit 8-1).

Budget Calendar

Between May and September of each year the RTA and Service boards work through a "business plan call process" that includes RTA estimates of revenue to be collected from taxes and other sources and the Service Boards own preliminary estimates for the capital plan and operating revenues and expenditures during the planning period.

Based upon this information "the RTA Board shall, not later than September 15 prior to the beginning of the Authority's next fiscal year" advise each Service Board of the amount of funds estimated to be available during the upcoming fiscal year and following two years. The Board is also required to advise the Service Boards of the times when the amounts will be available and the next year's cost recovery ratio.

Between September 15 and November 15, each Service Board must prepare and publish a comprehensive annual budget, program document and a two-year financial plan. "The proposed budget and financial plan shall be based on the RTA's estimate of funds to be available to the Service Boards, by or through the Authority, and shall conform in all respects to the requirements established by the Authority." Before submitting the budget to the RTA, the Service Boards must hold at least one public hearing in each of the counties in which it provides service and must hold at least one meeting with the affiliated county boards. After considering the comments from these meetings, it must formally adopt the budget prior to submitting it to the RTA on November 15. The RTA Act requires that the budgets submitted by each Service Board not project or assume receipt of revenue greater than that set in the estimates provided by the RTA.

The RTA Board must then hold at least one public hearing in the metropolitan region and one meeting with each county board on the proposed budget. Twenty days prior notice is required for the public hearing. The public hearing notice for the 2010 budget may be reviewed in the Appendices Section.

After conducting these hearings and taking into consideration the comments, the RTA Board must adopt a budget (by 12 votes) that meets the statutory criteria. If the RTA does not find that a Service Board budget meets the criteria set forth under the Act, the Board shall, five working days after the start of the Service Board's fiscal year, adopt a budget and financial plan meeting these criteria. The RTA, CTA, Metra, and Pace all report on a calendar-year basis.

Statutory Requirements

The RTA Act sets forth seven statutory criteria for Board approval of the budget and financial plan of each Service Board. These seven criteria are:

Balanced Budget

Such budget and plan shall show a balance between (a) anticipated revenue from all sources, including operating subsidies, and (b) the costs of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness.

Cash Flow

Such budget and plan shall show cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenditures as incurred.

Recovery Ratio

Such budget and plan shall provide for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board which allow the Service Board to meet its required recovery ratio.

Assumptions

Such budget and plan are based upon and use assumptions and projections, which are reasonable and prudent.

Financial Practices

Such budget and plan shall be prepared in accordance with sound financial practices as determined by the RTA Board.

Strategic Plan

Such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan

Other Requirements

Such budget and plan shall meet such other financial, budgetary, or fiscal requirements that the RTA Board may by rule or regulation establish.

Oversight

After adoption of the operating budget, the RTA Board has continuing oversight powers concerning the budget and the financial condition of each Service Board and region as a whole. The RTA monitors the budgetary and operations performance of the Service Boards on a monthly basis to ensure compliance with their budget and recovery ratio. On a quarterly basis, the following oversight is conducted:

- After the end of each fiscal quarter, each Service Board must report to the RTA "it's financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction" for that quarter. If in compliance, the RTA Board so states and approves each Service Board's compliance by adopted resolution.
- If "in the judgment of the Board" these results are not substantially in accordance with the Service Board's budget for that period, "the Board shall so advise the Service Board" and it "shall, within the period specified by the Board, submit a revised budget incorporating such results."
- Once a Service Board submits the revised budget plan, the RTA must determine if it meets the seven statutory budget criteria necessary to pass an annual budget. If not, the RTA does not release any moneys to the Service Board(s) except for the statutory allocation of taxes.
- If a Service Board submits a revised budget and plan which shows that the statutory budget criteria will be met "within a four quarter period," the RTA "shall continue to release funds to the Service Board." The RTA may require the Service Board to submit a revised budget and plan that shows that the budget criteria "will be met in a time period less than four quarters."

Amendment

When prudent, the operating budget is amended due to shifts in the economic climate, governmental funding programs or new projects. Depending on the type of request, the proposed amendment may be presented to one or more of the RTA Board Committees for approval. However, the Board's Finance Committee must approve all proposed amendments before they are recommended to the RTA Board. The RTA Board ultimately approves or disapproves all proposals. If

approved, the RTA and Service Board budgets are amended to include all changes and actual results and are then monitored against the amended budget.

Operations Funding

The RTA provides operating funds to each Service Board equivalent to its budgeted deficit for the year as opposed to funding the actual deficit. This policy encourages cost efficiencies by the Service Boards and allows them to retain any budgeted funds that are not expended. Such funds are generally referred to as a positive budget variance, or PBV. However, due to the economic downturn, such practice has been deferred for current budgets.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level on the unreserved and undesignated fund balance. The ordinance affirms that the annual budget adopted by the RTA each year will reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for that year. If actual sales tax receipts or other RTA revenue falls short of the amounts reflected in the annual budget, then the succeeding year's annual budget and two-year financial plan will provide for the replacement of any shortfall in the unreserved and undesignated balance of the RTA general fund, by no later than the end of the three-year planning period.

The RTA established this policy to maintain financial stability in order to carry out the RTA's legislative mandates to plan, fund and oversee public transportation in the region. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods. However, due to the economic downturn, such practice has been deferred for current budgets.

Financial Policies

Capital Expenditure

The RTA Five-Year Capital Program is adopted by the RTA after affirmative vote of at least 12 RTA Directors, after consultation with the Service Boards, and after holding a minimum of 3 public hearings in Cook County and one public hearing in each of the other counties in the metropolitan region. Preparation of the RTA's capital budget is guided by the following policies found in the RTA Act.

A five-year program for capital improvements is updated annually. Each capital improvement to be undertaken or on behalf of a Service Board should meet the criteria set in the Strategic Plan, and is not inconsistent with any sub-regional or corridor plan adopted by the RTA.

In reviewing proposals for improvements to be included in a Five Year Capital Program, the RTA may give priority to improvements that are intended to bring public transportation facilities into a state of good repair.

The Five Year Capital Program shall also identify capital improvements to be undertaken by a Service Board, a transportation agency, or a unit of local government and funded by the Authority from amounts in the Innovation, Coordination, and Enhancement Fund, provided that no improvement that is included in the Five Year Capital Program as of the effective date of this amendatory Act of the 95th General Assembly may receive funding from the Innovation, Coordination, and Enhancement Fund.

Fixed Assets

The RTA's sets a fixed asset capitalization threshold of no less than $5,000 for any capital item(s). Capital assets are recorded at historical cost (or fair market value at the time of donation, if donated) and have a useful life of at least two years following the date of acquisition. Any acquisitions during the year are considered acquired at the

beginning of that year for the purpose of computing depreciation.

Description	Useful life
Furniture and Equipment	5 years
Computer Equipment	5 years
Leasehold improvements	Life of the lease

General Obligation Bonds

The RTA's policy states that bonds should be payable from all revenue and all other funds received or held by the RTA that lawfully may be used for retiring the debt. Exceptions to this are amounts in the Joint Self-Insurance Fund (JSIF) and amounts required to be held or used with respect to separate ordinance obligations. The bonds are secured by an assignment of a lien on the sales taxes imposed by the RTA. All sales tax receipts are to be paid directly to the trustee by officials of the State of Illinois. In addition, RTA Sales Tax must be 2.5 times greater than the debt service requirement. If, for any reason, the RTA has not made the required monthly debt service payment, the trustee is to deduct it from the receipts. If all payments have been made, the funds are made available to the RTA for regular use. Under the Act, the CTA, Metra and Pace fare box receipts and funds on hand will not be used for payment of debt service.

Investment

The RTA's policy complies with Illinois law, addresses safety of principal, liquidity of funds, rate of return, public trust, and Investments in Local and Disadvantaged Institutions. It further permits investments and prescribes safekeeping, collateralization, and reporting requirements.

The RTA policy establishes the following objectives:

- Safety of Principal – Every investment will be made with safety as the primary and overriding concern. Each investment transaction shall ensure that loss of capital, whether from credit or market risk, is minimized.
- Liquidity – Maturity and marketability aspects of investments should be coordinated with the anticipated cash flow needs of the RTA
- Rate of Return – A secondary objective is to seek the highest return on investments consistent with preservation of principal and prudent investment principles.
- Public Trust – The RTA and its officers should avoid any investment transaction or practice which in appearance may impair public confidence in its stewardship of public funds.
- Investments in Local and Disadvantaged Institutions – Locally owned and disadvantaged business financial institutions contribute to economic development of the RTA service area. The RTA recognizes its interest in the vitality of the local economy by investing in local, minority, and female (if any) owned financial institutions.

Operating Budget

The RTA operating budget and two-year financial plan approval process is based on the following guidelines:

- Adoption requires an affirmative vote of at least 12 RTA Board Directors, and the RTA must hold at least one public hearing in the metropolitan region, and meet with the county board or its designee of each of the several counties in the metropolitan region.
- The Service Boards (CTA, Metra, and PACE) must prepare and publish, for public hearing and comment, a comprehensive budget document that is to conform to the RTA "marks". RTA marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.
- All funds are required to balance. The total budgeted revenues must equal the sum of budgeted expenditures for each fund. Revenue sources include sales tax, state funds (e.g.

Public Transportation Funds, State Financial Assistance, and Reduced Fare/Senior Ride Free program reimbursements) and other revenue.

- The adopted budget should reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA total operating expenditures for the year. If the amount is below 5 percent, the financial plan must show full replenishment by the end of the current planning cycle.
- The combined revenue from RTA operations (apart from ADA Paratransit Service) should cover at least 50 percent of the system operating costs. ADA Paratransit Service operations are to cover 10 percent of the system operating costs.

Pension Funding

The RTA, Metra, and Pace are required to contribute the amounts necessary to fund the benefits of their respective employees in the Plan using the projected unit credit actuarial method. Employer contribution and the income it earns through investments are used to operate the Plan and to pay benefits. Assets are valued recognizing a portion of both realized and unrealized gains and losses in order to avoid wide swings in actuarially determined funding requirements from year to year.

ORDINANCE NO. 2009-93

APPROVING THE 2010 BUDGETS AND 2011-2012 FINANCIAL PLANS OF THE SERVICE BOARDS, ADOPTING THE 2010 BUDGET AND PROGRAM OF THE AUTHORITY, APPROPRIATING FUNDS FOR THE 2010 BUDGETS, AND TAKING CERTAIN OTHER ACTIONS WITH RESPECT TO THE BUDGET AND PROGRAM FOR FISCAL YEAR 2010

WHEREAS, Section 4.01 of the Regional Transportation Authority Act (the "Act") directs the Board of Directors of the Regional Transportation Authority (the "RTA Board") to (i) appropriate money to perform the purposes of the Regional Transportation Authority (the "RTA") and provide for payment of debts and expenses of the RTA, (ii) take action with respect to the budget and two-year financial plan of each of the Chicago Transit Authority (the "CTA"), the Commuter Rail Division of the Regional Transportation Authority ("Metra"), the Suburban Bus Division of the Regional Transportation Authority ("Pace", and, together with the CTA and Metra, collectively, the "Service Boards" and each, individually, a "Service Board"), as provided for in Section 4.11 of the Act, and (iii) adopt an Annual Budget and Two-Year Financial Plan for the RTA that includes the annual budget and two-year financial plan of each Service Board that has been approved by the RTA;

WHEREAS, pursuant to Section 4.11 of the Act, the RTA Board adopted Ordinance 2009-74 on September 15, 2009, identifying the amounts of funds estimated to be available to each Service Board during fiscal year 2010 and the two following fiscal years;

WHEREAS, on November 11, 2009, the RTA and the Service Boards entered into a Memorandum of Understanding (the "MOU") with the Illinois Department of Transportation ("IDOT"), pursuant to which, among other things, IDOT agreed to provide (i) $8.5 million of funding for ADA Paratransit service operations in each of 2010 and 2011, and (ii) capital funds for distribution to the CTA in an amount equal to the debt service payable on RTA bonds to be issued pursuant to Ordinance 2009-82;

WHEREAS, pursuant to Section 4.11 of the Act, each Service Board has presented its proposed fiscal year 2010 budget and proposed 2011–2012 financial plan to the RTA for its review;

WHEREAS, the RTA has conducted public hearings with respect to its proposed annual budget, and considered the proposed budgets and financial plans of the Service Boards and the public comments with respect to those budgets and financial plans;

WHEREAS, Section 4.11 of the Act authorizes and directs the RTA to review the budgets and financial plans of the Service Boards for approval;

WHEREAS, pursuant to Sections 4.01(a) and 4.11(d) of the Act, the budgets and financial plans of the Service Boards shall contain estimated expenses for contributions to be made with respect to pension and other employee benefits, and the Service Boards are required to present to the RTA sufficient detail that fairly presents the condition of any pension plan or trust for health care benefits with respect to retirees established by the Service Board and describes the plans of the Service Boards to meet the requirements of Sections 4.02a and 4.02b;

WHEREAS, pursuant to Sections 4.02a and 4.02b of the Act, the RTA shall continually review the payment of the required employer contributions to affected pension plans and if at any time the RTA determines that a Service Board's payment of any portion of the required contributions to an affected pension plan is more than one month overdue, it shall as soon as possible pay the amount of those overdue contributions to the trustee of the affected pension plan on behalf of that Service Board out of moneys otherwise payable to that Service Board under Section 4.03.3, and the RTA shall thereafter

have no liability to the Service Board for amounts paid to the trustee of the affected pension plan, and if the RTA's payment of such contributions is similarly overdue it shall pay such overdue amount out of its administrative expenses;

WHEREAS, pursuant to Ordinance 2007-48, adopted by the RTA Board on September, 14, 2007, federal capital funds may not be used by a Service Board to fund operating expenses unless the RTA Board determines, based on adequate information supplied by the Service Board, that such use will not have a materially adverse impact on the state of repair of such Service Board's capital assets;

WHEREAS, as set forth in RTA Ordinance 2009-83, adopted on November 19, 2009, the RTA Board has authorized the CTA to transfer $77,321,848 from 2009, $36,462,265 from 2010 and $52,215,887 from 2011 of federal capital funds to operations to provide for preventive maintenance, and has determined that these transfers will not have a materially adverse impact on the state of repair of CTA's capital assets;

WHEREAS, the CTA desires to use additional federal funds to fund operations in the form of preventive maintenance in the amounts of: $90 million in 2010, $70 million in 2011, and $65 million in 2012;

WHEREAS, Pace desires to use $2.3 million of federal capital funds to fund Suburban Service operations in the form of capital cost of contracting;

WHEREAS, the federal capital funds utilized for preventive maintenance or capital cost of contracting in the operating budget of a Service Board are not considered operating revenues and are therefore excluded from such Service Boards' recovery ratio calculation;

WHEREAS, the RTA will provide the CTA with $14.953 million of discretionary funds for the CTA's capital program;

WHEREAS, Metra's capital farebox programs are considered as operating revenue for funding their operating deficit and in calculating the recovery ratio;

WHEREAS, pursuant to Section 4.03.3 of the Act, the RTA has established public funding levels in 2010 through 2012 for the ADA Paratransit Fund, the Suburban Community Mobility Fund, and the Innovation, Coordination, and Enhancement Fund (the "ICE Fund") that change proportionately with the percentage change in RTA sales tax receipts;

WHEREAS, pursuant to Ordinance 2009-74, an emergency was declared was respect to 2010 funds in the ICE Fund, and such funds have been reserved for potential allocation to Pace for use in 2010 ADA Paratransit service operations, subject to certain conditions;

WHEREAS, pursuant to Ordinance 2009-74 the RTA Board has waived the RTA funding policy adopted by Ordinance 91-9 (the "Fund to Budget Policy") for the 2010 fiscal year;

WHEREAS, unfavorable economic conditions have created the need to waive, for purposes of the adoption of the 2010 Budget and 2011-2012 Financial Plan, the provision of the RTA Funding Policy adopted by Ordinance No. 98-15 that requires that the RTA Annual Budget and Two-Year Financial Plan show a year-end unreserved and undesignated fund balance equal to 5% of the RTA general fund by no later than the end of the three-year planning period (the "Fund Balance Policy");

WHEREAS, the RTA will reimburse the purchase of excess liability and terrorism insurance by the RTA system's Loss Financing Plan to provide system protection against catastrophic loss; and

WHEREAS, RTA working cash borrowing was used to fill shortfalls in funding provided by public subsidies to the Service Boards in 2009; and, pursuant to Section 4.09 of the Act, the proceeds of such borrowings distributed to the Service Boards are projected to be repaid in 2011 with the proceeds of subsequent working cash borrowings; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take the following actions in order to carry out its powers and duties under the Act.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY that:

ARTICLE I - APPROVAL OF BUDGETS AND PROGRAMS

Section One:

Service Board Budgets and Financial Plans

1.1 In compliance with the Act, the RTA has received and reviewed proposed budgets for 2010, and financial plans for 2011 and 2012, of each of the Service Boards.

1.2 With respect to the proposed budget and financial plans of the CTA (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of CTA sufficient to allow CTA to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan.

(h) Given the adverse economic conditions and shortfall in funding needed for the CTA's 2010, 2011 and 2012 operating budgets, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize the CTA to transfer additional federal capital funds to operations for preventive maintenance in the following amounts: $90 million in 2010, $70 million in 2011, and $65 million in 2012.

1.3 With respect to the proposed budget and financial plans of Metra (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to

the jurisdiction of Metra sufficient to allow Metra to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan.

1.4 With respect to the proposed budget and financial plan submitted by Pace for Suburban Service (as summarized in Schedule I-B) and subject to Pace taking deficit reductions actions as reflected in Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established;

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan; and

(h) Given the adverse economic conditions and shortfall in funding needed for Pace's 2010 operating budget, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize Pace to transfer $2.3 million of federal capital funds to operations for capital costs of contracting in 2010.

1.5 With respect to the proposed budget and financial plan submitted by Pace for ADA Paratransit service and subject to the deficit reduction actions reflected in Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

(h) Such budget and plan do not reflect the $8.5 million in funding to be provided by IDOT pursuant to the MOU in each of 2010 and 2011 for use in ADA Paratransit service operations, and such budget and plan are hereby amended as summarized in Schedule I-B to reflect such amounts.

1.6 Pursuant to Section 4.11 of the Act, the 2010 budgets and 2011-2012 financial plans for each of the Service Boards, as presented in the attached Schedule I-B, are hereby approved.

1.7 Pursuant to Section 4.11 of the Act, no more than 30 days after each fiscal quarter, each Service Board is directed to report to the RTA its financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction, as of the end of and for such quarter, for review by the RTA for conformity with the approved budget for such period.

Section Two:

RTA Annual Budget and Program

2.1 The RTA has received and reviewed the 2010 Annual Budget and Program of the Regional Transportation Authority as summarized in Schedule I-A. The 2010 Annual Budget and Program is hereby approved and the Board finds as follows:

(a) The 2010 Annual Budget and Program shows a balance between anticipated revenues from all sources and anticipated expenses, including the funding of operating deficits and the discharge of encumbrances incurred in prior periods and payment of principal and interest on outstanding indebtedness when due, as summarized in Schedule I-A.

(b) The 2010 Annual Budget and Program shows cash balances sufficient to pay with reasonable promptness all obligations and expenses as incurred, as summarized in Schedule I-E.

(c) The 2010 Annual Budget and Program shows that the level of fares and charges for public transportation provided by, or under grant or purchase of service contracts of, the Service Boards is sufficient to cause the aggregate of all projected system-generated revenues from such fares and charges received in 2010 apart from ADA Paratransit services to equal at least fifty percent (50%) of the aggregate cost of providing such public transportation in 2010, and at least ten percent (10%) for ADA Paratransit service in 2010, as required by the Act, and as summarized in Schedule I-C.

(d) The 2010 Annual Budget and Program is based on and employs assumptions and projections which are reasonable and prudent.

(e) The budgeted "administrative expenses" of the RTA for 2010, as defined in Section 4.01(c) of the Act, do not exceed the maximum administrative expenses (Statutory Cap) permitted for 2010 of $16,931,639.

(g) The 2010 annual budget and program is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

ARTICLE II - APPROPRIATION OF FUNDS AND CERTAIN OTHER ACTIONS

Section One:

Appropriation for each Service Board

The following amounts for 2010 are appropriated for payment to each Service Board from the enumerated sources of funds and for the specified objects and purposes.

1.1 Statutory RTA Taxes (Part I)

There is appropriated, for expenditure by each Service Board pursuant to the 2010 Budget approved in Article I, 85% of the RTA receipts from taxes imposed pursuant to Section 4.03 of the Act and allocated according to the percentages shown on this page and specified in Section 4.03.3(a) of the Act, and from the Regional Transportation Authority Occupation and Use Tax Replacement Fund and the State and Local Sales Tax Reform Fund pursuant to Section 4.03.3(b) of the Act. The estimated amount of the appropriation is specified as Part I Allocation – "85% Sales Tax" on Schedule I-D.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified proportionate share of such proceeds.

1.2 Statutory RTA Sales Taxes and Public Transportation Funds (Part II)

(a) There is appropriated for expenditure by Pace for ADA Paratransit Services receipts from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified as Part II Allocation; RTA Total for ADA Paratransit Service on Schedule I-D;

(b) There is appropriated for expenditure by the Service Boards pursuant to the Budget approved in Article I, RTA receipts from taxes imposed pursuant to Section 4.03 of the Act, and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified as Remaining Balance to Service Boards in Part II Allocation on Schedule I-D, and allocated to each Service Board according to the percentages specified under Remaining Balance to Service Boards in Part II on Schedule I-D; and

(c) There is appropriated for expenditure by Pace's Suburban Bus Service funds for Suburban Community Mobility pursuant to the Budget approved in Article I, RTA receipts from taxes imposed pursuant

	Statutory RTA Sales Tax (Part I)		
	Collected Within Chicago	**Collected Within Suburban Cook County**	**Collected in DuPage, Kane, Lake, McHenry and Will Counties**
CTA	100 %	30 %	0 %
Metra	0 %	55 %	70 %
Pace	0 %	15 %	30 %
Total	**100%**	**100%**	**100%**

to Section 4.03 of the Act, and public transportation fund receipts pursuant to Section 4.09 of the Act. The amount of the appropriation is specified as RTA Suburban Community Mobility Funding to Pace in Part II Allocation on Schedule I-D.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, and Public Transportation Fund receipts pursuant to Section 4.09 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified share of such proceeds pursuant to Section 4.03.3 of the Act.

1.3 Free and Reduced Fare Reimbursement

There is appropriated, for expenditure by each Service Board pursuant to the 2010 Budget approved in Article I, amounts received from the State of Illinois for reimbursement of revenues lost from providing free or reduced fare rides.

After receipt by the RTA of such funds from the State of Illinois, the Executive Director shall provide for the payment to each Service Board its proportionate share of the proceeds estimated to be received from the State as identified on Schedule I-A.

1.4 Discretionary Funds of the RTA -- Public Transportation Fund, 15% Sales Tax, Other RTA Revenues

(a) There is appropriated, for expenditure by each Service Board pursuant to the 2010 Budget approved in Article I, the amounts specified as "RTA Discretionary Funds to CTA", and "RTA Discretionary Funds to Pace" on Schedule I-B from other receipts and revenues of the RTA; and

(b) There is appropriated, for expenditure by Pace pursuant to the amount specified as RTA South Suburban Community Job Access Funds on Schedule I-B from other receipts and revenues of the RTA, or so much as may be necessary such that the actual amounts appropriated for Pace equal the amount specified as "RTA South Suburban Community Job Access Funds" on Schedule I-B.

(c) There is appropriated to the ICE Fund, which shall be reserved for potential expenditure by Pace for ADA Paratransit Service, subject to the conditions set forth in Ordinance 2009-74, the amount specified as RTA Funding for Innovation, Coordination and Enhancement (ICE) on Schedule I-A from Part II Allocation of Statutory Sales Taxes and Public Transportation Funds.

Subject to receipt by the RTA of sufficient proceeds of taxes imposed pursuant to Section 4.03 of the Act, and from the Public Transportation Fund receipts pursuant to Section 4.09 of the Act, the Executive Director is hereby directed to provide for the payment of such funds described in paragraphs (a) through (c) as soon as may be practicable upon their receipt provided that each Service Board is in compliance with the requirements of Section 4.11 of the Act and this Ordinance.

(d) Transfer Capital: There is appropriated, for expenditure by the CTA for capital projects, $20.353 million, consisting of $14.953 million of RTA funds and $5.4 million of grant funds from IDOT pursuant to the MOU.

Subject to receipt by the RTA of sufficient proceeds of taxes imposed pursuant to Section 4.03 of the Act, the Executive Director is hereby directed to provide for payment of such funds described in paragraph (d) pursuant to grant or intergovernmental agreements with the CTA.

Section Two:
Appropriation to the Regional Transportation Authority

In 2010 there is appropriated, for expenditure for the operating purposes of the RTA (the

"Agency") the amounts specified on Schedule I-A as Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, pursuant to the 2010 Budget approved in Article I, from other receipts and revenues of the RTA.

In 2010 there is appropriated for transfer from the RTA's Fund Balance to the Joint Self Insurance Fund (JSIF), funds to reimburse the insurance premium and associated fees for liability and terrorism insurance for the RTA System's Loss Financing Plan the amount specified on Schedule I-A as RTA JSIF Funding.

The total appropriations as shown in Schedule I-A for 2010 Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, represent the legal level of budgetary control. The Executive Director is authorized to transfer up to 10% from and among each of these items.

ARTICLE III - GENERAL

Section One:
Implementation and Dissemination

The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance and to prepare and disseminate the 2010 Annual Budget and Program of the RTA in accordance with the Act and the policies established herein.

Section Two:
Organization of the RTA

The Executive Director shall organize the staff of the Authority, shall allocate their functions and duties, and shall fix compensation and conditions of employment. The Executive Director shall develop, and modify as may be necessary, Agency policies regarding travel, business and relocation expenses.

Section Three:
Waiver of the Fund Balance Policy

The Fund Balance Policy is hereby waived with respect to the 2010 Budget and 2011-2012 Financial Plan.

Section Three:
Non-Waiver of RTA Authority

Nothing in this Ordinance is intended to or shall have the effect of (i) creating an obligation on the part of the RTA to provide funding to the Service Boards in excess of their respective statutorily allocated portions of the proceeds from taxes and State funds actually received by the RTA, nor (ii) waiving any discretion the RTA may have under law to amend the amounts appropriated to the Service Boards under the Ordinance, subject to compliance by the Service Boards with terms and conditions established by the RTA. Furthermore, nothing in this Ordinance is intended to or shall have the effect of waiving any discretion the RTA may have under law to subject to review the determinations made in this Ordinance, including, but not limited to, setting recovery ratios for the Service Boards, establishing exclusions or inclusions of certain revenues or expenditures from the calculation of such recovery ratios, or determining the allowable uses of federal, state or local funds.

Section Four:
Executive Director's Authority to Apply for Additional Funds

The Executive Director is authorized and directed to execute and file applications on behalf of the RTA with the United States Department of Transportation ("USDOT"), Federal Transit Administration ("FTA"), the Illinois Department of Transportation ("IDOT"), and any other funding agency (collectively the "Funding Agencies") for any monies available for funding of the RTA Annual Budget. The Executive Director is authorized to

furnish such additional information, assurances, certifications and amendments as the funding agencies may require in connection with such applications or the projects. The Executive Director is authorized and directed on behalf of the RTA to execute and deliver grant agreements and all subsequent amendments thereto between the RTA and the funding agencies. Further, the Executive Director is authorized and directed to take such action as the Executive Director deems necessary or appropriate to implement, administer, and enforce said agreements and all subsequent amendments thereto on behalf of the RTA.

Section Five:
Direction to File this Ordinance with Public Officials.

The Executive Director is authorized and directed to file the 2010 Budget and Program and a copy of this Ordinance with the Governor of Illinois, the Illinois General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago and the Auditor General of the State of Illinois, along with an appropriate certification that this budget and program meet the requirements of the Act.

(1) RTA working cash borrowing to fill shortfalls in funding provided by public subsidies in 2009. Pursuant to Section 4.04 of the Act the borrowing is projected to be repaid in 2011 with subsequent working cash borrowing. (2) Funds that exceed the operating deficit of a Service Board (except for ADA Paratransit service) are retained by the Service Board and reserved for their capital program unless approved for operating use by the RTA Board. (3) To achieve a balanced budget and two-year financial plan, as set forth in Ordinance 2009-74, the budget and two-year financial plan must be adjusted by actions that may include, but are not limited to, service adjustments, identification of additional funds or operating revenues, reducing operating costs, requesting the use of retained earnings (positive budget variances -PBV), and/or the use of federal capital funds for operating purposes. (4) Balance of 2008 ICE funding appropriated by Ordinance 2008-28. (5) Further actions are required to balance the ADA Paratransit budget, which may include, but are not limited to, adjusting service, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues, including 2010 funds from the ICE Fund that may be allocated pursuant to Paragraph 7 of Ordinance 2009-74.

Schedule I-C: **Recovery Ratio %**

	2010 Budget
CTA	
Recovery Ratio %	51.0%
Metra	
Recovery Ratio %	55.0%
Pace Suburban Service	
Recovery Ratio %	36.0%
Total System-Generated Revenue Recovery Ratio %	**52.9%**
Pace ADA Paratransit	
Recovery Ratio %	10.0%

The RTA Act allows certain expenditures to be excluded from the recovery ratio calculation including security, depreciation, CTA's pension obligation bonds, and facility leases. Metra's calculation includes capital farebox revenue. The total system-generated revenue recovery ratio includes a statutory expense credit of $160 million.

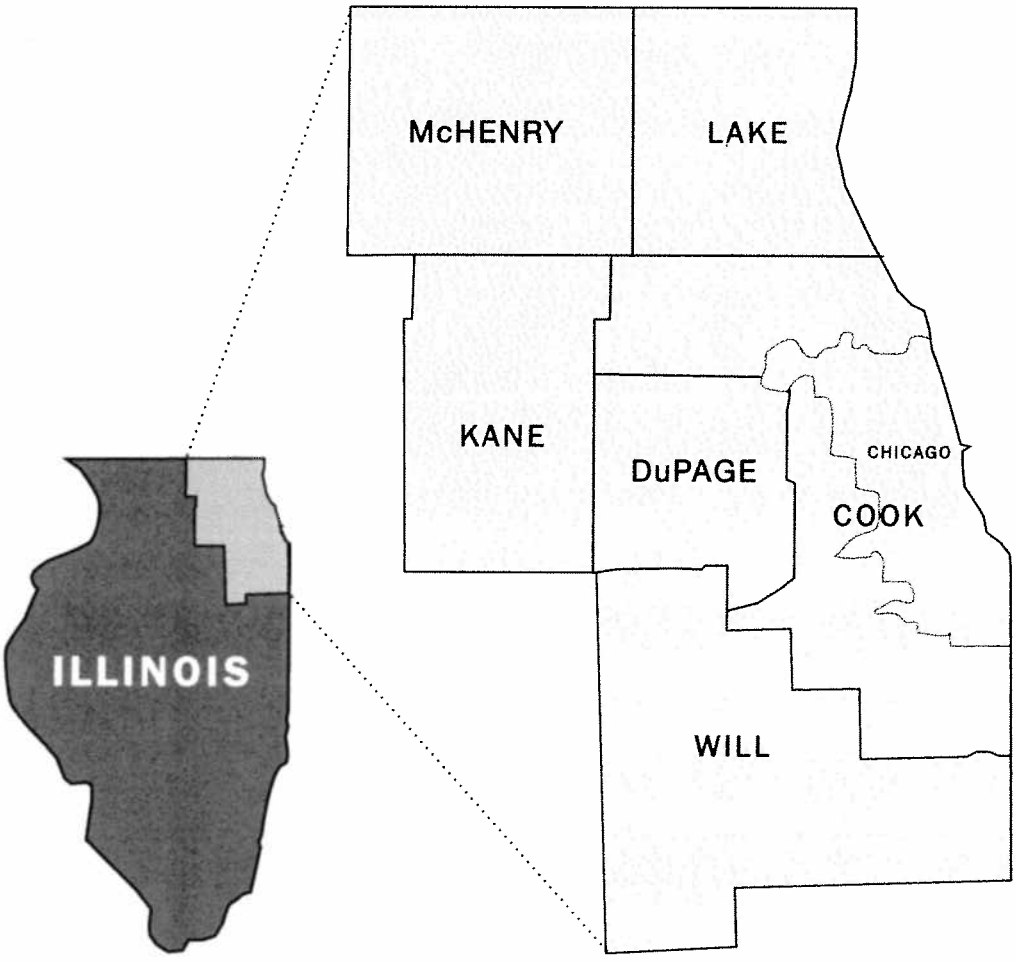
The GFOA Distinguished Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) present an award of Distinguished Presentation to the Regional Transportation Authority, Illinois for its annual budget for the fiscal year beginning January 1, 2009.

In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan, and as a communication device.

The award is valid for a period of one year only. We believe our current budget book continues to conform to program requirements, and we are submitting it to the GFOA to determine its eligibility for another award.

2 Budget in Brief



System Overview

The Regional Transportation Authority (RTA/Agency) provides funding, planning and fiscal oversight for regional bus and rail operations in the six-county northeastern Illinois region as set forth by the RTA Act. The Act designates the Agency as the primary public body in the region to secure funds for public transportation. The Agency is authorized to impose taxes in the region, issue debt, and is responsible for the allocation of federal, state and local funds to finance both the operating and capital needs of public transportation in the region.

The RTA Board of Directors governs the Agency. Three independent Service Boards, the Chicago Transit Authority (CTA), Metra commuter rail and Pace bus, have operational responsibility for public transportation within the six-county region and are governed by their own separate boards of directors. The CTA provides bus and rapid transit rail service in the City of Chicago and neighboring suburbs. Metra provides commuter rail service throughout the six-county region. Pace provides bus service in the suburbs and between the suburbs and the City of Chicago, and Pace provides ADA Paratransit service for the entire region (Exhibit 2-1).

Yearly, the RTA Board must adopt an annual budget, two-year financial plan and a five-year capital program for each Service Board. The principal features of this process are outlined in the following paragraphs. In September, the RTA Board approves the "marks" for each Service Board. The marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

Exhibit 2-1: **RTA Organization Structure**

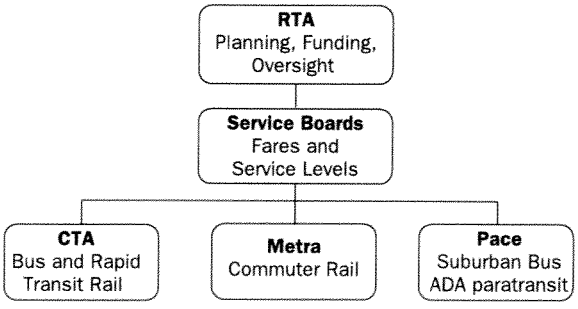


Exhibit 2-2: **Financial Relationship and Responsibilities of the RTA and Service Boards**

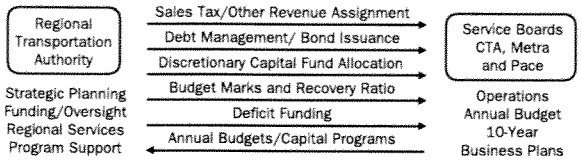

The marks guide the Service Boards' budgetary process. Each Service Board prepares and publishes, for public hearing and comment, a comprehensive budget document that is to conform to the RTA marks. After considering public comment, the CTA, Metra and Pace board members adopt their respective budgets.

In November, those budgets are forwarded to the RTA, which consolidates the Agency and the Service Board budgets into a proposed RTA budget document. The RTA Board distributes this document for public hearing and comment before adoption in December.

Exhibit 2-2 illustrates the principal responsibilities and interactions between the Agency and Service Boards in the annual budget and capital program process.

Service Characteristics

There are more than 8 million residents in the six-county northeastern Illinois region, an area that covers 3,749 square miles or 7,200 route miles. The RTA system includes 5,100 bus and rail cars plus over 600 vanpool vehicles on more than 400 routes to service its customers. In 2008, the regional public transportation system provided nearly 651.8 million trips.

The system has a replacement value of over $36 billion (i.e., the asset value of the system's existing infrastructures). With an average asset life

Exhibit 2-3: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in millions)

	2009 Estimate	2010 Budget

Ending Unreserved/Undesignated Fund Balance	**(18)**	**15**
% of Total Operating Expenditures	(1.7%)	1.4%
System-Generated Revenue Recovery Ratio %	54.0%	53.0%
ADA Paratransit Recovery Ratio	10.0%	10.0%

of over 25 years, the RTA system needs more than $1 billion in capital funds each year just to keep the existing infrastructure in good repair.

Operating Budget

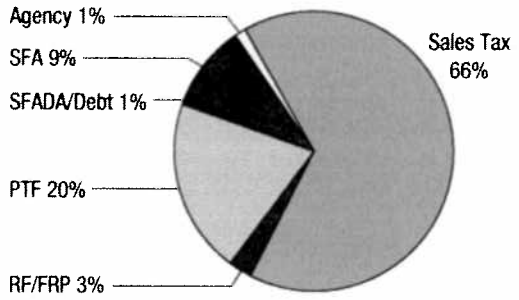
A statement of revenues and expenditures for the 2009 estimate and the 2010 budget is presented in Exhibit 2-3, and subsequent paragraphs summarize line item information. The statement of RTA revenues and expenditures from 2008 through 2012 is shown in the Region section.

Total Revenues

In 2010, total RTA revenues are projected at $1,354 million. This represents an increase of $34 million or 3% over the 2009 estimate of $1,320

million. $891 million, or 66%, of these revenues will be generated from RTA Sales Tax; State reduced fare reimbursement and free ride programs (RF/FRP) equal 3% or $37 million of total revenues. Public Transportation Fund (PTF) receipts are 20% or $273 million of total revenues. State Funding for ADA and Debt Services (SFADA/DEBT) of $14 million provides 1% of revenues. State Financial Assistance (SFA) equals 9% of total revenues, or $122 million, and other RTA/Agency revenues account for the remaining balance of $18 million, or 1%. Exhibit 2-4 illustrates this distribution.

Exhibit 2-4: **2010 RTA Revenue - $1,354 million**



Sales Tax

Sales tax is the primary source of revenue for the RTA. The tax is authorized by Illinois statute, imposed by the RTA in the six-county region of northeastern Illinois and collected by the State.

RTA Sales Tax (Part I) and Public Transportation Funds (PTF)

The traditional RTA sales tax (identified in this document as "Old" or "Part I" Sales Tax) has been the major source of funding for public transportation in northeastern Illinois for nearly three decades. 85% of the RTA sales tax receipts are apportioned to the Service Boards by statutory formula.

The 2009 sales tax estimate and the 2010 budget year sales tax projections were developed in August 2009, and were established after assessing state and regional economic data and national forecasts. This information was used as a basis for the RTA estimated sales tax receipts for 2009 and 2010 totaling $640 and $650 million respectively. The estimate for 2009 in August was 5% below the RTA's initial budget figure of $680.0 million.

State Public Transportation Funds (PTF) from Part I sales taxes are based on a formula tied to Part I sales tax results. The fund provides the RTA with a 25% match of its sales tax proceeds, which means that for every four dollars collected in old sales tax the RTA receives an additional dollar in PTF. The budgeted receipts for 2010 are $162 million.

RTA Sales Tax, Real Estate Transfer Tax (RETT), and PTF – (Part II)

In January 2008, Illinois Public Act 95-0708 increased the RTA sales tax rate throughout the region, increased the real estate transfer tax (RETT) in the City of Chicago, and raised the portion of RTA sales tax revenues matched by PTF (identified in this document as "New" or "Part II" Sales Tax). The RTA sales tax rate was increased 0.25% in Cook County and 0.50% in the Collar Counties effective April 1, 2008. Proceeds of the sales tax increase in the Collar Counties are divided evenly between the RTA and the county where the tax is collected. Effective April 1, 2008, the real estate transfer tax in the City of Chicago was increased 0.3% (e.g. for every $1,000 in sales price $3.00 in tax is collected).

In February 2008, the PTF match of the old RTA sales tax increased from 25% to 30%. In April 2008, the 5% PTF match was applied to the RETT and the RTA portion of the sales tax increase. Beginning in January 2009, the PTF match of both the RETT and the RTA portion of the sales tax increase moved from 5% to 30%.

While RETT and the 25% PTF match of RETT funds only the CTA, the largest part of P.A. 95-0708 revenue provides funding for CTA, Metra, Pace and ADA Paratransit operations as well as for regional Innovation, Coordination and Enhancement (ICE) and Suburban Community Mobility Fund (SCMF) initiatives. Funds for ADA Paratransit, ICE and SCMF are by statute set aside

Exhibit 2-5: **Funds Provided by P.A. 95-0708**
2010 Budget (dollars in millions)

Source	Funds	%
Sales Tax	241	64%
PTF	111	30%
RETT	22	6%
Total Source	**374**	**100%**
Distribution		
CTA	138	37%
Metra	89	24%
Pace (includes SCMF)	48	13%
ADA Paratransit	90	24%
ICE	9	2%
Total Distribution	**374**	**100%**

before distributions to the CTA, Metra and Pace. Of this remaining balance the CTA receives 48%, Metra 39% and Pace 13%. In 2010, the budget for the additional funds provided by P.A. 95-0708 total $374 million (Exhibit 2-5).

State Financial Assistance

This revenue source is state-authorized assistance to reimburse the debt service expenses for RTA Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the state, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. Projected receipts for 2009 and 2010 are $122 million.

Reduced Fare and Free Ride Programs

This operating assistance is partial reimbursement from the State of Illinois to the Service Boards for discounts and free ride programs mandated by law. This includes discounts to students, elderly, and disabled riders as well as free ride programs for seniors 65 and older, and any disabled person who qualifies for the State's Circuit Breaker Program. The funds are distributed by the state through the RTA and then to the Service Boards. Receipts for 2010 are budgeted at $37 million, an increase of $3 million from the 2009 funding level.

State Funding ADA/Debt Service

On November 11, 2009 the RTA and the Service Boards entered into a Memorandum of Understand (MOU) with the Illinois Department of Transportation (IDOT). In this document the IDOT agreed to provide $8.5 million in funding for ADA Paratransit service operations in 2010 and 2011, and agreed to provide capital funds for distribution to the CTA in an amount equal to the debt service payable on RTA bonds to be issued in order to maintain quality service. The 2010 budget calls for debt funding of $5.4 million.

Other Revenue

This RTA revenue category includes sales tax interest, investment income, transit benefit program revenue, and grant funds from state and local agencies for regional coordination and technology initiatives which help defray the cost of these Agency sponsored programs. Total receipts are budgeted at $18 million for 2009 and 2010.

Total Expenditures

Total RTA expenditures (operating, debt service and capital) for 2010 are budgeted at $1,318 million. This amount is $38 million or 3% higher than the 2009 estimate of $1,280 million. Operating expenses account for 81% of the expenditures, 16% is used to cover the debt service on RTA bonds, and 3% is used to fund capital programs (Exhibit 2-6 illustrates this distribution).

Exhibit 2-6: **2010 RTA Expenditures** - $1,318 million

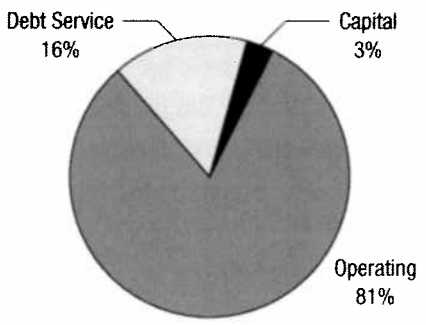


Exhibit 2-7: **2010 Funds for Service Operations - $1,193 million**

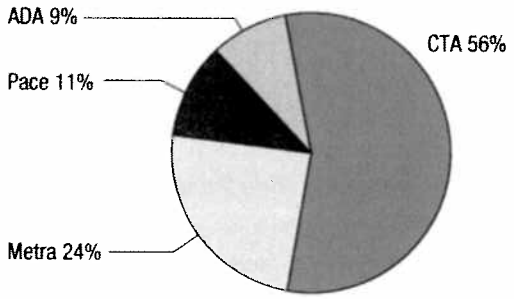

Operations Funding

The RTA's primary expenditure is the funding of Service Board operating deficits.

The RTA Board establishes "marks" for each Service Board to use in its proposed budget and program. The marks are set in September for the next fiscal (calendar year) period. Operating marks include a recovery ratio for the next budget year and operating funds for the budget and following two-year financial planning period. Operating deficits are primarily sourced from RTA sales tax, the State's PTF, and the City of Chicago's RETT. Other sources include federal funds, local program funds and intermittent use of fund balances.

Funds for operations are budgeted at $1,193 million in 2010. The CTA will use 56%, Metra 24%, and Pace 20% (11% for suburban bus service and 9% for regional ADA Paratransit service) (Exhibit 2-7). The source of funds and amount of funds (Exhibit 2-8) used for each Service Board's operation are identified in more detail in subsequent paragraphs.

CTA

The CTA's operations funding level (deficit) in 2010 is budgeted at $670 million. This figure includes statutory sales tax (sales tax based on formulas set by state law) totaling $372 million, $98 million from discretionary RTA funds (sales tax and PTF funds the RTA receives for operating and capital expenditures as set forth by state law), $28 million from City of Chicago RETT and corresponding 25% statutory PTF, and $173 million from the Federal 5307 Preventive Maintenance Fund. (Note: City of Chicago RETT funds flow directly from the City to the CTA and therefore are not included in the revenue or funding figures on Exhibit 2-3).

Metra

Metra's funding in 2010 is budgeted at $310 million with all funds provided by statutory formula.

Exhibit 2-8 **2010 Service Board Deficit Funding** (dollars in millions)

	2010				
			Pace		
Service Board	**CTA**	**Metra**	**Suburban Service**	**ADA (1)**	**Total**
Operating Revenue	601	311	55	8	975
Operating Expense	1,271	603	191	128	2,193

Operating Deficit	**670**	**292**	**132**	**99**	**1,193**
Funding					
RTA Sales Tax - old	262	221	70	-	552
RTA Sales Tax - new	110	89	30	90	320
RTA Discretionary Funds	98	-	-	-	98
RETT/PTF	28	-	-	-	28
RTA Community Mobility and Job Access	-	-	26	-	26
Other (1)	173	(18)	6	9	170
Total Funding for Operations	**670**	**292**	**132**	**99**	**1,193**

(1) CTA's amount ($173 million) represents Federal 5307 Preventive Maintenance Funds.
Metra's amount ($18 million) represents funds retained for Capital initiatives
Pace's amount for Suburban Service ($6 million) represents RTA Ice funds carried over from the previous year and Federal funds. Pace's amount for ADA ($9 million) represents additional state MOU funding.

$292 million is appropriated for operations with the remaining balance of $18 million retained by Metra and set aside for capital programs (in this document statutory funds that exceed Metra's operating needs may be referenced as Transfer Capital or Retained Earnings).

Pace Suburban Service

Pace's funding for operations in 2010 is budgeted at $132 million and reflects deficit reduction actions of $4 million. Pace will receive statutory sales tax from the old sales tax and new sales tax formulas totaling $100 million. Suburban Community Mobility and South Suburban Community Job Access funding (provided by P.A. 95-0708 and discussed in more detail in the region section) total $26 million. Pace is also transferring to operations federal 5307 funds in the amount of $2 million and projects $4 million in CMAQ/JARC/New Freedom/Ice funds.

Pace ADA Paratransit Service

Funding for ADA Paratransit service in 2010 is budgeted at $99 million and reflects total deficit reduction actions of $21 million. RTA funds are statutorily provided by P.A. 95-0708 and increase or decrease each year by the percentage change in sales tax revenue. Statutory funds that exceed the operating deficit are by statute retained by the RTA and reserved to fund future ADA Paratransit service; in 2010 no funds are to be retained by the RTA.

Innovation, Coordination and Enhancement (ICE) Funding

The Innovation, Coordination, and Enhancement (ICE) program, established as part of the 2008 Mass Transit Reform Legislation (P.A. 95-0708), provides operating and/or capital funding for projects that provide cost-effective ways to enhance the coordination and integration of public transportation, and develop and implement innovations to improve the quality and delivery of public transportation.

In 2009, the funding for ICE is projected to be used as discretionary funding from the RTA with $5 million for CTA operations and the balance for ADA Paratransit service. In 2010, $9 million is set aside and may be allocated for ADA Paratransit, as directed by ordinance 2009-74 paragraph 7.

Reduced Fare/Free Ride Programs and Sales Tax Interest

State reduced fare and free ride reimbursements are received as revenue by the RTA, as previously described, and flow directly to the Service Boards to help defray program costs. The 2010 projected reimbursement level of $37 million is a 9% increase from 2009.

There is a lag in time between when the State collects RTA sales tax and when it distributes the funds to the RTA. The RTA receives interest on this sales tax, and then disburses earnings on Part I sales tax to the Service Boards using the same formula as the Part I sales tax distribution formula. Payments in 2009 and 2010 are budgeted above $1 million.

Agency Administration, Regional Services & Programs

Agency administration represents on-going RTA functions to execute its funding and financial oversight responsibilities. Budgeted 2010 administrative expenses totaling $8 million are significantly below the 2010 statutory cap of $17 million permitted by the RTA Act.

The RTA coordinates and funds several region-wide initiatives that bring together public transportation services. These programs include system maps, local advertising, the transit benefit program, the Travel Information Center (TIC), ADA certification, Reduced Fare, and the Customer Service Center. In addition, the RTA supports continued demands for technical assistance initiatives and coordination programs that encourage transit oriented improvements in the region. Programs supported include various community planning and sub-regional programs.

Debt Service and Capital Expenditures

Total expenditures in this category are projected to decrease from $262 million in 2009 to $248 million in 2010, a decrease of 5%. This change basically reflects the decrease of statutory funds Metra has available for capital expenditure.

Principal and Interest

Principal and interest (debt service) expenditures in the 2010 budget total $207 million. Payments cover the debt incurred on bonds (authorized by the state), which help pay for Service Board capital projects, and pay for the occasional issuance of working cash notes to cover extended accounts receivable cycles from the State. The State's financial assistance for SCIP bond programs in 2010 covers roughly 59% of the RTA's debt service costs with the remaining balance paid from RTA funds.

Regional Technology and Agency Capital

The 2010 budget continues the RTA's commitment to fund region-wide capital and/or technology driven initiatives and Agency programs. The 2010 Agency budget of $2 million includes an online Trip Planner (goroo), various IT hardware and software updates, an integrated management system, telecommunication hardware moves, and participation with the Clean Air Commuter Challenge.

Transfer Capital

Since 1995, the RTA has transferred a portion of its discretionary funds, available for region-wide capital or operating initiatives, to the CTA for capital investment. Annual funding for this program during the next three-year financial planning period continues at over $20 million. In addition, the statutory apportionment of sales tax to a Service Board can exceed its operating needs. When this occurs, the Service Board retains the funds for their capital program. Over the years Metra has been the only Service Board that has been able to retain such funds for capital investment. The budget for 2010 includes $18 million available for Metra's capital program.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a 5% minimum level in the unreserved and undesignated fund balance. If the amount is below 5% the financial plan must show full replenishment by the end of the current three-year planning cycle. The percentage is based on total operating expenditures for the year (as shown on Exhibit 2-3). The purpose of the ordinance was to formalize a practice of maintaining a level of available financial resources for funding during unfavorable economic periods. The policy proved its value as sluggish economic conditions over the past several years' limited growth of sales tax receipts.

However, continued unfavorable economic conditions created the need to waive the provision for the 2009-2011 planning period, and the continued uncertainty in the economic environment necessitates the continuance of this waiver during the 2010-2012 planning cycle. This waiver also removes RTA's ability to fund the operating budgets of the Service Boards at the levels established in the operating marks, (a provision of the RTA Funding Policy) and therefore the funding to budget policy was waived for purposes of the adoption of the 2010 Budget and 2011-2012 Financial Plan. The ending fund balance for 2010 is estimated to be $15 million or 1.4% of total operating costs of $1.1 billion.

Beginning Balance

The beginning fund balance is the amount of funds in the undesignated and unreserved (General Fund) fund balance after the previous year's results have been audited and the accounting records are closed. All statements in this document reflect 2008 actual results for the 2009 beginning balance.

Change in Fund Balance

Total RTA revenues less total RTA expenses produce an annual change to the fund balance. When revenue exceeds expense, the remainder or surplus is added to the fund balance. If expenses exceed revenues, the fund balance is reduced by the deficit amount. Estimates indicate that revenues will exceed expenditures in 2010 by $37 million before using $4 million to fund the regions Joint Self Insurance Fund (JSIF).

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal (calendar) year for each Service Board. The RTA Act further requires that the combined revenues from RTA operations cover at least 50% (apart from ADA Paratransit service) of the system operating cost. The RTA's system-generated revenue recovery ratio for 2010 is 53%. A breakdown of this calculation is provided at the end of the Region section.

In meeting the 50% recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figure used to determine whether the RTA system meets this 50% requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/leaseback transactions. The Act further requires a recovery ratio for ADA Paratransit service of 10%, the 2010 budget for this service meets this stipulation.

Statutory Compliance

The RTA Act requires that the CTA, Metra and Pace each have a balanced budget; the region's recovery ratio is at least 50% (apart from ADA Paratransit that requires a recovery ratio of 10%); and the RTA's (Agency's) administrative expenses do not exceed an established statutory cap (CAP). The CAP is almost $17 million, and the Agency's administrative expenses of $8 million are well below the statutory amount. The Act also requires that prudent fiscal practice be followed such as

Exhibit 2-9: **2010 Source and Use of Funds** (dollars in millions)

Source of Funds	**Total**
RTA Sales Tax	891
State Funds	446
RTA Revenue	18

ADA Paratransit	116
Agency & JSIF	38
Debt Service	207
Transfers to Capital	38
RTA Fund Balance	33
Total Use	**2,493**

Exhibit 2-10: **2010 Source of Funds - $2,493 million**

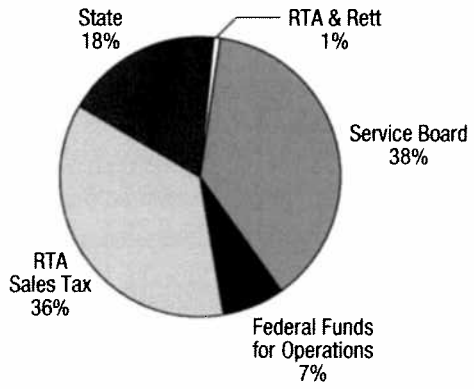

Exhibit 2-11: **2010 Use of Funds - $2,493 million**

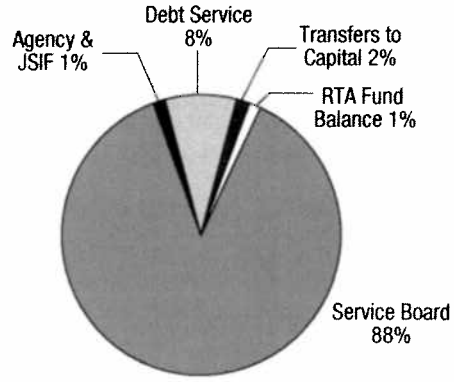

Exhibit 2-12: **2010 Source and Use Funds - $2,493 million**

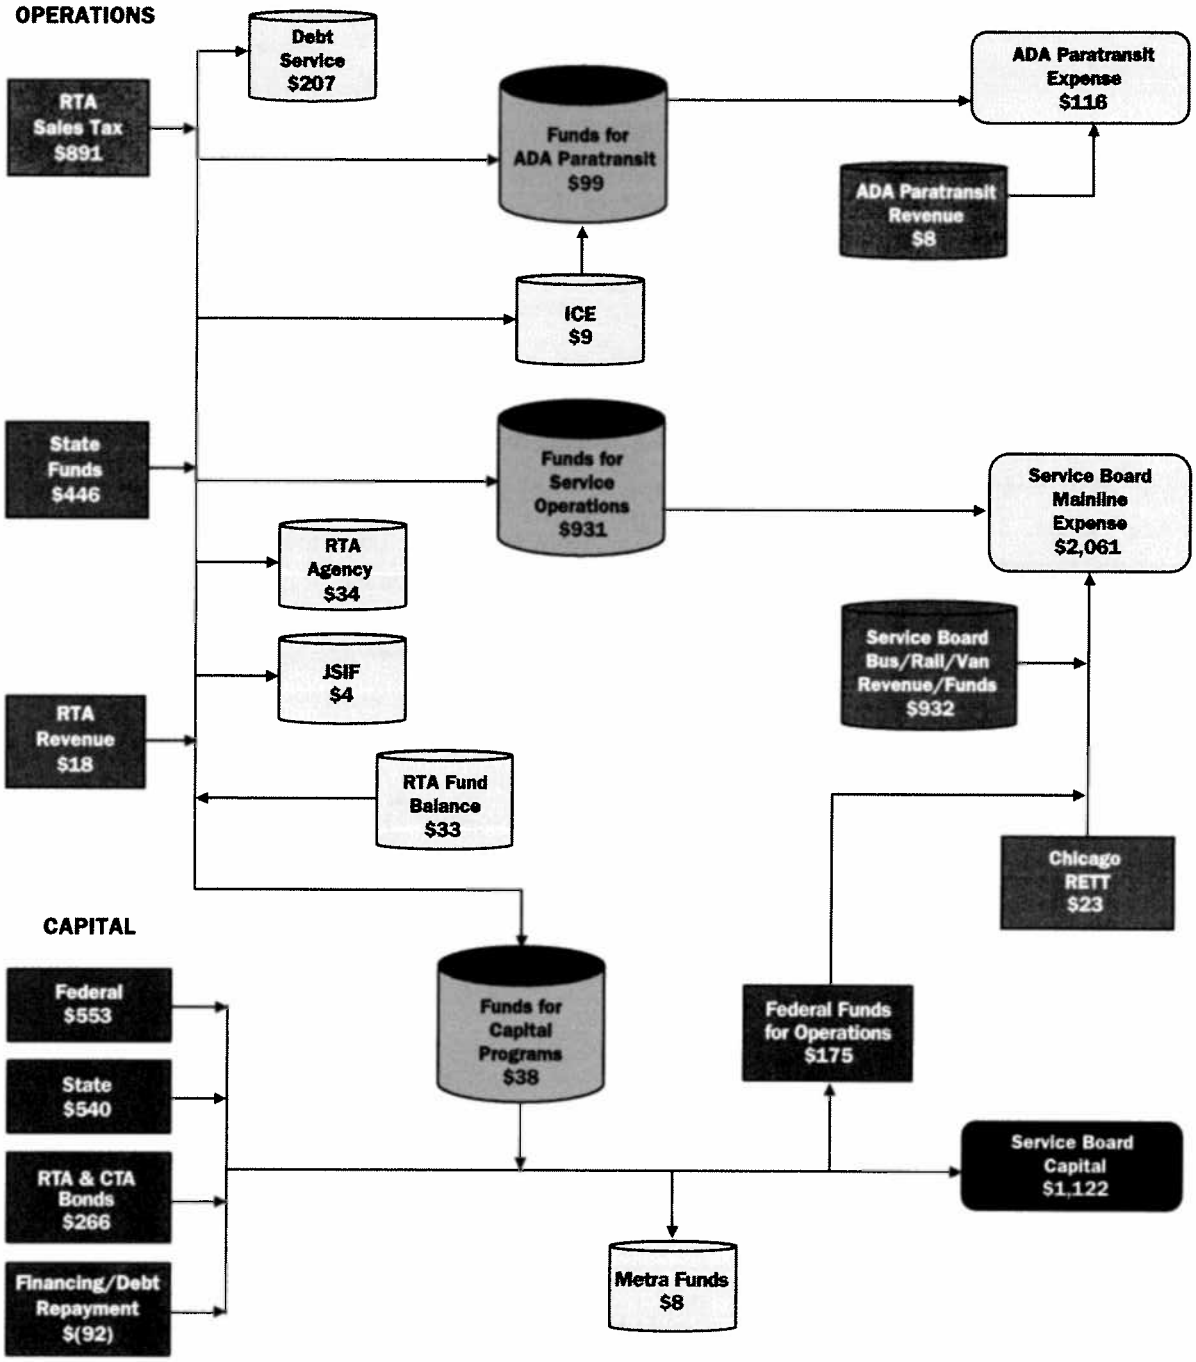


proper cash management, use of reasonable assumptions, and sound accounting and financial practices. Each Service Board, the Agency and the region as a whole have budgets presented in this document that comply with these stipulations.

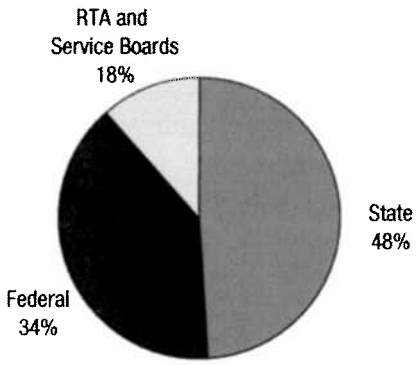
Source and Use of Funds

Each section of the 2010 Program and Budget Book presents the source of funds (public funding and/or operating revenues) and the use (expenditure) of funds for the respective operation. The subsequent paragraphs and exhibits (Exhibits 2-9 though 2-12) summarize the source and use of these funds for the 2010 budget.

In 2010, total revenue estimates of $2,493 million include: $891 million in receipts from RTA sales tax; State funding totaling $446 million, RTA revenue of $18 million, $23 million from RETT, CTA, Metra, and Pace mainline operating receipts of $932 million, $8 million in ADA operating revenue, and federal funds for operations of $175 million.

The use of $2,493 million in funds includes $2,177 million for service operations (ADA paratransit $116 million, and mainline CTA, Metra and Pace Suburban Bus service $2,061 million); $38 million for Agency and JSIF; $207 million for debt service; $38 million for capital programs, and $33 million for the RTA fund balance.

Exhibit 2-13: **2010 Funds for Service Board Capital Programs - $1,122 million**



Capital Program

The capital program information in this document adopted by the RTA Board on December 17, 2009 includes: $38 million from RTA funds, $553 million in federal funds, $540 million in State funds, $266 million in RTA and CTA bonds, less $92 million used for debt service, $8 million retained by Metra, and $175 million used for operations. Exhibit 2-13 summarizes program funds totaling $1,122 million by major source. Reference the capital Section for program detail and the capital program impact on region-wide operations.

3 RTA

Region Operating Plan

Budget and Financial Plan

The RTA must prepare and publish a document every year that includes a one-year operating budget, a two-year financial plan, and a five-year capital program that meets specific statutory requirements.

This document fulfills the responsibility. Exhibit 3-1 provides a summary of the RTA's statement of revenue and expenditures for 2008-2012. Throughout this document, 2008 is actual data, 2009 is an estimate of year-end results, 2010 is the operating budget, and 2011-2012 represent the two-year financial plan.

Revenue

Total revenue for the regions operating plan is projected to drop in 2009 to $1,319.7 million, a decrease of $4.7 million from 2008. This is because the traditional RTA sales tax (Part I) is expected to decrease 11.9 percent in 2009. In 2012, total revenue is expected to reach $1,420.7 million, an increase of $101.0 million from 2009 (Exhibit 3-1).

The RTA Sales Tax (Part I and II) are the primary sources of revenue for the RTA comprising a total of 69.6 percent or $921.3 million in 2008. Traditional RTA Sales Tax (Part I) receipts of $726.7 million comprised 54.9 percent of the RTA's total revenue. RTA Sales Tax (Part II) receipts of $194.6 million comprised 14.7 percent of the RTA's total revenue. Public Transportation Funds (PTF – Part I and PTF-Part II), State Financial Assistance (SFA), State Reduced Fare (RF), and other revenue provided the balance of RTA revenue totaling $403.1 million, or 30.4 percent (Exhibit 3-2).

Sales Tax

The RTA Sales Tax (Part I and II) is authorized by Illinois statute and imposed by the RTA in the six-county northeastern Illinois region. The RTA Sales Tax is collected by the Illinois Department of Revenue, paid to the Treasurer of the State of Illinois and held in trust for the RTA outside the State Treasury. Proceeds from the RTA Sales Tax are paid directly to the RTA on a monthly basis, without appropriation, by the State Treasury on the order of the State Comptroller.

The traditional (Part I) sales tax is the equivalent of 1 percent on sales in Cook County and 0.25 percent on sales in DuPage, Kane, Lake, McHenry and Will counties. The 1 percent sales tax in Cook County is comprised of 1 percent on food and drugs and 0.75 percent from all other sales, with the State of Illinois then providing a "replacement" amount to the RTA equivalent to 0.25 percent of all other sales. The RTA retains 15 percent of the total sales tax and distributes the remaining 85 percent to the Service Boards according to the formula specified in the RTA Act (Exhibit 3-3).

Exhibit 3-4 breaks out the 2008 sales tax distribution by Service Board for the Part I Sales Tax. In 2008, the $726.7 million in sales tax was broken out in the following manner; CTA received 40.2 percent, Metra 34.0 percent, Pace 10.8 percent, and RTA 15.0 percent.

Public Act 95-0708 (P.A. 95-0708) passed in January 2008 established Sales Tax Part II. The legislation increased RTA sales tax from 1 percent in Cook County to 1.25 percent, and increased the sales tax in the collar counties (DuPage, Kane, Lake, McHenry and Will) from .25 percent to .75 percent. The collar county tax increase is divided evenly between the RTA and the county where the tax is collected, which means the sales tax the RTA receives in the collar counties doubled (from 0.25 percent to 0.50 percent). Revenues collected from RTA Sales Tax Part II are projected to increase from $237.3 million in 2009 (the first full year receipts were collected) to $255.0 million in 2012, an increase of $17.7 million or a compound annual growth rate of 2.5 percent (Exhibit 3-5). Total sales tax revenues are projected to decline from $921.2 million in 2008 to $877.3 million in 2009. After 2009, total sales tax revenues are estimated

(1) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action.

to increase annually up to $942.9 million in 2012 (Exhibit 3-5).

Sales tax projections are made by examining economic trends at a national, state and regional level. From a geographic standpoint, the City of Chicago accounted for 31.7 percent of the Part I sales tax collected in 2008, suburban Cook 52.2 percent, and the collar counties 16.1 percent (Exhibit 3-6). In 2010, combining the estimates for Part I and Part II sales tax, the collections are as follows; the City of Chicago 28.9 percent, suburban Cook County 47.6 percent, and the collar counties 23.5 percent (Exhibit 3-7). RTA Ordinance 2009-93 Schedule I-D (Introduction Section) illustrates the source and distribution of funds provided by the new legislation.

Public Transportation Funds (PTF I and II)

Revenues from this fund are only paid to the RTA upon state appropriation. In accordance with

Exhibit 3-2: **2008 RTA Revenue** - $1,324 million

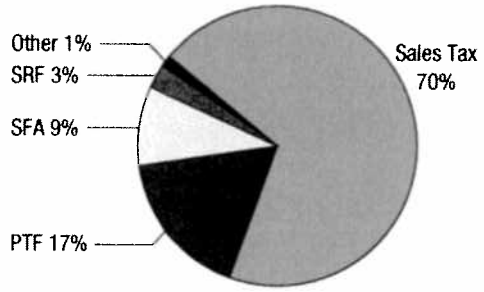

Exhibit 3-3: **RTA Sales Tax (Part 1) Collected** (in percent)

	CTA	Metra	Pace	Total
Chicago	100	-	-	100
Suburban Cook	30	55	15	100
Collar Counties	-	70	30	100

Exhibit 3-4: **RTA Sales Tax (Part I) Distribution** - $727 milion

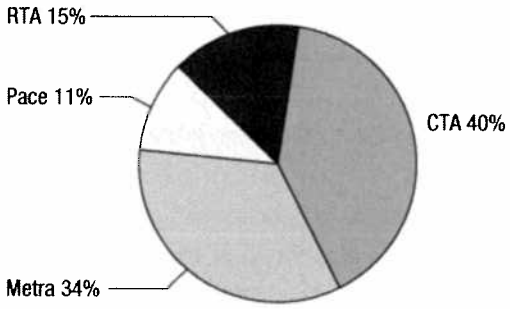

Exhibit 3-5: **RTA Sales Tax** (dollars in millions)

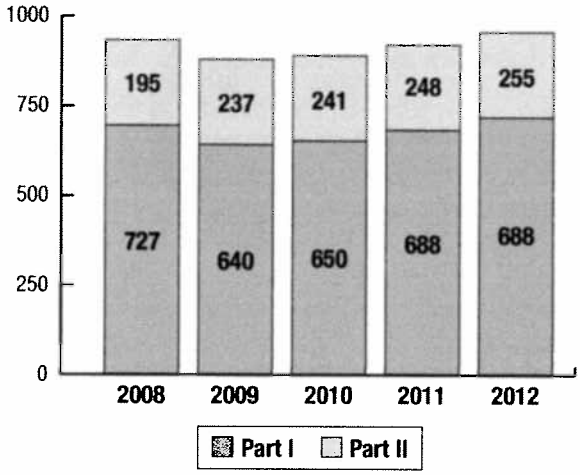

the RTA Act, the State Treasurer is authorized and required to transfer from the State of Illinois' General Revenue Fund an amount equal to 25 percent of net revenue realized from Part I sales taxes. These receipts are based on a formula tied to sales tax collections and are, therefore, projected to increase or decrease at a rate equal to sales tax growth or decline. For every four dollars that are collected in sales tax Part I, the RTA receives an additional dollar in PTF I. The 2010 estimated amount is $162.4 million (Exhibit 3-1). The amount of funds that each Service Board receives through the RTA from the PTF I are allocated at the discretion of the RTA Board upon the review and approval of each Service Board's annual or revised budget.

Revenues from PTF II provided by P.A. 95-0708 are combined with Part II sales tax and designated for certain operations and programs before formula allocation to the Service Boards. Money set aside before allocations include funding for: ADA Paratransit operations, Suburban Community Mobility (SCMF), and Innovation, Coordination and Enhancement (ICE) initiatives. Funding for these initiatives, as set by statute, increase or decrease with the annual changes in sales tax collections, with 2008 set as the base year. The 2010 appropriation for ADA Paratransit was $90.3 million, SCMF $18.1 million, and ICE $9.0 million. The remaining balance is allocated as follows: CTA 48 percent, Metra 39 percent and Pace suburban service 13 percent.

In 2009, (P.A. 95-0708), the PTF match of both the RETT and the RTA portion of the sales tax increased from 5 percent to 30 percent. The new legislation also increased the real estate transfer tax (RETT) in the City of Chicago by 0.3 percent, which yields $3 in public funding for the CTA for every $1,000 paid for the property. This funding flows directly from the City of Chicago to the CTA and is not included in the RTA schedule of revenues and expenditures (Exhibit 3-1). However, PTF funds associated with RETT (i.e. 25 percent of RETT)

Exhibit 3-6: **2008 Part I Sales Tax by Area** - $727 million

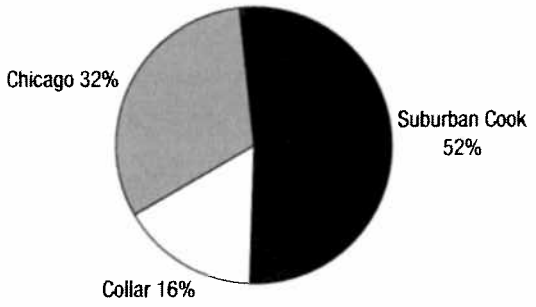

Exhibit 3-7: **2010 Part I & Part II Sales Tax by Area** - $890 million

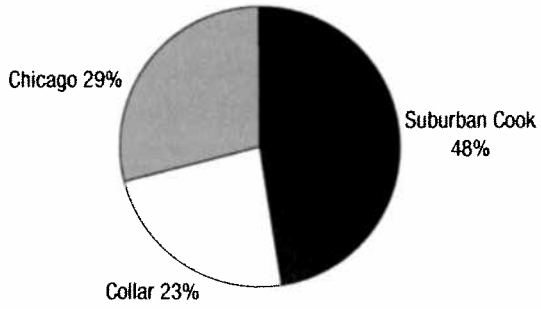


transactions flow through the RTA and by statute become part of the CTA's funding as illustrated in the Introduction Section (Ordinance 2009-93 – Schedule I-B).

None of the PTF revenue is payable to the RTA until it certifies to the Governor, State Comptroller and Mayor of the City of Chicago that it has adopted a budget and financial plan as called for by the RTA Act.

State Financial Assistance (SFA)

This revenue source is a state-authorized assistance to reimburse the debt service expenses for the RTA's Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the State of Illinois, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. The RTA received $121.9 million in 2008 and estimates that it will receive $122.0 million each year from 2009 to 2012.

Reduced Fare/Free Ride Programs

This operating assistance program is a partial reimbursement from the State of Illinois to the Service Boards for discounts mandated by law. This includes discounts to students, elderly, and disabled individuals who qualify for the State Circuit Breaker Program.

The reduced fare/free ride funds are distributed by the State of Illinois through the RTA and then to the Service Boards. Funding in 2008 was $36.8 million and is estimated at $33.6 million in 2009. Funding of $36.8 million annually is expected from 2010 through 2012.

State Funding ADA/Debt

On November 11, 2009 the RTA and the Service Boards entered into a Memorandum of Understand (MOU) with the Illinois Department of Transportation (IDOT). In this document the IDOT agreed to provide $8.5 million in funding for ADA Paratransit service operations in 2010 and 2011, and agreed to provide capital funds for distribution to the CTA in an amount equal to the debt service payable on RTA bonds to be issued in order to maintain quality service. The 2010 budget and 2011-2012 financial plan calls for debt funding in the respective amounts of $5.4 million, $10.8 million, and $10.8 million.

Other Revenue

The other revenue category generally consists of sales tax interest, investment income, and Agency revenue. The RTA received $17.3 million in Other Revenue in 2008.

Illinois pays interest on sales tax receipts to the RTA from the time of collection until it is disbursed to the RTA. The RTA then disburses the interest on Part I sales tax receipts to the Service Boards based on the same formula used to allocate the Part I sales tax receipts. In 2009, sales tax interest is estimated at $2.0 million. RTA investment income is dependent on available

cash balances and prevailing market rates. The RTA's cash balance is primarily composed of funds reserved in prior years for various Service Board capital projects and associated RTA financial transaction proceeds. Additional revenue in this category includes fees charged to employers for RTA Fare Checks that help offset the costs of administering the program. Also included in Agency revenue are matching funds obtained under federal, state and local programs for regional planning, development and new technology efforts. Other Revenue of $17.6 million annually, is expected during the 2010-2012 planning cycle.

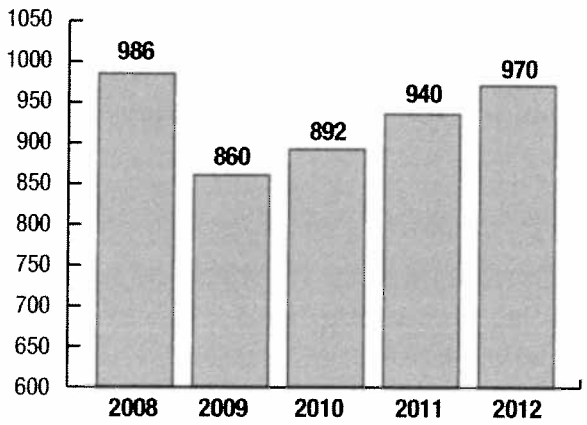
Operating Expenditures

Exhibit 3-1 provides a summary of the RTA's operating expenditures from 2008 through 2012. Total operating expenditures are projected to decline from $1,158.9 million in 2008 to $1,146.5 million in 2012. This is a decrease of $12.5 million over the four-year period, or a compounded annual decline of (0.3) percent.

Operations Funding

The RTA's primary expenditure is the funding of the Service Boards' operating deficits. An operating deficit is the difference between a Service Board's system-generated revenue (farebox and other revenue) and system operating expenditures. Exhibit 3-8 presents the operations funding level for the three Service Boards and ADA Paratransit. The Service Board operations funding apart from ADA from the RTA is estimated at $859.7 million in 2009. This $126.3 million decline from 2008 represents to a decrease of 12.8 percent. Service Board operations funding is expected to increase annually after 2009 to $969.9 million in 2012.

Exhibit 3-8: **RTA Operations Funding** - Excludes ADA
(dollars in millions)



RTA operations funding to the Service Boards in 2008 compared to 2012 is as follows: The CTA's funding (including PTF from RETT) is estimated to decline to $465.2 million in 2009. This $126.5 million decrease corresponds to a 21.0 percent decline from 2008. CTA's funding is projected to increase annually from 2010 to 2012, reaching $521.7 million in 2012.

Metra's funding level is expected to decline to $268.7 million in 2009. This $10.2 million decrease from 2008 corresponds to a 0.4 percent decline. Metra's funding is projected to increase annually from 2010 to 2012. Metra's funding is estimated at $315.6 million in 2012.

Pace's suburban bus service funding (excluding Suburban Community Mobility Funds and South Suburban Job Access funds) are expected to increase in 2009 to $100.5 million and then increase to 105.9 million in 2012. A compound annual growth rate of 1.8 percent in 2012 (Exhibit 3-I). When Suburban Community Mobility funds and South Suburban Job Access funds are added to Pace's suburban operations funds, Paces funding increases from 115.4 million in 2008 to 132.6 million in 2012, a compound annual growth rate of 2.8 percent. Total funding for the 2010 through 2012 financial plan is provided in the Introduction Section (Ordinance 2009-93, Schedule I-B).

A detailed discussion of each Service Board's revenues and expenditures is provided in the CTA, Metra and Pace sections of this document.

Suburban Community Mobility Funding

Each year, as provided by P.A. 95-0708, the RTA shall deposit into this fund an amount that increases or decreases with the percentage change in sales tax receipts. This change is

indexed from the 2008 statutory base year amount of $20 million. As shown in Exhibit 3-1 this amount declines to $17.8 million in 2009. Funding increases from $18.1 million in 2010 to $19.1 million 2012. This $1.0 million increase corresponds to a compound annual growth rate of 2.9 percent.

The amount on deposit including interest and earnings shall be used by the RTA to provide grants to Pace for operating transit services that enhance suburban mobility, including, but not limited to, demand-response services, ride sharing, van pooling, service coordination, centralized dispatching, call taking, reverse commuting, service restructuring, and bus rapid transit (BRT).

South Suburban Job Access Funding

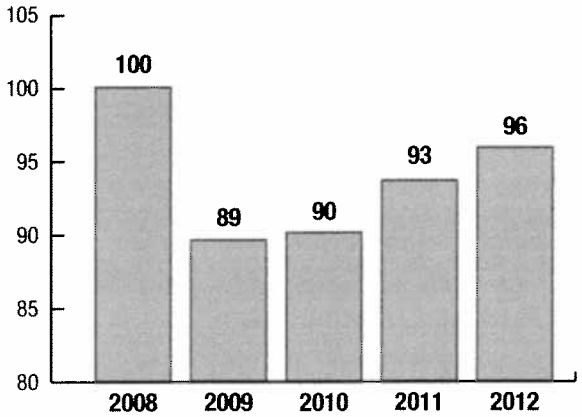
Another provision of P.A. 95-0708 is the establishment of a fund that provides financial resources to Pace, in cooperation with the RTA, for the development of operating programs that enhance access to job markets for residence in south suburban Cook County. Funding was set at $3.75 million in 2008 increasing to $7.5 million annually thereafter.

ADA Paratransit Service

The State of Illinois appropriated additional funds to the RTA in the amount of $54.3 million for ADA Paratransit service and other costs and services in 2005, 2006, and 2007. In 2005, the CTA received the full appropriation. In 2006 the CTA and Pace shared the appropriation because Pace acquired responsibility for all ADA Paratransit service in the RTA region effective July 1, 2006. In 2007, Pace received the full appropriation from the State of Illinois. Because of growing service demands and increased operating costs, Pace also received $21.8 million of RTA Discretionary Funds producing a total funding for ADA Paratransit in 2007 of $76.1 million.

In 2008, the additional state funding for ADA Paratransit service ($54.3 million) was terminated with the passage of P.A. 95-0708. Provisions in the RTA Act set aside a base amount of $100 million for 2008 ADA Paratransit operations that change annually in conjunction with the annual percentage change in sales tax receipts. Funding from this source is estimated to decrease to $89 million in 2009 and then increase to 95.6 million in 2012 (Exhibit 3-9), a compound annual growth rate of 1.8 percent. The additional $8.5 million from the state increases total funding to $98.8 million in 2010 and $101.4 million in 2011. Consult the section titled Pace ADA Paratransit for further information on Pace ADA revenues and expenditures.

Exhibit 3-9: **ADA Paratransit Funding** - (dollars in millions)



Innovation, Coordination and Enhancement (ICE) Funding

P.A. 05-0708 also established a fund for innovation, coordination, and enhancement. The base amount of $10 million for ICE funds changes at the same rate as regional sales tax collection changes. ICE Fund are appropriated with the affirmative vote of 12 RTA directors, and after a public participation process, for operating or capital grants or loans to service boards, transportation agencies, or units of local government that advance the goals and objectives of the RTA's Strategic Plan, provided that an improvement is not a five-year capital program as of the effective date of the new legislation may receive any ICE funds. However, if the RTA Board determines that an emergency exists, by an affirmative vote of 12 members, funds may then be used for urgent operating or capital needs.

The distributions of funds from 2008 through 2012 have decreased from $10.0 million to $9.6 million respectively. In 2009, the RTA determined that an emergency existed and diverted ICE funds to the CTA and ADA Paratransit service.

Reduced Fare/Free Ride Programs and Sales Tax Interest

State reduced fare/free ride programs reimbursements are received as revenue by the RTA and flow directly to the Service Boards to help defray program costs associated with the cost of providing free and reduced fares. In 2008, the State's Reimbursement was $36.8 million. The reimbursement is estimated to decline in 2009 to $33.6 million which is not expected to fully cover the cost of the program. During the three-year planning period (2010-2012), the reimbursement is estimated to be $36.8 million.

There is a lag between when the State of Illinois collects the RTA Sales Tax and when the State of Illinois transfers it to the RTA. The RTA receives interest on this sales tax, and then disburses 85 percent of the interest to the Service Boards according to the same formula used for sales tax distribution. From 2010 through 2012 the amount is projected to hold at an annual amount of $1.7 million.

Agency Administration, Regional Services and Programs

Spending for Agency administration, regional services and regional programs are discussed further in the Agency portion of this section. Expenditures in 2008 were $30.9 million and estimated in 2009 at $29.9 million. After 2009, these expenditures are expected to increase annually through 2012 to $32.9 million corresponding to a compound annual growth rate of 3.3 percent from 2009.

Debt Service and Capital Expenditures

Exhibit 3-1 provides a summary of the RTA's debt service and capital expenditures from 2008 to 2012. Total debt service and capital expenditures are estimated at $262.3 million in 2009. This represents an increase of $45.6 million from 2008. Total debt service and capital expenditures are then expected to decrease in 2010 and then increase annually through 2012. These expenditures are estimated at $247.8 million in 2010 and $253.3 million in 2012.

Principal and Interest

Principal and interest payments reflect the RTA's expenditures and projected expenditures from 2008 through 2012. Payments are expected to be $207.0 million, $215.0 million, and $217.6 million in 2010, 2011, and 2012 respectively. Additional bond information is provided at the end of this section.

Regional Technology, Agency Capital, and ICE

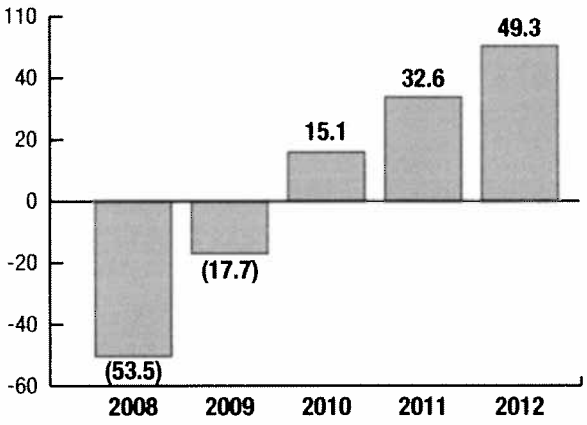
The 2010 budget continues to fund region-wide capital-driven technology enhancements. Like regional technical assistance programs, the regional technology programs are coordinated efforts with other state and local agencies, reducing RTA funding. At the end of the year, any funds that have not been spent are reserved. Included in this category are expenditures for the Agency's capital needs. The funds are used to enhance various information technology programs and preserve the office environment.

The budget for 2010 totals $2.4 million, remaining level though the planning period. More details are spelled out in the Agency's share of this section.

Transfer Capital

Two funding sources cover this category of expenditure, statutory and RTA discretionary. The statutory apportionment of sales tax to a Service Board can exceed its operating deficit, when this occurs, a Service Board can transfer these funds to its capital program. During the planning period Metra continues to be the only Service Board that can assign funds that could be used for operating

Exhibit 3-10 **Fund Balance** - (dollars in millions)



purposes to its capital program. From 2010 through 2012, Metra's plans to transfer statutory funds to its capital program in the respective amounts of $18 million, $13.7 million, and $13 million.

Since 1995, the RTA has transferred a portion of its discretionary funds, available for operations, to the CTA for capital investment. From 1995 through 1997 the program was funded at an annual level of $11.0 million. In 1998, CTA's funding for this program was increased to $16.5 million. The CTA transfer capital program was funded at $19.2 million in 1999 and increased to $20.4 million in 2000 and remains at this level through the 2012 planning period.

Total Expenditures

Total RTA expenditures include all operating, debt service and capital program costs. In 2009, these expenses are projected at $1,279.9 million, a decrease of $95.8 million from 2008. After 2009, total RTA expenditures are expected to increase annually to $1,399.7 million in 2012. This $119.9 million increase is corresponds to an annual growth rate of 3.0 percent from 2009 to 2012.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level in the unreserved and undesignated fund balance of 5 percent of total operating expenditures. Fund balance policy details are outlined in the Introduction Section. The purpose of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods. However, unfavorable economic conditions have created the need to waive the provision for the 2010 budget and 2011-2012 planning period.

The 2008 undesignated/unreserved ending fund balance was negative $53.5 million. The estimated ending balance for 2009 is negative $17.7 million. The ending balance for the 2010 budget and two-year financial plan (2011 to 2012) is expected to be $15.1 million, $32.6 million, and $49.3 million respectively (Exhibit 3-10).

Beginning Balance

The beginning balance is the amount of funds in the undesignated and unreserved fund balance after the previous year's results have been audited and the accounting books are closed. All statements in this document reflect 2008 actual results of negative $53.5 million as the 2009 beginning balance.

Change In Fund Balance/Ending Fund Balance

Total RTA revenue less total RTA expenditures produces a change in fund balance. When revenue exceeds expenditures, the gain is added to the fund balance. If expenditures exceed revenue, the deficit reduces the fund balance. In 2008, total expenditures exceeded total revenues on a budgetary basis by $51.3 million.

Expended from RTA's fund balance is the payment of premium for the Joint Self Insurance Fund (JSIF). The amount in 2010 is $4.1 million. The RTA provides excess liability insurance to protect the self-insurance programs maintained by the Service Boards. The Service Boards are obligated to reimburse the fund for any damages paid plus interest. The 2010-2012 Budget and Financial Plan provides for an annual payment of premium of approximately $4.2 million

At year end changes in revenue over expenditures, other funding uses, and capital grant expenditures are reconciled on a GAAP versus budgetary basis with the balance in the general fund then reflecting a GAAP based undesignated/ unreserved balance. The year-end unreserved/ undesignated fund balance in 2008 was negative $53.5 million (Exhibit 3-1).

Recovery Ratio

The RTA Act requires the RTA Board to set a recovery ratio for the next fiscal year for each Service Board. The RTA Act further requires that the combined revenue from RTA operations cover at least 50 percent of the system operating cost apart from ADA paratransit Service. The RTA's system-generated revenue recovery ratio in 2010 is 53.0 percent or 3.0 percentage points above the mandated 50.0 percent. This calculation is based on the CTA, Metra and Pace achieving their respective marks of 51 percent, 55 percent and 36 percent.

In meeting the 50.0 percent recovery ratio, the RTA Act requires that the revenue figures include all receipts consistent with generally accepted accounting principles with certain specified exceptions. Therefore, the revenue figures used to determine whether the RTA system meets this 50 percent requirement includes not only all of the items contained in the recovery ratio for the Service Board budgets, but also the net gain on lease/lease-back transactions and Metra's 2008

(1) Budget Ordinances 2009-65 and 2009-67 (adopted August 2009). (2) August estimate to meet 2009 budget and two-year financial planning cycle (Marks set by September 15, and Budget adoption by year-end) as set by state statute. (3) Includes $3.9 million of RTA discretionary funds from 2009 ICE Funds. (4) Appropriated funds for long-term regional initiatives that remain unspent at the end of each year continue to be available for this purpose without subsequent appropriation action. (5) Estimate includes $3.9 million to fund the JSIF.

fare increase—which was restricted for capital investment. A breakout of this calculation is provided in Exhibit 3-46 at the end of this section.

2009 Budget Versus 2009 Estimate

The 2009 budget was last amended in August of 2009. Total revenues of $1,319.7 million is estimated to come in at par to budget.

Total expenditures of $1,279.9 million are projected to be favorable to the budget by $299 thousand dollars. Total operating expenditures are estimated to be favorable to the budget by $285 thousand dollars with the entirety being saved from agency administration and Regional initiatives. Additional funding for Regional Technology and Agency Capital is estimated to be favorable to budget by $14 thousand dollars (Exhibit 3-11).

Capital Program

At the present time, the 2010-2014 capital program funding marks total $5.003 billion. When federal, state or local appropriation figures change, the Service Boards' capital programs may not match the program marks.

When this occurs, the RTA Board considers ordinances that incorporate all changes and bring the Service Board programs in balance with the marks. Detailed Service Board program information is provided in the Capital Section of this publication.

Agency Departments and Staffing

The agency's original 2009 budget included a staffing plan of 118 Full Time Equivalent (FTE) positions, an increase of five positions over the staffing level in 2008. During the year one FTE was added bringing the staffing level to 119 positions. However, with economic environments upholding unpredictability and revenues for 2009 and 2010 significantly below earlier expectations ten positions remained open in the middle of 2009, lowering the total FTE positions plan to 109. The proposed plan for 2010 is 110 positions, adding one new travel trainer to increase mainline service usage and decrease ADA paratransit service dependency. The proposed 110 positions staffed in 2010 will forego salary increases, and further cost saving measures will be taken, including employee furloughs, to maintain a budget unchanged from 2009 expenditures of $33.7 million.

The RTA organization chart (Exhibit 3-12) illustrates the agency departments and their divisions and functional units.

Exhibit 3-13 shows the total RTA staffing plan and the Grand Total of budgeted positions for the entire region. The Grand Total of budgeted positions in 2010 is 15,254. The department breakdown reflects that 44.0 percent of our efforts provide various regional services and planning programs and that 30.0 percent of our efforts are for finance and administration initiatives. The remaining 26.0 percent is dedicated for various management services and oversight responsibilities such as executive services, research, analysis and policy development, legal & governmental affairs, and communications (Exhibit 3-14).

Exhibit, 3-15 and 3-16 show agency expenses by each department. The estimated 2009 agency expenses of $33.4 million are slightly under the 2009 budget. As previously discussed, the total 2010 agency expenditure is $33.7 million, which represents no increase over the 2009 budget.

The next pages introduce each department, their program priorities and analyze their expenditures in a more detailed level. The 2010 Agency Program Priorities builds on the accomplishments of 2009.

Executive Office

This structure includes the RTA Board of Directors and organizations that support the RTA Chairman and Board of Directors, and administer day-to-day agency activities.

The RTA Board of Directors consists of 15 members and a chairman. The RTA Board has the statutory authority to establish by rule or regulation, financial, budgetary, or fiscal requirements for the region's public transit system. The RTA Board and its committees set policy, consider matters relating to RTA operations and compliance with the ADA Act, supervise audits, and consider planning studies and capital program investments. The Board has six standing committees that review and recommend policy to the entire Board.

The Executive Director executes the policy decisions of the RTA Board and staffs the agency to administer its statutory mission and implement Board policy. The Executive Director informs and assists the RTA Chairman and the Board in the development of policy, and is the principal contact with executive staffs of the CTA, Metra, and Pace to ensure effective administration of the RTA's regional planning and oversight responsibilities.

The Secretary to the Authority provides Board support functions by assisting with the information, documentation, and logistical needs of the RTA Board. The Secretary works with staff to supply Board members with the information and documentation needed to fulfill their statutory role and to obtain quorums for meetings of the Board and its six standing committees.

Program priorities:

- Manage the departments continued implementation of the RTA Act mandates and Illinois Auditor General Recommendations

Exhibit 3-12: **RTA Organization Chart**

Grand Total	**16,641**	**16,261**	**15,254**	

- Oversee the departments achievement of their 2010 program goals
- Work closely with the RTA Board to obtain the necessary Board direction for the achievement of the over-all 2010 program

2010 expenditures of $1.4 million represent 4 percent of the total agency budget, which include personnel related expenses for the board and the executive area. The 2010 budget reflects a 2.3 percent reduction over 2009. There will be no change in the budgeted positions in 2010. The total executive office staff of three - without the board members - will remain the same.

Planning and Regional Programs

The department consists of four principal organizational areas. Three areas, Strategic & Long Range Planning, Special Programs, and Regional Coordination provide strategic, regional, subregional and corridor planning, and coordination between Service Boards. The fourth area, Regional Services is responsible for the following RTA-operated regional services and programs: the RTA Travel Information Center, Accessibility, ADA Paratransit Certification program, RTA reduced fare program, senior and disabled ride free program, and the RTA Customer Service Center.

Program priorities:

STRATEGIC AND LONG RANGE PLANNING

- **Moving Beyond Congestion Strategic and Business Plan**

  Complete the update to the strategic plan in spring 2010. The plan will incorporate major RTA investigations including the asset condition assessment, performance measurement, 10-Year business plans, and travel market and system analyses. Additional work on a longer term vision and with the Board is likely to take place in the first half of 2010. The plan will present several strategy recommendations that will guide all RTA future activities. Staff must present and monitor these activities to ensure implementation.

- **Bus Rapid Transit**

  I-55 Bus on Shoulder

  Phase Engineering Study: Complete study with IDOT, determine operating parameters of the scope of BOS on I-55 including transit and highway agencies. Address legal issues. Seek IDOT and FHWA approval. Work with Pace and IDOT to implement a demonstration project. Evaluate impacts and operations.

  Cermak Alternatives Analysis

  Procure and lead Alternatives Analysis work with FTA and Pace. Lead the federally prescribed Very Small Starts Alternatives Analysis. Coordinate with highway agencies and local communities

  Market Research Study

  Complete an investigation of customer/ stakeholder preferences for various BRT elements, focusing on the Cermak corridor. This will inform Cermak AA as well as other RTA BRT initiatives.

- **Establish an Enterprise GIS System**

  Establish an Enterprise GIS system that will centralize and update datasets, establish dictionary, mapping standards, templates. Staff

must also create data sharing protocols and automatic data updating. This system is the backbone of all RTA planning and over-sight analyses including service overlap and planning work and supports other functions such as Support Path of Travel database development.

SPECIAL PROGRAMS

- **Operating and Capital Programs**
  Provide program and project management of the ICE and JARC/NF programs, structuring of programs to achieve key Department initiatives, development of a RTA policy or position on sustainability of grant funded operating and capital projects, implementation of a compliance program for ICE and provide input on the federal reauthorization.
- **Planning Programs**
  Provide program and project management of the Community Planning and Subregional Planning programs, implementation of a quantitative evaluation method, structuring of programs to achieve key initiatives, ongoing coordination with CMAP.
- **Mobility Management**
  This activity involves national and local policy development and implementation (passenger information, fares/ticketing, complete streets, interface with ongoing information and technology projects in Regional Coordination Division), oversight of RTA travel training program, oversight and support for coordinated Paratransit and Human Service Agency Transportation systems and initiatives, ADA Paratransit Policy support (including staffing ADA Advisory Committee).
- **Livability & Sustainability Programs**
  This activity involves national and local policy development, coordination with local agencies/ development of roles and responsibilities, development of a spectrum of alternatives and formulation of RTA policy on sustainability of grant funded operating projects, oversight of Suburban Community Mobility Fund and South Suburban Job Access Fund.

REGIONAL COORDINATION

- **Regional Traveler Information**
  Adding enhancements to the goroo website including a mobile version; real-time CTA, Metra and Pace information; and screen reader compatibility for people with visual limitations. Staff will also deliver systems to support the RTA interactive voice response system (with next train and bus information) and the Traveler Resource and Itinerary Planning System (TRIPS) kiosks. Also, the federally-funded signage project created a uniform design standard for a system of information products to seamlessly guide inter-agency transit passengers throughout the region. Staff will install and test signage at four pilot sites. Staff will use goroo software to produce automated schedules for ITPID, and the service boards resulting in cost savings and efficiencies for operators and more accurate information for customers.
- **Fare Coordination**
  Work with the Service Boards to establish a policy framework that leads towards a new open source regional electronic payment system to enable seamless regional travel on CTA, Metra and Pace using a single fare instrument. Initiate technical work regarding regional interoperability standards and the development of a regional fare clearing

house. Conduct an analysis of the associated costs and benefits of a range of potential implementation alternatives, recommend the most cost-effective preferred alternative and develop an implementation plan for a regional fare payment system.

- **Environment and Air Quality**

  Green Transit Plan

  Develop the Regional Green Transit Plan to develop a baseline inventory of environmental impacts from RTA system operations and infrastructure; Establish environmental impact reduction goals and identify the strategies for achieving these goals; Give priority to strategies that achieve savings or have no cost impact; Best position the region to obtain funding from discretionary programs addressing climate change; Make evident the benefits of a reliable and expanded public transit system in addressing climate change and energy efficiency issues.

  Chicago Climate Action Plan

  Continue coordination with the City of Chicago and their Climate Action Plan to ensure that the benefits of transit are emphasized; identify opportunities for funding; coordinate this effort with the RTA Green Transit Plan and staff several committees.

  Clean Air Commuter Challenge

  Co-brand the RTA's goroo and Drive Less Live More websites, to provide social networking capabilities between challenge participants and sophisticated personal and competitive trip tracking system (mileage, comparative team progress, carbon and calorie calculators)

REGIONAL SERVICES

- **Free Ride program administration**

  Continue the implementation and support for the Free Ride programs including the annual certification of the People with Disabilities Ride Free program.

- **Launch Mail-in Recertification process**

  Notify applicants who meet criteria for waiver of in-person recertification, provide mail-in recertification materials, review upon receipt and make recertification decision. Continue to identify applicants who qualify for waiver of in-person recertification at time of next eligibility review.

- **Expand Travel Training Program**

  Further reduce TT waiting list to less than 3 months. The longer customers have to wait for training, the less likely they will be to participate. Getting people trained to use main-line and fixed route is saving the region approximately $809,000 annually based on trips not taken on paratransit.

- **Complete Path of Travel Database**

  Create a GIS based Path of Travel Database that will track barriers in the path of travel from paratransit users' front doors and their destinations to fixed route stops and stations. This data will be used in the travel training program and to help determine which paratransit riders can take fixed route rather than paratransit. This will significantly reduce paratransit ridership over time, leading to cost savings for the region.

Planning and regional programs of $19.1 million represent more than half, 57.0 percent of the total agency budget (Exhibit 3-16). Most of the expenditures are reflecting the regional services initiatives, such as TIC operations, ADA certification program, transit benefit, and ride free programs as well as the agency planning programs and studies.

The 2010 expenses reflect a 9.0 percent increase over the 2009 budget due to higher monthly fixed fees, interviews and assessment fees and close to a 50.0 percent increase in transportation cost for the ADA certification program; the inclusion of the Transit Benefit Program, which will be part of the regional programs from 2010; and the proposed Bus Rapid Transit initiative.

The department's 49 budgeted positions (Exhibit 3-13) reflect a 10.0 percent decrease or 5 less positions over the 2009 original plan of 54 positions. The department deferred some positions and plan to add one new travel trainer position.

Research, Analysis, and Policy Development (RAP)

The RAP organization was created in 2007 to better meet the RTA's oversight responsibilities and address the recommendations of the Auditor General. Departmental divisions include Program Compliance, External Audit, Performance Measures and Standards, and Operations Research.
The primary function of the department is to strengthen the RTA's oversight of the Service Boards and ensure that RTA has adequate finance, administration, and operations information and resources to develop policies for a more effective and efficient regional mass transit system. The department is also responsible for the CTA Rail Safety Oversight, which assures compliance with the Federal State Safety Oversight Rule for Rail Fixed Guideway Systems.

Program priorities:

- **Performance Measurement**
  Measure and benchmark the performance of the RTA regional transit system and the Service Boards as required by the RTA Act and recommended by the OAG. Develop and implement methodologies to monitor and report key performance against standards that are consistent with and support the achievement of the MBC Strategic Plan. Perform evaluation of performance at a regional level that aggregates Service Board data, as well as at a sub-regional level that includes individual Service Board, mode, line, and geographic measures. Utilize trend analysis and peer data to frame performance and target improvement.
- **ADA Paratransit Oversight**
  Perform Paratransit and ADA oversight to ensure compliance with Federal and State regulations as required by the RTA Act. Update ADA Legislative Compliance Review and present policy issues to Board for discussion and resolution with the goal of maintaining ADA service standards in a cost effective manner. Implement and follow-up on recommendations from the audit of the Chicago service area transition to pace.
- **Customer Satisfaction Survey**
  Implement a regional customer satisfaction survey as outlined by the performance measurement system and as required by the RTA Act. Develop a regional survey instrument that coordinates and consolidates various aspects of the individual Service Board surveys as well as reflect specific regional interests. Administer, tabulate and analyze a regional customer satisfaction survey.
- **Project Management Oversight**
  Improve the execution of the capital program to reflect RTA reform legislation mandates and OAG recommendations. Complete the development and implementation of a new PMO program for the monitoring and reporting of overall capital project performance that includes both fiscal and planning/engineering aspects.
- **Capital Asset Evaluation and Programming**
  Develop and implement a process for the evaluation and programming of capital projects as required by the RTA Act and recommended by the OAG. Complete the development of a capital prioritization process, which utilizes criteria that integrate MBC priorities, including a complete assessment of the age and condition of the current asset inventory. Implement a decision support tool to facilitate the execution of the selection process.
- **Audit of Service Boards**
  Design and implement a five-year audit program of the Service Boards as required by the RTA Act. Review and audit the management control process of the Service Boards, which includes management and performance

audits, operational audits, financial audits, and program specific audits.

2010 expenses of $2.9 million represent 9.0 percent of the total agency budget. This is a 12.0 percent increase over the 2009 budget reflecting initiatives that required by the RTA Act such as the capital asset condition assessment and the development of a capital program prioritization tool; customer satisfaction survey development as part of the performance measurement, service boards audit, and other program compliance expenses such as rail safety oversight and program management oversight.

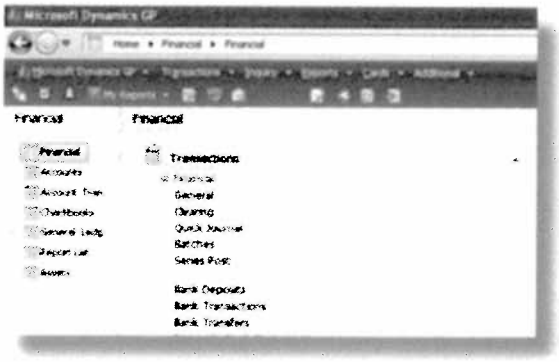
The department's 2010 budgeted positions of 14 include 3 additional positions over the 2009 plan in order to be able to meet all of the legislative requirements.

Finance

The Finance office executes the funding and oversight responsibilities of the RTA. It works to maintain financial stability in the region and ensures that the agency and the Service Boards execute their statutory requirements for fiscal responsibility. The finance department includes the following divisions: Controller, Financial Planning and Analysis, Audit and Review, Financial Development/ Grants and Capital Program, and Treasury.

Program priorities:

- **Integrated management system**
  This system provides an integrated database for finance, human resources, procurement, grants management, accounting, as well as system operating information for budget and subsequent reporting of actual results. This new system will enhance our ability to perform more robust analysis and provide information to agency management and the Board, as well as improve agency process efficiencies. The agency looks to "go live" on 1/1/10. Activity in 2010 will focus on developing business intelligence ("dashboard") information, as well as any effort necessary to ensure the system is working properly.



- **2010 budget and business plan process**
  In 2010, the agency will look for continued improvement to the ten-year business plan. This involves more robust assumptions of key factors and subsequent analysis of long-term obligations such as those related to pension, leasing, borrowing, and operational liabilities. Further, this effort will work with the Chicago Metropolitan Agency for Planning (CMAP) in their "GoTo2040" project. Also, the agency will look to better communicate the status of the developed information.
- **Financing**
  This objective includes the analysis of RTA financial obligations – short term as well as long term – and related cash flow requirements. The economic downtown has placed increased financial pressure on the RTA system In 2010, the agency will develop a strategy to address short term need – which will include the development of legislation recommendations, as appropriate – as well as execute any long term financing necessary.
- **Public-private partnership ("PPP")**
  The RTA has embarked on an initiative to investigate PPP strategies we have not tried here in the Chicago area but which are applied by transit systems elsewhere in the US and other nations. The first phase of this effort involves identifying revenue enhancements and cost savings that will help balance future operating budgets and provide funds for

expansion projects. The RTA has brought in outside expertise to provide the RTA with an assessment of projects and operating activities that may benefit from a public-private partnership approach.

The department's 2010 expenditures of $3.7 million represent 11.0 percent of the overall Agency budget. This reflects a 4.5 percent increase over the 2009 budget mainly due to higher financial advisory services and higher fringe benefit allocation, such as higher health insurance and pension contribution.

The budgeted 19 positions in 2010 represent a 9.5 percent decrease or 2 less positions over the 2009 plan. The department deferred some positions during the year.

Administrative Services

Administrative Services include Human Resources, Procurement, and Information Technology. These areas are responsible for compensation and benefits, purchasing, and information systems management.

Program priorities:

- **Office Relocation**
  This involves securing office space sufficient for agency needs in the most economical manner possible. In 2010, the agency looks to relocate the Travel Information Center (TIC) to available, lower cost, space in the Metra building. Subsequently, if economical, we will relocate staff currently adjacent to the TIC space to adjoin the agency staff on the 15th floor of 175 W. Jackson, to improve productivity as well as enable reconfiguring the existing RTA Board room to better accommodate the public and its use as general meeting space.
- **Integrated management system**
  Work with finance and vendors on potential change modifications and updates to the new financial business system. Develop power point presentation training for Procurement for use with the new financial system. Train all staff and new hires on the new procurement process within the new integrated system.

The department's 2010 expenditures of $3.1 million represent 9 percent of the overall Agency budget. This reflects a 22 percent decrease over the 2009 budget mainly due to the budgeted TIC relocation cost in 2009 that will be carried over in 2010, and the integrated management system implementation that started in 2009 and plans to complete the core system by January 1st of 2010.

The budgeted 14 positions in 2010 represent a 13.0 percent decrease or 3 less positions over the original 2009 plan. The department deferred some positions during the year.

Legal and Governmental Affairs

The Legal and Governmental Affairs Department provides legal advice and counsel to the RTA Board, Executive Director, and staff regarding the statutory and regulatory provisions governing the Authority, as well as overseeing all RTA transactions and litigation. The Department also develops and promotes the RTA's federal, state and local government affairs agenda, in coordination with the Service Boards.

Program priorities:

- **Implement State Capital Bill**
  In 2009 the Legislature and Governor enacted two capital bills that together provide $2.7 billion in funding for northeastern Illinois mass transit. In 2010 the RTA will work cooperatively with the Service Boards and with the State (Governor's Office, Office of Management and Budget, and Illinois Department of Transportation) to implement the capital program. This will include seeking the timely sale of bonds to fund capital projects, as well as development of a capital program administrative process that allows for an efficient implementation of the capital program.

- **Protect and Increase Transit Capital and Operating Funding or Revenues**
  The RTA continually monitors legislative developments and cooperates with the Service Boards to provide analysis and coordinate advocacy efforts. These efforts include promoting the appropriate funding of transit operations in the annual budget process, and seeking state legislative changes that stabilize funding for the regional transit system, such as means-testing the Seniors Ride Free Program.
- **Promote Increases in Federal Funding for Transit State of Good Repair Needs**
  At the federal level, the RTA will continue to work cooperatively with the Service Boards to promote reinvestment in the nation's largest and oldest transit systems. We have developed and are leading a national coalition of large transit systems. We are also working with industry associations such as APTA, advising legislators with policy and program design, and advocating directly with Congress and the Obama Administration.
- **Protect and Increase Federal Funding and Transit-Oriented Development**
  The RTA continually monitors legislative developments and cooperates with the service boards to provide analysis and coordinate advocacy efforts. A particular focus in 2010 will be efforts by the Obama Administration and Congress to develop a comprehensive policy for urban affairs that integrates regional housing, transportation, and land use planning and investment. The RTA will continue to work with the Administration and Congress to promote mass transit and transit-oriented development as a key component of these urban policy initiatives.
- **Improve Disadvantaged Business Enterprise Program**
  The RTA will continue to work to enhance the opportunities for diverse firms to participate in its procurement processes, both as prime contractors and as sub-contractors. The January 2008 amendments to the RTA Act require that, beginning in January 2010, the RTA implement a similar program to track and report on DBE participation on non-federal contracts. Improved DBE program policies and procedures will be utilized to monitor and report on all agency contracts. RTA procurement and legal staff are working to improve the procurement and contracting process to enhance identification of DBE opportunities and ensure compliance with contracting goals established by the agency.
- **Improve Legal Procedures and Policies to Enhance Efficiency and Performance**
  Many of the RTA's internal policies and procedures are not adequately documented or have become outdated, resulting in administrative inefficiencies that hamper the productivity of the agency. Revisions to these policies and procedures aimed at streamlining administrative tasks are necessary to improve agency efficiency. In addition, agency staff will be retrained with respect to project management, procurement and contracting issues to ensure compliance with applicable rules and requirements.

The department's expenses represent 6.0 percent of the total agency budget. 2010 expenses of $2.1 million show a 4.0 percent decrease over the 2009 budget reflecting lower legislative and consulting expenses as well as lower regional diversity program expense. The department's staffing plan of 6 people will remain the same in 2010.

Communications

Communications leads management in three key areas: communications, marketing and public outreach to communicate, market, publicize and obtain input for each RTA department's programs and initiatives. The department also collaborates with the service boards to promote their services and programs.

Program priorities:

- **Communications**
  Communicate and publicize RTA programs, initiatives and successes to internal and external audiences. In this area, responsibilities include production and distribution of annual reports and budget publications, newsletters, websites content writing and updates, proactive media relations and special events management and internal communications.
- **Marketing**
  Implement partnership agreement following board adoption to coordinate sales, advertising, marketing and public information programs among the RTA and service boards that will help increase ridership, improve the ridership experience and achieve cost efficiencies. Promote programs and campaigns that include: the Transit Benefit program, drive less. live more, BRT, goroo multi-modal trip planner. Coordinate and manage sponsor-ships that help promote transit ridership and programs. Oversee graphic design including websites and ensure graphic standards are maintained and adhered to. Develop and distribution materials that promote transit programs and initiatives.
- **Public Outreach**
  Broaden support for the RTA obtaining public input and promoting advocacy; favorably influence public perception about the RTA's value by demonstrating transparency and accountability. Conduct public hearings and factor in feedback related to the Strategic Plan update; conduct public hearings for RTA 2011 budget and incorporate an array of other public input methods to increase outreach; obtain input for Planning and Regional Program's management of RTA Funding Programs; generate advocacy for pursuit of federal authorization funding; continue and expand Partners for Transit Outreach; manage public speaking engagements for senior staff and RTA Board; utilize emerging communications resources such as social media; and launch a reconstituted Citizen Advisory Board.

2010 expenses of $1.4 million are 4.0 percent of the total agency budget. It shows a 42.0 percent decrease over the 2009 budget level due to lower Communications program expenses and transferring the Transit Benefit Program expenses to the regional programs. As a result of this transfer the 5 budgeted positions in 2010 reflect one less position than in 2009.

Agency Expenses by Expense Type

Exhibit 3-17 shows an Agency summary by major expense type from 2008 to 2010. The 2010 budget of $33.7 million reflects a 5.3 percent increase over the 2008 actual expenses and no increase over the 2009 budget. The 2009 expenses of $33.4 million are expected to be slightly under the 2009 budget.

Exhibit 3-18 shows that compensation of $8.1 million is 24.0 percent of the total expenses. This represents no increase over the 2009 budget as we keep our headcount flat.

Benefits and other personnel of $4.3 million or 13 percent of total expenses show a 5.1 percent increase over the 2009 budget reflecting higher health insurance and pension contribution expenses.

Professional services of $3.3 million represents 9.0 percent of the overall expenses and reflect an 18 percent increase over the 2009 budget. This category includes some new initiatives required by the RTA Act, such as the five-year service boards audit program, customer satisfaction survey for performance measurement, and new project management oversight program development.

Purchase Service category represents 23.0 percent of the total Agency expenses. This category includes the operation of the Travel Information Center, the ADA certification program, ADA Accessibility program, the senior and disabled ride free programs, and the transit benefit program. The 2010 budgeted expense of $7.7 million reflects

Exhibit 3-17: **Agency Expense by Type** - (in dollars)

	2008 Actual	2009 Budget	2009 Forecast	2010 Budget
Compensation	6,927,881	8,089,187	8,135,046	8,089,187
Benefits and Other Personnel	3,640,135	4,112,958	4,010,666	4,322,549
Professional Services	1,981,970	2,753,488	2,700,211	3,258,846
Purchase Service	9,339,038	7,631,012	8,302,093	7,670,000
Office Services	4,946,670	4,040,517	4,085,877	4,040,360
Agency Programs & Studies	5,194,131	7,097,500	6,192,299	6,343,720
Total Agency	**32,029,825**	**33,724,662**	**33,426,192**	**33,724,662**

Exhibit 3-18: **Agency Expense by Type** - (in dollars)

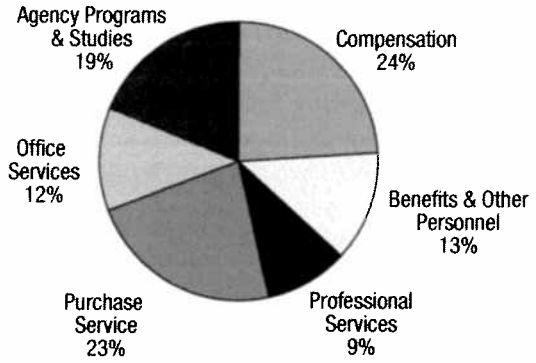


Exhibit 3-20: **2010 Administrative Expense/Statutory Cap** (in dollars)

	2010 Budget
Administration Expenses	**8,024,403**
Regional Expenses	23,321,459
Capital Expenses	2,378,800
Total RTA	**33,724,662**
Statutory Cap Allowance	16,931,639
Percent under Cap	**(52.6)%**

an increase for the ADA certification program over the 2009 budget due to higher transportation costs, higher monthly fixed fee and interview and assessment fees but lower budgeted expenses for the transit benefit program.

Office services of $4.0 million represent 12.0 percent of the overall Agency budget and reflects no change over the 2009 budget. In 2010 the base rent fee for the 2nd and 15th floor office space will be 2.6 percent lower than in 2009.

Agency programs and studies of $6.3 million represent 19.0 percent of the total Agency expenses. This category includes all the agency planning programs/projects and studies such as community planning programs, regional coordination programs, and strategic & long range planning programs (e.g. bus rapid transit) as well as the agency capital program initiatives such as the integrated management system. This category shows an 11.0 percent decrease over the 2009 budget due mostly to the integrated management system implementation and the budgeted TIC relocation expenses in 2009 that will be carried over in 2010. Exhibit 3-19 provides subcategorized detail of each expense type.

In 1985, a statutory cap for administrative spending was set at $5 million, with a growth rate of 5.0 percent per year. The proposed 2010 administrative expenditures of $8.0 million are 52.6 percent below the cap allowance of $16.9 million as it shown on Exhibit 3-20. The next part of this section outlines Agency work to develop and study the impact of Regional Performance Measures.

Exhibit 3-19: **Agency Expenses by Type** (in dollars)

	2008 Actual	2009 Budget	2009 Forecast	2010 Budget

* Includes Transit Benefit, ADA Assessments & Travel Training, Reduced Fare and Free Ride Programs.

Background on Goals and Performance Measures

In February 2007, the Regional Transportation Authority released its five-year strategic plan entitled Moving Beyond Congestion (MBC). This joint planning process between the RTA and the three service boards achieved several important milestones, including the establishment of a shared vision and goals for the region, a detailed analysis of the current status of the transit network, and a long-term evaluation and assessment of the infrastructure and operational needs of the system.

In January 2008, the Illinois General Assembly enacted significant amendments to the RTA Act, which mandated an ongoing strategic planning process, the establishment of goals, and measurement of performance.

The goals and objectives approved in February 2007 were developed with a funding campaign focus and were designed to be inspirational. Unfortunately, they did not easily support the development of performance measures. Some of the specific MBC objectives were not aligned with the best high-level goals. For example, service/customer objectives supported the financial goal instead of the provision of service goal. Finally, the January 2008 amendment to the RTA Act specified in some detail the role of the RTA's strategic plan goals. The MBC goals and objectives did not satisfy all of these requirements.

On February 19th, 2009, the RTA joined in partnership with each of the Service Boards to enact a resolution that would revise the goals and objectives of the MBC in order to satisfy all requirements of the amended RTA Act.

Vision

The RTA, CTA, Metra, and Pace share a common vision for the region: That the RTA is a world-class public transportation that is affordable, reliable and safe, and is the keystone of the region's growing business opportunities, thriving job market, clean air, and livable communities.

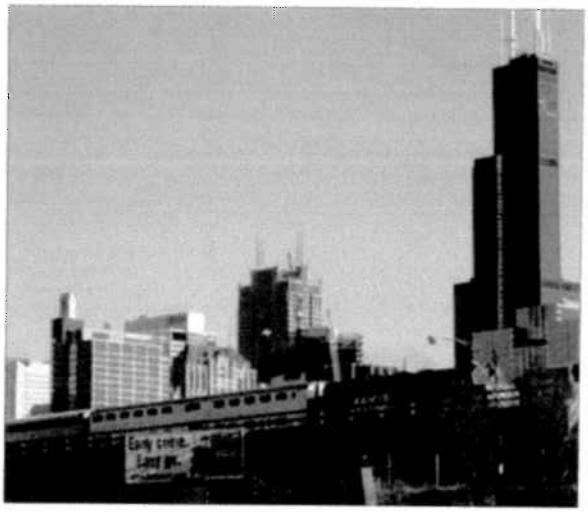
Goals and Objectives

The table on the next page identifies the current regional goals and objectives. The Goals explain what the RTA Region needs to accomplish in order to realize its vision, the Focus identifies the stakeholders of each goal, and the Objectives identify how the RTA region will meet its goals.

The executive director and staff of the RTA are committed to working with the Service Board's, their staffs, and local and state elected officials in order to update the Plan to reflect the strategic planning process, achieve the objectives in the Plan, promote investment in the region's transit system, and ensure that the system operates efficiently and in a coordinated fashion throughout the region.

Performance Measures

In addition to revisions of the MBC's Goals and Objectives, the RTA Act required the development of performance measures to inform the public about the extent to which the provision of public transportation in the metropolitan region meets the goals, objectives and standards for the RTA, the Service Boards, and the broader community of stakeholders. In accordance with these mandates,



RTA Goals and Objectives

MBC Goal	Focus	Objectives
Provide Transportation Options and Mobility		
Provide attractive, high-quality, innovative transit choices that link people to jobs and facilitate the use of transit for other trips. Transit use in our region is the broadest measure of the success of the transit system.	Customer / external	· Increase the use of public transportation for commuting · Increase the use of public transportation for other purposes. · Increase the amount of transit service provided and serve more of the region's travel markets using innovative approaches, as appropriate · Take advantage of highway pricing strategies and promote preferential treatment of transit · Provide quality transit service that is fast, clean, safe and reliable · Provide affordable transit service · Increase the ease of connection between different transit providers by coordinating service, fares, information and physical connections · Ensure appropriate consideration of regional equity principles
Ensure Financial Viability		
The sustained financial viability of public transportation is essential to the region's effective multi-modal transportation system. The transit agencies need to manage operating costs, make sound investment decisions and implement the capital program in a timely manner.	Internal to transit agencies	· Manage the growth of operation costs · Select investments which maximize returns to the region · Progress towards achieving a state of good repair while making appropriate investments to enhance and expand the transit system · Implement the capital program in a timely manner · Ensure a fair allocation of passenger revenue from interagency trips across service providers · Where appropriate, engage in joint efforts with private interests that contribute resources and add value to the transit system
Enhance Livability and Economic Vitality		
An effective transit system makes many contributions to an economically vibrant and livable region. Though transit's role is secondary, not primary, in achieving this goal.	External: transit is a secondary contributor but does not have direct control	· Mitigate the growth in highway congestion · Improve our environment by reducing total transportation emissions and energy consumption · Coordinate transit with development to encourage concentrated growth near transit services · Provide mobility for aging populations and people with disabilities · Provide employers with access to a broader workforce
Demonstrate Value		
In order to fulfill its valuable role in our region, transit requires the support of key constituencies and the public at large.	External: Taxpayers and key stakeholders	· Realize additional operations support through legislative action · Achieve adequate capital funding to move the system towards a state of good repair and undertake selective expansions · Manage transit operations so that they are cost and service effective · Create and sustain public understanding of the benefits of public transportation

the RTA has established several Performance Measures, which have been compiled into a Report Card. The Report Card will be published annually for use in both internal and public reports and made available on the RTA's website.

In order to achieve the objectives of the Strategic Plan the RTA Report Card has identified five major areas, Service Coverage, Service Efficiency and Effectiveness, Service Delivery, Service Maintenance and Capital Investment, and Service Level Solvency. Each major area has several corresponding performance metrics.

- **Service Coverage** - monitors both how much service is available to people in the region (in terms of population and square miles) and how much of that service capacity is used.
- **Service Efficiency and Effectiveness** - evaluates the level of resources spent for delivering service as well as the extent to which passengers are using public transit.
- **Service Delivery** - reflects the quality of the service delivered.
- **Service Maintenance and Capital Investment** - indicates the allocation of capital funds and the replacement and maintenance of infrastructure components on a schedule consistent with their life expectancy.
- **Service Level Solvency** - assesses financial condition to ensure that there are sufficient resources to meet current and ongoing financial needs (both operating and capital).

The 2007 Regional Report Card was approved on May 21st 2009 and contains a unique perspective that is achieved by aggregating data from CTA, Metra, and Pace to assess how those agencies are collectively meeting their missions, and thus the transit needs of the region.

Overall, the report suggests that the performance of the transit system is relatively good. However, it is clear that the system continues to face challenges and that specific opportunities remain. Two of the five areas of evaluation show very optimistic trends, two are less encouraging and one is still under development and will allow for future measurement.

Performance Metrics

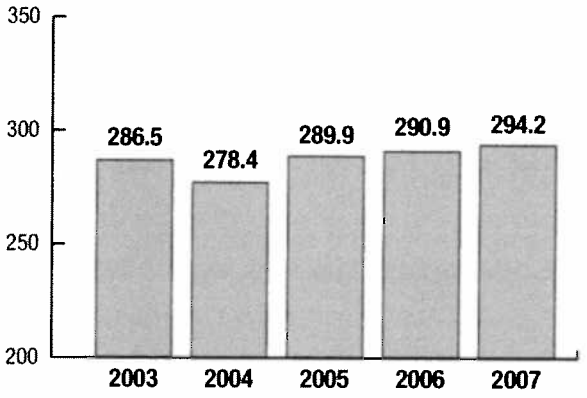
Service Coverage

Service Supplied and Service Consumed

These metrics monitor both how much service is available to people in the region and how much of that service capacity is actually used. The measures reveal positive trends reflecting increased service levels and concurrent ridership growth. Passenger Trips per area resident, Vehicle Revenue Mile per service area square mile, Total Ridership, Total Ridership Per Area Resident, and Passenger miles all increased at a rate of 2.7, 9.1, 5.0, 4.7 and 9.2 percent, respectively, from 2003 to 2007 (Exhibit 3-21 through Exhibit 3-25). Thus, service plans over the five year period were responsive to service demands from both new and existing customers, as well as to regional population changes. These results demonstrate that residents reacted positively to public transit overall and thus utilized it more, both in frequency and in distance traveled.

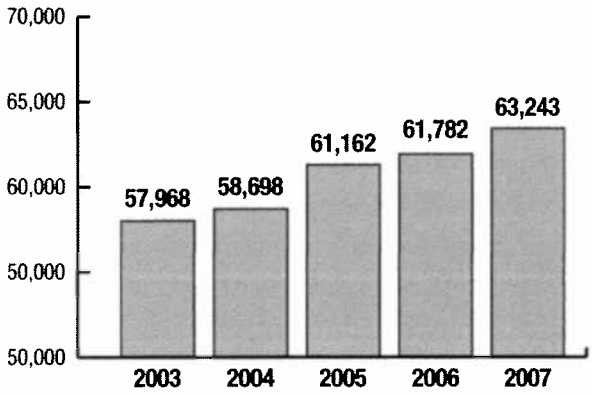
Transit Capacity (trips): The amount of service provided as measured in trips available to be taken.

Exhibit 3-21: **Per Area Resident** - The number of trips available for each resident in the region to take annually.



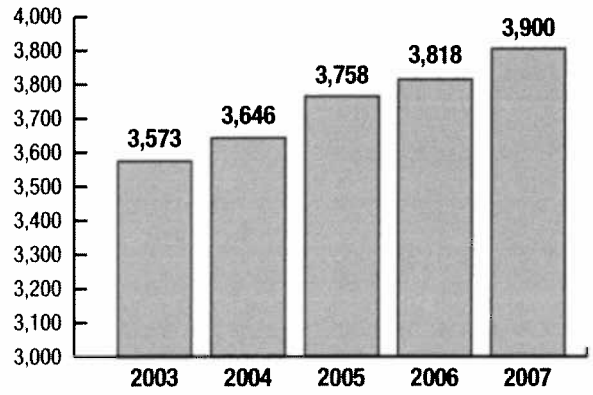
Vehicle Revenue Miles: The amount of service provided as measured in miles driven by vehicles while in service.

Exhibit 3-22: **Per Service Area Square Mile** - The number of miles of travel provided per square mile of the service area annually



Passenger Miles: The cumulative sum of the distances ridden by all passengers.

Exhibit 3-23: **In millions**



Passenger Trips (Ridership): The number of times passengers board buses and trains, including transfers from one bus or train to another to complete their trips.

Exhibit 3-24: **In millions**

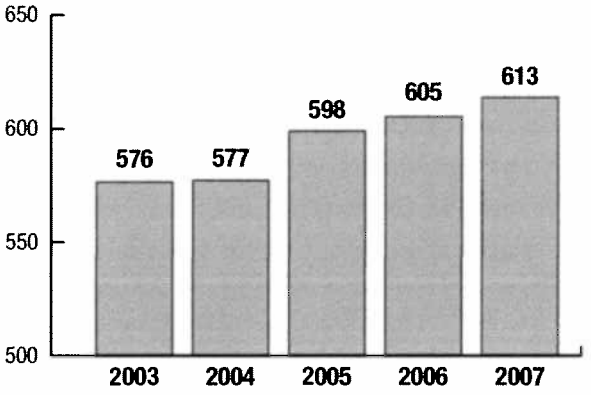


Exhibit 3-25: **Per Area Resident** - The number of rides taken per resident annually.

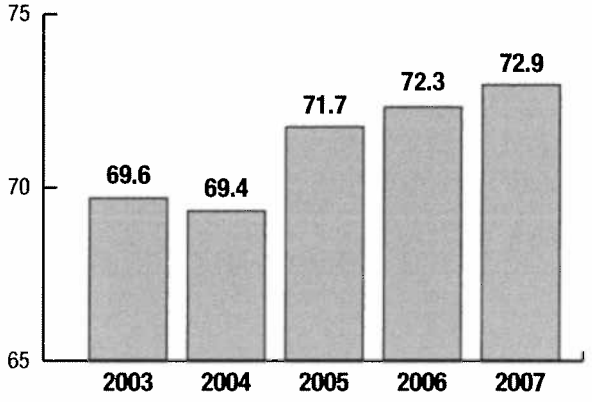

Service Efficiency and Effectiveness

Efficiency of Service and Cost Effectiveness

These metrics, which evaluate the cost of supplying units of transit services, show somewhat negative results. Operating costs grew faster than inflation, but cost growth was still somewhat contained despite the challenges of rising costs including fuel, healthcare, labor, and infrastructure of a mature transit system. This area continues to provide opportunities for managing and reducing costs of individual services provided and the overall network (Exhibits 3-26, 3-27, and 3-28).

Operating Cost: The expenses associated with the operation of the transit system.

Exhibit 3-26: **Per Unit of Transit Capacity** - The average cost of providing a passenger seat or space for each mile of an individual trip, whether or not it is taken.

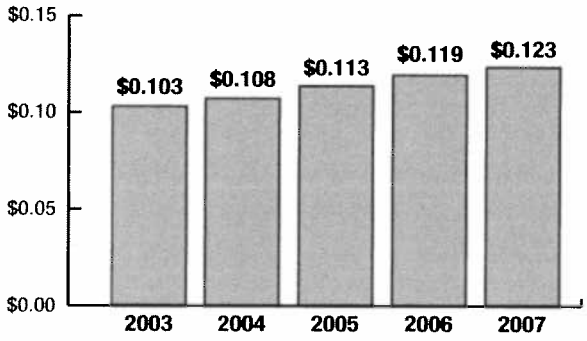

Exhibit 3-27: **Per Passenger Trip** - The average cost of an individual trip.

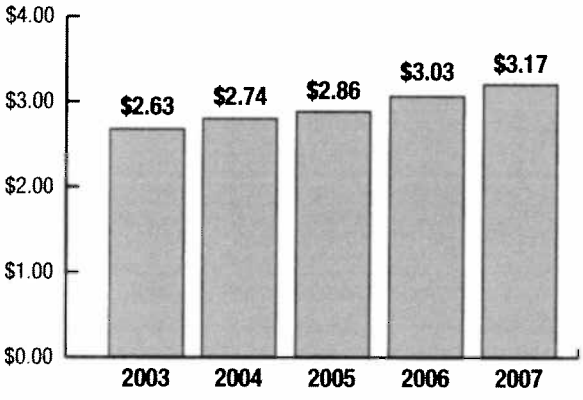

Exhibit 3-28: **Per Passenger Mile** - The average cost of providing each mile of an individual trip taken.

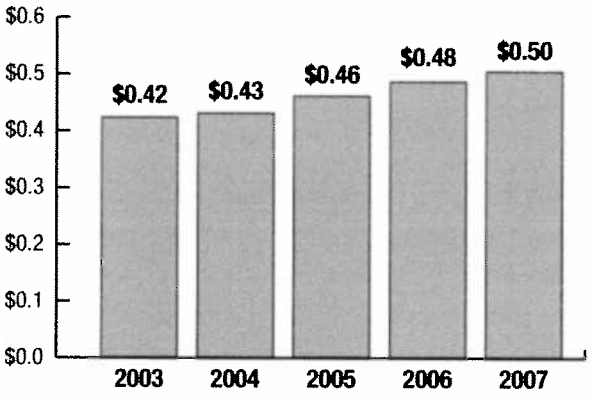
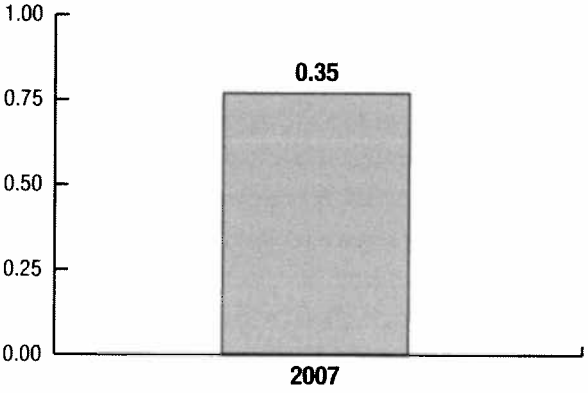


Major Safety and Security Incident: Accidents, casualty, and crime statistics reported under the Federal Transit Administration (FTA) National Transit Database (NTD) reporting system (Exhibit 3-29).

Exhibit 3-29: **Per 100,000 Passenger Trips** - The number of combined safety and security incidents per 100,000 trips taken.



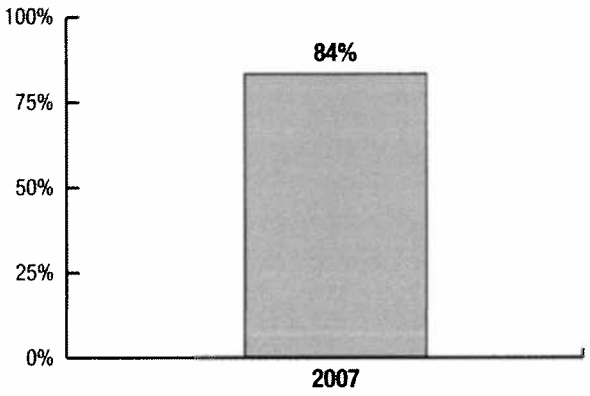
Service Delivery

Customer Service, and Customer Safety and Security

This performance area, which focuses on customer service and safety, is still under development. Regional Customer Satisfaction metrics are being created, which will include customer surveys regarding interagency services. Also, consistent and comparable data for some metrics were only available for 2007 (Exhibit 3-30).

On-Time Performance*: The percentage of time that vehicles are "on-schedule".

Exhibit 3-30



*Due to variances in collection methods, data for prior years are not comparable and therefore not included.

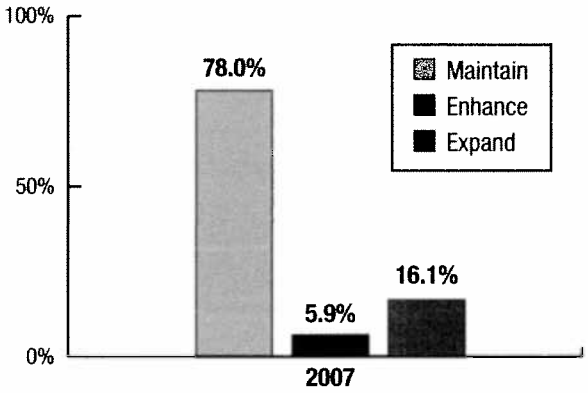
Service Maintenance and Capital Investment

State of Good Repair and Reliability

This area, which evaluates reliability and state of good repair, is trending very well, even showing significant improvement. The measures suggest that the focus of the system has been to invest its limited resources to keep the vehicle inventory operational. This has slowed the implementation of expansion and enhancement plans, and has also put significant pressure on operations, as more costs are required to maintain an aging infrastructure. For instance, the miles between major mechanical failures have increased, from 11,934 miles in 2003 to 15,993 miles in 2007, representing a 30.0 percent increase. However, even with these focused efforts and demonstrated progress, the system is still far from achieving a state of good repair.

Capital Program Maintenance/Enhancement/ Expansion: Annual allocation of projects budgeted within each category as a percent of the total capital program (Exhibit 3-31).

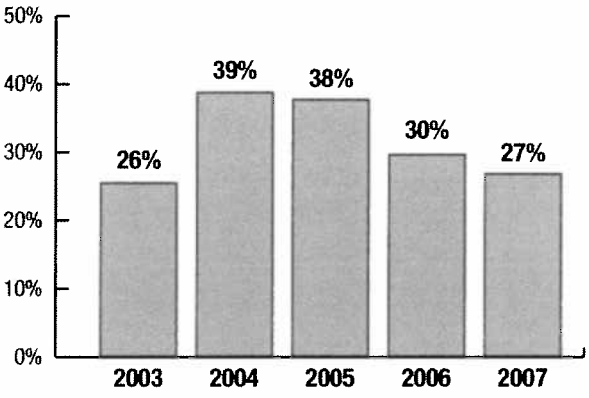
Exhibit 3-31



*Data for prior years are not available and therefore not included.

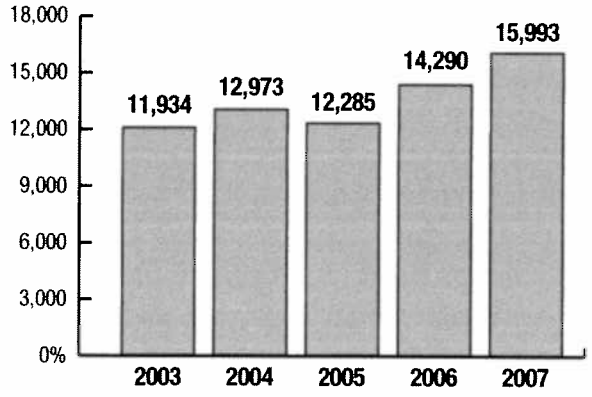
Percent of Vehicles Beyond Useful Life: The actual number of vehicles for all modes combined that exceeds their individual useful lives as defined by the Federal Transit Administration (10 years for buses and 25 years for rail cars that are new; or longer for some vehicles if life-extending rehabilitations are performed (Exhibit 3-32).

Exhibit 3-32



Miles Between Major Mechanical Failures: The average distance that vehicles of all modes travel in revenue service uninterrupted by mechanical failures that prevent them from completing a scheduled trip or from starting the next scheduled trip (Exhibit 3-33).

Exhibit 3-33:



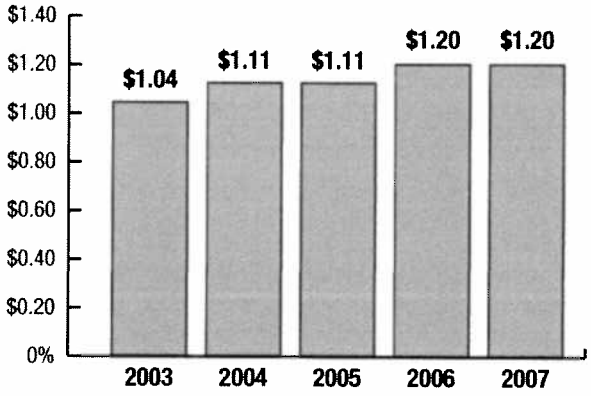
Service Level Solvency

Operations and Capital

Financial indicators that monitor overall financial strength highlight a system that is under stress. Although more fare revenue has been generated as a result of increases in both ridership and actual fares (Exhibits 3-34 and 3-35), it has not been sufficient to cover higher public subsidy to provide the service, including demands for more peak service rather than non-peak service with existing capacity. Thus, other system generated revenue, such as advertising on buses, continues to be an important element in achieving the legislatively mandated 50% recovery ratio. The Capital budget is also cause for concern primarily due to the significant decline in capital funding resulting from the lack of a state capital program for infrastructure.

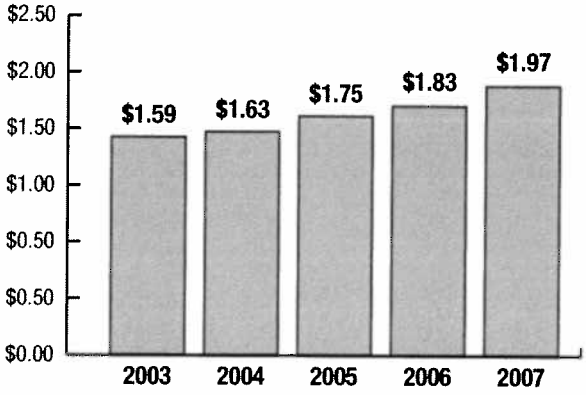
Fare Revenue: The total amount of money that passengers pay in fares.

Exhibit 3-34: **Per Passenger Trip:** The average fare paid by a customer per trip.



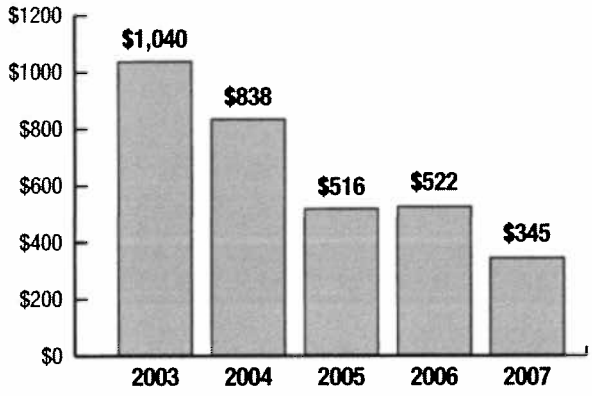
Fare Subsidy: The amount of the total cost of operation that is not covered by fare revenue.

Exhibit 3-35: **Per Passenger Trip:** The average amount of each trip that is not covered by the customer.



Capital Program: The amount of capital funds (Exhibit 3-36) available to finance the maintenance, enhancement and expansion of the transit system infrastructure.

Exhibit 3-36



A Commitment to Performance Measurement

As part of its on going commitment to the Strategic Plan and to providing quality service to the public transit passengers of the region, the RTA is continuing to work with the Service Boards and key stakeholders to develop more performance measures. In 2010, the RTA will propose a set of new performance measures that compares the performance of the RTA Region with peer regions. Using data from the National Transit Database, the RTA intends to make comparisons between the RTA's regional service and service in ten of the most urbanized areas, as identified by the US Census Bureau. In conjunction with the Service Boards, and key stakeholders, the RTA expects to develop a target or goal for each of the above performance measures, and develop sub-regional and Service Board specific measures. Both the CTA and Pace have already started development of their own performance measures. These efforts are described in the Service Board sections.

The RTA is committed to the use and development of performance measurement, and recognizes that these measures increase overall accountability, and can explain where the system is doing well and where it can make improvements. Through the continued use of Performance Measurement the RTA recognizes that trends will emerge which will help the region as a whole make informed planning, operating, capital and financial decisions.

Reference

RTA Bonds

The bonds issued by the RTA carry a rating of "AA+" from Standard & Poor's, AA- Fitch IBCA and "Aa3" from Moody's Investors Service, Inc. These represent strong investment grade ratings. The RTA has the distinction of being one of the highest rated public transportation agencies in the United States.

All bonds are general obligations of the RTA to which the full faith and credit of the RTA are pledged. These general obligation bonds, with a balance of $2,227.6 million as of December 31, 2008, are divided into two types: $1,577.2 million in Strategic Capital Improvement Program (SCIP) bonds and $650.3 million in RTA bonds (Exhibit 3-37 and Exhibit 3-38).

On June 21, 1993, the RTA issued an advance refunding of a portion of its 1990A Series general obligation bonds. The RTA issued $23,265,000 of general obligation refunding bonds (1993C Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On January 30, 1996, the RTA also issued an advance refunding of a portion of its 1994B and 1994D Series general obligation bond issues. The RTA issued $151,235,000 of general obligation refunding bonds (1996 Series) to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On September 18, 1997, the RTA issued an advance refunding of a portion of its 1990A, 1991A, 1992B and 1993B Series general obligation bond issues. The RTA issued $98,385,000 of general obligation refunding bonds (1997 Series). Proceeds from the issuance amounted to $105,570,935, including a premium of $7,185,935. The proceeds are to fund an irrevocable trust for generating resources for all future debt service payments. As a result, the

2008	64,685	127,870	192,555

refunded bonds are considered to be defeased and the liability has been removed from the financial statements.

On August 10, 1999, the RTA made an advance refunding of a portion of its 1992A, 1993A, 1994A, and 1994C Series general obligation bond issues. The RTA issued $298,725,000 of general obligation (1999) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. As a result, the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunded bonds are as follows: $113,895 of the 1992A Series, $9,720,000 1993A, $142,615,000 1994A, and $21,955,000 1994C. The refunding was undertaken to reduce debt service over the next 26 years by $22 million, an economic gain of $11.4 million, which represents a 3.9 percent savings on the previous debt service.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 to 2004. In March 2001, the RTA issued $100 million in SCIP bonds.

During 2002, the RTA issued two bond offerings. The first issue was a $160 million SCIP bond offering. The second issue was a $200 million non-SCIP issue.

During 2003, the RTA issued three bond offerings. On January 1, the RTA issued $150,000,000 of general obligation (2003B) bonds to provide resources to fund an irrevocable trust for the purpose of generating resources for all future debt service payments. The second issue was a $260 million SCIP bond offering on April 1. On the same day, RTA currently refunded the remaining portion ($19,055,000) of its 1993C Series general obligation bond issue. As a result the refunded bonds are considered to be defeased and the liability has been removed from the financial statements. The refunding was undertaken to reduce debt service through 2009 by $ 1.6 million (an economic gain of $1.6 million) which is a 6.9 percent savings on the previous debt service.

On October 13, 2004, the RTA issued one bond offering (Series 2004A) for $260 million in SCIP bonds. The Series 2004A Bonds are also secured by the Series 2004A debt service reserve account.

Exhibit 3-41 **Recent Bond Projects with Project-to-Date Expenditures** (dollars in thousands)

2003 B	CTA	Repair Track and Structure	$1,508
2003 B	CTA	Implement Automatic Fare Control	417

		Total	**$3,633**
2006 A	CTA	Replace/Upgrade Power Distribution and Signal Systems	$3,883
2006 A	CTA	Rehabilitate Rail Stations	2,940
2006 A	CTA	Upgrade Communication Systems	2,603
2006 A	CTA	Purchase Replacement Buses	1,348
2006 A	Metra	Rebuild Locomotives	11,304
2006 A	Metra	Renew Bridges	5,426
2006 A	Metra	Improve Station Platforms and Ramps	1,368
2006 A	Pace	Purchase Paratransit Vehicles	2,857
2006 A	Pace	Purchase Associated Capital Items	488
2006 A	Pace	Improve Garages and Facilities	201
		Total	**$32,418**

On May 2,2005, the RTA issued $148,110,000 of general obligation bonds (2005B) to defease the remaining balance of the 1996 refunding. As a result, the 1996 refunding bonds have been removed from the financial statement.

On September 13, 2006, the RTA issued a general obligation bond for $250,350,000 (2006A) to be used to finance a portion of the costs incurred in connection with the construction, acquisition, repair and replacement of certain public transportation facilities.

RTA Sales Tax must be 2.5 times greater than the debt service requirement. As shown over the last ten years (Exhibit 3-39 and 3-40), the RTA meets this test. Any differences between debt service amounts presented and amounts shown in general purpose financial statements represent timing differences between payments made to trustees and payments made to bondholders. Also, investment income earned in the debt service accounts may lower actual cash transfers from the General Fund.

The RTA and its Service Boards have put an emphasis on making sure that the bond proceeds are spent in a timely and efficient manner. Exhibit 3-41 highlights recent bond issues with the largest project-to-date expenditures.

Fund Accounting

The accounts of the RTA are organized on the basis of funds and account groups, each of which is considered a separate accounting entity. The operations of each fund are separated in its own set of accounts that comprise its assets, liabilities, fund equity, revenues and expenditures or expenses, as appropriate. RTA resources are allocated to and accounted for in individual funds based upon the purposes for which they are to be utilized and the means by which spending activities are controlled.

Governmental Fund Types

The RTA's governmental fund types are the General Fund, Debt Service Fund and Capital Projects Fund (Exhibit 3-42).

General Fund

The General Fund is the general operating fund of the RTA. It is used to account for all financial transactions that are not specifically required to be accounted for in another fund such as the Agency Fund. Exhibit 3-1 shows the balance in the General Fund from 2008 through 2012. The General and the Agency Funds are the only two funds that have annual budgets. Exhibit 3-43 highlights the 2010 budget for these funds.

Debt Service Fund

The Debt Service Fund is used to account for the accumulation of resources for, and the payment of, general long-term debt principal, interest and related costs. The interest earned is generated from the funds being held for payment to the bondholders. The difference between the transfer and payment expenditures reflects the year-over-year timing variance.

Capital Projects Fund

In 1989, the Illinois General Assembly authorized the RTA to issue a maximum of $500 million of SCIP bonds, and to have a maximum of $500 million RTA bonds outstanding. Capital Projects Fund is utilized for the receipt and disbursement of the proceeds of the bond issues. The first Capital Projects Fund was established in 1990 with the issue of $100 million of RTA bonds to fund capital projects at the Service Boards. The RTA allocated the proceeds from the bonds issued under the General Assembly's authorization as follows: 50 percent for CTA capital projects; 45 percent for Metra capital projects; and 5 percent for Pace capital projects. Projects included in approved

five-year capital programs will be eligible for reimbursements from these proceeds by the RTA without further review or action by the RTA Board of Directors.

Effective January 1, 2000, the RTA Act was amended to authorize the issuance of an additional $260 million of SCIP Bonds in each year for the period of 2000 through 2004 and to issue and have outstanding an additional $300 million of non-SCIP Bonds. These amounts have been issued.

Proprietary Fund

Proprietary Funds are used for activities that are similar to those found in the private sector and to account for the financing of goods or services provided by a department or agency to other departments or agencies of the governmental unit, or to other governmental units on a cost-reimbursement basis. The RTA has one Proprietary (Enterprise) Fund—the Joint Self-Insurance Fund.

Joint Self-Insurance Fund

The Joint Self-Insurance Fund is used to finance claims incurred by the Service Boards and the RTA on a cost-reimbursement basis. This fund is reported as an enterprise fund since the predominant participants are outside of the RTA.

Fiduciary Fund Types

Fiduciary Funds account for assets held by a governmental entity in a trustee capacity or as an agent for others. The RTA's Fiduciary Funds consist of an Agency Fund and a Pension Trust Fund.

Agency Fund

The Agency Fund records the receipt and disbursement of amounts due to the CTA, Metra and Pace, including Retailers' Occupation and Use Tax (sales tax), interest on this tax, reduced fare reimbursement grants and federal operating assistance grants. Sales tax revenues are recorded in the fund and are equally offset by expenditures recording the pass through to the Service Boards.

Pension Trust Fund

The Pension Trust Fund is used to account for all accumulation of resources for and payments of, retirement benefits to employees participating in the RTA Pension Plan and Trust.

Basis of Budgeting

The basis of budgeting refers to the conventions for the recognition of costs and revenues in budget development and in establishing and reporting appropriations. The RTA's annual budget and related appropriations are prepared on the modified accrual basis of accounting in conformity with generally accepted accounting principles except for capital grants/expenditures and debt service payments. Capital grants/expenditures are budgeted for on a project basis, which normally exceed one year. Debt service payments are budgeted as transfers from the General Fund.

Although appropriations are adopted for individual line items, the legal level of control is restricted to total appropriations/expenditures and total administration (statutory cap) appropriations/

expenditures. Management has the authority to exceed any line appropriation without Board approval, provided it does not exceed the legal levels of control. It has been the policy of the RTA to fund the budgets of the Service Boards up to the amount appropriated in the Budget Ordinance. However, due to the unfavorable economic conditions in recent years and the depletion of funds in the undesignated / unreserved fund balance to preserve operating stability, the RTA waived its fund to budget policy for the 2010 fiscal year.

Budgetary reporting is balanced with accounting records on a monthly basis and is fully reconciled to the accounting system on an annual basis in the Comprehensive Annual Financial Report and for the annual Municipal Bond Disclosure Reports required by the Securities and Exchange Commission (Exhibit 3-44 and 3-45).

Operating Expense	127,595
Adjustments (6)	(44,000)
Total Expense	**83,595**
Recovery Ratio	**10.0%**

(1) The RTA Act permits certain revenue and expense adjustment for the recovery ratio calculation. The RTA, by means of ordinance, allows supplementary adjustments for service board calculations, but such adjustments are reversed to determine the system-generated revenue recovery ratio for the region, which by statute must be at least 50%. Service board adjustments include amounts that result in calculations that equal the "marks" set by the RTA. (2) CTA adjustments to revenue include credits for seniors who ride free and in-kind revenue for security services provided by the Chicago Police Department (CPD). Expense adjustments include in-kind costs for the CPD equal to the revenue credit, and credit for security and pension obligation debt service. (3) Metra revenue reflects senior ride free credits; expense adjustment credits include security, depreciation and transportation facility leases. (4) Pace revenue adjustments include in-kind ADvAntage program and senior ride free credits. Expense adjustments include budget reduction actions and in-kind ADvAntage program charges. (5) Regional revenue adjustments include a debit for service board senior ride free credits, and a credit for a CTA lease transaction. (6) Expense adjustments include reductions for budget balancing actions, and credits for capital costs incurred in providing contracted services (capital cost of contracting).

4 CTA Operating Plan

Overview

The Chicago Transit Authority (CTA) was created by the Illinois State legislature in 1945 and began operations in 1947. It became the sole operator of Chicago transit in 1952 when it purchased the Chicago Motor Coach System. The CTA is the region's largest transit operator and is governed by a seven-member Chicago Transit Board.

A new State of Illinois funding package ratified by state legislation in 2008 increased the percentage of State sales tax dedicated to mass transit and gave authority to the City of Chicago to increase the Real Estate Transfer Tax (RETT) to support the CTA. The legislation also provided for long-term pension reforms that will increase the funded ratio of the CTA's pension to 90% by 2059.

In 2010, the CTA is faced with the difficult decision of having to divert additional funds from capital construction projects to fund its operating budget. In 2010, $173 million of federal capital funds will be used for the operating budget. In order to balance its 2010 budget, the CTA has also identified the need to eliminate nine express bus routes and implement span reductions on 41 bus routes. On January 6, 2010, the RTA issued a combined $175 million in Build America and General Obligation Bonds. This arrangement provides the CTA equal amounts in excess of $80 million in 2010 and 2011. The CTA remains committed to maintaining and continually improving the level of on-time, clean, safe, courteous and efficient service to its customers.

Service Characteristics

The CTA operates the second largest public transportation system in the United States with an average weekday ridership of 1.6 million on its bus and rail system. The CTA's service area encompasses 220 square miles in the City of Chicago and its 40 surrounding suburbs.

Bus operations provide 1,782 buses traveling over 153 routes covering 2,517 miles, with approximately 11,833 bus stops. Rail service on eight routes has 1,190 train cars traveling over 224 miles of track. The CTA transferred all paratransit service to Pace in July 2006.

Ridership

Total ridership for 2010 is estimated at 466.8 million trips (Exhibit 4-1). This is 9.8% or 50.6 million trips lower than the projected 2009 ridership. Bus ridership is estimated at 277.5 million trips in 2010. This is 11.9% or 37.4 million trips lower than projected 2009 ridership. Rail ridership is estimated at 189.3 million trips in 2010. This is 6.5% or 13.1 million trips lower than projected 2009 ridership (Exhibit 4-2).

Average weekday ridership on the CTA is 1.4 million, while Saturday and Sunday average

Exhibit 4-1: **CTA Ridership** (in millions)

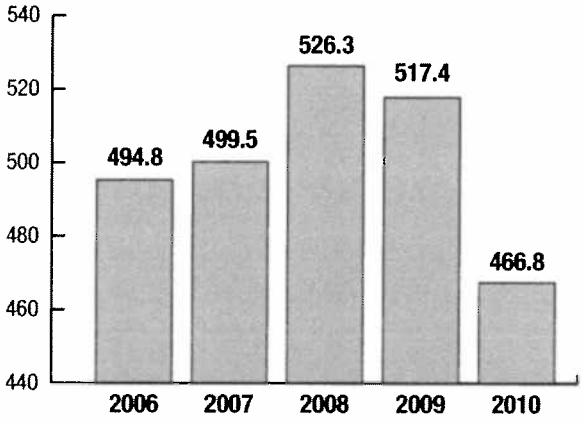

Exhibit 4-2: **CTA Annual Ridership by Mode** (in millions)

	2005	2006	2007	2008	2009	2010
Bus	303.2	298.4	309.3	328.2	315.0	277.5
Rail	186.8	195.2	190.3	198.1	202.4	189.3
Paratransit/Taxi	2.4	1.2	-	-	-	-
Total Ridership	**492.4**	**494.8**	**499.5**	**526.3**	**517.4**	**466.8**

Exhibit 4-3: **CTA Average Daily Ridership** (in thousands)

	2006	2007	2008	2009	2010
Weekday	1,596	1,606	1,679	1,583	1,430
Saturday	966	977	1,048	1,107	994
Sunday	662	675	725	864	775

ridership are 994,000 and 775,000, respectively (Exhibit 4-3). Total vehicle miles are expected to decline from 135.6 million in 2009 to 118.5 million in 2010. This 12.6% decline is largely due to the sluggish economy and scheduled service changes in 2010 (Exhibit 4-4).

Service Quality

The CTA has continued to work on improving the core components of its business that impact its customers directly. Some of its efforts include: the implementation of performance management initiatives that ensure the delivery of safe, clean, on-time, courteous and efficient service; the restructuring and consolidating of customer service and customer communications providing timely and accurate information to the riders; and concrete repairs made to improve the safety of bus turnarounds and rail stations.

As part of its effort to improve service quality, the CTA has implemented a variety of performance measures. These measures support a significant effort by the CTA to improve service quality. Grouped by quality service objective, the CTA provides for each performance measure the average monthly 2008 result, a 2009 monthly target, 2009 monthly results, and a definition of the performance measure. These quality objectives include ridership, on-time, efficient, safe, clean, and courteous. When performance for the month exceeds the monthly target, the measurement is highlighted in green. If performance for the month falls below but within 10% of the target, the measurement is highlighted in yellow. When performance falls below 10% of the target, the measurement is highlighted in red. Performance measure targets, which have yet to be established, are highlighted in gray. The 2009 performance measures can be found at the end of this section.

The implementation of performance measures represents an important step toward ensuring quality service and increasing accountability to the public. By creating these performance targets and striving to meet or exceed them, the CTA has shown that it values customer opinion and is working toward improving service quality.

Exhibit 4-4: **CTA Ridership and Miles** (Riders and Miles in thousands)

	2006* Actual	2007 Estimate	2008 Budget	2009 Plan	2010 Plan
Ridership	494,803	499,540	526,336	517,374	466,800
Vehicle Miles	138,648	135,244	136,190	135,557	118,544
Passengers Per Mile	3.6	3.7	3.9	3.8	3.9

* Data includes one half year of Paratransit service.

Challenges

Although there are signs in the broader economy that the nation may be pulling out of the deep recession that began in 2008, the outlook for 2010 continues to be pessimistic. The CTA's primary revenue sources are very sensitive to the health of the economy. In addition to significantly lower public funding, the CTA is also faced with higher costs in several areas. Labor costs make up the largest portion of the CTA's budget. In 2010, the CTA's union labor will receive an automatic 3.5% pay increase which adds $24 million to the expense budget. Increases in required Pension Obligation Bond interest payments will add $79 million to expenses in 2010. Additional required employer contributions to the CTA's employee pension fund will add $28 million. Free rides mandated by State law continue to cost the CTA over $30 million per year in lost revenue.

Capital Investments

The CTA spent $941 million on its capital program in 2008. The CTA is expected to spend a total of $1.2 billion on capital projects in 2009 and 2010 (Exhibit 4-5).

In August 2009, the fully renovated Kedzie and Rockwell Brown Line stations were re-opened to customers for service. The station boasts a new glass station house, new platforms, brighter lighting and accessible features including ramps, tactile edging and accessible gates. The station is also ADA accessible, bringing the total number of accessible CTA rail stations to 91, out of 144, or 63% of the rail stations.

The Brown Line Capacity Expansion, which began in the late 1990's, was completed in January of 2010. Following the capacity expansion, the Brown Line accommodates eight-car trains and provides greater accessibility to customers with disabilities in accordance with the Americans with Disabilities Act.

Bus System

In 2009, the CTA operated a fleet of approximately 2,069 buses, that made 24,195 weekday trips on 150 routes, providing almost 1.037 million rides on a typical weekday. In the summer of 2009, the CTA received the final 200 option 4, standard forty-foot New Flyer buses. The New Flyer buses represent the complete delivery of the 1,050 bus order. In addition, the CTA also received delivery of 1,208 sixty-foot articulated hybrid buses. The hybrid bus order was funded through the American Recovery and Reinvestment Act. The entire CTA bus fleet is ADA Accessible and air-conditioned.

The bus vehicle overhaul program continues to improve service through regular replacement of major mechanical components subject to extensive wear. In 2010, bus mid-life overhaul activities are programmed for $15.3 million in 2010 and $162.9 million during 2011-2014. With overhauls, the fleet will demonstrate increased reliability and fewer instances of expensive breakdown-based repair.

The bus tracker project has improved data communication between buses and the Control Center and on-street supervision. The project

Exhibit 4-5: **CTA Capital Statistics** (dollars in thousands)

	2006	2007	2008	2009	2010
CTA Total Capital Expenditures[1]	$640,447	$730,819	$940,749	$815,810	$416,203

(1) 2009 is a forecast; 2010 is the budget. From CTA 2010 Budget Book, page 93.

tracks CTA buses in real time and provides estimated bus arrival times to customers. Global positioning satellite (GPS) technology identifies bus locations and provides that information via a dedicated website (www.ctabustracker.com) which can be accessed by mobile devices. Bus tracker has enhanced centralized control functions and provides useful information to customers.

Rail System

The CTA has committed to an aggressive slow zone rehabilitation schedule. As of October 2009, slow zones on CTA's rail system have been reduced to 263,526 feet or 9.3% of track from a peak of 141,577 feet of slow zones or 22.3% of track.

Work continues on the signal upgrade and replacement for the Blue Line. This project, which began in 2006, will replace the entire signal system in the Dearborn subway, on the Congress (Forest Park) Branch, and a portion of the O'Hare Branch. This will result in smoother train operations, reduced travel times, and greater reliability.

The CTA has 406 railcars currently on order. Delivery of test cars began in late 2009. Delivery of the full order is expected to begin in late 2010. These railcars will replace the aging 2200-Series and 2400-Series fleet placed into service in 1969 and 1978. Both series have already exceeded their 25-year life expectancy.

System-Wide Improvements

The CTA continued to invest in new technology to further improve service and safety. The CTA was able to complete the installation of the technology infrastructure necessary to enhance communication capability in the Red and Blue Line subway system. In addition, stations are being outfitted with cameras to provide a comprehensive view of the transit system to the CTA Control Center and through redundant fiber optic links to Chicago's 911 Center. Other systems improvements include better lighting, rehabilitation of station escalators and elevators, replacement of station roofs and canopies, and upgraded passenger public address systems.

Budget and Financial Plan

The 2010 budget and 2011 and 2012 financial plan approved by the RTA Board on December 17, 2009, conforms to the 2009 marks set by the RTA on September 15, 2009. The CTA's operating funding marks were set at $474.8 million for 2010, $505.3 million for 2011, and $521.7 million for 2012. The CTA's recovery ratio mark was set at 51.0% in 2010. The CTA's statement of revenue and expenditures, which includes the recovery ratio, is presented in Exhibit 4-6. The following portrays the outlook for the 2010-2012 planning period.

System-Generated Revenue

Total system-generated revenue is expected to increase from $552.6 million in 2008 to $805.7 million in 2012. This is an increase of $253.1 million over the four-year period, or a compound annual growth rate of 9.9% (Exhibit 4-7). System-generated revenue includes passenger revenue, reduced fare reimbursement, and other revenue. In 2010, passenger revenue comprises 86.8% of the CTA's total operating revenue. The reduced fare subsidy and other revenue account for the remaining 13.2% (Exhibit 4-8).

(3) Recovery ratio marks are projected for 2011 and 2012.

Exhibit 4-7: **CTA System-Generated Revenue** (dollars in millions)

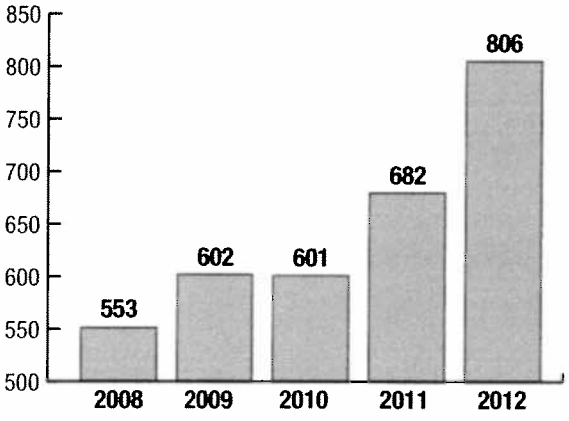

Exhibit 4-8: **2009 CTA Revenue** - $602 million

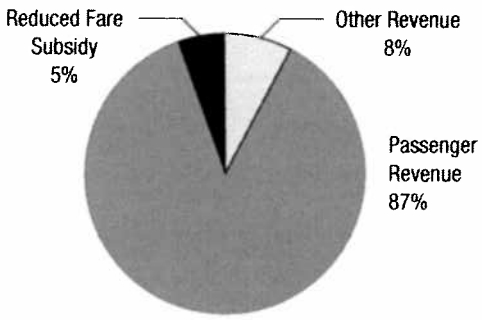

Passenger Revenue

Passenger revenue is expected to increase from $471.1 million in 2008 to $525.0 million in 2009, an increase of $53.9 million or 11.4% due to higher average fare resulting from a fare increase in January 2009 (Exhibit 4-9).

Fare revenue is budgeted at $521.4 million in 2010, $3.6 million lower than the 2009 estimate, reflecting the 2010 service reductions. The CTA fare structure is shown in Exhibit 4-10.

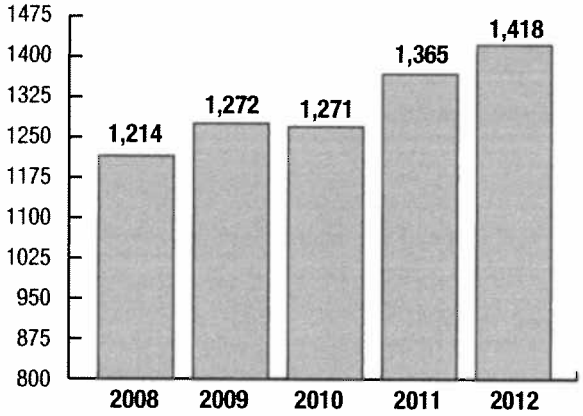
State Free Rides & Reduced Fare Reimbursements

The Illinois General Assembly passed legislation in 1989 that provided funds to reimburse the CTA for the cost of providing reduced fares for the elderly, students, and the disabled. Fare reimbursement is included as revenue and became available in July 1989. However, in 2009, the State eliminated a portion of the funding for this program thereby leaving CTA estimating its share at $24.2 million in 2009. For 2010-2012, CTA assumes that the program will be fully restored to and their share of program receipts will be $32.3 million.

Other Revenue

This category includes advertising, charters, concessions, contributions from local governments, investment income, and other revenue (Exhibit 4-11). Also included are essential contributions from the City of Chicago and Cook County. Annual funds provided by the City are $3 million, and the County contributes an additional $2 million. Other revenue was $49.6 million in 2008 and is expected to reach $112.3 million in 2012. Reasons for this increase include additional revenue from the sale of excess property and an increase in advertisements placed on buses and trains and in stations, as well as income from concessions, charters fees from filming and other miscellaneous revenues.

Exhibit 4-12: **CTA Total Operating Expenditures** (dollars in millions)



Operating Expenditures

Total operating expenditures are forecasted to increase from $1,214.4 million in 2008 to $1,418.4 million in 2012. This $204.0 million increase represents a 4.0% compound growth rate (Exhibit 4-12).

For 2009, operating expenditures are estimated at $1,271.9 million or 4.7% higher than 2008 actual expenditures of $1,214.4 million. The increase is due mainly to higher labor and pension costs, fuel, security and all other costs.

Budgeted 2010 expenditures of $1,271.0 million are expected to decline slightly from 2009. The financial projections for 2011 and 2012 show operating expenditures of $1,364.5 million and $1,418.4 million respectively. The 2011 financial projection represents an increase of 7.4% over the 2010 operating budget, and the 2012 financial projection represents an increase of 4.0% over the 2011 financial plan.

Expenditure Elements

The 2010 operating expenditure elements include labor, material, fuel, power, insurance and claims, security, paratransit services, and other costs. Labor expenditures, including fringe benefits, represent 67.0% of the CTA's total expenditures. Base wages represent about two-thirds of that total, while fringe benefits, which are primarily medical insurance and pension costs, represent the remaining one-third. Materials, used primarily for maintenance, are 6.1% of total expenditures. Fuel and power represent 8.0% of the CTA's expenditures. Security and insurance & claims represent 4.8% of total spending. Other expenditures comprise the remaining 14.0%. The other expenditure category includes items such as leases, utilities, and contractual services (Exhibit 4-13).

Labor Costs

Labor expenditures are expected to increase from $873.6 million in 2008 to $933.1 million in 2012. This $59.5 million increase represents a compound annual growth rate of 1.7% (Exhibit 4-14). Labor expenditures for 2009 are estimated at $871.0 million or $2.6 million less than prior year. The lower labor expense is a result of administrative layoffs effective January 1, 2009. The number of budgeted positions in 2009 is lower than in 2008 (Exhibit 4-15). Budgeted labor expenditures of $852.1 million in 2010, a decrease of $18.9 million or 2.2% from prior year result from position eliminations reflecting proposed service efficiencies, as well as the implementation of furlough days and unpaid holidays for non-union employees. Labor expenditures are projected to rise by 6.3% to $905.9 million in 2011 and 3.0% to $933.1 million in 2012.

Exhibit 4-13: **2010 CTA Operating Expenditures - $1,271 million**

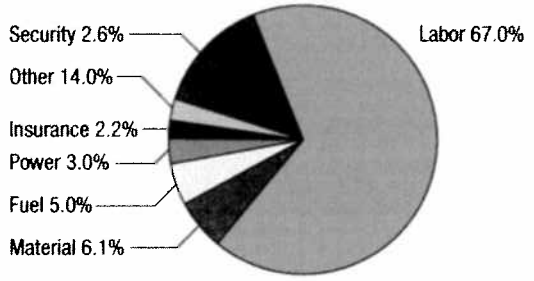


Exhibit 4-15: **CTA Budgeted Positions** (in thousands)

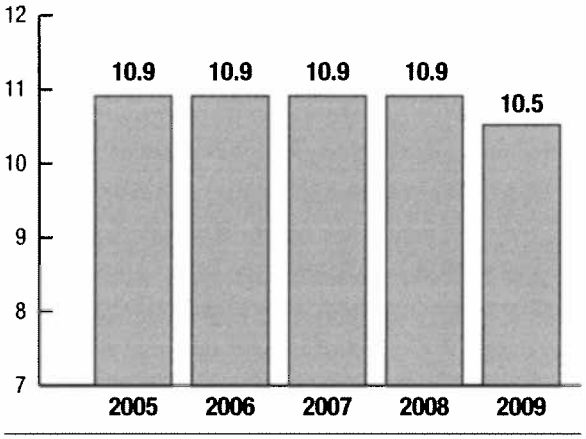


Material

The material category covers all repair parts for buses, trains, track, structure and signals in the system. Material expenditures are estimated at $90.2 million in 2009, $77.7 million in 2010, $79.3 million in 2011, and $80.9 million in 2012. The overall decline results from service level reductions and additional capital preventative maintenance funds received in 2009, which helped offset costs of regular maintenance.

Fuel

In 2008, CTA fuel expenditures were $91.8 million for 21.4 million gallons (Exhibit 4-16). The 2009 budget identified the need for 22.6 million gallons of diesel fuel at a cost of $99.2

Exhibit 4-14: **CTA Labor Expense Growth** (in thousands)

	2008	2009	2010	2011	2012
Labor Expense	$873,636	$870,985	$852,081	$905,904	$933,081
% Change from Prior Year	11.3%	-0.3%	-2.2%	6.3%	3.0%

Exhibit 4-16: **CTA Fuel Cost per Gallon** (cost and gallons in thousands)

	2006	2007	2008	2009	2010
Fuel Cost	$57,470	$68,614	$91,834	$99,180	$63,879
Gallons	24,722	25,500	24,100	22,600	25,545
Cost Per Gallon	$2.33	$2.69	$3.81	$4.39	$2.50

million. Due to the uncertainty surrounding energy prices, the CTA estimated for 2009 fuel costs at approximately $4.39 per gallon. Total diesel fuel cost for 2010 are budgeted to be $63.9 million, $34.3 million less than the 2009 estimate. This decrease is based on proposed service changes, lower fuel costs and more fuel efficient buses.

Power

Electric power expenditures for the rail system are projected to increase from $35.4 million in 2008 to $40.0 million in 2009 due to higher energy prices. Expenditures for power decrease $1.8 million in 2010, increase $0.7 million in 2011 and increase $0.8 million in 2012.

Insurance and Claims

The Provision for Injuries and Damages represents the expenditure for claims and litigation for injuries and damages that occur on CTA property or with CTA vehicles.

The CTA 2009 estimate of $20.0 million is $12.3 million higher than the actual 2008 amount. The 2010 budget of $28.0 million represents a 40% increase over 2009. In 2011 and 2012 the CTA projects these expenditures to be $28.6 million and $29.1 million respectively.

Purchase of Security Services

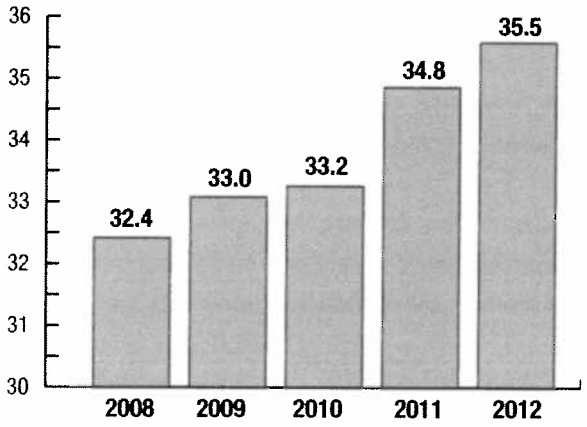
Security is strategically deployed throughout the CTA system to provide 24-hour coverage, seven days a week. Security services are provided by the City of Chicago, Evanston and the Oak Park Police departments, the Wells Fargo Guard Service, and National K-9 Security.

Expenditures are estimated to be $33.0 million in 2009, which is a slight increase from 2008 (Exhibit 4-17). The 2010 budget is $33.2 million. In 2011 and 2012, security expenditures are expected to increase $1.6 million and $0.7 million, respectively. These modest increases are due to investments made in new surveillance cameras and sensors for the rail system.

All Other Expenditures

All other expenditures include utilities, rents, maintenance and repair, advertising, commissions, consulting, insurance, and other general expenditures. For 2009, $118.5 million is budgeted, which is $45.7 million more or 63.2% higher than the prior year. The 2010 all other expenditures budget is projected to be $178.0 million, which is higher than the 2009 budget by $59.3 million. Expenditures are forecasted to continue to increase to $211.2 million and $232.3 million in 2011 and 2012, respectively. All other expenditures include interest on Pension Obligation Bond (POB) required by the 2008 legislation which enabled the CTA to regain long-term solvency in its pension funds.

Exhibit 4-17: **CTA Purchase of Security Service** (dollars in millions)



Deficit

System-generated revenue (fares and other revenue) cover much of the CTA's operating expense budget, with the remainder of the operating deficit covered by public funding. The operating deficits are derived from total system generated revenue minus total operating expenditures. The deficits for the 2010 budget and 2011-2012 financial plan are $670.3 million, $682.3 million and $612.7 million, respectively (Exhibit 4-6).

Funding

Public funding, available for CTA operations, is determined by and based on the RTA's revenue projection for the year. Public funding from the RTA consists of the RTA Sales Tax (RTA Sales Tax-I and II), the Public Transportation Fund (PTF-II), the RTA Real Estate Transfer Tax (RETT), and RTA discretionary funding. Illinois Public Act 95-0708, increased the rates of the RTA sales tax rate, the PTF match, and the City of Chicago RETT, creating RTA Sales Tax II, PTF-II and RETT.

CTA funding from RTA Sales Tax-I is expected to increase from $261.6 million in 2010 to $277.0 million in 2012. RTA Sales Tax-II and PTF-II are expected to increase from $110.1 million in 2010 to $116.6 million in 2012. The RETT and the 25% PTF-II match on RETT combined are expected to increase from $28.0 million in 2010 to $32.5 million in 2012. RTA discretionary funds for the CTA are expected to increase from $97.6 million in 2010 to $121.6 in 2012. Apportionments from the RTA's 15% share of the sales tax (Sales Tax-I) revenue and the State's public transportation fund (PTF-I) are the sources of the RTA's discretionary funds. A more detailed description of how public funds are allocated among the service boards can be found in the Region Section of this book.

Recovery Ratio

The CTA's recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2010, the CTA's Estimated recovery ratio is 53.5% which exceeds the mark of 51% set by the RTA Board. The Region Section provides the detailed recovery ratio calculation.

The following factors affect the CTA recovery ratio calculation. First, in-kind security services provided by the Chicago Police Department in the amount of $22 million are included as both revenue and expenditure in the recovery ratio calculation. Second, additional security expenditures are excluded from the recovery ratio calculation. The CTA's recovery ratio was 49.2% in 2008 and is estimated to be 53.5% in 2009. In 2010, the CTA will be required to reach a 51% recovery ratio, that amount is expected to increase to 52% in both 2011 and 2012 (Exhibit 4-6).

2009 Budget versus 2009 Estimate

The CTA expects a balanced budget in 2009 based on an amended budget (Exhibit 4-18).

Revenue

Calendar year 2009 operating revenues are estimated at $602.0 million and are projected to be equal to budget. Revenue from fares is estimated at $525.0 million which is lower than budget by $4.7 million, or 0.9%. The decrease in fare revenue is a result of a lagging economy and its impact on ridership.

The reduced fare subsidy is the State's reimbursement to the CTA for providing discounted fares to the disabled, the elderly, and students. Revenue from the reduced fare subsidy is estimated at $24.2 million which is higher than budget by $8.1 million or 50.6%.

All other revenue is estimated at $52.7 million which is lower than budget by $3.5 million or 6.2%. Contributions from local governments of $5 million are on par with budget. The RTA Act requires the City of Chicago to contribute $3 million and Cook County to contribute $2 million annually to the operations of CTA. Revenue from Advertising, Charter, & Concessions is estimated at $27.4 million which is lower than budget by $3.2 million or 10.2%. Investment income is estimated at $1.9 million, which is lower than budget by 3.8%. The CTA benchmarks its investments against the rates for the 90-day Treasury bond.

Expenditures

Calendar year 2009 operating expenditures are estimated at $1,271.9 million and are projected to be equal to budget. Expenditures for fuel and security services are expected to be slightly over budget for the year. On the other hand, labor, material, power, and other services are estimated to finish under budget due to cost containment strategies implemented to ensure that the CTA balances its budget in 2009.

Labor expenditures are projected at $871 million, which is $.8 million or 0.1% under budget. The increase is due to higher wage rates, increased pension contributions and higher health care expenses.

Material expenditures in 2009 are estimated at $90.2 million, which is lower than budget by $2.1 million. The decrease in material expenditures is due to a reduction in replacement bus part expenditures. In 2009 the CTA retired 92 buses that had surpassed their Federal

Exhibit 4-18: **CTA 2009 Amended Budget versus 2009 Estimate** (dollars in thousands)

	2009 Amended Budget	2009 Estimate	Variance
System-Generated Revenues			
Passenger Revenues	$529,705	$525,033	($4,672)
Reduced Fare Subsidy	16,100	24,248	8,148
Other Revenue	56,164	52,688	(3,476)
Total Revenues	**$601,969**	**$601,969**	**$0**
Operating Expenditures			
Labor	$871,757	$870,985	$772
Material	92,326	90,245	2,081
Fuel	98,163	99,180	(1,017)
Power	40,077	39,970	107
Insurance & Claims	20,000	20,000	0
Purchase of Security Services	32,204	33,044	(840)
All Other	117,407	118,510	(1,103)
Total Operating Expenditures	$1,271,934	$1,271,934	$0
Operating Deficit	**$669,965**	**$669,965**	**$0**
Recovery Ratio %	53.5%	53.5%	0.0 pts.

Transit Administration life span of 12 years. Due to structural issues, the CTA also pulled 220 high maintenance North American Bus Industries (NABI) buses out of service. To offset these fleet requirements, the CTA has put 75 new 40 foot New Flyer buses and 158 new 60-foot hybrid buses into service. These capital expenditures have resulted in a decrease in Material expenditures.

Fuel expenditures for revenue equipment are expected to be $99.2 million at the end of 2009. This is $1.0 million or 1.0% higher than budget. Fuel prices have been running above budget and are estimated to end 2009 at an average price of $4.39. Budgeted fuel expenses were made at $98.2 million which is $1.0 million greater than projected, and 8.0% more than the previous year's actual amount

Electric power expenditures for the rail system are estimated to be $40.0 million, just under budget. At the end of May 2008 the CTA's new Electric power contract began. This new Contract included a rate of $0.0875 per kilowatt hour. This rate is $0.0189 per kilowatt hour, or 27.6% higher than the previous contract. However, the rail system did benefit from the cooler than expected summer weather, saving approximately 25 million kilowatt hours of power, or $2.2 million.

Expenditures for insurance, claims and litigation for injuries and damages that occur on CTA property or with CTA vehicles are estimated at $20.0 million for 2009 which is par to budget.

Security is deployed strategically throughout the system to provide 24-hour coverage, seven days a week. These services are provided by the Chicago, Evanston, and Oak Park Police departments and contracts with private security firms. Full year expenditures are estimated at $33.0 million. This is $0.8 million or 2.6% higher than budget. In addition to the services contracted by CTA, the Mass Transit Unit of Chicago Police Department (CPD) continues to provide services to CTA at an estimated cost of $22 million.

Statutory Compliance

The RTA Act requires that each Service Board meet the six criterions detailed in the Region Section for their budgets to be approved. The CTA budget, as submitted, meets all criteria.

Organizational Structure

The CTA organization chart is shown in Exhibit 4-19 and consists of the following divisions.

CTA Board

The CTA's governing arm is the Chicago Transit Board, consisting of seven board members. The Mayor of Chicago appoints four board members who are subject to the approval of the City Council and the Governor. The Governor appoints three board members who are subject to the approval of the State Senate and the Mayor of Chicago.

The Citizens Advisory Board, the CTA Board Members, the Chief of Staff to the Chairman, and the Secretary of the CTA Board report to the Chairman of the Board.

General Counsel

The General Counsel handles appellate matters, claims and tort litigation, and workers compensation matters.

Office of Inspector General

The Office of Inspector General reviews and analyzes the integrity of financial, operating, and computer system activities and any other organizational activity that management requires.

This office is also responsible for financial and general investigations.

Treasurer

The Treasurer manages cash and handles investment.

Office of the President

The CTA President is the agency's chief executive and is charged with executing the policy decisions made by the CTA Board of Directors and providing direction to the CTA staff as they work to fulfill the mission and goals of the Service Board.

Planning

The Planning department is responsible for developing routes and schedules that best synchronize CTA capabilities with customer demand. Planning ensures that the highest level of service is attained.

Security and System Safety

Security and System Safety administers the Destination Safety program with aims to reduce employee and third party accidents and injuries.

Facilities Maintenance, Construction & Engineering

Facilities Maintenance includes system maintenance support, power and way maintenance, rail station appearance, and facility maintenance. Construction is responsible for ensuring that major capital construction projects are on time, budget, and in conformance with the standards. Engineering is responsible for creation and maintenance of construction documents for CTA facilities, reviewing and answering design requests.

Performance Management

Performance management includes developing strategic goal for each business unit that focuses on five goals namely, safety, on-time, cleanliness, efficiency, and courtesy (Exhibit 4-20).

Transit Operations

Transit Operations, which represents the largest percentage of CTA employees, is responsible for bus and train operations, customer and paratransit services (prior to July 1, 2006), planning, security, control center, and training.

Bus and Rail Operations manages a fleet of 1,782 buses and 1,190 rail cars that cover 188,000 bus miles and 189,000 rail miles driven every day. They employ approximately 4,200 full-time equivalent bus operators and 1,300 rail operators that provide service to the customers.

The Control Center monitors passenger and facility security and maintains accident statistics and monitors environmental affairs. The Control Center operates 24-hours per day, 7 days a week.

Operations Support

Communications and Marketing is responsible for marketing, media relations, identity development, and publications.

Finance is responsible for budgeting, general accounting, investment support, program development, and the management and control of property, grants, and funding.

The Government and Community Relations and Affirmative Action department monitors transit legislation that affects the CTA on both regional and national levels.

The Human Resources department includes recruiting, hiring, benefit services, medical services, and program compliance.

The Purchasing/Warehousing department includes inventory management.

The Technology Management department includes management information systems.

The Property & Real Estate Asset Management is responsible for the management of the CTA Headquarter, the CTA control center, and for the management of all properties leased by the CTA.

Exhibit 4-19: **CTA Organization Chart**

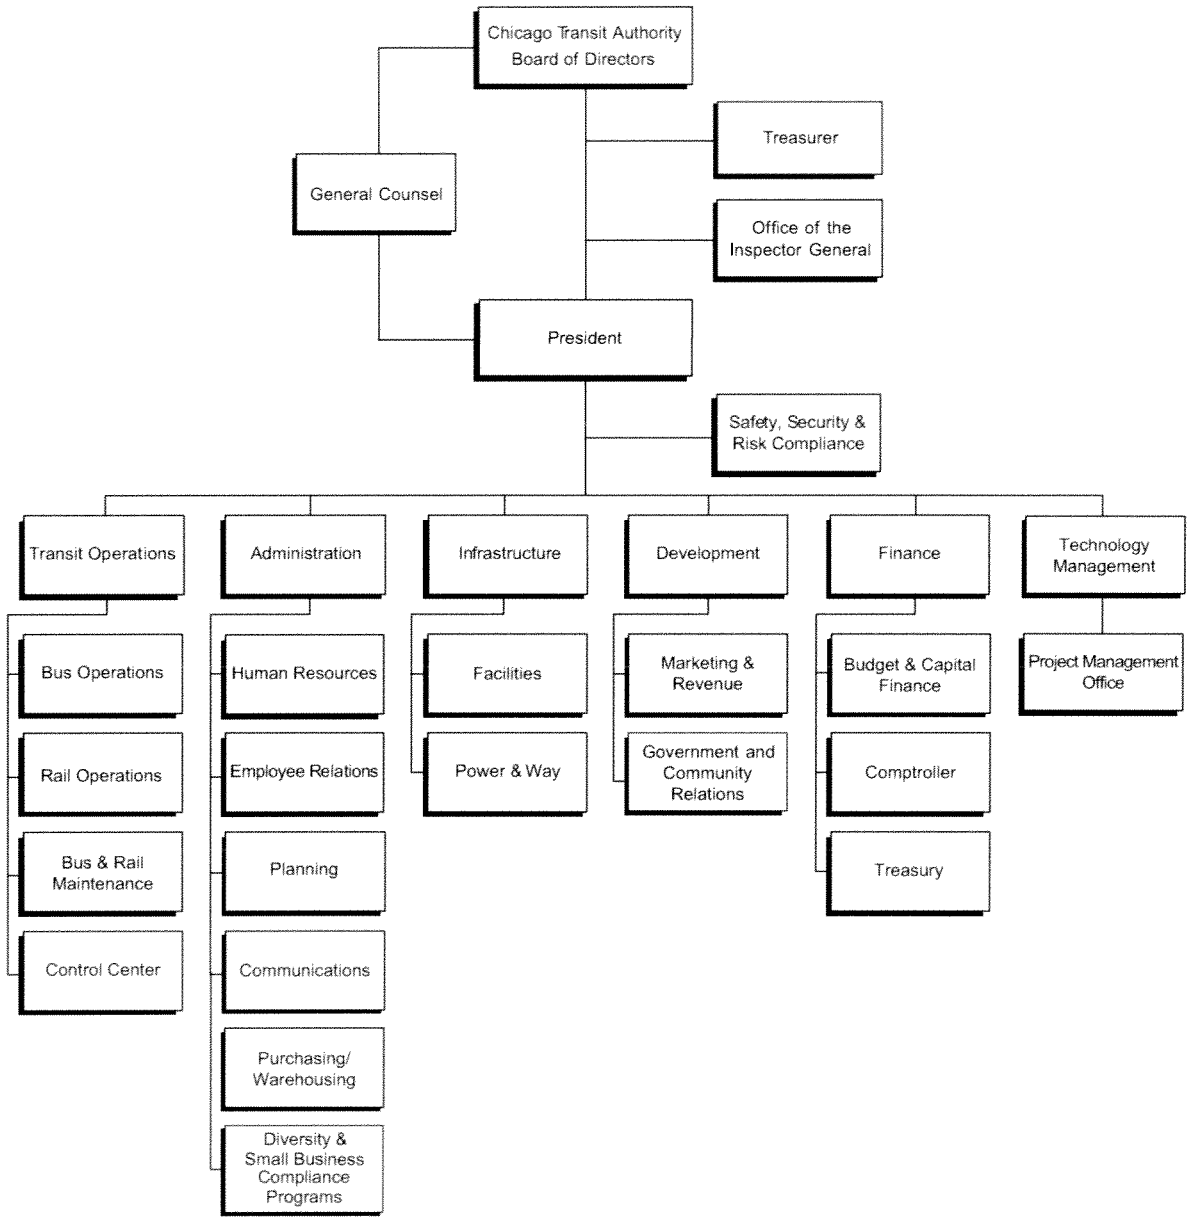


Exhibit 4-20

	CTA Monthly Performance	2009 Monthly Target	2008 Monthly Average	Jan 2009	Feb 2009	Mar 2009	Apr 2009	May 2009	Jun 2009	Jul 2009	Aug 2009	Sep 2009	Oct 2009	Nov 2009	Dec 2009	Definition

5 Metra Operating Plan

Overview

Metra was formed in November 1983 as part of the reorganization of the RTA by the State of Illinois. Metra is responsible for the day-to-day operations of the region's commuter rail system including fare and service levels, capital improvements, finances, passenger services, safety, and systems planning. Service is operated by private carriers under contract to Metra and by Metra directly.

Metra is governed by a twelve-member board of directors. Four of the directors are appointed by the suburban members of the Cook County Board. The chairman or executive of the County Boards of Cook, DuPage, Kane, Lake, McHenry, and Will counties each appoint one director, and the Mayor of the City of Chicago also appoints one director. The Chairman of Metra's board of directors must be one of the twelve-directors, and is appointed by the concurrence of eight directors.

In 2010, Metra will continue its efforts to contain costs by leaving 150 positions unfilled. Additionally some targeted fare actions will be implemented in order to maximize system generated revenues.

Service Characteristics

The Metra rail system is comprised of eleven separate lines, which run north, west, and south of the Chicago central business district. The system extends 488 route-miles to the limits of the six-county area and serves 240 local rail stations in more than 100 communities. The network itself is made up of 1,100 pieces of rolling stock, 800 bridges, more than 2,000 signals, 18 rail storage yards, and seven major maintenance facilities. Metra's operational interface with extensive freight networks makes it one of the nation's most complex. A system of such magnitude requires continual maintenance and renewal in order to preserve operational performance, safety, and service efficiency.

Metra serves the region on routes owned by Metra or freight carriers and through purchase of service agreements with Union Pacific and Burlington Northern Santa Fe, two of the largest freight carriers in the nation. The South Shore Line, operated by the Northern Indiana Commuter Transportation District (NICTD), is another Metra partner, providing service between Chicago and South Bend, Indiana.

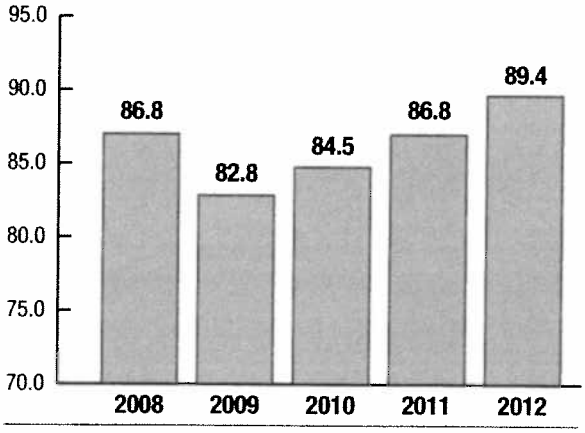
Metra provides safe, reliable commuter rail service with an average weekday ridership of 322,100. Peak period ridership represents 75.1 percent of the total average weekday trips. Average scheduling speeds are 5.0 percent higher during weekday peak periods than during off-peak hours and weekend/holiday periods.

Metra's hub is located in the downtown Chicago business district. Four downtown terminals serve Metra's eleven lines. Approximately one-half of all commuter trips from the suburbs to downtown Chicago are made on Metra.

Ridership

Metra's primary customer base is suburban residents who work in downtown Chicago. Passenger loads on peak period, peak direction trains have realized an increase of 2.5 percent compared to five years earlier. According to Metra's

Exhibit 5-1: **Metra Ridership** (in millions) (1)



(1) Based on ticket sales. Includes free senior rides. Excludes South Shore (NICTD) service.

Exhibit 5-2: **Riders and Miles** (in millions) (1)

	2008 Actual	2009 Estimate	2010 Budget	2011 Plan	2012 Plan
Ridership (2)	86.8	82.8	84.5	86.8	89.4
Revenue Car Miles	35.1	33.4	33.4	33.4	33.4
Passenger Miles (3)	1,913.7	1,807.7	1,843.8	1,895.5	1,952.3

(1) Ridership, Revenue Car Miles, and Passenger Miles exclude South Shore (NICTD) service.
(2) Based on ticket sales. Includes free Senior rides.
(3) Based on ticket sales. Excludes Senior free rides.

2006 Origin-Destination Survey, more than 90 percent of all Metra trips are for business and work purposes.

In 2008, Metra's total ridership, excluding South Shore service, totaled 86.8 million passenger trips (Exhibit 5-1). Metra's total ridership is projected to decline in 2009 to 82.8 million passenger trips. An increase of 6.6 million passenger trips is expected over the next three years, with an estimated total ridership of 89.4 million passenger trips in 2012. This represents a compound annual growth rate of 2.6 percent (Exhibit 5-2).

Metra has made concerted efforts to market off-peak and reverse commute trips. Compared to five years earlier, reverse peak travel has increased 64.3 percent, while midday and evening travel has increased 18.1 percent and 28.8 percent, respectively (Exhibit 5-3). These gains are attributable to Metra's efforts to broaden its ridership base, including the weekend ticket, enhanced off-peak service, targeted promotion of service to suburban employers, marketing travel to cultural and entertainment attractions, and Metra's Bikes on Train program, implemented on June 1, 2005. In 2009, with grants from the RTA's ICE program, weekday Southwest Service was expanded from 179th Street to Manhattan and Saturday service was introduced on this line.

Exhibit 5-3: **Average Daily passenger Loads by Service Period** (in thousands)

	July 2003-June 2004 (1)	July 2008-June 2009 (1)	Change	% Change
Peak Direction	236.0	241.8	5.8	2.5
Reverse Peak	14.0	23.0	9.0	64.3

Saturday	53.0	74.4	21.4	40.4
Sunday	30.0	50.2	20.2	67.3

(1) Excludes South Shore (NICTD) service.

Service Quality

Metra has identified improved service quality as one of its objectives to insuring customer satisfaction. Metra periodically conducts on-board surveys to measure various service attributes. Beyond general rider satisfaction, Metra also collects information on the service attributes that are most effective at attracting and retaining riders. This data provides direction for planning, scheduling and marketing activities. For example, Metra's goal to provide safe, reliable, clean and on-time service is derived directly from the most important service characteristics identified through these customer surveys. In response to the changing needs of customers, Metra continuously looks

for ways to expand and improve its service within financial constraints. In order to ensure customer satisfaction and efficiency Metra has implemented a number of metrics to measure efficiency and customer satisfaction.

For instance, Metra measures service reliability using on-time performance. A delay is recorded if the train arrives at its final destination more than five minutes later than scheduled. Metra's on-time performance in 2008 was 95.4 percent (Exhibit 5-4).

Matching the supply of service to demand is another means of maintaining system efficiency. Metra measures capacity utilization train-by-train, which allows it to track daily passenger loads by service period and line in order to analyze trends. Metra monitors and reports trains with occupancy rates exceeding 95.0 percent, and uses this information to make service change decisions.

One measurement of system-wide effectiveness relates the number of passengers to the number of car miles of service, thereby calculating passengers per revenue car mile. Metra's ratio of passengers per revenue car mile is projected to increase from 2.4 in 2008 to 2.7 in 2012 (Exhibit 5-5). This 0.3 increase represents a compound annual growth rate of 2.4 percent. In the case of a new service, the number of car miles initially increases faster than the number of passengers, thereby decreasing the passenger per mile ratio. An increase in passengers per revenue car mile indicates increasingly efficient transportation practices.

Another measurement used to evaluate whether costs are being contained and efficiency maintained is cost per revenue car mile. This measure recognizes that costs tend to vary with the amount of service provided. Metra expects that its cost per revenue car mile will increase from $16.96 in 2008 to $19.40 in 2012. This $2.44 increase represents a compound annual growth rate of 3.4 percent (Exhibit 5-6).

The cost per passenger ratio measures cost effectiveness and is designed to examine how well vehicles are deployed to serve riders. Metra projects that its cost per passenger will decrease slightly from 2008 to 2009, and increase from 2009 to 2012. The cost per passenger ratio is expected to be $6.80 in 2009 and $7.30 in 2012. This $0.50 increase represents a compound annual growth rate of 2.4 percent (Exhibit 5-6).

Exhibit 5-4: **On-time Performance**

Year	% On-Time
2004	96.9
2005	96.3
2006	96.3
2007	95.7
2008	95.4

Exhibit 5-5: **Passengers Per Revenue Car Mile** (in millions)

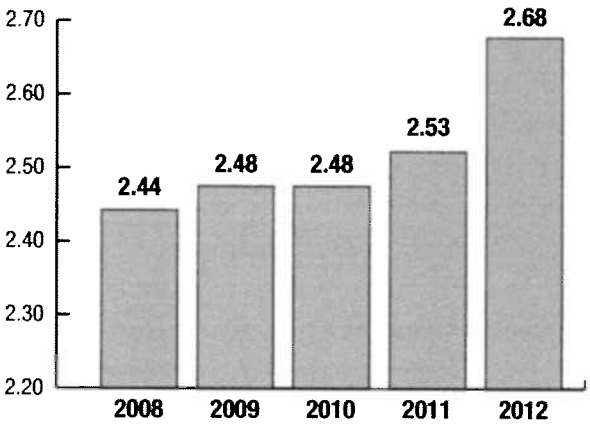

Exhibit 5-6: **Metra Cost Efficiency**

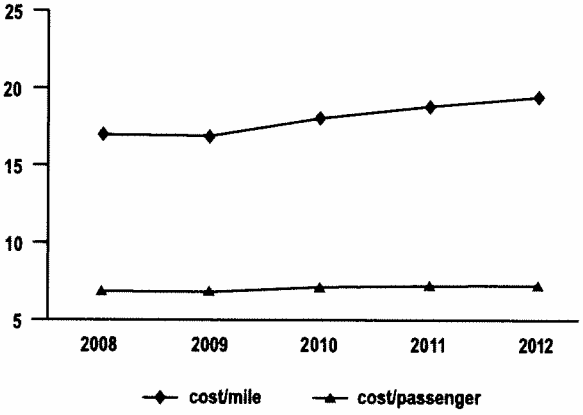

Maintenance and Modernization

Since Metra was formed in 1984, Metra has overseen a comprehensive program to improve and grow the regional commuter rail network in support of the twin objectives of core system maintenance and strategic service expansion. For the past several years Metra's budget has discussed the need for new capital funding sources.

In 2009, the Illinois General Assembly passed a new bond program that will provide up to $1.1 billion for Metra's capital program. An additional $140.9 million in capital funding was also made available through the American Recovery and Reinvestment Act (ARRA). These federal stimulus dollars are already being put to use on projects such as remanufacturing locomotives, replacing bridges, restoring stations, and upgrading signal systems. When the proceeds from the new State of Illinois capital funding become available, Metra intends to replace 160 Highliner cars used on the Metra Electric District. Metra has stated that some of these cars date as far back as 1971. Metra expects that the Highliner purchase will cost an estimated $585 million. The remainder of the state capital program will be used to address a backlog of rolling stock and infrastructure projects across the region.

Safety and Security

In an effort to provide a safe and secure environment for both customers and employees, Metra provides employee incentives to those

regularly meeting safety and security goals. Key among these goals is workplace safety. A safe workplace correlates into a safe environment for Metra passengers.

Metra's investments in staff training programs and incentive plans have resulted in substantial dividends, including commuter satisfaction and industry recognition. In 2009 Metra received a Bronze Harriman Award from the E.H Harriman Memorial Awards Institute for outstanding achievements in maintaining employee safety. This marks the 11th time that Metra has been so recognized for its safety record.

In addition to routine workplace safety training, Metra employees have also been trained to recognize and observe potential safety hazards and security threats in and around trains, stations and tracks. As part of these investments, Metra has installed security cameras at several downtown train stations.

Metra also installed a train tracking system using Global Positioning System (GPS) technology in 2001. GPS monitors the real time position and movement of all trains on Metra's routes. GPS offers Metra's operations professionals a snapshot that details the performance of every train during an operational day. The real-time information supports and delivers a more effective response to any service disruptions or emergencies and leads to enhanced overall safety.

In 2010 Metra will continue its safety outreach programs emphasizing the region's school children. This year will mark the fourth year of Metra's

Poster Contest. Students from throughout the region compete to create the winning designs to be displayed on Metra's safety calendar and monthly passes, and distributed to over 2,000 schools. This year's theme is, "Make the right choice: Look, Listen and Live."

Budget And Financial Plan

The Metra budget and financial plan presented in Exhibit 5-7 meets the 2010, 2011, and 2012 funding marks and the 2010 recovery ratio mark of 55 percent set by the RTA Board on September 15, 2009. The performance measures published for 2009 can be found at the end of this section. The RTA Board adopted Metra's 2010 budget and 2011-2012 financial plan on December 17, 2009.

System-Generated Revenue

Total system-generated revenue is estimated at $296.3 million in 2009, a decrease of $19.5 million from 2008. Total system-generated revenue is expected to increase to $332.3 million in 2012. The increase of $36.0 million represents a compound annual growth rate of 3.9 percent from 2009 to 2012. (Exhibits 5-7 and 5-8).

Metra's system-generated revenue has three major components: passenger revenue, reduced fare subsidy, and other revenue. In 2010, passenger revenue of $250.7 million comprises 80.6 percent of the total revenue budget with other revenue and the reduced fare subsidy representing 18.3 percent and 1.1 percent respectively (Exhibit 5-9).

Exhibit 5-7: **Metra 2010 Budget and 2011-2012 Financial Plan** (dollars in thousands)

	2008 Actual	2009 Estimate	2010 Budget	2011 Plan	2012 Plan
System-Generated Revenue

Deficit Funding					
RTA Sales Tax I	$247,039	$217,400	$220,661	$227,061	$233,645
RTA Sales Tax II and PTF II	40,142	88,082	89,436	92,056	94,751
Federal Funds	-	6,300	-	-	-
Funds Available for Capital (1)			(17,997)	(13,717)	(12,796)
Total Deficit Funding	**$287,181**	**$311,782**	**$292,100**	**$305,400**	**$315,600**
Additions to Recovery Ratio Revenues	5,000	7,100	7,500	7,700	7,900
Recovery Ratio % (1) (2)	**57.4%**	**56.5%**	**55.0%**	**55.0%**	**55.0%**

(1) Recovery ratio revenue includes credits for Senior free rides, and $10 million of capital farebox revenue. Recovery ratio expenditures exclude costs related to transportation facilities, security and depreciation.

(2) In 2010, Metra's recovery ratio is 56.2 percent, exceeding the mark of 55.0 percent set by the RTA Board.

Passenger Revenue

Passenger revenue or farebox revenue is estimated at $238.9 in 2009, a decrease of $12.8 million from 2008. Passenger revenue is expected to increase to $265.3 million in 2012. This increase of $26.4 million represents a compound annual growth rate of 3.6 percent from 2009 to 2012.

Ridership and passenger revenue are expected to decline from 2008 to 2009. In 2010 Metra expects passenger revenues to increase by 4.9 percent. This increase is largely due to projected ridership growth and fare adjustments. Targeted fare increases include a 6.0 percent increase in one way fares across all fare zones, an increase in the weekend fare from $5 to $7, and an increase in the penalty for on board ticket purchases from $2 to $3. These programs, intended to increase advanced ticket purchases of discounted 10 ride tickets and monthly tickets take effect on February 1, 2010. Changing rider and ticket trends, such as longer trip length and lower one-way ticket sales also impact changes in passenger revenue (Exhibit 5-10). Metra's fare structure is presented at the end of this section (Exhibit 5-14).

Reduced Fare Subsidy

The Illinois General Assembly passed legislation in 1989 providing funds to reimburse the CTA, Metra, and Pace for the cost of providing reduced fares for the elderly, students, and persons with disabilities. The fare reimbursement is included in revenue and is contingent upon annual approval by the State of Illinois. In 1999, the Assembly passed new reduced fare legislation, which doubled the reimbursement level of previous years.

Exhibit 5-8: **Metra System-Generated Revenue** (dollars in millions)

PlusBus	13.5	16.0	2.5	18.5%

*Excludes South Shore (NICTD) service.

Other Revenue

The other revenue category represents 18.3 percent of Metra's total revenue for 2010. The components of this category are investment income, joint facility and lease revenue, advertising income, capital credits, and miscellaneous non fare-generated income. Other revenue is expected to decrease $7.3 million from 2008 to $54.0 million in 2009. In 2012, other revenue is estimated at $63.6 million. This $9.6 million increase represents a compound annual growth rate of 5.6 percent from 2009 to 2012. This increase is due to higher levels of capital project work.

Operating Expenditures

Total operating expenditures are estimated to decrease $29.7 million from 2008 to $565.0 million in 2009. Total operating expenditures are expected to be $647.9 million in 2012. This $82.9 million increase represents a compound growth rate of 4.7 percent from 2009 to 2012 (Exhibit 5-11).

Metra's 2010 total operating expenditures of $603.1 million are projected to grow by $38.1 million or 6.7 percent from the 2009 estimate. In 2011 and 2012, total expenditures will increase by 4.0 percent and 3.3 percent respectively (Exhibit 5-7). These increases are consistent with the terms and conditions of contracts and agreements, as well as projections of market indices as applicable.

Exhibit 5-11: **Metra Operating Expenditures** (dollars in millions)

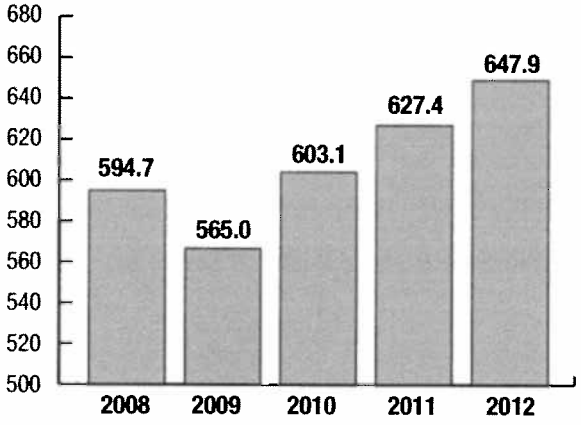

Exhibit 5-12: **Metra Operating Expenditures** - $603.1 million

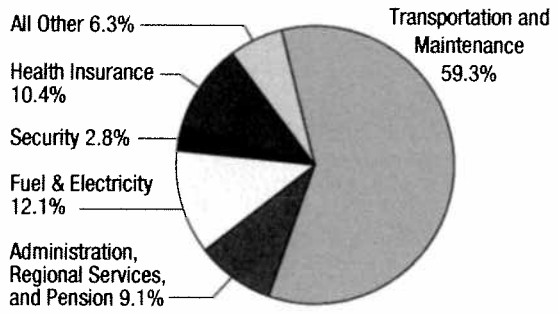

Expenditure Elements

The components of operating expenditures are transportation and maintenance, administration & regional services, pension, diesel fuel and electricity, security, health insurance and all other, which includes risk management & claims, downtown stations, credit cards, and the apprentice training program. Of total 2010 expenditures, transportation and maintenance represent 59.3 percent; administration, regional services, and pension 9.1 percent; fuel and electricity 12.1 percent; security 2.8 percent; health insurance 10.4 percent; and the all other 6.3 percent (Exhibit 5-12).

Transportation and Maintenance

Transportation includes the functions and activities directly responsible for the operation of the commuter trains. The major functions include train and engine crew work, dispatching, tower operations, ticket sales, police and security services, employee safety, and supervisory support. The main objective of this area is to run service consistent with the published train schedules in a safe and efficient manner and in accordance with federal and state regulations.

Maintenance includes two types of activities: maintenance of way and maintenance of equipment. Maintenance of way activities include the maintenance of track, structures, communications and facilities to preserve operational safety, reduce travel times and service interruptions, and increase passenger comfort. Maintenance work is concentrated on safety inspections and short-term projects to safeguard overall track and structure conditions.

Maintenance of equipment activities include regular repairs, inspection and preventive maintenance of passenger train equipment to ensure that this equipment is safe and in good working order to meet train schedules and passenger demand for seating.

Transportation and maintenance expenditures are estimated to decrease $3.4 million from

2008 to $348.0 million in 2009. Transportation and maintenance expenditures are expected to reach $380.8 million in 2012. This $32.8 million increase represents a compound annual growth rate of 3.0 percent from 2009 to 2012. This growth rate is consistent with the traditional growth rate of the CPI (Exhibit 5-7).

Administration and Regional Services

Administration activities include general support functions for the organization to ensure overall corporate goals and regulations are met. Administrative activities include human resources, labor management committee, information systems, training, accounting and other support areas. Management of Metra owned and operated rail services are also included in this category.

Metra has adopted a variety of cost-containment measures that save on administrative costs in 2010. The cost-cutting actions include leaving 150 positions unfilled. Administration and regional services are estimated to be $53.3 million in 2009, an increase of $2.1 million from 2008. Administration and regional services are projected to decline in 2010 to $49.4 million, a decrease of $3.9 million. Administration and regional services are expected to reach $53.3 million in 2012, representing an increase of 4.7 percent and 3.1 percent in 2011 and 2012, respectively.

Pension

Metra's annual contributions to the RTA Pension Plan are determined by a third-party actuary. The pension expenditure is expected to decrease slightly from 2008 to $4.7 million in 2009. The pension expenditure is expected to reach $6.5 million in 2012. This $1.8 million increase represents a compound growth rate of 11.1 percent from 2009 to 2012.

Diesel Fuel and Electricity

Diesel fuel and electrical power are two of the most volatile components of the operating expenditures. For 2010, Metra has budgeted motive power and electric utility costs to increase by $0.7 million or 3.8 percent from 2009. In 2012, combined fuel and electric power costs are projected to reach $77.9 million. This $17.4 million increase represents a compound annual growth rate of 8.8 percent from 2009 to 2012 (Exhibit 5-7).

In 2009, diesel fuel is expected to average $1.63 per gallon for a total of $41.9 million, a decrease of $32.6 million or 43.8 percent from 2008. The 2010 budget based on $2.15 a gallon totals $53.8 million, an increase of $11.9 million or 28.4 percent from 2009. The projected average prices per gallon for diesel fuel in 2011 and 2012 are $2.24 and $2.29, respectively. In 2004 diesel fuel represented only 4.0 percent of total operating costs. In 2010, diesel fuel is estimated to represent 8.9 percent of total operating expenses, more than double the share in 2004.

Electrical power and diesel fuel costs are projected to decrease from $91.0 million in 2008 to $60.5 million in 2009. This difference of $30.5 million represents a 33.5 percent decrease in combined fuel and electrical costs.

Security

Security has become a significant concern for Metra as it seeks to safeguard riders and employees alike. This expense category includes police and contract security services as well as planning, coordination, and training with other agencies. The budget of $16.7 million in 2010 represents an increase of $0.7 million or 4.4 percent from 2009. Security expenses are budgeted to increase $0.5 million annually after 2010 representing a sustainable commitment to provide a secure environment to the customers and employees of Metra (Exhibit 5-7).

Health Insurance

Health insurance costs for 2010 of $62.7 million are assumed to increase by 8.1 percent over the 2009 estimate of $58.0 million, with annual growth rates of 4.5 percent and 4.0 percent in 2011 and 2012, respectively. These increases are attributable to national trends of increasing health insurance costs (Exhibit 5-7).

All Other

This expenditure category includes risk management & claims, downtown stations, credit cards, and the apprentice training program. Expenditures in this category are expected to increase from $24.4 million in 2008 to $43.6 million by 2012. This $19.2 million increase represents a compound annual growth rate of 15.6 percent (Exhibit 5-7).

On September 9, 2009 Metra inaugurated a new web site that included the acceptance of credit and debit cards for the purchase of 10-ride and monthly tickets. Expenses for credit cards are for systems and related support costs. Metra expects that credit card and related expenses will grow from $0.2 million in 2009 to $7.2 million in 2012. This increase represents 37.5 percent of the $19.2 million increase for all other expense from 2008 to 2012 and reflects increased expenses as a result of increased customer demand for credit card transactions. Finally, the apprentice training program increase represents 23.0 percent of the $19.2 million increase for all other expenses, as expenses for this program are expected to increase from $1.0 million in 2008 to $5.4 million in 2012. The apprenticeship training program represent a strategic investment in human capital planning to compensate for the upcoming wave of retirement that Metra is currently facing.

Deficit

The operating deficit is derived from total system-generated revenue minus total operating expenditures. Metra's 2010 budget deficit is $292.1 million (Exhibit 5-7). This deficit is offset with statutorily allocated public funding to reach a balanced budget.

Funding

Public funding, available for Metra, is determined by and based on the RTA's revenue projection for the year. From the RTA, Metra receives RTA Sales Tax (RTA Sales Tax-I and II), the Public Transportation Fund (PTF-II)

Metra funding from RTA Sales Tax-I is expected to increase from $217.4 million in 2009 to $233.6 million in 2012. RTA Sales Tax-II and PTF-II are expected to increase from $88.1 million in 2009 to $94.8 million in 2012. Metra projects that sales tax and PTF funding will exceed the operating deficit by $18.0 million in 2010, $13.7 million in 2011, and $12.8 million in 2012. These amounts will be transferred to the capital program.

A more detailed description of how public funds are allocated among the service boards can be found in the Region Section of this book.

Recovery Ratio

Metra's recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. In 2010 Metra's recovery ratio is 55.0 percent, matching the mark set by the RTA. The RTA Region section provides a detailed recovery ratio calculation.

Statutory Compliance

The RTA Act requires that each Service Board meet seven criteria, which are detailed in the RTA Region section, for Board approval of its budget. The Metra budget meets each of these criteria.

2009 Budget Versus 2009 Estimate

Metra expects a balanced budget in 2009 based on an amended budget. In 2009 Metra estimated and budgeted for a 57.4 percent Recovery Ratio exceeding the recovery ratio set by the RTA of 55.0 percent. (Exhibit 5-13)

Revenue

Calendar year 2009 operating revenues are estimated at $296.3 million and are projected to be equal to budget. There are no variances for the revenue categories.

Exhibit 5-13: **Metra 2009 Budget vs. 2009 Estimate** (dollars in thousands)

	2009 Budget	2009 Estimate	Variance
System-Generated Revenue			
Passenger Revenue	$238,900	$238,900	-
Reduced Fare Subsidy	3,400	3,400	-
Investment Income	840	840	-
Capital Credits, Leases, etc...	53,200	53,200	-
Total Revenue	**$296,340**	**$296,340**	**-**
Operating Expenditures			
Transportation	$151,200	$150,100	1,100
Maintenance of Way	98,700	98,100	600
Maintenance of Equipment	99,800	99,800	-
Risk Mgmt. & Claims	8,700	8,700	-
Administration & Regional Services	50,100	53,300	(3,200)
Downtown Stations	13,600	13,260	340
Diesel Fuel	41,900	41,900	-
Security	16,000	16,000	-
Health Insurance	59,360	58,000	1,360
Credit Cards	-	200	(200)
Pension	4,740	4,740	-
Electricity	18,600	18,600	-
Apprentice Training Program	2,300	2,300	-
Total Expenditures	**$565,000**	**$565,000**	**-**
Operating Deficit	**$268,660**	**$268,660**	**-**
Recovery Ratio % (1)	**57.4%**	**57.4%**	**0.0%**

(1) The RTA Act requires the RTA Board to set a recovery ratio for each Service Board. Metra's 2009 recovery ratio budget and estimate exceed the 55 percent mark set by the RTA Board.

Expenditures

Total 2009 operating expenditures are estimated at $565.0 million and are projected to be equal to budget.

Transportation, maintenance of way, downtown stations, and health insurance are estimated to cost less than what was budgeted by $1.1 million, $0.6 million, $0.3 million, and $1.4 million respectively, for a total of $3.4 million. Conversely, administration & regional services and credit cards are estimated to finish the year $3.2 million and $0.2 million greater than budget, respectively, for a total of $3.4 million. These compensating variances result in no variance in total expenditures.

Fare Structure

Commuter rail fares are based upon travel between designated fare zones. These zones are set at five-mile intervals beginning at each rail line's downtown Chicago station. The zone system does not apply to the South Shore fares set by the Northern Indiana Commuter Transportation District (NICTD).

A uniform base fare is charged for travel within a zone and increments are added to this base fare as fare zone boundaries are crossed.

Effective February 1, 2010, Metra's one-way fares will increase $0.10 to $0.45 or about 6.0 percent (Exhibit 5-14). Despite these one-way increases, the prices of 10-ride tickets and monthly passes will not change. Accordingly, the 10-ride ticket will now provide a 20 percent discount in comparison to purchase of individual one-way fares. The cost of a weekend pass will increase from $5 to $7 dollars, the first increase since the launch of this fare 18 years ago. Additionally, passengers who pay for their ticket on the train when a Metra agent is available at their boarding station will pay a $3 instead of $2 surcharge. These fare increases were made to encourage customers to utilize Metra's multiple ticket options.

Exhibit 5-14: **Full Fare Schedule**

	Effective Feb. 1, 2008			Effective Feb. 1, 2010 (3)
Zone (1)	**One-Way**	**Ten-Ride (2)**	**Monthly (2)**	**One-Way**
A	$2.15	$18.30	$58.05	$2.25
B	$2.35	$20.00	$63.45	$2.50
C	$3.35	$28.50	$90.45	$3.50
D	$3.80	$32.30	$102.60	$4.00
E	$4.30	$36.55	$116.10	$4.50
F	$4.75	$40.40	$128.25	$5.00
G	$5.15	$43.80	$139.05	$5.50
H	$5.65	$48.05	$152.55	$6.00
I	$6.10	$51.85	$164.70	$6.50
L	$6.60	$56.10	$178.20	$7.00
K	$7.05	$56.95	$190.35	$7.50
M	$8.05	$68.45	$217.35	$8.50

(1) Fares based on traveling to/from Zone A (downtown stations).

(2) Monthly and Ten-Ride fares will not increase on February 1, 2010.

(3) The weekend pass will increase from $5.00 to $7.00, and the on-board surcharge will increase from $2.00 to $3.00.

Organizational Structure

Metra's administrative organization chart is presented in Exhibit 5-15.

6 Pace Operating Plan

Suburban Service

Overview

Pace was formed in 1983 as part of the reorganization of the Regional Transportation Authority (RTA), and began service in 1984. A 13-member board of directors made up of current and former village presidents and mayors governs Pace.

Beginning July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the RTA region. Pace's regional ADA paratransit service is discussed separately, later in this section.

Service Characteristics

Pace's mission is to provide efficient well-integrated transportation services that meet the travel needs of the suburban Chicago area. Effective suburban mobility supplies line-haul and community-based services that provide access between both nearby and distant origins and destinations. To attract riders in an automobile-oriented market requires coordination of infrastructure, service, information, and travel demand. Achieving this mission will also require the continued restructuring of Pace's current fixed-route service.

Pace covers 3,500 square miles and is one of the largest bus services in North America. The suburban area is divided among the six counties and serves 210 communities. Transportation needs in this broad area are as unique as the individual communities Pace serves. Pace service includes approximately 144 regular routes, 48 feeder routes, 19 shuttle routes, 721 Van Pool vehicles, and 371 Paratransit and Dial-A-Ride buses.

Employment and residential shifts outward from central business districts have resulted in longer commutes, greater single-occupant automobile use, increased traffic congestion, and declining air quality. A growing suburban job market, welfare-to-work initiatives, and greater work-hour, workday, and work-location flexibility have resulted in changing transit needs. However, increased support for smart growth, transit-oriented development, and environmental concerns has accompanied these trends. In light of these factors, Pace is working to better serve various suburban travel markets.

To attract more riders, Pace will need to gain consensus among a diverse group of stakeholders, communities, and organizations interested in transportation and smart growth; create viable community and regional partnerships; develop service plans for specific communities and groups of communities; and gain funding from local, regional, state and federal sources.

In April 2002, Pace unveiled a long range comprehensive operating plan called Vision 2020. The plan outlines the goals and overall direction for Pace for the 21st century and a strategy to create a true suburban transportation network through route restructuring. Vision 2020 also includes plans for transit signal priority, bus-only lanes, localized flexible transit services and regional transportation centers that provide coordinated links between the region's transit services.

Pace already works with communities to plan, design, and deliver services. Vision 2020 identifies nearly 100 service areas for further study in partnership with communities. To better support a service area that spans walkable suburban neighborhoods, satellite cities, and rural communities, Pace will expand its current offerings (e.g., fixed-route, commuter rail feeder, employer shuttle, and route-deviation services) and further customize the mix of tailored, flexible community-based services (e.g., demand response, curb-to-curb van service, and subscription routes) based on detailed studies of travel markets and local interests and conditions. Vision 2020 addresses three service levels—low, medium, and high—which reflect the spectrum of population and employment density found in Pace's service area. To achieve

high service levels at low cost, Pace will apply Bus Rapid Transit (BRT) features, limited stops, simple routes, frequent service, off-board fare payment, electronic next-stop announcements, traffic signal priority, and bus lanes on expressway/tollway and arterial line haul routes.

To develop an effective regional arterial and community-based transit system, Pace began route-restructuring initiatives in 2000. Consistent with Vision 2020, the goals of route restructuring include faster, more efficient, and more effective service, as well as an enhanced image of transit as an alternative to the automobile. Pace restructured routes in Elgin, along the Halsted Corridor, and in the vicinity of Orland Square Mall. In 2005, Pace completed its restructuring of eleven routes in North Shore communities to serve new trip generators, reduce transfers, and eliminate unproductive segments and route duplication.

Late in 2005, Pace implemented an initial round of service changes in the Aurora area as part of its restructuring efforts in the Fox Valley/ Southwest DuPage region. After Metra increased service on its North Central Line, Pace added three new Shuttle Bug routes for employees of several nearby companies. Pace has completed most of the planning for the redesign of service in southern and southwestern Cook County and all of Will County. These efforts have resulted in improved on time performance, service frequency, and passenger amenities at bus stops, because Pace was able to discontinue unproductive route segments and expand service in areas with greater ridership demand. In the next few years, Pace has plans for restructuring initiatives in the Waukegan area and in Western Cook County.

In 2009, Pace added a series of express routes that operate on regional expressways to provide long distance connections between subregional activity centers through its Express Bus Networks program. Additionally, Pace made progress on its Arterial Rapid Transit Program (ART) by installing Transit System Priority (TSP) technologies. ART is a

program designed to improve regional connectivity throughout suburban Northeastern Illinois. ART can be implemented quickly in comparison to other rapid transit options and will allow Pace to cost-effectively increase service levels. A critical component of ART, TSP technologies allow bus transit vehicles to adhere to their published schedule by giving priority green light time to buses that are behind schedule. In 2009 Pace buses began taking advantage of TSP with the implementation of the Harvey TC project that upgrades 21 existing traffic signals along Halsted Street, Park Avenue, 159th Street, and Sibley Boulevard in the vicinity of the Harvey Transportation Center. In 2010 several other corridors will be developed, including Washington Street, and Grand Avenue in Lake County, Halsted Street and 159th Streets outside the Harvey TC Project Area, 95th Street and Harlem Avenue, in South Cook County, and Cermak & Roosevelt Roads in West DuPage County.

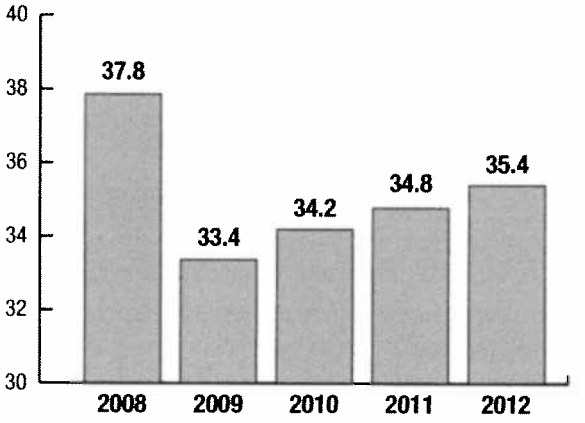
In 2010, Pace will perform a study in conjunction with the RTA that examines the potential for the development of shoulder routes on I-55 for Pace buses. Pace will also be implementing its RideShare program in 2010-12. Through www.PaceRideShare.com, Pace provides a website that matches users who can share their commute by carpooling. This also facilitates the formation of new Pace vanpools and supports the retention of existing van pools.

Ridership

In 2008, Pace ridership of 40.5 million included suburban service ridership of 37.8 million. Pace estimates that suburban service ridership will decline 11.7 percent in 2009 to 33.4 million. This is as a result of increased unemployment, higher fares, and Pace no longer accepting the CTA 7-Day pass, U-pass, and Visitor/Fun passes.

Pace projects suburban service ridership of 34.2 million in 2010. Pace projects suburban service ridership to increase approximately 1.6 percent annually to 34.8 million in 2011 and 35.4 million in 2012 reflecting continued expansion of the vanpool program (Exhibit 6-1).

Exhibit 6-1: **Pace Suburban Service Ridership** (in millions) (1)



(1) Ridership in 2010 and 2011 assumes no deficit reduction actions.

Marketing Strategies

Pace's 2010 marketing strategy implementation will emphasize work commute trips, which comprise 80 percent of Pace's customer base, and encourage non-riders to try Pace service. Pace plans to augment existing successful tactical route marketing campaigns and to promote extensively express routes to popular destinations. Pace's 2010 marketing efforts will also emphasize outreach to the disabled and Latino communities and support of the South Cook restructuring project, the ride share program, and special projects.

Service Quality

As part of its effort to improve service quality, Pace has implemented a variety of performance measures. Pace provides for each performance measure the 2008 result, a projected total for 2009, a 2010 goal, and a Performance Standard. The Performance Standards are grouped by quality service objectives, including Safety, Reliability, Courtesy, Efficiency, and Effectiveness. When performance for a year exceeds the performance standard, the measurement is highlighted in green. If performance for the year falls below but within 10 percent of the standard, the measurement is highlighted in yellow. When performance falls below 10 percent of the standard, the measurement is highlighted in red. The performance measures published for 2009 can be found at the end of this section.

The implementation of performance measures represents an important step toward ensuring quality service and increasing accountability to the public. By creating these performance standards and striving to meet or exceed them, Pace has shown that it values customer opinion and that it is working toward improved service quality.

Cost Efficiency

Matching the service supply to demand is one means of achieving system effectiveness. One way to measure supply versus demand is to relate the number of passengers to the number of miles served. Pace's passengers per mile ratio for suburban service is projected to decline from 0.91

in 2008 to 0.79 in 2009 and 0.78 in 2010 (Exhibit 6-2). This decline results from both decreases in fixed route ridership and increases in Dial-A-Ride services in DuPage and Kane Counties.

The cost per mile measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-3). Suburban service cost per mile is expected to increase from $4.13 in 2008 to $4.34 in 2010. This $0.21 increase corresponds to a compound annual growth rate of 2.5 percent.

Exhibit 6-2: **Pace Suburban Service Passengers Per Mile**

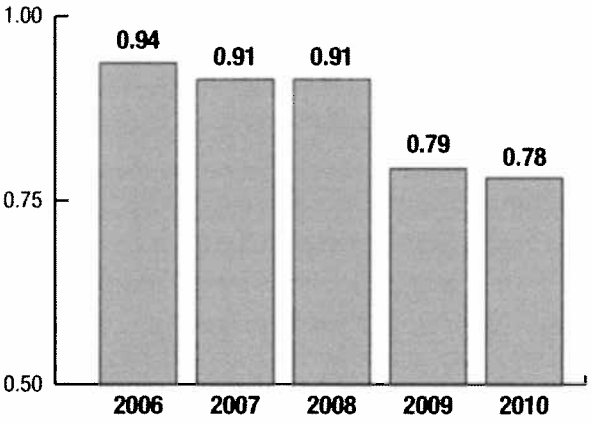


Exhibit 6-3: **Pace Suburban Service Cost Efficiency**

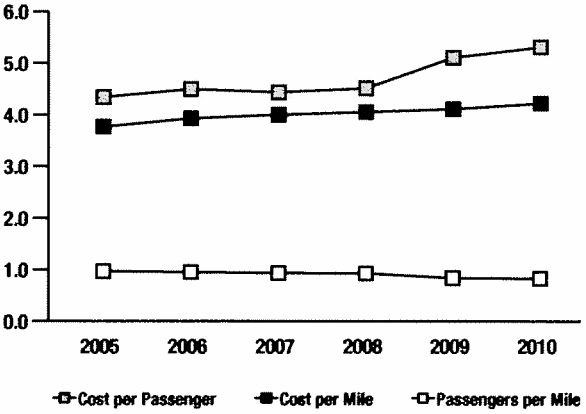

Capital Investment

The capital program funds the purchase and maintenance of rolling stock, support facilities and equipment (including new technologies), and project management.

Rolling Stock

In 2010, Pace intends to replace 22 fixed-route buses which have exceeded their useful life. The new vehicles will be 40-foot vehicles. Pace will also replace 15 Vanpool Vans which have also exceeded their useful life.

As part of its Diesel Engine Retrofit Program Pace plans to install Detroit Diesel Series 50 engines in existing buses with improved mechanical components and software upgrades that reduce exhaust emissions. The total capital expenditures are expected to cost $8.3 million.

The RTA has also approved Pace's use of $9.0 million of its Federal 5307 capital funds to pay for the capital cost of contracting expenses incurred in 2009 for Regional ADA service.

Stations and Passenger Facilities

Capital funds have been budgeted to construct customer support facilities, signage, and other passenger infrastructure. The 2010 Capital Budget includes funds for a Transportation Center in Downers Grove at I-88 and the North-South Tollway, infrastructure investments along Randal Road between Aurora and Elgin (including the installation of 22 TSP light signals), and the construction of the Toyota Park Transfer Center in Bridgeview.

Support Facilities & Equipment

The 2010 capital program scheduled and required maintenance for garages and other support equipment. The 2010 Capital Program includes capital expenditures for the replacement of the Northwest Cook garage, construction funds for a replacement garage in South Holland, and Mid-Life Reconstruction funds for Fox Valley, North, River, South and West Garages. Midlife Reconstruction funds will replace important garage equipment such as bus washers, and bus lifts as well as provide improvements to lighting, concrete and asphalt.

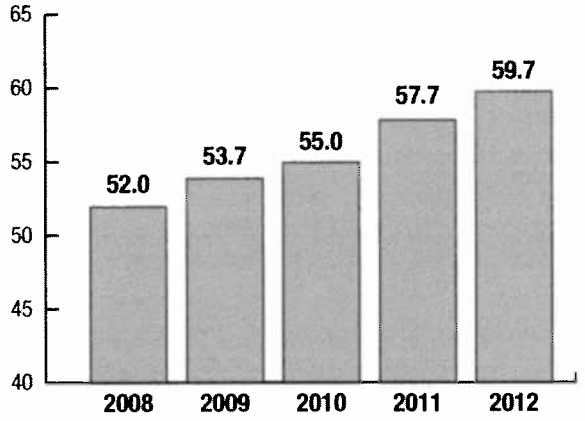
Recovery Ratio (3)	***36.0%***	***36.0%***	***36.0%***	***36.0%***	***36.0%***

(1) Passenger revenue includes fixed route, vanpool, Dial-A-Ride, Ride DuPage, Ride in Kane, and other services.

(2) Excludes ADvAntage Program in-kind revenue and expense (of equal amount) that are included in Pace's recovery ratio calculation.

(3) The recovery ratio in 2008 includes ADvAntage Program in-kind revenue and expense credits (of equal amount), as well as revenue credits for lost revenue from the Seniors Ride Free program. The recovery ratio in 2009-2012 includes ADvAntage Program in-kind revenue and expense credits (of equal amount), as well as revenue credits for lost revenue from the Seniors Ride Free program. The recovery ratio in 2010 meets the 36% mark set for Pace by the RTA Board on September 15, 2009.

Exhibit 6-5: **Pace Suburban Service System-Generated Revenue**
(dollars in millions) (1)



(1) In 2010, 2011, and 2012, revenue does not reflect deficit reduction actions.

Exhibit 6-6: **2010 Pace Suburban Service Revenue**

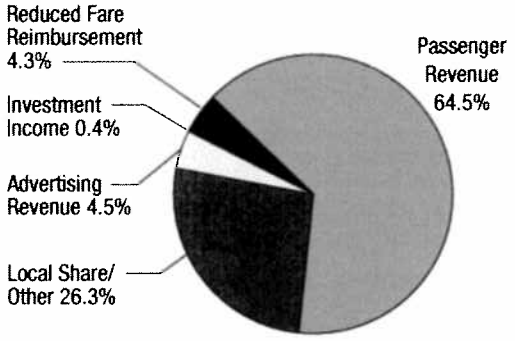

Exhibit 6-7: **Pace Suburban Service Farebox Revenue**
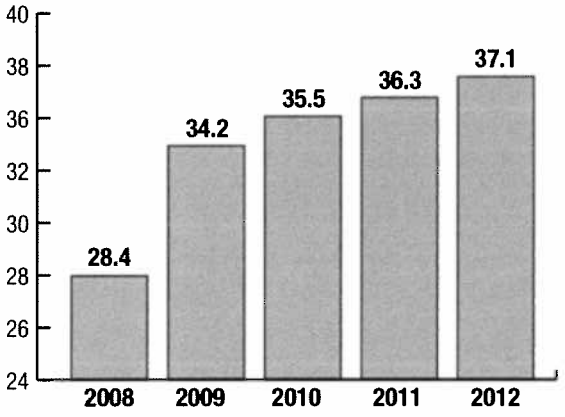
(dollar in millions) (1)



(1) In 2010, 2011, and 2012, revenue does not reflect deficit reduction actions.

Budget and Financial Plan

The Pace suburban service budget and financial plan presented in Exhibit 6-4 meets the funding marks set by the RTA Board on September 15, 2009. To meet these funding levels, Pace will need to implement deficit reduction actions that will increase revenues and/or decrease expenditures by $4.2 million in 2010, $11.1 million in 2011, and $16.7 million in 2012. The RTA Board set Pace's 2010 recovery ratio mark for suburban service operations at 36.0 percent and adopted this mark on September 15, 2009. Pace's 2010 budget reflects a recovery ratio of 36.0 percent.

System-Generated Revenue

In 2008, Pace's system-generated revenue from suburban service operations totaled $52.0 million. Pace projects suburban service system-generated revenue of $53.7 million in 2009, $55.0 million in 2010, $57.7 million in 2011, and $59.7 million in 2012 corresponding to a compound annual growth rate of 3.5 percent from 2008 through 2012 (Exhibit 6-5). These revenue figures do not incorporate required deficit reduction actions in 2010, 2011, and 2012. In 2010, passenger revenue is projected to account for 64.5 percent, local share/other 26.3 percent, advertising revenue 4.5 percent, reduced fare reimbursement 4.3 percent, and investment income 0.4 percent of total suburban service revenue (Exhibit 6-6).

Passenger Revenue and Local Share

In 2008, Pace suburban service passenger revenue totaled $28.4 million. Pace expects that in 2009 suburban service will result in passenger revenue of $34.2 million. Pace projects suburban service passenger revenue of $35.5 million in 2010 will grow to $37.1 million in 2012, a $1.6 million increase corresponding to a compound annual growth rate of 2.3 percent (Exhibit 6-7). Passenger

revenue includes fixed route farebox deposits (using cash, passes, and cards) and payments for Van Pool, dial-a-ride, and other services

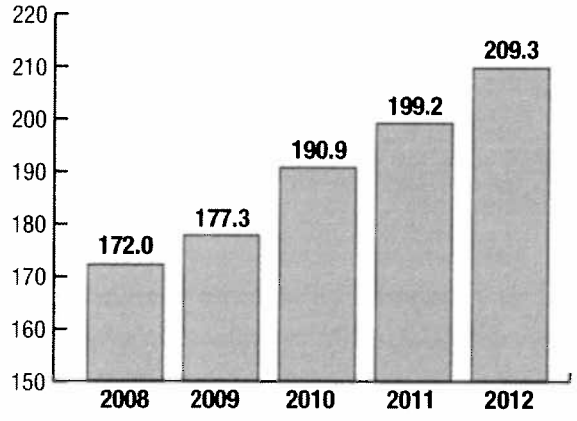
In 2008, Pace's local share contributions and other revenue totaled $14.6 million. Pace expects local share contributions and other revenue of $13.6 million in 2009. Suburban service local share contributions and other revenue are projected to grow from $14.5 million in 2010 to $17.4 million in 2012, a $2.9 million increase that corresponds to a 9.6 percent compound annual growth rate.

Pace's suburban service fare structure (effective January 2009) is presented at the end of this section (Exhibit 6-10). No fare increases are scheduled for 2010. Effective January 2009, Pace raised the base fare from $1.50 to $1.75, monthly pass from $75.00 to $86.00, and Van Pool fares by 10 percent. Pace also raised the price of its other full-fare and reduced fare single-ride fares, ten-ride tickets, and passes.

Reduced Fare Subsidy

Reduced fare reimbursement is expected to decrease from $3.1 million in 2008 to $2.4 million in 2010. This $0.7 million decrease corresponds to a compound annual decline rate of 12.0 percent. The reduced fare reimbursement is expected to remain at $2.4 million through 2012.

Exhibit 6-8: **Pace Suburban Service Operating Expenditures** (dollars in millions) (1)



(1) In 2010, 2011, and 2012, expenditures do not reflect deficit reduction actions.

Advertising

Advertising revenue is expected to decrease from $4.7 million in 2008 to $2.5 million in 2010. This $2.2 million decrease corresponds to a compound annual decline rate of 27.5 percent. Pace projects that advertising revenue will remain at $2.5 million through 2012.

Investment

Investment income is expected to decrease from $1.2 million in 2008 to $0.3 million in 2009 resulting from smaller cash balances and declining interest rates. Pace projects that investment revenue will remain between $0.2 million and $0.4 million annually through 2012.

Operating Expenditures

Pace suburban service operating expenditures totaled $172.0 million in 2008. In 2009, Pace estimates suburban service operating expenditures will be $177.3 million. Pace projects suburban service operating expenditures of $190.9 million in 2010 to grow to $209.3 million in 2012, an increase of $18.4 million corresponding to a compound annual growth rate of 4.7 percent from 2010 to 2012 (Exhibit 6-8). These expenditure totals include a regional ADA support credit that reflects many of the administrative and overhead costs to be incurred throughout Pace in support of ADA paratransit. Growth of labor/fringe benefits, purchased transportation, and health care costs is the primary factor behind the increases in suburban service operating expenditures. Figures for individual expenditure elements do not incorporate required deficit reduction actions in 2010, 2011, and 2012.

Expenditure Elements

Operating expenditure elements include labor/fringe benefits, health insurance, parts/supplies, purchased transportation, fuel, utilities, insurance/claims, other, and regional ADA support credit (Exhibit 6-4).

Labor/Fringe Benefits and Health Insurance Costs

Labor/fringe and health insurance expenditures are projected to account for 55.8 percent of total suburban service operating expenditures in 2010. Combined labor/fringe benefits and health insurance expenditures for suburban service are projected to grow from $106.5 million in 2010 to $116.5 million in 2012, a $10.0 million increase that corresponds to a 4.6 percent compound annual growth rate.

Parts/Supplies

Parts/supplies expenditures are projected to account for 3.7 percent of total suburban service operating expenditures in 2010. These expenditures are projected to grow from $7.0 million in 2010 to $7.4 million in 2012, a $0.4 million increase that corresponds to a 2.3 percent compound annual growth rate.

Purchased Transportation

Expenditures for purchased transportation are projected to account for 17.0 percent of total suburban service operating expenditures in 2010. These expenditures are projected to grow from $32.4 million in 2010 to $35.4 million in 2012, a $3.0 million increase that corresponds to a 4.6 percent compound annual growth rate.

Fuel

In 2009, fuel expenditures fell substantially to $13.1 million from $22.0 million in 2008. This decrease was due to declining gas prices. In 2010, fuel expenditures are projected to account for 8.8 percent of total suburban service expenditures. Fuel expenditures are projected to grow from $16.8 million in 2010 to $19.0 million in 2012, a $2.2 million increase that corresponds to a 6.3 percent compound annual growth rate. The 2010 budget assumes an average price of $2.30 per gallon, a $0.52 increase from estimated 2009 levels. Fuel is one of the most volatile components of the budget.

Utilities

Utilities expenditures are projected to account for 1.1 percent of total suburban service operating expenditures in 2010. These expenditures are projected to grow from $2.0 million in 2010 to $2.5 million in 2012, a $0.5 million increase that corresponds to an 11.4 percent compound annual growth rate. The projected rise in natural gas costs is the primary cause of the increase in utility costs from 2010 through 2012.

Insurance/Claims

Insurance/claims expenditures are projected to account for 5.7 percent of total suburban service operating expenditures in 2010. These expenditures are projected to grow from $10.9 million in 2010 to $12.2 million in 2012, a $1.3 million increase that corresponds to a 5.7 percent compound annual growth rate.

Other

Other expenditures are projected to account for 9.9 percent of total suburban service operating expenditures in 2010. These expenditures are projected to grow from $19.0 million in 2010 to $20.4 million in 2012, a $1.4 million increase corresponding to a 3.6 percent compound annual growth rate.

Regional ADA Support Credit

In 2008, Pace charged $3.6 million of administrative and overhead expenses to the regional ADA paratransit budget and expects to charge $3.7 million in 2009. Pace projects that regional ADA support credit will increase annually from $3.9 million in 2010 to $4.2 million in 2012.

Deficit

The operating deficits are derived from total system-generated revenue minus total operating expenditures. In 2008, Pace had a shortfall of $1.3 million that reduced its fund balance. Pace expects a suburban service funding surplus of $5.5 million in 2009. In 2010, 2011, and 2012,

deficit reduction actions of $4.2, $11.1, and $16.7 million respectively are projected to result in deficit funding matching the operating deficit.

Funding

Public funding, available for Pace, is determined by and based on the RTA's revenue projection for the year. From the RTA, Pace receives RTA Sales Tax (RTA Sales Tax-I and II), and monies from the Public Transportation Fund (PTF-I and PTF-II).

Pace's portion of RTA Sales Tax I is expected to decrease 12.0 percent from $78.2 million in 2008 to $68.8 million in 2009 (Exhibit 6-4). This amount is projected to increase to $74.0 million in 2012, which corresponds to a compound annual growth rate of 2.4 percent from 2009. RTA Sales Tax II & PTF II (PA95-0708) is projected to increase from $13.4 million in 2008 to $31.6 million in 2012. This $18.2 million increase is represented by a compound annual growth rate of 24.0 percent. RTA Suburban Community Mobility Funds of approximately $18 million to $19 million are projected for 2009 through 2012. The legislation also required that the RTA provide Pace suburban service with RTA South Suburban Job Access Funds in the amount of $3.8 million in 2008 and $7.5 million annually thereafter.

The RTA will provide Pace with discretionary funds at an estimated amount of $2.3 million in 2009, $0.2 million in 2011, and $0.4 million in 2012. The RTA did not provide discretionary funding for Pace in 2008 and does not plan to in 2010.

Outside of funds collected and distributed from the RTA, Pace also receives federal funds. Combined, Congestion Mitigation Air Quality (CMAQ), Job Access Reverse Commute (JARC), and New Freedom funds for Pace suburban service are expected to be $3.1 million in 2009, a decrease of $0.3 million from 2008. In 2010, Pace estimates these federal funds at $5.4 million, an increase of $2.3 million from 2009. In 2012, federal funds are projected at $0.3 million. This $5.1 million decrease represents a compound annual growth rate of negative 77.0 percent from 2010 to 2012.

RTA Sales Tax II & PTF II (PA95-0708) is projected to increase from $13.4 million in 2008 to $31.6 million in 2012. This $18.2 million increase is represented by a compound annual growth rate of 24.0 percent. RTA Suburban Community Mobility Funds of approximately $20 million are projected for 2008 through 2012 with the rate of change in sales tax receipts. The legislation also required that the RTA provide Pace suburban service with RTA South Suburban Job Access Funds in the amount of $3.8 million in 2008 and $7.5 million annually thereafter.

A more detailed description of how public funds are allocated among the service boards can be found in the Region Section of this book.

Recovery Ratio

The recovery ratio equals total (system-generated) revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. With the inclusion of ADvAntage Program in-kind revenue and expense credits, Pace achieved a recovery ratio of 36.0 percent in 2008. With the inclusion of ADvAntage Program in-kind revenue and expense credits, as well as revenue credits for lost revenue from the Seniors Ride Free program, Pace expects to achieve a recovery ratio for suburban service of 36.0 percent in 2009. With the inclusion of ADvAntage Program in-kind revenue and expense credits, as well as revenue credits for lost revenue from the Seniors Ride Free program and the People with Disabilities Ride Free program, Pace projects a recovery ratio for suburban service of 36.0 percent in 2010 which matches the 36 percent recovery ratio mark set by the RTA Board on September 15, 2009.

Recovery Ratio (5)	***36.0%***	***36.0%***	***0.0%***

(1) Pace Suburban Service 2009 Budget approved by the RTA Board on August 20, 2009

(2) Passenger revenue includes Fixed Route, Van Pool, Dial-A-Ride, Ride DuPage, Ride in Kane, and Other Services.

(3) Excludes ADvAntage Program in-kind revenue and expense (of equal amount) that are included in Pace's recovery ratio calculation.

(4) The ADvAntage Program in-kind revenue and expense (of equal amount) is included in the recovery ratio calculation.

(5) The recovery ratio calculation includes ADvAntage Program in-kind revenue and expense credits (of equal amount), as well as revenue credits for lost revenue from the Seniors Ride Free program.

2009 Budget Versus 2009 Estimate

Pace expects 2009 operating revenue for suburban service to finish the year $5.8 million or 9.7 percent unfavorable to budget. Passenger revenue is expected to finish the year $0.3 million or 0.8 percent above the budget. Local share/other revenues are expected to be down $2.8 million or 16.6 percent, and advertising revenue is expected to finish the year $2.0 million or 39.2 percent below budget. The reduced fare reimbursement is expected to finish the year down $0.2 million or 7.1 percent unfavorable to budget.

Legislation enacted in early 2008 gave Pace the opportunity to consider implementation of new and/or expanded service. Per the amended budget, Pace expected $1.1 million in additional system-generated revenue from the new initiatives for new and/or expanded service.

Total expenditures are expected to finish the year $10.4 million or 5.5 percent favorable to budget. Expenditures for labor/fringe benefits, health insurance, fuel, utilities, insurance/claims, other, and new initiatives are each expected to be $1.7, $0.8, $0.3, $1.0, $1.8, $5.9, $0.1, and $3.6 million favorable to budget, respectively, while expenditures for parts/supplies and purchased transportation are expected to be $0.2 million and $4.7 million unfavorable to budget, respectively.

From a funding perspective, Pace expects a favorable variance of $0.8 million in 2009 primarily because of higher than budgeted federal CMAQ & JARC funding (Exhibit 6-9).

Exhibit 6-10: **Pace Suburban Service Fare Structure**

	Current Fares	
	Full Fare	**Reduced Fare**
Regular Fares		
Full Fare	$1.75	$0.85

Vanpool

New Monthly VIP and other van pool services fares range from $73 to $174 depending on the daily round trip van miles and the number of passengers. New fares are effective January 2009

*Effective January 1, 2006, the CTA discontinued issuing or accepting cash transfers.

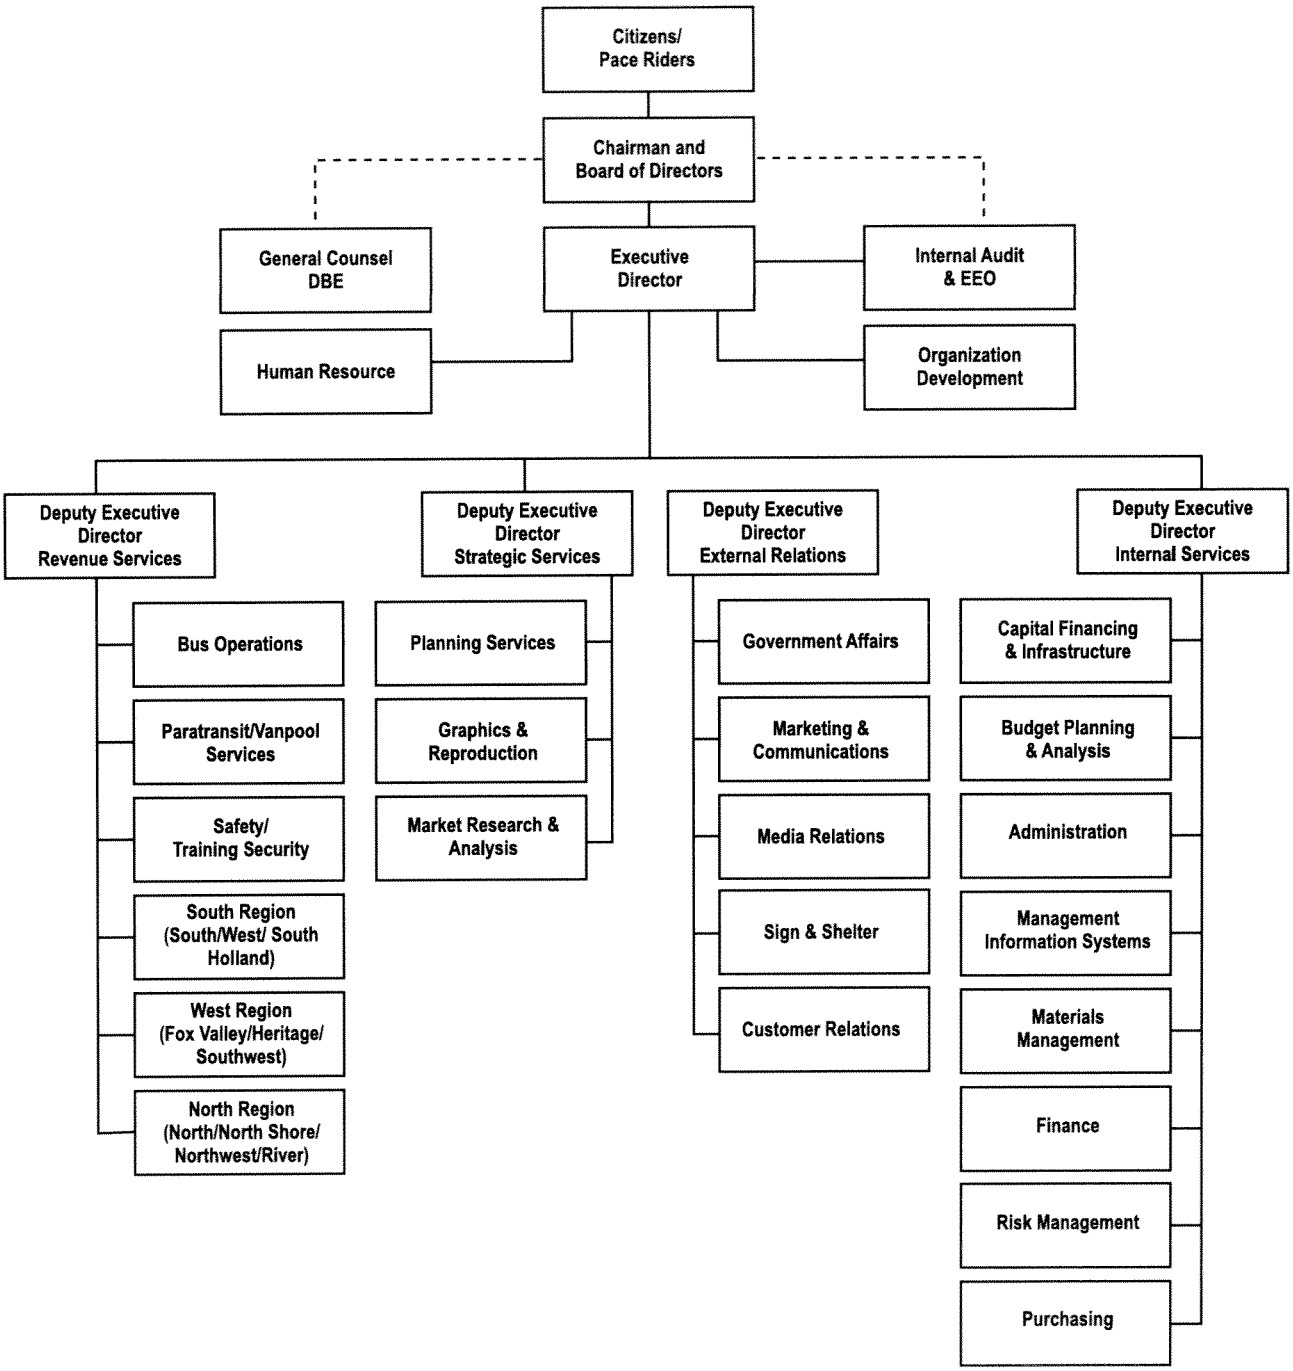
Statutory Compliance

Pace's proposed 2010 budget, 2010-2012 plan, and 2010 recovery ratio submitted to the RTA comply with the operating marks set by the RTA Board on September 15, 2009. These marks set the total funding levels at $131.6 million in 2010, $130.4 million in 2011 and $132.9 million in 2012.

Organizational Structure

Pace is organized into four main areas: Revenue Services, Strategic Services, External Relations, and Internal Services (Exhibit 6-11). Pace's organizational structure comprises four primary elements: administration, central support, Pace-owned divisions, and regional ADA paratransit services. Within each element, employees are classified into four areas: operations, maintenance, non-vehicle maintenance and administration. These activity areas are defined by the National Transit Database reporting requirements, which apply to all public transit operators.

Exhibit 6-11: **Pace Organization Chart**



ADA Paratransit

Overview

Effective July 1, 2006, Pace has provided all ADA paratransit service in the RTA region. Beginning in 2007, Pace's revenue and expenditures are separated into suburban service and regional ADA paratransit service.

Service Characteristics

The RTA administers a regional certification program that determines if individuals with physical or cognitive disabilities are eligible for ADA paratransit service. If eligible, passengers can arrange for travel within three quarters of a mile of Pace or CTA bus routes or CTA or Metra rail stations, as described in the Americans with Disabilities Act (ADA).

In the suburban area where Pace provides fixed route service, Pace contracts with private operators to provide ADA paratransit service. These operators use 187 Pace-owned lift-equipped vehicles to provide curb-to-curb service to 47,000 ADA-certified passengers a month.

In the CTA service area, Pace contracts with four private operators to provide ADA paratransit service in the entire city of Chicago and most of the suburbs serviced by the CTA The operators use contractor-owned vehicles to provide service to ADA-certified passengers throughout the City of Chicago and the suburban communities served by CTA bus and rail operations. Pace also administers two subsidized taxi programs in the City of Chicago (the Taxi Access Program (TAP) and the Mobility Direct program) for ADA-certified passengers, although these programs are not required by the Americans with Disabilities Act.

The CTA and Pace fixed route services are described earlier in this book.

Exhibit 6-12: **Pace Regional ADA Paratransit Ridership** (in millions)

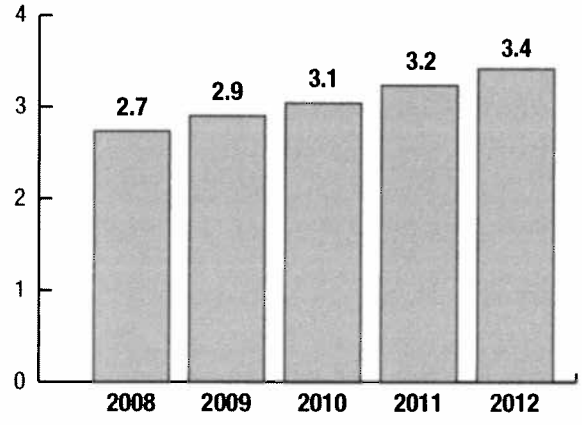


Exhibit 6-13: **Pace ADA Paratransit Cost Efficiency**

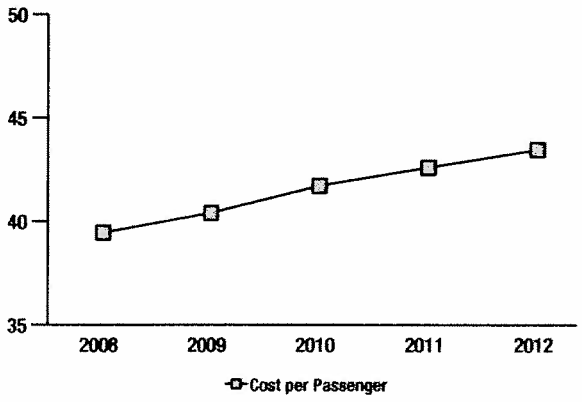

Ridership

Pace estimates that ridership will grow by 5.6 percent in 2009 from 2.7 million in 2008 to 2.9 million in 2009. Pace projects that ADA paratransit ridership will increase by 6.0 percent annually (6.0 percent in the CTA service area and 5.9 percent in the suburban service area) to 3.1 million in 2010, 3.2 million in 2011, and 3.4 million in 2012 (Exhibit 6-12). These ridership growth projections do not incorporate the fare increase in the CTA service area and the collar counties implemented on November 15, 2009 (Exhibit 6-20).

Cost Efficiency

The cost per passenger measurement recognizes that expenditures tend to vary with the amount of service provided (Exhibit 6-13). Cost per passenger for Regional ADA paratransit service is projected to increase by a compound

Exhibit 6-14: **Pace Regional ADA Paratransit Service 2008 Budget and 2009-2010 Financial Plan** (dollars in thousands)

	2008 Actual	2009 Estimate	2010 Budget	2011 Plan	2012 Plan
System-Generated Revenues

Recovery Ratio % (3)	***10.0%***	***10.0%***	***10.0%***	***10.0%***	***10.0%***

(1) To achieve a balanced budget and two-year financial plan, as set forth in Ordinance 2009-93, the budget and two-year financial plan must be adjusted by actions that may include, but are not limited to, service adjustments, identification of additional funds or operating revenues, reducing operating costs, requesting the use of retained earnings (positive budget variances-PBV), and/or the use of federal capital funds for operating purposes.

(2) RTA working cash borrowing to fill shortfalls in funding provided by public subsidies in 2009. Pursuant to Section 4.04 of the Act the borrowing is projected to be repaid in 2011 with subsequent working cash borrowing.

(3) On August 26, 2008, The governor signed Senate Bill 1920 that allows the RTA Board to exempt from the farebox recovery ratio formula a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

annual growth rate of 2.45 percent from $39.47 in 2008 to $43.58 in 2012. In 2010 through 2012, Pace projects that contractor costs will grow at a compound annual growth rate of 5.6 percent and 6.4 percent annually in the CTA service area and suburban service area, respectively.

Budget And Financial Plan

The Pace ADA paratransit service budget and financial plan presented in Exhibit 6-14 meets the 2010 recovery ratio mark set by the RTA on September 15, 2009. In compliance with the RTA Act, the RTA set the ADA paratransit recovery ratio for 2010 at 10.0 percent. The RTA set the funding for ADA paratransit at $107.5 million for 2010, $101.4 million for 2011, and $95.6 million for 2012. To meet these funding levels, Pace will need to implement deficit reduction actions that will increase revenues and/or decrease expenditures by, $20.4 million in 2010, $27.9 million in 2011,

Exhibit 6-15: **Pace ADA Paratransit Service System-Generated Revenue** (dollars in millions)

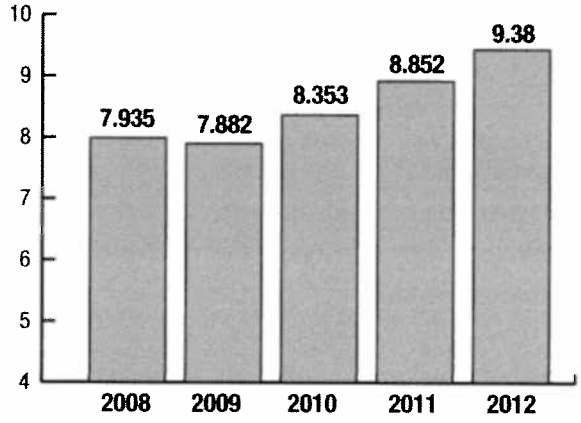

Exhibit 6-16: **Pace ADA Paratransit Farebox Revenue** (dollars in millions)

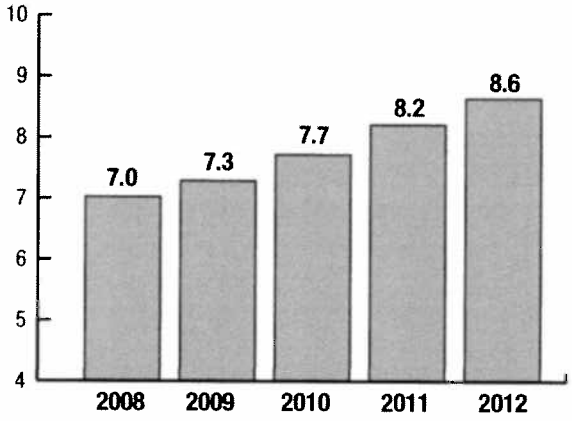
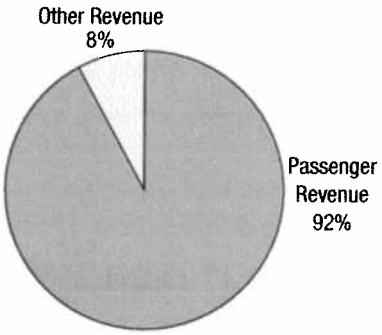


and $35.9 million in 2012. In addition, other budgeting balancing activities totaling $8.5 million are necessary to meet the 2012 funding mark.

System-Generated Revenue

In 2008, regional ADA paratransit revenue of $7.9 million comprised passenger revenue of $7.0 million and reimbursements from the RTA for transporting paratransit applicants to assessment sites of $0.9 million (Exhibit 6-15 and Exhibit 6-16). In 2009, Pace expects total regional ADA paratransit revenue to decrease slightly. Pace projects that passenger revenue will account for 88.2 percent and 92.1 percent of system generated revenue in 2008 and 2009 respectively. From 2010 to 2012, Pace estimates that passenger revenue will remain at 92.1 percent of total revenues (Exhibit 6-17). Pace projects that total ADA paratransit system-generated revenue of $8.4 million in 2010, $8.9 million in 2011, and $9.4 million in 2012. This $1.5 million increase represents a compound annual growth rate of 6.0 percent from 2009 to 2012. These revenue figures do not incorporate required deficit reduction actions in 2008. Pace's regional ADA paratransit structure revisions are presented at the end of this section (Exhibit 6-20). No fare increases were assumed in Pace's revenue or ridership projections.

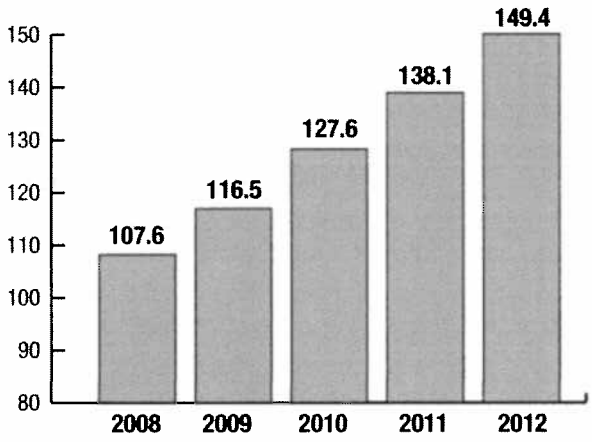
Exhibit 6-17: **2010 Pace ADA Paratransit Revenue**–$8.4 million



Operating Expenditures

In 2008, regional ADA paratransit service operating expenditures totaled $107.6 million. In 2009, Pace expects total regional ADA paratransit operating expenditures to reach $116.5 million. Pace projects total operating expenditures of $127.6 million in 2010, $138.1 million in 2011, and $149.4 million in 2012. This $41.8 million increase in operating expenditures represents a compound annual growth rate of 8.5 percent from 2008 to 2012. Growth in purchased transportation costs is the primary factor behind these increases in operating expenditures, which account for more than 90 percent of total expenses (Exhibit 6-18).

Exhibit 6-18: **Pace Total Operating Expenditures**
(dollars in millions)



Expenditure Elements

Operating expenditure elements include labor/fringe benefits, health insurance, administrative expense, fuel, liability insurance, RTA certification, purchased transportation, and regional ADA support allocation (Exhibit 6-14). Figures for individual expenditure elements do not incorporate required deficit reduction actions in 2008.

Labor/Fringe Benefits and Health Insurance Costs

Labor/fringe benefits and health insurance expenditures are expected to account for 2.2 percent of regional ADA paratransit service operating expenditures in 2010. Labor/fringe benefits and health insurance expenditures are projected to grow from $2.4 million in 2008 to $3.1 million in 2012, corresponding to a 6.5 percent compound annual growth rate.

Administration

Administration expenditures are projected to account for 1.6 percent of regional ADA paratransit service operating expenditures in 2010. Pace leases its operations center for ADA paratransit services in Metra's downtown Chicago headquarters at 547 W. Jackson Blvd. Administrative expenditures are projected to grow from $2.0 million in 2010 to $2.1 million in 2012 at a 2.4 percent compound annual growth rate.

Fuel

Pace purchases fuel for the private operators who provide ADA paratransit service using Pace-owned vehicles in Pace's suburban service area. The price of a gallon of gasoline will decline from 2008 to 2009 but Pace expects it will slowly climb thereafter. Fuel expenditures are projected to account for 1.3 percent of regional ADA paratransit service operating expenditures in 2010. Fuel expenditures of $1.3 million in 2009 are projected to decrease $0.7 million from 2008 expenditures of $2.0 million. This represents a decrease of 35.2 percent from 2008. Fuel expenditures are expected to reach $1.9 million in 2012. This $0.6 million increase in fuel expenditures represents a compound annual growth rate of 12.6 percent from 2009 to 2012.

Liability Insurance

Liability insurance expenditures are projected to account for 0.3 percent of regional ADA paratransit service operating expenditures in 2010. Liability insurance expenditures are projected to remain near $0.4 million from 2010 to 2012.

RTA Certification

RTA certification expenditures comprise the cost of transporting applicants for ADA certification to and from assessment centers. These expenditures are projected to account for 0.5 percent of regional ADA paratransit service operating expenditures in 2010. RTA certification expenditures are projected to remain near $0.7 million from 2010 to 2012.

Purchased Transportation

Purchased transportation expenditures are projected to account for 91.0 percent of regional ADA paratransit service operating expenditures in 2010. These expenditures are projected to increase from $116.1 million in 2010 to $137.0 million in 2012, a $20.9 million increase that corresponds to an 8.6 percent compound annual growth rate. Pace assumes that demand for suburban ADA paratransit service will increase 5.9 percent in both 2011 and 2012, while demand for CTA service area ADA paratransit service will increase 6.0 percent in both 2011 and 2012.

Regional ADA Support Allocation

In 2008, Pace charged $3.6 million of administrative and overhead expenses to the regional ADA paratransit budget and expects to charge $3.7 million in 2009. Pace projects that this amount will increase from $3.9 million in 2010 to $4.2 million in 2012. This $0.3 million increase corresponds to a 4.0 percent compound annual growth rate.

Deficit and Funding

The operating deficits are derived from total system-generated revenue minus total operating expenditures. In 2008, Illinois Public Act 95-0708 allocated to the funding of ADA paratransit service $100 million of the revenue from the increase in the RTA sales tax rate and the increase in the portion of RTA tax revenues matched by the State Public Transfer Fund (PTF). According to the legislation, this amount will vary in future years in proportion to annual RTA sales tax collections, and funding not required for the current year deficit will be applied to regional ADA paratransit operating deficits in future years. In 2008, nearly all of the $100.0 million allocated for ADA paratransit funded the 2008 regional ADA paratransit service deficit. In 2009, only $89.0 million is allocated to ADA paratransit because of the decline in sales tax revenues. In addition, $4.0 million of ICE funds, $9.0 million of capital funds, and $4.1 million of working cash borrowing will be used to fund ADA paratransit in 2009. Based on the projections of sales tax collections in 2010, 2011, and 2012, the ADA paratransit allocations are $90.3 million, $92.9 million, and $95.6 million, respectively. In 2010 and 2011, additional state funds of $8.5 million per year have also been allocated for ADA public transit.

RTA paratransit funding is projected to decrease from $107.5 million in 2010 to $95.6 million in 2012, a decrease of $11.9 million corresponding to a compound annual decline of 5.7 percent. In 2010 and 2011, the funding level is projected to match the corresponding operating deficit following deficit reduction actions in the amount of $20.4 and $27.9 million, respectively. In 2012, a deficit reduction actions beyond the $35.9 million currently estimated will be required of the operating deficit..

Recovery Ratio

The recovery ratio equals total system-generated revenue, with statutory and approved adjustments, divided by total operating expenditures, with statutory and approved adjustments. The RTA Act requires that regional ADA paratransit service meet a recovery ratio of 10 percent. In 2009 and 2010, Pace's projected recovery ratio for regional ADA paratransit service is 10 percent. These recovery ratios are reached by exempting from the recovery ratio calculation a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

Exhibit 6-19: **Pace Regional ADA Paratransit Service 2009 Budget vs. 2009 Estimate** (dollars in thousands)

	Amended 2009 Budget (1)	2009 Estimate	Variance
System Generated Revenue			
Passenger Revenue	$ 7,258	$ 7,258	-

Funding Surplus/Deficit	-	-	-
Recovery Ratio (5)	***10.0%***	***10.0%***	-

(1) The amended 2009 budget reflects actions to be taken by Pace to increase system generated revenues and reduce expenses which includes adjusting service and/or fares, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues.

(2) This figure represents the funding described in Paragraph 8 of Ordinance 2009-67 which authorizes that the balance of ICE funds, less $5 million previously allocated to the CTA, be transferred in full to fund ADA paratransit operations.

(3) This figure represents the funding described in paragraph 6 of ordinance 2009-67, which allows Pace to waive the requirement of ordinance 2007-48 and authorizes Pace to use up to $9 million from 2010 federal capital funds to fund 2009 ADA paratransit service operations.

(4) This figure represents the funding described in paragraph 9 of ordinance 2009-67 which authorizes the issuance of working cash notes up to a maximum aggregate of $4.103 million

(5) On August 26, 2008, The governor signed Senate Bill 1920 that allows the RTA Board to exempt from the farebox recovery ratio formula a portion of costs incurred in paying ADA paratransit contractors for their capital expenses.

Exhibit 6-20: **Fare Structure**

	2009 Fare	New Fare (1)
CTA Service Area		
ADA Paratransit	$2.25	$3.00
Taxi Access Program and Mobility Direct	$5.00	$5.00
Pace Service Area		
Regular Route analog	$3.00	$3.00
Local Route analog	$2.50	$3.00

(1) Effective November 15, 2009, Pace raised the ADA paratransit fare to $3.00

2009 Budget Versus 2009 Estimate

Pace projects 2009 regional ADA paratransit service operating revenue will be on par with the budget. Other revenue and passenger revenue are estimated to match the budget (Exhibit 6-19).

Total expenditures for 2009 are expected to be on par with the budget. Expenditures for purchased transportation are expected to be favorable to budget by $0.3 million (0.3 percent). The regional ADA support allocation and other expenditures are expected to be unfavorable to budget by $0.1 million (3.6 percent) and $0.2 million (9.7 percent) respectively. Labor/fringe benefits, health insurance, fuel, and liability insurance will also closely match budget

Total funding for 2009 is expected to be on par with the budget. Funding from RTA sales tax II and PTF II, RTA ICE funds, capital funds for operations, and working cash borrowing are expected to match budget.

Statutory Compliance

Pace's 2010 budget and plans in 2011 and 2012 meet the regional ADA paratransit operating funding marks set by the RTA Board on September 15, 2009 through budget balancing actions which may include, but are not limited to, adjusting service and/or fares, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues, including 2010 funds from the ICE Fund that may be allocated pursuant to paragraph 7 of RTA Ordinance 2009-74. These marks set the total funding levels at $107.5 million in 2010, $101.4 million in 2011 and $95.6 million in 2012. Pace's projected recovery ratio of 10.0 percent in 2010 complies with the recovery ratio marks set by the RTA Board on September 15, 2009.

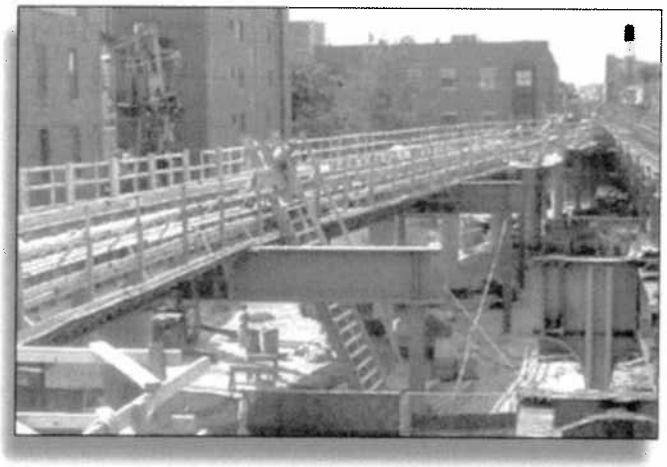
7 Capital Program



Regional Overview

The RTA Act requires that the capital expenditures of the CTA, Metra and Pace be subjected to continuing review so that the RTA may budget and expend funds available to the region with maximum efficiency. The RTA Board must adopt a five-year capital program every year. The RTA's five-year capital program describes the nature, location, and budget by project and by fiscal year of all anticipated Service Board capital improvements. Public hearings are held in each county in the northeastern Illinois region to inform the public and government officials of the Authority's capital development plans.

The RTA emphasizes the need to preserve and enhance the RTA system's valuable infrastructure. This includes bringing the system's $36.4 billion in assets (as measured in terms of replacement value) to good condition and extending or expanding service when demand is justified and funding available. This translates into a need more than $1 billion per year just to maintain and preserve the existing system.

Source of Funds

On September 15, 2009, the RTA adopted preliminary capital funding marks for 2010-2014. Since then, the RTA received proposals for funds controlled by the Service Boards. The RTA adopted Ordinance 2009-92, amending the September marks and adopting the 2010-2014 Capital Program on December 17, 2009, to reflect updates of various federal and local funding sources based on the latest information from the Service Boards and the RTA. Exhibits 7-1 through 7-10 are based on the December ordinance. The funding sources for the RTA capital program include the U.S. Department of Transportation's Federal Transit

Exhibit 7-1: **RTA 2010-2014 Capital Program Marks** (dollars in millions)

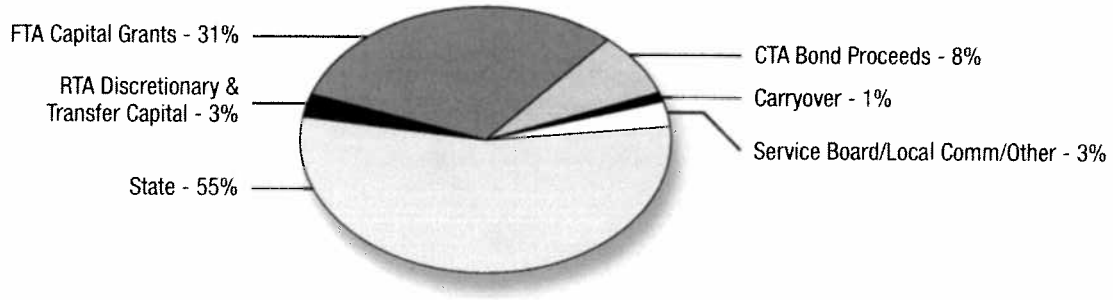
Exhibit 7-2: **RTA 2010-2014 Capital Program Marks** - $5,003 million



Administration (FTA), the Illinois Department of Transportation (IDOT), the RTA, and the Service Boards. Of the estimated $5.0 billion of new and carryover funding for 2010-2014, State funds account for $2,747 million or 55%, federal funding accounts for $1,593 million or 31%, the CTA Bond proceeds account for $405 million or 8%, RTA funds account for $143 million or 3%, Service Board and other funds account for $90 million or 2% and carryover funds from 2009 account for $25 million or 1% (Exhibits 7-1 and 7-2).

The total estimated capital funds available for capital projects in 2010 are $1,121.8 million. This amount reflects a $137.8 million transfer of federal funds to operations for CTA and Pace preventive maintenance and the CTA's intention to issue additional bonds totaling $230 million. At this time, the final federal appropriation figures for 2010 have not been determined. Once this amount has been established, the capital program will be adjusted to reflect the available funding. Of the estimated $1,121.8 million of new and carryover funding sources for 2010, State funds account for $545.4 million or 49%, federal funding accounts for $247.8 million or 22%, the CTA Bond proceeds account for $230 million or 20%, RTA funds account for $51.4 million or 5%, Service Board and other funds account for $22.1 million or 2% and carryover funds from 2009 account for $25.1 million or 2% (Exhibits 7-3 and 7-4).

Despite the challenging economic times, critical progress was made in 2009 in meeting our capital investment needs. Both the State of Illinois and the federal government acted this spring and approved nearly $5.3 billion in transit capital investments over the next five years.

The State of Illinois actually approved two measures – a "jump start" capital plan in April and

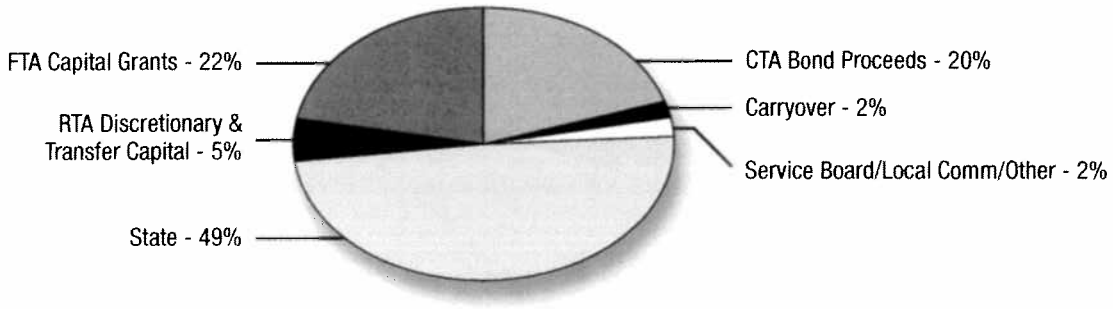
Exhibit 7-4: **Capital Funding in 2010** - $1,121.8 million



a full Five-Year Capital Plan in May. Combined, these two programs provided the RTA system with $2.7 billion in capital funds. These funds will allow us to reduce our capital maintenance backlog that had developed over the last four years. With these funds we will also be able to replace aging trains, buses, track, stations and other infrastructure and improve the reliability of the system.

Federal stimulus dollars were also provided this year and helped to address some of our most pressing needs. Because these funds were intended to provide immediate positive effects for the economy, programs were quickly identified and funds were obligated as soon as possible.

Use of Funds

The primary emphasis of the 2010-2014 Capital Program is to continue efforts to bring the system's assets to a state of good repair. When replacing worn out items, it is imperative to utilize modern technologies that often result in improved functionalities of equipment, facilities and rolling stock. In addition, a balanced capital program is responsive to customer needs and shifting markets by including investment in system expansion. For the 2010-2014 Capital Program, 97% of the budget is allocated to capital projects that maintain the existing infrastructure. For the 2010 Capital Program, 95% of the budget is allocated to maintain the existing infrastructure. While the current funding level does not satisfy all needs, an appropriate balance of investment is achieved in light of the current condition of the RTA system.

Investments in the capital program can also be broken down by various asset categories. Exhibits 7-5 and 7-6 show that $2.1 billion or 52% of the 2010-2014 Capital Program is spent on rolling stock and $804 million or 20% on track and structure which are considered to have the greatest direct impact on transit users. Substantial investment in other infrastructure is also critical to maintaining safe, reliable transportation services.

Exhibit 7-5: **2010-2014 Capital Program Uses** (dollars in millions)

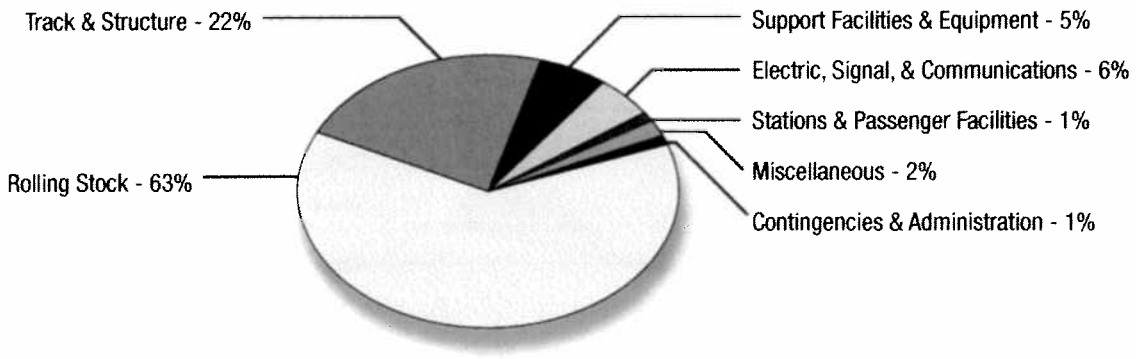
CTA Overview

The proposed projects in the CTA's portion of the 2010-2014 Capital Program total $2.1 billion. The CTA's portion of the Capital Program continues the rehabilitation and replacement of capital assets. The allocation of the total program to the major categories of capital improvements is as follows: 63% for rolling stock, 22% for track and structure, 6% for electric, signal and communications, 5% for support facilities and equipment, 1% for stations and passenger facilities and 3% for miscellaneous, contingencies and administration (Exhibit 7-7). The general categories of capital improvements comprising the CTA's portion of the Capital Program are illustrated in Exhibit 7-10.

Highlights of projects included in the CTA's proposed 2010-2014 Capital Program:

- $440.0 million for the repair of track and structure
- $465.3 million for the purchase of 406 rail cars
- $418.2 million for the rehabilitation and overhaul of rail cars
- $187.7 million for the purchase of buses
- $178.2 million for the rehabilitation and overhaul of buses
- $82.4 million for the improvement of facilities

Exhibit 7-7: **CTA Five-Year Assets by Category** - $2.1 billion



A comprehensive list of CTA Five-Year capital projects can be viewed at www.rtachicago.com

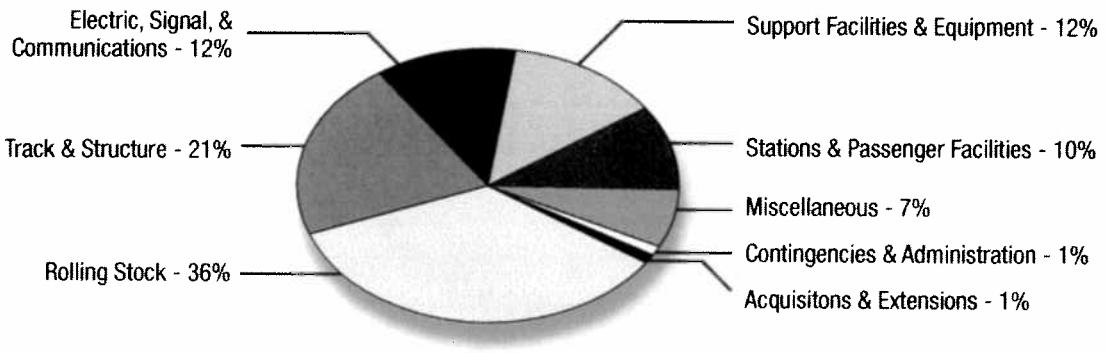
Metra Overview

Metra's portion of the proposed 2010-2014 Capital Program totals $1.7 billion. During this five-year period, Metra will continue to renew its extensive commuter rail infrastructure and replace aging rolling stock. The allocation of the total program to the major categories of capital improvements is as follows: 36% for rolling stock, 21% for track and structure, 12% for electric, signal, and communications, 12% for support facilities and equipment, 10% for stations and passenger facilities, 8% for miscellaneous, contingencies and administration and 1% for acquisitions and extensions (Exhibit 7-8). The general categories of capital improvements comprising the Metra's portion of the Capital Program are illustrated in Exhibit 7-10.

Highlights of projects included in Metra's proposed 2010-2014 Capital Program:

- $294.3 million to purchase 160 bi-level cars for the Metra Electric District
- $178.3 million for bridge rehabilitation and renewal
- $203.6 million for the rehabilitation of commuter rail cars
- $159.6 million for the construction and renewal of yards, shops and facilities
- $103.2 million for the rehabilitation and purchase of locomotives
- $150.3 million for station rehabilitation and improvement

Exhibit 7-8: **Metra Five-Year Assets by Category** - $1.7 billion



A comprehensive list of Metra Five-Year capital projects can be viewed at www.rtachicago.com

Pace Overview

Pace's portion of the proposed 2010-2014 Capital Program totals $296 million. A majority of the funding is provided for the replacement and expansion of rolling stock. The allocation of the total program to the major categories of capital improvements is as follows: 63% for rolling stock, 2% for electric, signal and communications, 27% for support facilities and equipment, 6% for stations and passenger facilities and 2% for miscellaneous, contingencies and administration (Exhibit 7-9). The general categories of capital improvements comprising the Pace's portion of the Capital Program are illustrated in Exhibit 7-10.

Highlights of projects included in Pace's proposed 2010-2014 Capital Program:

- $104.1 million for the purchase of 262 fixed route buses
- $31.2 million for the purchase of vans and community vehicles
- $26.4 million for the purchase of 310 paratransit vehicles
- $4.9 million for the purchase of a replacement farebox system
- $4.0 million for the purchase of a replacement of fixed route radio system
- $14.6 million for the construction and reconstruction of passenger and transfer facilities
- $12.9 million for the purchase of computer hardware and software
- $59.5 million for the construction, improvement and renovation of garages and facilities

Capital Impact on Operations

As part of its oversight function, the RTA is charged with providing conditional assessments of the Service Board's capital projects and plans. Pursuant to Ordinance 2009-92 the RTA, after consultation with the Service Boards must annually prepare and adopt a Five-Year Capital Program that includes each capital improvement undertaken by or on behalf of a Service Board. As funding sources change, the RTA adopts amended marks and the Service Boards adjust their programs to stay within the marks. On March 18, 2010, the RTA amended its marks to (ordinance 2010-23) approving a financing plan providing for the issuance of bonds with proceeds in the amount of $550 million in 2010. The 10-year Plan Analysis that follow (Exhibits 7-11 and 7-12) include the bond proceeds.

The estimated value of transit capital assets in Northeastern Illinois is $36.4 billion. With an average useful life of 25 years, approximately $1.4 billion in constant dollars should be spent annually just to maintain the system in a state of good repair. In addition to the Five Year Plan, PA. 95-0708 established the need for the development of a Ten Year Capital Plan.

In the 2010-2019 period, the total cost of maintaining the region's system at its current state would be $17.9 billion. Currently, $9.1 billion in capital program funds is estimated to be available for the 2010-2019 Ten Year Plan. Of this $9.1 billion, $1.0 billion has already been committed to debt service for bonds issued by the CTA, and $325.0 million is programmed to be transferred out for operating expenses in 2010-2012. The current Ten Year capital program leaves approximately $7.8 billion in funds available for the 2010-2019 period, or 43.6 percent of the total need.

Capital Funds Available for Ten Year Plan

As Exhibit 7-11 indicates there are four sources of funding that are dedicated to capital program expenditures in the region: Federal, State, Local and RTA. In the RTA's Ten Year plan $475.7 million dollars in Federal Capital Grants are expected to be made available to the RTA in 2010. By 2010 Federal Capital Grants are planned to increase to $630.1 million a compound annual growth rate of 3.4 percent, reflecting long term historic trends. State funding includes the $2.7 billion bond program appropriated in 2009 and allocated through 2014. RTA funds include discretionary spending and bonds issued by the RTA. Local funds consist of $550 million of Service Board borrowing, $10 million that Metra allocates to Capital Programs from farebox revenues annually, and additional funds provided by the Service Boards. In 2010 due to the $550 million borrowed by the CTA, the region would be able to meet its annual replacement need with an available funds for Capital Programs

Exhibit 7-11: **Capital Program Funds Available** (in millions)

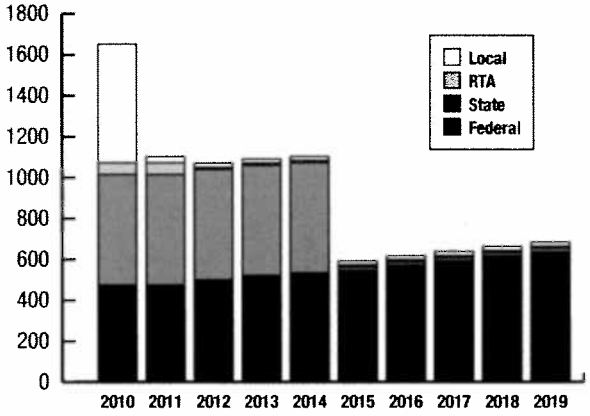

Exhibit 7-12: **Funds vs. Needs** (in millions)

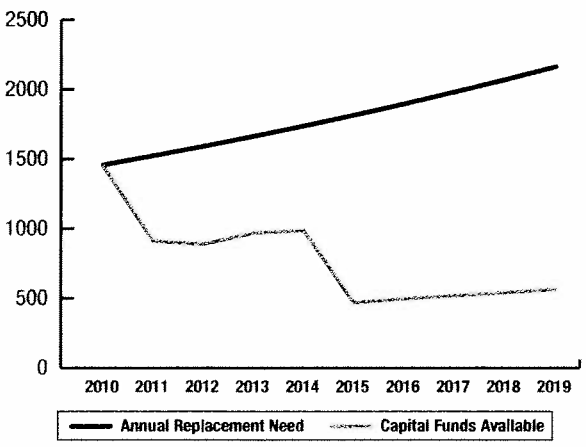

Exhibit 7-13: **Capital Program Funds Available**

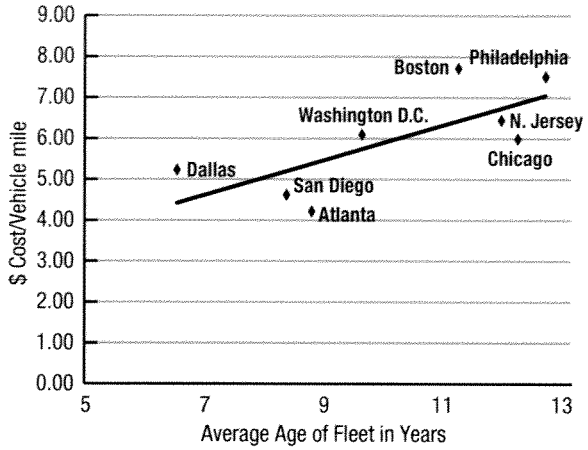

of $1,451.6 million. In 2019, the planned balance available for the Capital Programs decreases to $560.9 million or 38.6 percent of 2010 funding. With limited State, RTA and Local funding projected for 2015, approximately 93 percent of all funding for Capital Projects will then come from the federal government.

As Figure 7-12 shows, in 2010 the RTA just meets its annual replacement need. In 2011, with the absence of locally generated borrowing, the Region can only meet about 59.6 percent of its annual replacement need, falling short of fully meeting this need by $615.3 million. In 2012 the unfunded annual replacement need decreases to 55.7 percent with an unmet capital need of $705.5 million. When State funding is no longer projected in 2015, the situation becomes critical, as the amount of funding available would only meet 25.6 percent of the regions annual replacement need.

Lack of funding for capital improvements is further exacerbated by two factors: Capital transfers to the operating budget and increased operating costs associated with an aging vehicle fleet.

In recent years increasing amounts of capital funds have been diverted to operating budgets. In the past ten years $619.5 million has been diverted from capital funding to the operating budget. An additional $325 million has been budgeted for the 2010-2012 period. Allowing additional transfers of scarce resources will only intensify the capital shortfalls. As the region continues to transfer funds from its capital programs budget to its operating budget, it further delays needed replacement expenditures. Delaying replacement, results in increased operating expenditures.

A comparative analysis of peer groups indicates that as the average life of the fleet increases, cost/annual vehicle mile increases. By examining the average life of a fleet we can conclude that as the average life of a region's fleet increases by one year the operating and maintenance costs increase by 44 cents per vehicle mile (Exhibit 7-13). Conversely, if the average age of a fleet decreases, we can expect to see similar reductions in operating and maintenance costs per vehicle mile. Based on this estimation we have calculated the potential savings that could be realized by reducing the replacing aging buses and rail cars in the region.

Capital Impact on Maintenance Operations

By investing in capital and rolling stock the Service Boards reduce their operating expenditures. Evidence also indicates that as the fleet ages it becomes increasingly expensive to maintain. By meeting its annual replacement need, the region will continue to save money on operating expenditures. However, if the region continues to use capital funds for operating expenditures, and fails to address both vehicular and non-vehicular capital replacement needs, operating costs will continue to rise making it difficult to continue to provide service at its current level.

Impact of Capital Program on the 2010 Operating Budget (Based on the December Program)

CTA

The CTA's 2010 Capital Program proposes $572 million for its capital projects divided among

the following: Bus Rolling Stock $46 million; Rail Rolling Stock $331 million; Track & Structure for Rail $75 million; Electrical Signal & Communications for Rail $49 million; Station & Passenger Rehabilitations for Rail $5 million; Acquisitions and Extensions for Rail $2 million; System Electronic, Signal, & Communications $7 million; System Support Facilities & Equipment $32 million; and Total System Miscellaneous, Contingencies & Administration are $25 million (Exhibit 7-10). The CTA will spend approximately $21.9 million on bus replacements in 2010, reducing the average age of its bus fleet from 4.8 years to 4.5 years and saving an estimated $7.4 million in bus operating and maintenance costs. Additionally, the CTA will replace approximately, 140 Rail Cars in 2010 at a

Ballast, track, and signal upgrade at Metra's Milwaukee West line

Exhibit 7-14: **CTA Capital Impact on Operations** (includes only some of the major programs)

Bus Projects	
Replacement of Buses ($8.5 million)	· Improve service reliability · Increase customer satisfaction · Reduce maintenance and operating costs by approximately $2.8 million · Enhance safety
Rail Projects	
Replacement Rail Cars ($237.3 million)	· Increase fleet reliability (Rail cars to be replaced exceed the 25-year FTA standard life of a rapid transit car by at least 5 years.) · Reduce maintenance and operating costs by approximately $82.2 million
Rehabilitation of existing rail lines ($9.8 million)	· Raise travel speed by reducing slow zone restrictions · Enhance safety · Improve on-time performance · Increase customer satisfaction
System Wide Improvements	
Implement Security & Communication Projects ($6.5 million)	· Enhance safety and customer satisfaction · Improve Communications and efficiencies.

Exhibit 7-15: **Metra Capital Impact on Operations** (includes only some of the major programs)

Rolling Stock	
Replace Bi Level Electric Commuter Rail Cars ($74.5 million)	· Maintain on-time performance · Reduce maintenance cost · Enhance safety · Increase customer satisfaction
Track and Structure	
Rehabilitation of Bridges ($3.4 million)	· Preserve uninterrupted service – higher on-time performance · Improve vertical clearances · Improve traffic flow and pedestrian safety
Electrical Signal & Communication	
Signal system upgrade ($22.7 million)	· Improve travel times resulting in higher on-time performance · Enhance safety
Stations and Passenger Facilities	
Rehabilitate/improve/construct stations ($4.5 million)	· Increase other revenue by providing more commercial and retail space
Expand commuter parking ($7.7 million)	· Increase ridership

total cost of $237.3 million in capital expenditures, reducing the average age of the fleet from 22.3 year to 19.6 years. Based on our calculation this could potentially save $82.2 million in operating and maintenance costs (Exhibit 7-14).

Metra

Metra's 2010 Capital Program proposes $379 million for its capital projects divided among the following: Rolling Stock $133 million; Track and Structure $90 million; Electrical, Signal & communications $43 million; Support Facilities and Equipment $35 million; Stations and Passenger Facilities $34 million; and Miscellaneous, Acquisitions & Extensions, Contingencies & Administration $44 million (Exhibit 7-10).

Pace

Pace's 2010 Capital Program proposes $55 million for its capital projects divided among the following: Rolling Stock $22 million; Support Facilities & Equipment $29 million; Stations & Passenger Facilities $3 million; and Miscellaneous, Acquisitions & Extensions, Contingencies & Administration $1 million (Exhibit 7-10). Pace spent $8.9 million to replace 22 fixed route buses saving an estimated $2.2 million in operating and maintenance costs in 2010 (Exhibit 7-16).

NABI bus - Pace Rapid Transit project

The RTA will continue to work more cooperatively with the service boards to identify the impact of capital expenditures on their operating expenditures to mitigate the effects of aging fleets and to meet the capital needs of public transit in Northeastern Illinois.

Exhibit 7-16: **Pace Capital Impact on Operations** (includes only some of the major programs)

Rolling Stock Purchase of 22 fixed route accessible buses ($11.5 million)	· Reduce maintenance and Operating costs by $2.2 million · Improve travel time · Enhance safety · Lower fuel consumption
Diesel engine retrofit with improved mechanical components, software upgrades, and diesel multi-stage filters ($8.2 million) and Bus Overhaul Maintenance ($2.0 million)	· Reduce operating expenses · Lower maintenance costs · Reduce engine exhaust emissions
System Wide Improvements Replace Northwest Cook Garage ($13.7 million)	· Alleviate over crowding of buses in Des Plaine Garage.
South Holland Replacement Garage ($7.4 million)	· Savings in the operating Budget associated with lower building maintenance costs

8 Appendices

Exhibit 8-1: **2010 Business Plan Calendar (dates listed are in 2009)**

DATE	REQUIREMENTS
Jun	RTA and Service Boards meet to discuss Business Plan Call Part I and Part II requirement. (Part I requirements defined as the 2010-2012 Budget and Financial Plan, and Five-Year Capital Program, and Part II requirements defined as the 10-year business plan assessment of operations and capital investments from 2010 through 2019).
25-Jun	RTA Finance Committee and Board meet to discuss and consider the release of the Business Plan Call.
17-Jul	RTA staff provides economic indicators and preliminary public funding estimates to the Service Boards.
Aug	RTA holds Community and County outreach meetings to review legislative actions and collect suggestions for consideration in business plan development.
1 - 14-Aug	Service Boards submit initial Part I Business Plan documents to the RTA.
20-Aug	The RTA Executive Director reports to the RTA Board the adequacy of the Service Boards' Part I Business Plan submittals for its review and discussion at the August 20, 2009 RTA Board meeting.
Aug-Sep	The RTA Executive Director prepares the finance and ordinance information required to: (1) establish the operating funding amounts for the budget for the upcoming year and the financial plan for the subsequent two years for each Service Board, (2) set the budget recovery ratio for the upcoming year for each Service Board, (3) set the preliminary capital program amounts for the upcoming five years.
15-Sep	RTA Finance Committee and Board meet to discuss and consider adoption of ordinances which (1) establish the operating funding amounts for the budget for the upcoming year and the financial plan for the subsequent two years for each Service Board, (2) set the budget recovery ratio for the upcoming year for each Service Board, and (3) set the preliminary capital program amounts for the upcoming five years.
Sep-Oct	RTA evaluates Service Boards' current year performance for consistency with the adopted budget and the Strategic Plan, and provides guidance to the Service Boards to use in preparing their Part I and Part II Business Plan Documents (defined below).
Sep-Oct	Based on RTA Board action, the Service Boards complete the following Part I and Part II Business Plan materials. Part I • Three-year environmental assessment, • Detailed annual operating budgets, • Two-year financial plans, • Preliminary five-year capital programs, and • Service Plans Part II • Ten-year environmental assessments, • Ten-year long-term financial view of operations, • Preliminary ten-year capital plans, and • Service Plans
Oct-Nov	Service Boards release proposed Part I Business Plan Documents to the RTA, the public, and present to the Counties in the region. Service Boards release Part II Business Plan Documents to the RTA. RTA Executive Director analyzes Service Board Business Plan Documents (Part I and Part II) and provides comments to Service Boards.
15-Oct	RTA Board Committees and the RTA Board review the RTA Agency Budget.
15-Nov	Service Boards adopt Business Plan Documents (Part I) and submit Part I and Part II documents the RTA no later than November 15.
19-Nov	RTA prepares consolidated Part I Business Plan Documents and the Chairman of the RTA Board and/or the Chairman of the RTA Board Finance Committee approve the release of such documents
Nov-Dec	RTA presents operating and capital program information to the Counties in the region.
1-Dec	RTA proposed consolidated Part I Business Plan Documents are made available for public inspection.
Dec	RTA holds public hearings in December on the proposed consolidated Part I Business Plan Documents.
17-Dec	RTA Finance Committee and Board meet to discuss and consider adoption of ordinances which (1) establish the operating funding amounts for the budget for the upcoming year and the financial plan for the subsequent two years for each Service Board, (2) set the budget recovery ratio for the upcoming year for each Service Board, and (3) set the capital program amounts for the upcoming five years. The RTA Executive Director reports to the RTA Board the adequacy of the Service Boards' Part II Business Plan submittals for its review and discussion at the December 17, 2009 RTA Board meeting.

Exhibit 8-2.1: **RTA August Community Meetings/Budget Hearings Schedule**

The RTA is sought public input regarding the 2010 budget and summarized the new transit legislation and RTA governance reforms. Input was invited on the strategic plan update of how transit projects will be assessed and prioritized as well as the status of capital investment needs to fund transit projects.

Exhibit 8-2.2: **RTA December Community Meetings/ Budget Hearings Schedule**

The Regional Transportation Authority (RTA) hosted its second round of public hearings from December 7-10 to discuss the proposed 2010 budget and provide an update on the Strategic Plan. Eight hearings were held throughout the transit system's six county region. RTA Board members offered opening remarks followed by the RTA senior staff who conducted presentations. Attendees had the opportunity to make public comments. Hearings were open to the general public and are ADA Accessible.

In addition to the hearings, the budget and Strategic Plan update was presented through webinars, posted on RTA websites and are available at certain libraries in addition to other methods to broaden access to the public. The RTA Board voted to approve the 2010 transit system budget at its December 17th meeting.

Public Hearing Overview

Section 4.01 of the RTA Act directs the RTA to hold public hearings on its annual consolidated budget and financial plan, prior to Board consideration of the ordinance adopting the budget and plan. This year the RTA held thirteen public hearings from August 24th through September 1st, eight from December 8th through December 10th. The hearings in August took place as follows: five in the City of Chicago (north, east, south, west and central), three in suburban Cook (north, south and west), and one each in Lake, Will, DuPage, Kane and McHenry counties. The hearings in December took place as follows: two in Suburban Cook County (South, and West), one in the City of Chicago, and one each in Lake, Will, DuPage, Kane and McHenry counties. The meetings were publicized in press releases issued to the media, paid half-page ads in newspapers across the region, e-mails and calls to Moving Beyond Congestion Partners for Transit, the RTA's InTransit newsletter, a special communication to elected officials, as well as through the Service Boards, at reduced fare presentations, and on MovingBeyondCongestion, RTA, all service boards and many Partners For Transit websites. The hearing schedules are detailed in Exhibit 8-2.

At these meetings, the RTA briefed the public on the proposed RTA 2010 Budget, provided an update on the Moving Beyond Congestion strategic plan, briefed the public on the new transit legislation, underscored the need for capital investment, provided an overview of the RTA Funding Program grant awards and responded to comments and questions. Presenters included Executive Director Steve Schlickman and RTA senior management who were joined by RTA board members at all the hearings as well as 19 staff volunteers.

The majority of comments on record called for more effective RTA oversight, requests for new services and an appreciation for Funding Programs awards. Strong opposition to fare increases was also expressed along with concerns about paratransit service. Court reporters were present to take testimony, and transcripts of this testimony are on file at the RTA.

Glossary

Accessible—As defined by FTA, a site, building, facility, or portion thereof that complies with defined standards and that can be approached, entered, and used by persons with disabilities.

Accessible Service—A term used to describe service that is accessible to non-ambulatory riders with disabilities. This includes fixed-route bus service with wheelchair-lifts or dial-a-ride service with wheelchair lift-equipped vehicles.

ADA (The Americans with Disabilities Act of 1990)—This federal act requires many changes to transit vehicles, operations and facilities to ensure that people with disabilities have access to jobs, public accommodations, telecommunications, and public services, including public transit.

ADA Paratransit Service—Non-fixed-route paratransit service utilizing vans and small buses to provide pre-arranged trips to and from specific locations within the service area to certified participants in the program.

Administration Expenditure—Expenditures for labor, materials and fees associated with general office functions, insurance, safety, legal services, and customer services.

Agency Fund—This fiduciary fund accounts for the assets held by the RTA in a trustee capacity or as an agent for the CTA, Metra, and Pace, rather than for the RTA's own programs. (Of the four types of fiduciary funds [Agency funds, pension (and other employee benefit] funds, investment trust funds, and private-purpose funds), the RTA uses only the first two.)

Ambulatory Disabled—A person with a disability that does not require the use of a wheelchair. This would describe individuals who use a mobility aid other than a wheelchair or have a visual or hearing impairment.

Appropriation—A legal procedure that permits a specified amount of funds for a given operating or capital purpose to be expended; the RTA appropriates funds for expenditures.

Balanced Budget—A budget in which expected revenues equal expected expenses during a fiscal period.

Budget—Funds allocated by the RTA Board for a particular purpose; each year the RTA Board approves a budget document for the following year. Funds are allocated either by "programming" them or by "appropriating" them.

Budget Marks—The Regional Transportation Authority Act, as amended in 1983, requires the RTA to advise each of its Service Boards by September 15 of each year of its required revenue recovery ratio for the subsequent year, and the public funding estimated to be available for the next three years. These figures are referred to as budget marks.

Bus Bunching—A traffic scenario in which more than one bus arrives at the same time. This phenomenon is a subject of several CTA initiatives aimed at reducing service problems through improved field management of traffic and schedules.

Bus Rapid Transit (BRT)—BRT combines the quality of rail transit and the flexibility of buses. It can operate on exclusive transitways, High Occupancy Vehicle (HOV) lanes, expressways, or ordinary streets. A BRT system combines intelligent transportation systems technologies, priority for transit, cleaner and quieter vehicles, rapid and convenient fare collection, and integration with land use policies.

Capacity Utilization—The percentage of seats occupied in a train or bus at a given point in time.

Capital—Funds that finance construction, renovation, and major repair projects or the purchase of machinery, equipment, buildings, and land.

Capital Expenditure—Expenditures that acquire, improve, or extend the useful life of any item with an expected life of three or more years and a value of more than $5,000, e.g., rolling stock, track and structure, support facilities and equipment, and stations and passenger facilities.

Car Mile or Vehicle Mile—A single bus, rapid transit car, or commuter rail car traveling one mile.

Circuit Breaker Program—The Illinois Department on Aging's Circuit Breaker program provides assistance to low-income senior citizens and persons with disabilities. Illinois residents with a qualifying disability who meet the income eligibility requirements of the Circuit Breaker program are eligible for free rides on regularly scheduled fixed-route public transit service.

CMAP (The Chicago Metropolitan Agency for Planning)—Formed in 2005, CMAP integrates planning for land use and transportation in northeastern Illinois. The new organization combined the region's two previously separate transportation and land-use planning organizations – Chicago Area Transportation Study (CATS) and the Northeastern Illinois Planning Commission (NIPC) – into a single agency.

CMAQ (Congestion Mitigation/Air Quality) Grant—A federal grant program designed to support transportation projects that reduce traffic congestion.

Cost Per Mile—Operating expense divided by vehicle miles for a particular program or in total.

Cost Per Passenger—Operating expense divided by ridership for a particular program or in total.

CTA (Chicago Transit Authority)—The CTA operates bus and rapid transit service in the City of Chicago and several suburbs. The CTA was created by state legislation and began operations in 1947.

Dead-Head—The time when a transit vehicle is traveling toward a yard, shop, or the start of a run but is not in revenue service. Car miles include dead-head miles.

Debt Service—The payment of interest on and the repayment of principal on long-term borrowed funds according to a predetermined payment schedule.

Defeasance of Bonds—a technique used to discharge older high-rate debt prior to maturity with new securities bearing lower interest rates.

Deficit—For a particular Service Board, the difference between system-generated revenues and system operating expenses. The deficit is sometimes referred to as the "public funding requirement." The RTA's current practice is to provide operating funds to each Service Board equivalent to their budgeted deficit for the year as opposed to the actual deficit. For the RTA, its deficit or surplus equals total revenues (sales tax, PTF, interest, and other income) less operating funding, debt service, technology, and capital funding (RTA capital and RTA discretionary funding of Service Board capital).

Depreciation—Expiration in the service life of fixed assets, other than wasting assets, attributable to wear and tear, deterioration, action of the physical elements, inadequacy, and obsolescence. The portion of the cost of a fixed asset, other than a wasting asset, charged to expense during a particular period.

Dial-A-Ride Service—Paratransit service that requires the user to call ahead and schedule service.

Discretionary Funds—Funds that the RTA allocates, at its discretion, to the Service Boards. These funds include the PTF and a portion of the 15 percent of the RTA Sales Tax.

Elderly—A term used to describe individuals who are 65 years of age or older. This age is used to qualify for the RTA Senior Citizen Reduced Fare Card. Note that some paratransit services define elderly individuals at an age other than 65.

Express Bus (or route)—A suburban or intercity bus that operates a portion of its route without stops or with a limited number of stops.

Favorable Performance—In a comparison of actual results to budgeted levels, favorable performance describes the situation in which expenditures are less than budget or revenue exceeds budget.

Farebox Revenue—Revenue obtained from passengers and other fare subsidies except the state reduced fare subsidy program. Also referred to as "system-generated" revenue.

Fares—The amount charged to passengers for use of various services.

Feeder Bus Services—Pace bus routes that serve Metra stations.

Financial Plan—In addition to an annual budget, the RTA Act, as amended in 1983, requires the RTA and its Service Boards to develop a financial plan for the two years subsequent to the upcoming budget year. In combination with the annual budget, this provides a three-year projection of expenses, revenues, and public funding requirements.

Fiscal Year—The calendar year is the fiscal year for the RTA, CTA, Metra, and Pace. The fiscal year of the State of Illinois extends from July 1 through June 30 of the following year. The fiscal year of the federal government extends from October 1 through September 30 of the following year.

Fixed-Route Service—Buses that operate according to fixed schedules and routes.

Flexible Funds—Federal funds made available by TEA-21 that can be used for various transportation projects, including both highway and mass transit projects. Allocation of these funds is at the discretion of state and local agencies.

Fringes (Fringe Benefit Expenditures)—Pay or expenditures to or on behalf of employees in addition to salaries and wages, including sick pay, vacation pay, pension contributions, life and health insurance, unemployment and workers' compensation, social security costs, and other programs.

FTA (Federal Transit Administration)—The FTA is the federal agency that helps cities and communities provide mobility to their citizens. Through its grant programs, FTA provides financial and planning assistance to help plan, build, and operate rail, bus, and paratransit systems. Since

1988, the only FTA funding available to the RTA has been for capital projects.

Full Funding Grant Agreement (FFGA)—The FTA is required to use a FFGA to prove financial assistance for new start projects. The FTA also has the discretion to use an FFGA in awarding federal assistance for other major capital projects. The FFGA defines the project, including cost and schedule; commits to a maximum level of federal financial assistance (subject to appropriation); establishes the terms and conditions of federal financial participation; covers the period of time for completion of the project; and helps to manage the project in accordance with federal law. The FFGA assures the grantee of predictable federal financial support for the project (subject to appropriation) while placing a ceiling on the amount of that federal support.

Full-Time Equivalent Position (FTE)—A measurement equal to one staff person working a full-time work schedule for one year.

Fund Balance—The cumulative difference between revenues and expenses over the life of a fund. The excess of funding over deficit for a given period of time. In this document, the fund balance refers to the unreserved/undesignated funds in the Agency and general fund.

Funding Formula—A specific formula used to determine a subsidy level.

General Long Term Debt Account Group (GLTDAG)—This account group is not a fund but a separate list of certain long-term liabilities of the general government. Debt normally is recorded at its face value, without premium or discount. Additions to and deletions from GLTDAG are disclosed in the notes to the financial statements.

Bond Refinancing/Refunding—is the payoff and re-issuance of bonds, to obtain better interest rates and/or bond conditions which results the defeasance of the old debt.

General Fund—The operating fund that is used to account for all financial resources and normal recurring activities except for those required to be accounted for in another fund.

General Obligation Bonds (GO Bonds)—are bonds that are legally backed by the full faith, and credit of the issuing government. The government is legally obligated to use its full taxing power, if necessary, to repay the debt.

Gross Domestic Product (GDP)—Reported by the Bureau of Economic Analysis, this measure of economic activity is the sum of the market values of all of the final goods and services produced in the United States in a year.

Grants—Moneys received from local, federal, and state governments to provide capital or operating assistance.

Headway—The time span between service vehicles (bus or rail) on a specified route.

Illinois FIRST—A group of legislation passed by the Illinois Legislature to fund capital improvements for the state's infrastructure, roads, schools and transit.

Infrastructure—The physical assets of the RTA system, e.g., rail lines and yards, power distribution, signaling, switching, and communications equipment, passenger stations, information systems, and roadways, upon which the continuance and growth of transit depend.

In-Kind Service—These services are provided at no cost to a Service Board.
For example, the City of Chicago provides free of charge dedicated security forces to the CTA.

Innovation, Coordination and Enhancement (ICE) Fund—A new fund created to award grants to the Service Boards, transportation agencies, and local governments, for short-term, lower-cost projects and service enhancements.

Intelligent Bus System (IBS)—A bus communications system that uses advanced technology to monitor and improve performance on various levels. Pace's new bus communications system includes radio voice and data communications, Computer-Aided Dispatching

(CAD) and Global Positioning Satellite (GPS)-based Automatic Vehicle Location (AVL) functions.

Intelligent Transportation Systems (ITS)—The application of advanced sensor, computer, electronics, and communication technologies and management strategies in an integrated manner to increase the safety and efficiency of the surface transportation system. ITS is a national effort designed to promote the use of advanced technologies in multimodal transportation.

Interest—The charge for borrowing money, typically expressed as an annual percentage rate.

ISTEA (Intermodel Surface Transportation Efficiency Act of 1991)—ISTEA amended the Federal Transit Act introducing new sources of flexible funds and increasing the funding authorized for public transit.

Joint Self Insurance Fund (JSIF)—The RTA provides excess liability insurance to protect the self-insurance programs maintained by the CTA, Metra, and Pace. The service boards are obligated to reimburse the JSIF for any damages paid plus a floating interest rate.

Labor Expenditure—The cost of wages and salaries (including overtime) to employees for the performance of their work.

Line Item—An appropriation that is itemized on a separate line in a budget.

Linked Trip—A single, one-way trip without regard for the number of vehicles boarded to make the trip (i.e., a home-to-work trip taken by boarding a bus, to a train, to another bus represents one linked trip or three unlinked trips)

Maintenance Expenditure—Expenditures for labor, materials, services, and equipment used to repair and service transit and service vehicles and facilities.

Metra—The Commuter Rail Division of the RTA responsible for all rail public transit service with the exception of those services provided by the CTA. Metra was created in 1983 by an amendment to the RTA Act.

Mobility Limited—An individual who has a physical impairment, including impaired sensory, manual, or speaking abilities that result in functional limitations.

Modified Accrual Basis—A type of accounting whereby revenue and other financial resource increments (e.g., bond issue proceeds) is recognized when they become both "measurable" and "available" for finance expenditures of the current period. "Available" means collectible in the current period or soon enough thereafter to be used to pay liabilities of the current period. Similarly, expenditures (e.g., debt service payments and a number of specific accrued liabilities) are only recognized when payment is due because it is only at that time that they normally are liquidated with expendable available financial resources.

Moving Beyond Congestion—Jointly with the Chicago Transit Authority, Metra and Pace, the Regional Transportation Authority is leading a strategic planning effort to maintain, enhance and expand the northwestern Illinois region's transit system and to solve the current transit funding challenge, ensure financial viability and accountability, and meet the region's growing and changing transportation needs.

New Initiative—A new program or service that the RTA may approve separately from the Agency's or a Service Board's regular budget. The RTA may attach special criteria to measure the success of a new initiative.

Non-Ambulatory Disabled—A person who has a disability that requires use of a wheelchair.

Operating Assistance—Financial assistance for transit operations (as opposed to capital) expenditures. Such aid may originate with federal, state, or local governments.

Operating Budget—The planning of revenue and expenditures for a given period of time to maintain daily operations.

Off-Peak—Non-rush hour time periods.

Pace—The Suburban Bus Division of the RTA responsible for all non-rail suburban public

transit service with the exception of those services provided by the CTA. On July 1, 2006, Pace assumed operating responsibility for all ADA paratransit service in the RTA region. Pace was created in 1983 by an amendment to the RTA Act.

Paratransit Service—Any transit service that is not conventional fixed-route bus or rail service, including Dial-A-Ride, fixed-route deviation, shared-ride taxicab, and vanpool services.

Passenger Mile—A single passenger traveling one mile.

Peak Period—Morning or evening rush hour.

Principal—The amount borrowed or the amount still owed on a loan, separate from the interest.

Positive Budget Variance (PBV)—Calculated as the difference between a Service Board's budgeted and actual deficit, a positive budget variance results when the actual deficit is less than budgeted. Since the RTA funds the budgeted deficit, a PBV represents available funds for the Service Boards.

Program (verb)—To commit funds, for a given capital purpose, without necessarily appropriating these funds for expenditure. When the RTA Board passes its official budget document, certain funds are "programmed" so that they may be obligated (i.e., contracts signed) during the upcoming year; these funds may be expended during the upcoming or subsequent years.

Program (noun)—Groupings of expenditure accounts with related expenditures (i.e., operations, maintenance, administration, and capital program).

Public Transportation Fund(s) (PTF) —Each month the state transfers from its General Revenue Fund into the Public Transportation Fund an amount equal to 25 percent of the RTA Sales Tax collected in the previous month. All funds deposited in the Public Transportation Fund are allocated to the RTA to be used at its discretion for the benefit of the Service Boards.

Public Funding—Funding received from the RTA. Generally refers to funding for operating expenditures.

Purchase of Paratransit Service—The amount of money paid to contractors to provide door-to-door transportation to certified participants in the ADA paratransit Service program.

Recovery Ratio—System-generated revenues divided by system operating expenditures as allowed by the RTA Act. This ratio is calculated for each of the Service Boards and for the RTA region as a whole. The RTA Act mandates that the RTA region attain an annual recovery ratio of at least 50 percent for mainline service. For ADA paratransit service, the Act requires a 10% recovery ratio in 2008 and 12% thereafter.

Reduced Fares—Discounted fares for children age 7-11, grade and high school students (with CTA ID), seniors 65 and older (with RTA ID), and riders with disabilities (with RTA ID) except paratransit riders.

Revenue Car Mile—Car mile during which the vehicle is in revenue service (i.e., picking up and/or dropping off passengers).

Reverse Commute—City-to-suburb commute. This phrase refers to the fact that most riders commute from the suburbs to the city.

Ridership (unlinked passenger trips)—Each passenger counted each time that person boards a vehicle.

Rolling Stock—Public transportation vehicles including commuter rail cars, locomotives, rapid transit cars, buses, and vans.

RTA Sales Tax—1 percent in Cook County, 0.25 percent in the collar counties of DuPage, Kane, Lake, McHenry and Will. 85 percent of the sales tax is fully distributed to the Service Boards by the RTA according to formulas established by the RTA Act. Fifteen percent of the sales tax is retained by the RTA, a portion of which is distributed to the Service Boards at the RTA's discretion.

SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users)—Signed into law on August 10, 2005, this legislation provides $286.4 billion in guaranteed funding for federal surface transportation programs

through federal fiscal year (FFY) 2009 of which $52.6 billion is for federal transit programs over six years.

Sales Tax Designated for Capital or Transfer Capital-Statutory—The difference between a Service Board's entitlement (from the 85 percent of the RTA sales tax) and its budgeted or actual deficit, whichever is greater. These funds, which are over and above operating needs, are generally used for capital purposes. Metra is the only Service Board that has generated by statute sales tax for capital in more than a decade.

SCIP (Strategic Capital Improvement Program) Bonds—The RTA was authorized under the RTA Act to issue $500 million of bonds for public transportation projects approved by the Governor of the State as part of the RTA's Strategic Capital Improvement Program (SCIP). Effective January 1, 2000, the Act was amended to authorize the RTA to issue an additional $260 million of SCIP bonds in each year for the period of 2000 through 2004.

Series B Bonds—State Transportation Bonds used as all or a portion of the local share required to match federal funds for public transportation capital projects.

Service Boards—The term refers to the region's three transit operators: CTA, Metra and Pace.

Signal Priority—Transit signal priority either gives or extends a green signal to transit buses under certain circumstances to reduce passenger travel times, improve bus schedule adherence, and reduce bus operating costs.

Special Service—A transportation service, as defined by the FTA, specifically designed to serve the needs of persons who, by reason of disability, are unable to use mass transit systems designed for the use of the general public.

State Financial Assistance (SFA)—Subject to appropriation by the State, this assistance reimburses the debt service expenses of the RTA's Strategic Capital Improvement Program (SCIP) bonds.

Subscription Service—Special services for users who ride on a frequent and regular basis and follow a prescribed schedule (a minimum of three times per week between the same origin and destination).

Subsidy—Funds received from another source that are used to cover the cost of a service or program that is not self-supporting.

System-Generated Revenue (Total Operating Revenue) —Total revenue generated from operations includes farebox revenue, local subsidies, state fare subsidies, advertising, interest and all other income (excludes RTA and federal subsidies).

Taxi Access Program (TAP)—Certified participants in the ADA paratransit service program can purchase taxi vouchers valued at up to $13.50 at a reduced price to pay for one-way taxi rides that originate within the City of Chicago.

TEA-21 (The Transportation Equity Act for the 21st Century)— Signed into law on June 9, 1998, this legislation provided a six-year reauthorization of the federal transit program and the necessary contract authority needed to fully fund the fiscal year 1998 obligation limitations contained in the fiscal year 1998 Department of Transportation Appropriations Act.

T-FLEx (Transit Finance Learning Exchange)—A strategic alliance of transit agencies formed to leverage mutual strengths and continuously improve transit finance leadership, development, training practices, and information sharing. Its purpose is to transform the finance function into a value-added business partner within each transit authority. Members meet twice annually in a facilitated workshop environment to develop and share best practices in active roundtable work sessions.

TOD (Transit-Oriented Development or Transit-Oriented Design)— Mixed use development of residential, office and retail uses within walking distance of a transit station or bus route.

Total Vehicle Miles—The sum of all miles operating by passenger vehicles, including mileage when no passengers are carried.

Unreserved Fund Balance—The balance of funds that have not been reserved, designated or programmed into the budget, financial plan, or capital program.

Vanpool—Pace's VIP (Vanpool Incentive Program) is a service where a group of 5 to 15 people commute to and from work together in a Pace-owned van.

Supplemental Data

National Economic Projections

During the second half of 2009, the Gross Domestic Product (GDP) began to grow, but the unemployment rate continued to rise. The GDP is the value of the output of goods and services produced by labor and property located in the United States. Exhibit 8-3 highlights the annual real GDP growth from 2005 through 2010. GDP growth steadily declined from 2.9 percent in 2005 to 1.2 percent in 2008 before contracting 2.5 percent in 2009. The GDP is expected to grow 2.2 percent in 2010.

Exhibit 8-4 shows the U.S. annual unemployment rate from 2005 through 2010. The annual average unemployment rate declined from 5.1 percent in 2005 to 4.6 percent in 2006 and 2007, and then rebounded to 5.7 percent in 2008. The national unemployment rate is expected to climb to 9.3 percent in 2009 and climb to 10.1 percent in 2010.

Exhibit 8-5 shows the annual growth of the U.S. Consumer Price Index (CPI) from 2005 through 2010. The CPI annual growth rate decreased from 3.4 percent in 2005 to 2.8 percent in 2007. CPI annual growth jumped to 4.1 percent in 2008. It is expected that the growth will drop to 1.7 percent in 2009 and 1.6 percent in 2010.

RTA Region

The following sections summarize population and employment trends in the six-county RTA region. These trends have a significant impact on public transportation ridership, as well as sales tax revenue.

Population

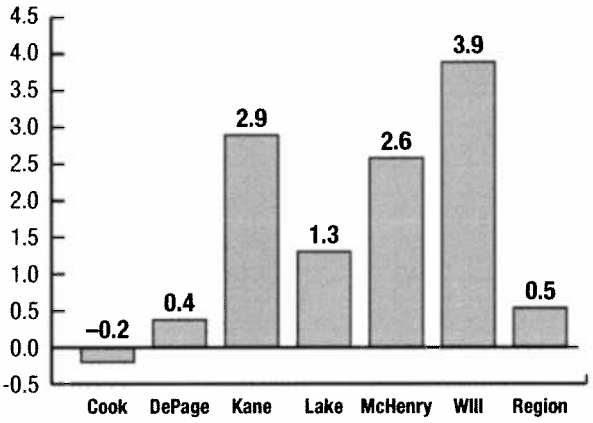
As shown in Exhibit 8-6, the population of the RTA region grew by 4.4 percent (from 8.1 million to 8.4 million) between 2000 and 2008. Population growth in the RTA region grew at a slower pace than the overall population of the United States, which increased by 7.9 percent during this period.

Exhibit 8-6: **Population Trend by County** (in thousands)

	1990	2000	2008	% Change
Cook	5,105	5,377	5,295	-1.5%
DuPage	782	904	931	2.9%
Kane	317	404	508	25.6%
Lake	516	644	712	10.6%
McHenry	183	260	319	22.5%
Will	357	502	681	35.6%
Total	**7,261**	**8,092**	**8,445**	**4.4%**

Source: United States Census Bureau

Exhibit 8-7: **RTA Region Population Annualized Growth Rates 2000-2008** (in percent)

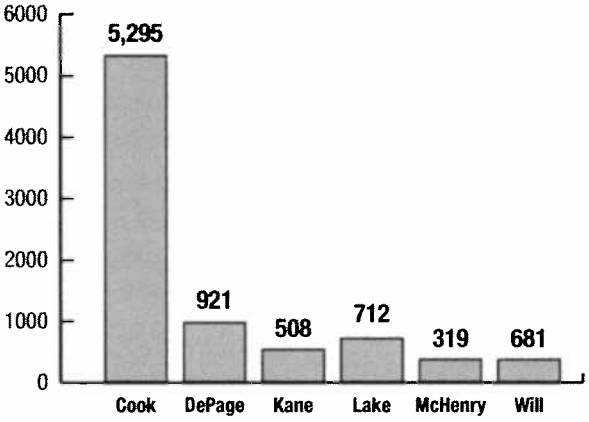


Source: United States Census Bureau

Since 1990, most of the region's population growth has occurred in the suburbs. Exhibit 8-7 illustrates the annualized population growth rates for each of the region's six counties between 2000 and 2008. The highest growth rate occurred in Will County, where the population increased at annual rate of 3.9 percent. The population of Kane and McHenry counties grew at annual rates of 2.9 percent and 2.6 percent, respectively. While the population of Lake and DuPage counties increased at annual rates of 1.3 percent and 0.4 percent, respectively. Cook County experienced a decline in population at an annual rate of 0.2 percent. During this 8-year period, the population of the entire RTA region grew at an annual rate of 0.5 percent.

In 2008, Cook County accounted for 63 percent of the 8.4 million people living in the RTA region. DuPage County's population comprised 11 percent of the region, followed by Lake County and Will County (8 percent each), Kane County (6 percent),

Exhibit 8-8: **RTA Region Population Distribution by County - 2008**



Source: United States Census Bureau

and McHenry County (4 percent). The population distribution for 2008 is illustrated in Exhibit 8-8.

Employment

Exhibit 8-9 provides a comparison of the national unemployment rate, the unemployment rate in the State of Illinois, and the unemployment rates in each of the counties of the RTA region from 2005 to 2009. Between 2005 and 2008, the unemployment rate in Illinois increased from 5.7 percent to 6.5 percent. In November 2009, the State-wide unemployment rate of 10.9 percent was 0.9 percentage points higher than the national unemployment rate of 10.0 percent.

Between 2005 and 2009, the Illinois state-wide unemployment rate exceeded those of most of the counties of the RTA region except Cook and Lake. Among the six counties in the RTA region, DuPage County's November 2009 unemployment rate of 8.6 percent was the lowest in the region, while Lake

County's rate of 10.7 percent was the highest in the region.

Suburban jurisdictions have led the region in employment growth since 1980. In 2000, employment in the five collar counties accounted for one-third of the RTA region's total. Cook County, which in 1980 accounted for 79 percent of the region's employment, accounted for only two-thirds of employment in 2000. Regional employment has increased from 3.7 million in 1980 to 4.3 million in 1990 and to 5.0 million in 2000 (Exhibit 8-10).

The trends in employment by economic sector in the RTA region are illustrated in Exhibit 8-11. Between 1980 and 2000, the most growth has occurred in the service sector. The manufacturing sector experienced the greatest loss during this period. In 2000, services comprised 34 percent of employment, retail trade 15 percent, manufacturing 13 percent, government 11 percent, and finance, insurance, and real estate 10 percent. Combined, wholesale, transportation and public utilities, construction, and other comprised the remaining 17 percent.

The RTA region experienced steady growth in per capita income from 1980 to 2000. Within the region, per capita income was highest in DuPage and Lake Counties in 2000 and lowest in Kane and Will counties, as illustrated in Exhibit 8-12.

Sales Tax Trends

In April 2008, the RTA sales tax increased from the equivalent of one percent on retail sales in Cook County and one quarter percent on retail sales in the collar counties to the equivalent of one and one quarter percent on retail sales in Cook County

and one half percent on retail sales in the collar counties. Also in 2008, a real estate transfer tax of three tenths of one percent was imposed in the City of Chicago to fund the CTA. Sales tax collections grew from $614 million in 1999 to $650 million in 2000. However, between 2000 and 2003, sales tax collections fluctuated between $648 and $655 million. From 2004 to 2006, sales tax collections increased from $676 million and $747 million. In 2008, sales tax collections increased 22.4% from $753 million to $921 million, due to the April 2008 sales tax increase. The percentage of sales tax collected by Cook County decreased from 84% in 2007 to 78% in 2008 (Exhibit 8-13 and 8-14).

Ridership Trends

Total RTA ridership increased annually from 1998 to 2001 despite a decline in Pace ridership during this period. Reflecting the overall downturn in the economy, total RTA ridership declined in both 2002 and 2003. Metra and Pace lost riders in 2002, while all three Service Boards lost riders in 2003. Regional ridership changed little from 2003 to 2004 reflecting stagnant ridership on all three Service Boards. In 2005, however, all three Service Boards achieved significant ridership gains as the economy rebounded and gas prices climbed. Albeit at a slower rate, regional ridership continued to grow in 2006 and 2007. In 2008 ridership grew 4.9% representing the largest percentage of growth in the past ten years (Exhibit 8-16). Other trends include Service Board Expenditures (Exhibit 8-17 and 8-18), Service Board farebox revenues (Exhibit 8-19 and 8-20) and System Characteristics (Exhibit 8-21).

Letter from the Executive Director

The economic recession continues to challenge funding levels for public transit in northeastern Illinois. Reductions in consumer spending since late 2008 have drastically reduced revenues from the RTA sales and real estate transfer taxes and State matching funds, our largest sources of transit funding in our region. Despite recent improvements in the national and regional economy, tax revenues remain well below levels expected prior to the recession. Moreover, the State's fiscal condition has delayed funding to the RTA, running approximately $250 million in arrears on a monthly basis. The RTA has had to borrow funds to bridge these funding delays.

The RTA, CTA, Metra, and Pace have taken measures to continue operating service at these lower than previously anticipated funding levels. Despite service reductions and high levels of unemployment, overall ridership in 2010 is expected to decline less than 1% from 2009 and to begin to recover in 2011. While recent increases in motor fuel prices will further challenge our budgets, higher prices at the gas pump will steer motorists towards transit. We anticipate that many of these new passengers will remain on our buses and trains even if oil prices recede.

The RTA remains diligent in implementing the recommendations of the Auditor General. The RTA continues to work with the CTA, Metra, and Pace on performance measurement programs that will improve the efficiency and effectiveness of public transit service in our region. In cooperation with municipal, county, and state planning and transportation professionals and elected officials, the RTA is developing a set of strategic regional measures to track progress towards the goals outlined in the RTA strategic plan.

The RTA supports efforts to increase accountability and transparency of all of the transit agencies in our region. Recent State legislation will bring oversight of the RTA, CTA, Metra, and Pace under the jurisdiction of the Executive Inspector General and Executive Ethics Commission in July 2011. In 2011, the RTA will perform an initial risk assessment of the region's transit agencies in order to develop an effective multi-year audit work plan. This assessment will determine which areas, programs, and functions could most benefit from a review of policies, procedures, and performance.

Finally, beginning in 2011 the RTA will be leading an interagency task force to advance a collective vision for public transit in northeastern Illinois. Interdisciplinary teams, each with representatives from the RTA, CTA, Metra, and Pace, will pursue key priorities in order to improve efficiency, reduce costs, and increase revenues of the regional public transit network. These priorities include the areas of Strategic Capital Investment, Economies of Scale, Maximize System Use, Enhanced Customer Experience, and Marketing Coordination.

The RTA appreciates your continued support and confidence. I look forward to another year of safe, reliable, affordable, and convenient public transportation in the Chicago metropolitan area.

Sincerely,

Joseph G. Costello
Executive Director

Guide

The outline below is presented as a guide to the organization of the RTA 2011 Budget, Two-Year (2012-2013) Financial Plan, and Five-Year (2011-2015) Capital Program. In reading this document it is important to note that the information provided reflects the Region's funding and service conditions when the RTA Board adopted Ordinance 2010-121 on December 16, 2010, which approved the 2011 budgets and 2012-2013 financial plans of the Service Boards, the Agency, and the Region as a whole. It is also important to note that the funding marks (public funds to cover operating deficits) for each Service Board were set on September 15, 2010. The Service Boards include the Chicago Transit Authority (CTA), Metra commuter rail, Pace suburban bus, and Pace regional ADA Paratransit service. The book is divided into the following eight sections.

1. **Introduction** provides a list of the members of the RTA Board of Directors, a letter from the RTA Executive Director explaining the key points of the 2011 budget, a guide to the overall structure of this document, key budget issues, RTA's Vision and Goals, Governance including the 2011 budget ordinance (2010-121), and the 2010 GFOA Distinguished Budget Presentation Award.
2. **Budget in Brief** provides a snapshot of the RTA's role and summarizes the key elements of the 2011 budget.
3. **RTA** section is divided into four major categories: Region Operating Plan (RTA, CTA, Metra, and Pace Suburban Service and ADA Paratransit Service consolidated budget and plan); Agency Operating Plan (budget and financial plan); Goals and Performance Measures; and References (RTA bonds and fund types).
4. **CTA** information includes service characteristics, operating plans, budget and financial plan details, and organizational structure.
5. **Metra** section includes service characteristics, operating plans, budget and financial plan details, and organizational structure.
6. **Pace** information is divided into two operations – Suburban Service and regional ADA Paratransit Service. Information about both operations includes service characteristics, operating plan, budget and financial plan details, and organizational structure.
7. **Capital** provides an overview and details of the capital program of each of the Service Boards (CTA, Metra, and Pace) and the capital impact on operations.
8. **Appendices** include the budget call calendar, budget hearing schedule, glossary, and supplemental ridership, sales tax, and demographic data.

Service, Operations and Capital Funding Issues

During the planning cycle, the region faces a number of crucial issues:

2010 Service Cuts

Effective February 7, 2010 both the CTA and Pace implemented service reductions. The CTA reduced bus service 18% and rail service 9% by reducing service frequency on 110 routes, reducing service spans on 41 routes, and eliminating nine express routes with matching local routes. Pace eliminated 15 bus routes, cut weekend service on nine, and reduced service on nine others.

Operations Funding with Capital Transfers

In 2011, the RTA will transfer more than $250 million of federal capital funds from the already strapped capital program to operations in order to sustain fare and service levels. In the 2011, 2012 and 2013 plans the CTA will require $196.2 million, $57.8 million, and $70.0 million, respectively, of federal funds to meet its operations funding needs, despite a projected 18.8 percent increase in passenger revenue in 2012. To meet its operations funding needs, Metra requires $60.0 million of federal funds in 2011, followed by $25.0 million in 2012 and 2013. Pace projects that Suburban Service operations will require $2.0 million, $3.1 million, and $4.7 million of federal capital funds in 2011, 2012, and 2013, respectively. Transfers of scarce capital resources to fund operations exacerbate capital shortfalls. While helping to maintain fare and service levels, reduced capital funding over the long term will add to increases in operating costs.

ADA Deficit Growth and Funding

The ADA paratransit fund established by the 2008 funding and reform legislation has not been sufficient to fully fund this growing service. In 2011, the RTA will need to supplement the ADA paratransit fund with $8.5 million of dedicated State funds and by redirecting most, if not all, of the $9.2 million Innovation, Coordination, and Enhancement (ICE) fund. After two years, the State funds for ADA Paratransit will cease in 2011. In 2012 and 2013, the ICE fund, estimated to average under $10 million each year, will not be sufficient to cover the gap of $20.6 million and $24.6 million, respectively, between the ADA paratransit fund and the projected ADA paratransit deficit.

Expense Growth

From 2011 to 2013, the combined CTA, Metra, Pace Suburban Service, and Pace ADA Paratransit Service expenditures are projected to increase at a compound annual growth rate of 2.5 percent, slightly slower than the projected 3.0 percent annual sales tax growth. However, Service Board deficits have historically grown faster than the RTA sales tax and the State Public Transportation Fund (PTF), the primary sources of operations funding. As a result, large amounts of federal funds, traditionally reserved for capital projects, will required to fund Service Board operations for the foreseeable future. Moreover, the CTA will require $50.0 million and $63.0 million of plan balancing actions in 2012 and 2013, respectively, to meet its operations funding needs, despite a projected $18.8% increase in passenger revenue in 2012. The Pace ADA paratransit service budget and plan require balancing actions of $9.2 million, $20.6 million, and $24.6 million in 2011, 2012, and 2013, respectively.

State Operations Funding Delays

Concern about the State's financial condition persists. The State continues to postpone funding to the RTA and is running approximately $300 million in arrears on a monthly basis. To cover this shortfall the RTA has borrowed funds.

State Capital Funding

The Governor has announced the initial phase of the Illinois Jobs Now capital program of $443 million and funds have started to flow. However, concern remains about the entire State capital

program of $2.7 billion because the State has yet to establish a revenue source to fund the $900 million Jumpstart portion of the program.

Although an Appellate Court decision declared appropriations for the Jobs Now capital program unconstitutional, we believe that bond funds previously issued will be sufficient and will be made available to cover existing obligations while the matter is being resolved. We have assumed that the legal issues will be resolved favorably either though action by the Illinois Supreme Court or by legislative action by the General Assembly no later than May 2011. However, if the State is unable to release any additional funds before the end of May, there will be serious impacts on existing obligations and the 2011 Capital Program.

Historically, the State has provided capital funding in five year programs approximately every ten years. After the current State program is exhausted in 2014, capital funding levels drop to dangerously low levels. The RTA system is in need of a dedicated source of capital funding.

Impact of the Recession on Anticipated Operations Funding Growth

Looking ahead in 2007, when legislative funding and reform legislation that would result in P.A. 95-0708 was emerging and the economy was expanding, public funding subsidies from sales tax, public transportation funds, and the City of Chicago's real estate transfer tax were projected to add more than $530 million for bus, rail and ADA Paratransit services. The budget for 2011 now shows figures that significantly below prior projections: 19% for the sales tax and PTF in place before the legislation and 34% for revenues provided by the new legislation. Combined, the sales tax and PTF budgets for 2011 are 24% or nearly $400 million below prior projections. Moreover, the unanticipated requirement to provide free rides on mainline service to all seniors and some people with disabilities has further reduced the benefit of the increase in funding that has been realized.

Uncertainty about Federal Funding Growth

The RTA anticipated that federal funds would grow 4% in 2011, reflecting the long term historical trend in federal formula funding to the region. However, a congressional proposal would reduce 2011 federal appropriations to 2008 levels, a $33.6 million or 8% reduction from the amount previously projected.

With a combined asset value of $36.4 billion and an average useful life of 25 years, approximately $1.4 billion in constant dollars should be spent annually just to maintain the RTA system and keep it in the current condition without any funding for system expansion. Since funding has not been available, major overhauls and replacements of aging vehicles have been delayed. Slow zones, less reliable service, and increased operating costs (fuel, labor, and materials) have resulted.

Debt as a Percentage of Capital Funding

Service Board bonding has provided additional capital funding for many projects over the last ten years. However, since debt service requirement are often paid out of federal formula funds, a significant percentage of future funding is committed and, therefore, not available for future capital needs. A proper balance between addressing immediate needs and meeting longer term requirement must be determined.

Strategic Plan, Vision Statement, and Goals

In 2007, the Regional Transportation Authority released its five-year strategic plan, *Moving Beyond Congestion,* that presented the RTA's 30-year vision for maintaining, enhancing, and expanding public transit system in northeastern Illinois which provides two million rides each weekday and hundreds of thousands more on weekends.

The RTA, CTA, Metra, and Pace vision for the region is a world-class public transportation system that is convenient, affordable, reliable and safe, and

is the keystone of the region's growing business opportunities, thriving job market, clean air and livable communities. The four agencies share the following goals:

I. Provide Transportation Option
II. Ensure Financial Viability
III. Enhance Livability and Economic Vitality
IV. Demonstrate Value

Governance

The RTA was established in 1974 upon approval of a referendum in its six-county northeastern Illinois region. The operating responsibilities of the RTA are set forth in the RTA Act. The RTA is a unit of local government, body politic, political subdivision and Municipal Corporation of the State of Illinois.

As initially established, the RTA was an operating entity responsible for providing day-to-day bus and rail transportation services as well as a planning and funding agency. However, in 1983, the Illinois General Assembly reorganized the structure and funding of the RTA. The reorganization placed all operating responsibilities with three Service Boards—the Chicago Transit Authority (CTA) and two operating divisions of the RTA, a Commuter Rail Division (Metra) and a Suburban Bus Division (Pace)—each with its own independent board of directors. These divisions conduct operations and purchase service from private carriers. The RTA became exclusively responsible for funding, financial oversight, and regional planning and programs.

In reviewing this document it is important to note that the Service Boards operate within the RTA region, but are separate legal entities. The Board of Directors of each Service Board is completely independent of the RTA Board. The RTA Board controls neither the selection nor the appointment of any Service Board director or its management. Furthermore, directors of the CTA, Metra and Pace are excluded from serving on more than one entity's board of directors, including that of the RTA.

The corporate authority and governing body of the RTA is the 16-member RTA Board of Directors. Fifteen directors are appointed from within the six-county region: five directors by the Mayor of the City of Chicago, one director by the president of the Cook County Board; four directors by the suburban members of the Cook County Board; and one director each from DuPage, Kane, Lake, McHenry and Will appointed by the Chairman or Executive of the County Board. The chairman of the RTA Board, its 16th member, is elected by at least 12 of the 15 appointed members.

To administer the Agency's statutory requirements, the Board hires officers and staff. One of its officers, who must be approved by the Board, is the Executive Director. The Executive Director executes the Board's policy decisions and staffs the Agency to carry out its mission and goals.

The RTA Act sets forth detailed provisions for the allocation of receipts by the RTA to the Service Boards, and imposes a requirement that the RTA's system as a whole (apart from ADA Paratransit service) achieves an annual "system-generated revenue recovery ratio" (i.e., aggregate income for transportation services provided) of at least 50 percent of the cost of the operation of transportation services other than ADA Paratransit service. The Service Boards achieve their required recovery ratios by establishing fares and related revenue to cover the required proportion of their proposed expenditures. By statute, the recovery ratio for ADA Paratransit service has been set at 10%. The RTA is responsible for supervising the budgets and financial performance of the CTA, Metra, and Pace.

The Service Boards are considered fiscally independent of the RTA. Although the RTA reviews the budgets of the CTA, Metra and Pace, approval of the budgets is mandated by State statute if such budgets meet specified recovery ratios.

The Service Boards maintain separate management, exercise control over all operations

(including the passenger fare structure), and are accountable for fiscal matters including ownership of assets, relations with federal and state transportation funding agencies, and the preparation of their operating budgets. They are also responsible for the purchase of services and approval of contracts relating to their operations.

The CTA, Metra and Pace provide services to different geographic areas within the six-county region. The CTA provides rail and bus service to the City of Chicago and 40 nearby suburbs within Cook County. Metra provides transit service to the six-county area, with the majority of the transit riders residing in the suburbs and commuting to the City of Chicago. Pace's primary service area for bus, dial-a-ride, and vanpool service in the suburbs of the six-county region, with service to areas within the City of Chicago. Pace is also responsible for region-wide ADA Paratransit service.

The RTA Act establishes the RTA as the primary public body with authority to apply for and receive grants, loans, and other funds from the state or the federal government for public transportation programs in Cook, DuPage, Kane, Lake, McHenry and Will counties ("northeastern Illinois"). The RTA is responsible for the allocation of certain federal, state and local funds to finance both the operating and capital needs of public transit in the six-county region.

The Act confers upon the RTA Board powers to prescribe regulations requiring that the Service Boards submit to the RTA such information as the RTA may require. The Board has statutory authority to establish by rule or regulation financial, budgetary, or fiscal requirements for the system.

In addition to its annual budget and financial plan responsibilities, each year the RTA is required to prepare and adopt a Five-Year Capital Program. The RTA also conducts market research and coordinates planning for public transportation in northeastern Illinois. The RTA funds the development of new types of service, both in the suburbs and in the City of Chicago, on a demonstration basis.

Budget Process

As previously discussed, the Act requires that the RTA Board of Directors approve an annual budget, a two-year financial plan, and a Five-Year Capital Program. The budget calendar and statutory oversight and budget amendment requirements govern this process. The essential aspects of the budget calendar are outlined below. A detailed calendar is provided in the Appendices (Exhibit 8-1).

Budget Calendar

By July 1 of each year, the Office of Management and Budget (OMB) is to submit to the RTA an estimate of revenue to be collected from taxes for the next fiscal year.

Between April and September of each year the RTA and the Service Boards execute a "business plan call process" that includes RTA estimates of revenue to be collected from taxes and other sources and the Service Boards' own preliminary estimates for the capital plan and operating revenues and expenditures during the planning period.

Based on this information and its own economic assessments, the RTA estimates tax receipts and revenue from other sources. "The Board shall, not later than September 15 prior to the beginning of the Authority's next fiscal year," advise each Service Board of the amounts estimated to be available during the upcoming fiscal year and following two years. The Board is also required to advise the Service Boards of the times when the amounts will be available and the next year's recovery ratio.

Between September 15 and November 15, each Service Board must prepare and publish a comprehensive annual budget, program document and a two-year financial plan. "The proposed budget and financial plan shall be based on the

RTA's estimate of funds to be available to the Service Boards, by or through the Authority, and shall conform in all respects to the requirements established by the Authority." Before submitting the budget to the RTA, the Service Boards must hold at least one public hearing in each of the counties in which it provides service and must hold at least one meeting with the affiliated county boards. After considering the comments from these meetings, it must formally adopt the budget prior to submitting it to the RTA on November 15. The RTA Act requires that the budgets submitted by each Service Board not project or assume receipt of revenue greater than that set in the estimates provided by the RTA.

The RTA must then hold at least one public hearing in the metropolitan region and one meeting with each county board on the proposed budget. Twenty days prior notice is required for the public hearing. The public hearing notice and results for the 2011 budget may be reviewed in the Appendices Section (Exhibits 8-2.1 and 8-2.2).

After conducting these hearings and taking into consideration the comments, the RTA Board must adopt (with 12 votes) a budget that meets the statutory criteria. If the RTA does not find that a Service Board budget meets the criteria set forth under the Act, the Board shall, five working days after the start of the Service Board's fiscal year, adopt a budget and financial plan meeting these criteria. The RTA, CTA, Metra, and Pace all report on a calendar-year basis.

Statutory Requirements

The RTA Act sets forth seven statutory criteria for Board approval of the budget and financial plan of each Service Board. These seven criteria are as follows:

Balanced Budget

Such budget and plan shall show a balance between (a) anticipated revenue from all sources, including operating subsidies, and (b) the costs of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness.

Cash Flow

Such budget and plan shall show cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenditures as incurred.

Recovery Ratio

Such budget and plan shall provide for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of such Service Board which allow the Service Board to meet its required recovery ratio.

Assumptions

Such budget and plan are based upon and use assumptions and projections, which are reasonable and prudent.

Financial Practices

Such budget and plan shall be prepared in accordance with sound financial practices as determined by the RTA Board.

Strategic Plan

Such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan

Other Requirements

Such budget and plan shall meet such other financial, budgetary, or fiscal requirements that the RTA Board may by rule or regulation establish.

Oversight

After adoption of the operating budget, the RTA Board has continuing oversight powers concerning the budget and the financial condition of each Service Board and region as a whole.

The RTA monitors the budgetary and operations performance of the Service Boards on a monthly basis to ensure compliance with their budget and recovery ratio. On a quarterly basis, the following oversight is conducted:

- After the end of each fiscal quarter, each Service Board must report to the RTA "it's financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction" for that quarter. If in compliance, the RTA Board so states and approves each Service Board's compliance by adopted resolution.
- If "in the judgment of the Board" these results are not substantially in accordance with the Service Board's budget for that period, "the Board shall so advise the Service Board" and it "shall, within the period specified by the Board, submit a revised budget incorporating such results."
- Once a Service Board submits the revised budget plan, the RTA must determine if it meets the seven statutory budget criteria necessary to pass an annual budget. If not, the RTA does not release any moneys to the Service Board(s) except for the statutory allocation of taxes.
- If a Service Board submits a revised budget and plan which shows that the statutory budget criteria will be met "within a four quarter period," the RTA "shall continue to release funds to the Service Board." The RTA may require the Service Board to submit a revised budget and plan that shows that the budget criteria "will be met in a time period less than four quarters."

Amendment

When prudent, the operating budget is amended due to shifts in the economic climate, governmental funding programs or new projects. Depending on the type of request, the proposed amendment may be presented to one or more of the RTA Board Committees for approval. However, the Board's Finance Committee must approve all proposed amendments before they are recommended to the RTA Board. The RTA Board ultimately approves or disapproves all proposals. If approved, the RTA and Service Board budgets are amended to include all changes and actual results and are then monitored against the amended budget.

Operations Funding

The RTA provides operating funds to each Service Board equivalent to its budgeted deficit for the year as opposed to funding the actual deficit. This policy encourages cost efficiencies by the Service Boards and allows them to retain any budgeted funds that are not expended. Such funds are generally referred to as a positive budget variance, or PBV. However, due to the economic downturn, this practice of funding at budget has been suspended for 2010 and 2011 fiscal years.

Fund Balance

In 1998, the RTA Board adopted an ordinance establishing a minimum level on the unreserved and undesignated fund balance. The ordinance affirms that the annual budget adopted by the RTA each year will reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for that year. If actual sales tax receipts or other RTA revenue falls short of the amounts reflected in the annual budget, then the succeeding year's annual budget and two-year financial plan will provide for the replacement of any shortfall in the unreserved and undesignated balance of the RTA general fund, by no later than the end of the three-year planning period.

The RTA established this policy to maintain financial stability in order to carry out the RTA's legislative mandates to plan, fund and oversee public transportation in the region. The purpose

of the ordinance was to formalize a practice of maintaining a level of financial resources available for funding during unfavorable economic periods. Deferred for the 2010 budget and 2011–2012 financial plan because of the economic downturn, this practice has been resumed for the 2011 budget and 2012–2013 financial plan.

Financial Policies

Capital Expenditure

The Five-Year Capital Program is adopted by the RTA after affirmative vote of at least 12 RTA Directors, after consultation with the Service Boards, and after holding a minimum of 3 public hearings in Cook County and one public hearing in each of the other counties in the metropolitan region. Preparation of the RTA's capital budget is guided by the following policies found in the RTA Act.

The Five-Year Capital Program is updated annually. Each capital improvement to be undertaken by or on behalf of a Service Board should meet the criteria set in the Strategic Plan and be consistent with any sub-regional or corridor plan adopted by the RTA.

In reviewing proposals for improvements to be included in a Five Year Capital Program, the RTA may give priority to improvements that are intended to bring public transportation facilities into a state of good repair.

The Five-Year Capital Program shall also identify capital improvements to be undertaken by a Service Board, a transportation agency, or a unit of local government and funded by the Authority from amounts in the Innovation, Coordination, and Enhancement Fund, provided that no improvement that is included in the Five Year Capital Program as of the effective date of this amendatory Act of the 95th General Assembly may receive funding from the Innovation, Coordination, and Enhancement Fund.

Fixed Assets

The RTA sets a fixed asset capitalization threshold of no less than $5,000 for any capital item(s). Capital assets are recorded at historical cost (or fair market value at the time of donation, if donated) and have a useful life of at least two years following the date of acquisition. Any acquisitions during the year are considered acquired at the beginning of that year for the purpose of computing depreciation.

Description	Useful life
Furniture and Equipment	5 years
Computer Equipment	5 years
Leasehold improvements	Life of the lease

General Obligation Bonds

The RTA's policy states that bonds should be payable from all revenue and all other funds received or held by the RTA that lawfully may be used for retiring the debt. Exceptions to this are amounts in the Joint Self-Insurance Fund (JSIF) and amounts required to be held or used with respect to separate ordinance obligations. The bonds are secured by an assignment of a lien on the sales taxes imposed by the RTA. All sales tax receipts are to be paid directly to the trustee by officials of the State of Illinois. In addition, the RTA sales tax must be 2.5 times greater than the debt service requirement. If, for any reason, the RTA has not made the required monthly debt service payment, the trustee is to deduct it from the receipts. If all payments have been made, the funds are made available to the RTA for regular use. Under the Act, the CTA, Metra and Pace fare box receipts and funds on hand will not be used for payment of debt service.

Investment

The RTA's policy complies with Illinois law, addresses safety of principal, liquidity of funds,

rate of return, public trust, and investments in local and disadvantaged institutions. It further permits investments and prescribes safekeeping, collateralization, and reporting requirements.

The RTA policy establishes the following objectives:

- Safety of Principal – Every investment will be made with safety as the primary and overriding concern. Each investment transaction shall ensure that loss of capital, whether from credit or market risk, is minimized.
- Liquidity – Maturity and marketability aspects of investments should be coordinated with the anticipated cash flow needs of the RTA
- Rate of Return – A secondary objective is to seek the highest return on investments consistent with preservation of principal and prudent investment principles.
- Public Trust – The RTA and its officers should avoid any investment transaction or practice which in appearance may impair public confidence in its stewardship of public funds.
- Investments in Local and Disadvantaged Institutions – Locally owned and disadvantaged business financial institutions contribute to economic development of the RTA service area. The RTA recognizes its interest in the vitality of the local economy by investing in local, minority, and female (if any) owned financial institutions.

Operating Budget

The RTA operating budget and two-year financial plan approval process is based on the following guidelines:

- Adoption requires an affirmative vote of at least 12 RTA Directors following at least one public hearing in the metropolitan region and meetings with the county board or its designee of each of the several counties in the metropolitan region.
- The Service Boards (CTA, Metra, and Pace) prepare and publish, for public hearing and comment, a comprehensive budget document that is to conform to the RTA "marks". The RTA marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the Five-Year Capital Program.
- All funds are required to balance. The total budgeted revenues must equal the sum of budgeted expenditures for each fund. Revenue sources include sales tax, state funds (e.g. Public Transportation Funds, State Financial Assistance, and Free Rides/Reduced Fare Reimbursement) and other revenue.
- The adopted budget should reflect a year-end unreserved and undesignated fund balance of its general fund equal to or greater than 5 percent of the RTA's total operating expenditures for the year. If the amount is below 5 percent, the financial plan must show full replenishment by the end of the current planning cycle.
- The combined revenue from RTA operations should cover at least 50 percent of the system operating costs. ADA Paratransit service revenues should cover at least 10 percent of the operating costs.

Ten-Year Plan

Statutorily required and a sound fiscal policy, a 10-year projection of the financial condition of public transportation in the Chicago metropolitan region supports the RTA Strategic Plan. Aligned with the RTA's goals, a long-term financial plan fosters the vision shared by the region's public transit agencies. Development of the 10-year financial plan detects financial and operational problems before they reach crisis proportions. Instead, course corrections can avoid drastic fare hikes, disruptive service cuts, and/or calls for steep funding increases. The ten-year financial plan supports the case for fare adjustments, service restructuring, and appropriate public support.

Pension Funding

The RTA, Metra, and Pace are required to contribute the amounts necessary to fund the benefits of their respective employees in the Plan using the projected unit credit actuarial method. Employer contribution and the income it earns through investments are used to operate the Plan and to pay benefits. Assets are valued recognizing a portion of both realized and unrealized gains and losses in order to avoid wide swings in actuarially determined funding requirements from year to year.

The Illinois pension code requires that if after January 1, 2009 a pension is less than 90% funded, the employer(s) must contribute to the plan amounts sufficient to bring the funding ratio up to 90% in accordance with an amortization schedule adopted jointly by the employer(s) and the trustee of the plan. The amortization schedule may extend for any period up to a maximum of 50 years and shall provide for additional employer contributions in substantially equal annual amounts over the selected period.

ORDINANCE NO. 2010-121

APPROVING THE 2011 BUDGETS AND 2012-2013 FINANCIAL PLANS OF THE SERVICE BOARDS, ADOPTING THE 2011 BUDGET AND PROGRAM OF THE AUTHORITY, APPROPRIATING FUNDS FOR THE 2011 BUDGETS, ALLOCATING CERTAIN REVENUES OF THE RTA TO THE RESPECTIVE SERVICE BOARDS, AMENDING THE CTA'S 2011-2013 OPERATING FUNDING AND ITS 2011 RECOVERY RATIO, AND TAKING CERTAIN OTHER ACTIONS WITH RESPECT TO THE BUDGET AND PROGRAM FOR FISCAL YEAR 2011.

WHEREAS, Section 4.01 of the Regional Transportation Authority Act (the "Act") directs the Board of Directors of the Regional Transportation Authority (the "RTA Board") to (i) appropriate money to perform the purposes of the Regional Transportation Authority (the "RTA") and provide for payment of debts and expenses of the RTA, (ii) take action with respect to the budget and two-year financial plan of each of the Chicago Transit Authority (the "CTA"), the Commuter Rail Division of the Regional Transportation Authority ("Metra"), the Suburban Bus Division of the Regional Transportation Authority ("Pace", and, together with the CTA and Metra, collectively, the "Service Boards" and each, individually, a "Service Board"), as provided for in Section 4.11 of the Act, and (iii) adopt an Annual Budget and Two-Year Financial Plan for the RTA that includes the annual budget and two-year financial plan of each Service Board that has been approved by the RTA;

WHEREAS, pursuant to Section 4.11 of the Act, the RTA Board adopted Ordinance 2010-92 on September 15, 2010, identifying the amounts of funds estimated to be available to each Service Board during fiscal year 2011 and the two following fiscal years;

WHEREAS, pursuant to Section 4.11 of the Act, each Service Board has presented its proposed fiscal year 2011 budget and proposed 2012–2013 financial plan to the RTA for its review;

WHEREAS, the RTA has conducted public hearings and webinars with respect to its proposed annual budget, and considered the proposed budgets and financial plans of the Service Boards and the public comments with respect to those budgets and financial plans;

WHEREAS, Section 4.11 of the Act authorizes and directs the RTA to review the budgets and financial plans of the Service Boards for approval;

WHEREAS, pursuant to Sections 4.01(a) and 4.11(d) of the Act, the budgets and financial plans of the Service Boards shall contain estimated expenses for contributions to be made with respect to pension and other employee benefits, and the Service Boards are required to present to the RTA budgets prepared in such detail as prescribed by the Board, which have been prepared on both an accrual and a cash flow basis, and that fairly present the condition of any pension plan or trust for health care benefits with respect to retirees established by the Service Board and describes the plans of the Service Boards to meet the requirements of Sections 4.02a and 4.02b;

WHEREAS, pursuant to Sections 4.02a and 4.02b of the Act, the RTA shall continually review the payment of the required employer contributions to affected pension plans and if at any time the RTA determines that a Service Board's payment of any portion of the required contributions to an affected pension plan is more than one month overdue, it shall as soon as possible pay the amount of those overdue contributions to the trustee of the affected pension plan on behalf of that Service Board out of moneys otherwise payable to that Service Board under Section 4.03.3, and the RTA shall thereafter have no liability to the Service Board for amounts paid to the trustee of the affected pension plan, and if the RTA's payment of such contributions is similarly overdue it shall pay such overdue amount out of its administrative expenses;

WHEREAS, pursuant to Ordinance 2007-48, adopted by the RTA Board on September, 14, 2007,

federal capital funds may not be used by a Service Board to fund operating expenses unless the RTA Board determines, based on adequate information supplied by the Service Board, that such use will not have a materially adverse impact on the state of repair of such Service Board's capital assets;

WHEREAS, given the adverse economic conditions and shortfall in funding needed for operations in 2011 through 2013 by the CTA, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize the CTA to transfer federal capital funds to operations for preventive maintenance in the amounts of $196.2 million in 2011, $57.8 million in 2012, and $70 million in 2013;

WHEREAS, the CTA has adopted a budget that presumes the receipt of additional RTA discretionary funds for use in operations in lieu of an equivalent amount of RTA discretionary funds for use in its capital program, and the RTA desires to provide such discretionary funding in the form of operating funding rather than capital funding;

WHEREAS, the receipt of such RTA discretionary funding as operating funding will impact CTA's recovery ratio calculation;

WHEREAS, given the adverse economic conditions and shortfall in funding needed for operations in 2011 through 2013 by Metra, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize Metra, to transfer federal capital funds to operations for preventive maintenance in the amounts of $60.0 million in 2011 and $25.0 million in 2012 and 2013;

WHEREAS, pursuant to Ordinance 2010-92, an emergency was declared with respect to 2011 funds in the ICE Fund, and such funds have been reserved for potential allocation to Pace for use in 2011 ADA Paratransit service operations, subject to certain conditions;

WHEREAS, the federal capital funds utilized for preventive maintenance in the operating budget of a Service Board are not considered operating revenues and are therefore excluded from such Service Boards' recovery ratio calculation;

WHEREAS, pursuant to Section 4.03.3 of the Act, the RTA has established public funding levels in 2011 through 2013 for the ADA Paratransit Fund, the Suburban Community Mobility Fund, and the Innovation, Coordination, and Enhancement Fund (the "ICE Fund") that change proportionately with the percentage change in RTA estimated sales tax receipts;

WHEREAS, the RTA Funding Policy states that the Service Boards may use Service Board funds from Positive Budget Variances (PBV) for "one-time finite life operating programs" and that "the Service Boards will propose the use of PBV funds for operating purposes subject to approval of the RTA Board and inclusion in the annual budget and two-year financial plan";

WHEREAS, unfavorable economic conditions have required the RTA to deplete its fund balance to provide funds to the Service Boards, and to allocate, rather than reserve, financial resources in an effort to preserve operating stability in prior years;

WHEREAS, the depletion of the RTA's fund balance prevents the RTA from providing additional operating funding to the Service Boards in the event that revenues decline below estimated levels, therefore the RTA funding policy adopted by Ordinance 91-9 (the "Fund to Budget Policy") must be waived for the 2011 fiscal year;

WHEREAS, the provision of the RTA Funding Policy adopted by Ordinance 98-15 that requires that the RTA Annual Budget and Two-Year Financial Plan show a year-end unreserved and undesignated fund balance equal to 5% of the RTA general fund by no later than the end of the three-year planning period (the "Fund Balance Policy") is hereby reinstated;

WHEREAS, the RTA will reimburse the purchase of excess liability and terrorism insurance by the RTA system's Loss Financing Plan to provide system protection against catastrophic loss;

WHEREAS, RTA working cash borrowing was used to fill shortfalls in funding provided by public subsidies to the Service Boards in 2009; and, pursuant to Section 4.09 of the Act, the proceeds of such borrowings distributed to the Service Boards are projected to be repaid in 2011 with the proceeds of subsequent working cash borrowings; and

WHEREAS, the RTA Board has determined that it is in the best interest of the RTA to take the following actions in order to carry out its powers and duties under the Act.

NOW, THEREFORE, BE IT ORDAINED BY THE BOARD OF DIRECTORS OF THE REGIONAL TRANSPORTATION AUTHORITY that:

ARTICLE I - APPROVAL OF BUDGETS AND PROGRAMS

Section One:

Service Board Budgets and Financial Plans

1.1 In compliance with the Act, the RTA has received and reviewed proposed budgets for 2011 and financial plans for 2012 and 2013, of each of the Service Boards.

1.2 With respect to the proposed budget and financial plans of the CTA (as summarized in Schedule I-B), and subject to the CTA taking budget/plan balancing actions in 2012 and 2013 as reflected in Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of CTA sufficient to allow CTA to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established;

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan; and

(h) Given the adverse economic conditions and shortfall in funding needed for the CTA's 2011 operating budget and 2012 and 2013 financial plan, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize the CTA to transfer federal capital funds to operations for preventive maintenance in the following amounts: $196.2 million in 2011, $57.8 million in 2012, and $70.0 million in 2013.

1.3 With respect to the proposed budget and financial plans of Metra (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board

fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Metra sufficient to allow Metra to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established;

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan; and

(h) Given the adverse economic conditions and shortfall in funding needed for the Metra's 2011 operating budget and 2012 and 2013 financial plan, the RTA Board determines that it is necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize the Metra to transfer federal capital funds to operations for preventive maintenance in the following amounts: $60.0 million in 2011, $25.0 million in 2012, and $25.0 million in 2013.

1.4 With respect to the proposed budget and financial plan submitted by Pace for Suburban Service (as summarized in Schedule I-B), the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established;

(g) Each such budget and plan is consistent with the goals and objectives adopted by the RTA in the Strategic Plan; and

(h) Given the adverse economic conditions and shortfall in funding needed for Pace's 2011 operating budget and 2012-2013 financial plan, the RTA Board determines that it is

necessary to waive the requirements of Ordinance 2007-48 for purposes of this Ordinance and authorize Pace to transfer federal capital funds to operations for capital costs of contracting in the following amounts: $2.0 million in 2011, $3.1 million in 2012, and $4.7 million in 2013.

1.5 With respect to the proposed budget and financial plan submitted by Pace for ADA Paratransit service and subject to the budget/plan balancing actions reflected in Schedule I-B, the RTA finds as follows:

(a) Each such budget and plan shows a balance between (A) anticipated revenues from all sources, including operating subsidies and application of Service Board fund balances, and (B) the cost of providing the services specified and of funding any operating deficits or encumbrances incurred in prior periods, including provision for payment when due of principal and interest on outstanding indebtedness;

(b) Each such budget and plan shows cash balances, including the proceeds of any anticipated cash flow borrowing, sufficient to pay with reasonable promptness all costs and expenses as incurred;

(c) Each such budget and plan provides for a level of fares or charges and operating or administrative costs for the public transportation provided by or subject to the jurisdiction of Pace sufficient to allow Pace to meet or exceed its required system-generated revenue recovery ratio, as set forth in Schedule I-C;

(d) Each such budget and plan is based upon and employs assumptions and projections which are reasonable and prudent;

(e) Each such budget and plan has been prepared in accordance with sound financial practices;

(f) Each such budget and plan meets the other financial, budgetary, or fiscal requirements that the RTA has established; and

(g) Each such budget and plan is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

1.6 Pursuant to Section 4.11 of the Act, the 2011 budgets and 2012-2013 financial plans for each of the Service Boards, as presented in the attached Schedule I-B, are hereby approved.

1.7 Pursuant to Section 4.11 of the Act, no more than 30 days after each fiscal quarter, each Service Board is directed to report to the RTA its financial condition and results of operations and the financial condition and results of operations of the public transportation services subject to its jurisdiction, as of the end of and for such quarter, for review by the RTA for conformity with the approved budget for such period.

Section Two:

RTA Annual Budget and Program

2.1 The RTA has received and reviewed the 2011 Annual Budget and Program of the Regional Transportation Authority as summarized in Schedule I-A. The 2011 Annual Budget and Program are hereby approved and the Board finds as follows:

(a) The 2011 Annual Budget and Program shows a balance between anticipated revenues from all sources and anticipated expenses, including the funding of operating deficits and the discharge of encumbrances incurred in prior periods and payment of principal and interest on outstanding indebtedness when due, as summarized in Schedule I-A.

(b) The 2011 Annual Budget and Program shows cash balances sufficient to pay with reasonable promptness all obligations and expenses as incurred, as summarized in Schedule I-E.

(c) The 2011 Annual Budget and Program shows that the level of fares and charges for public transportation provided by, or under grant or purchase of service contracts of, the Service Boards is sufficient to cause the aggregate of all projected system-generated revenues from such fares and charges received in 2011, apart from ADA Paratransit services, to equal at least fifty percent (50%) of the aggregate cost of providing such public transportation in 2011, and at least ten percent (10%) for ADA Paratransit service in 2011, as required by the Act, and as summarized in Schedule I-C.

(d) The 2011 Annual Budget and Program are based on and employ assumptions and projections which are reasonable and prudent.

(e) The budgeted "administrative expenses" of the RTA for 2011, as defined in Section 4.01(c) of the Act, do not exceed the maximum administrative expenses (Statutory Cap) permitted for 2011 of $17,778,221.

(g) The 2011 annual budget and program is consistent with the goals and objectives adopted by the Authority in the Strategic Plan.

ARTICLE II - APPROPRIATION OF FUNDS AND CERTAIN OTHER ACTIONS

Section One:

Appropriation for each Service Board

The following amounts for 2011 are appropriated for payment to each Service Board from the enumerated sources of funds and for the specified objects and purposes.

1.1 Statutory RTA Taxes

There is appropriated from the taxes collected under Section 4.03, to each Service Board for expenditure pursuant to the 2011 Budget approved for such Service Board in Article I, the amount required by Section 4.03.3(a) and 4.03.3(b). The estimated amount of each appropriation is specified as Part I Sales Tax Allocation on Schedule I-D.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified appropriation.

1.2 Statutory RTA Sales Taxes and Public Transportation Funds

(a) There is appropriated from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts received pursuant to Section 4.09 of the Act, to Pace for expenditure for ADA Paratransit Services, the amount required by Section 4.03.3(c). The estimated amount of the appropriation is specified as Part II Allocation; RTA Total for ADA Paratransit Service on Schedule I-D.

(b) There is appropriated from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts received pursuant to Section 4.09 of the Act to Pace for expenditure for Suburban Community Mobility, the amount required by Section 4.03.3(c). The estimated amount of the appropriation is specified as Part II Allocation; RTA Suburban Community Mobility Funding to Pace on Schedule I-D.

(c) There is appropriated from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts received pursuant to Section 4.09 of the Act, to the Innovation, Coordination and Enhancement (ICE) Fund the amount required by Section 4.03.3(c). The estimated amount of the appropriation is specified as Part II Allocation; RTA Innovation, Coordination

& Enhancement on Schedule I-D. The ICE Fund shall be reserved for potential expenditure by Pace for ADA Paratransit Service, subject to the conditions set forth in Ordinance 2010-92.

(d) There is appropriated from taxes imposed pursuant to Section 4.03 of the Act and public transportation fund receipts received pursuant to Section 4.09 of the Act to each Service Board for expenditure pursuant to the Budget approved for such Service Board in Article I, the amount required by Section 4.03.3(c). The estimated amount of each appropriation is specified as Part II Allocation; Remaining Balance to Service Boards in Schedule I-D.

After receipt by the RTA of the proceeds of taxes imposed pursuant to Section 4.03 of the Act, and Public Transportation Fund receipts pursuant to Section 4.09 of the Act, the Executive Director of the RTA shall provide for the payment to each Service Board the specified appropriation.

1.3 Free and Reduced Fare Reimbursement

There is appropriated, for expenditure by each Service Board pursuant to the 2011 Budget approved in Article I, amounts received from the State of Illinois for reimbursement of revenues lost from providing free or reduced fare rides.

After receipt by the RTA of such funds from the State of Illinois, the Executive Director shall provide for the payment to each Service Board its proportionate share of the proceeds estimated to be received from the State as identified on Schedule I-A.

1.4 Discretionary Funds of the RTA -- Public Transportation Fund, 15% Sales Tax, Other RTA Revenues

(a) There is appropriated, for expenditure by each Service Board pursuant to the 2011 Budget approved in Article I, the amounts specified as "RTA Discretionary Funds" and the amounts specified as "Additional State Funding" on Schedule I-B from other receipts and revenues of the RTA, or so much as may be necessary that the actual amounts appropriated for each Service Board under paragraphs 1.1 and 1.2 of this section equal the amounts specified as "Total RTA Funding for Operations" on Schedule I-B.

(b) There is appropriated, for expenditure by Pace pursuant to the amount specified as RTA South Suburban Community Job Access Funds on Schedule I-B from other receipts and revenues of the RTA.

Subject to receipt by the RTA of sufficient proceeds of taxes imposed pursuant to Section 4.03 of the Act, and from the Public Transportation Fund receipts pursuant to Section 4.09 of the Act, the Executive Director is hereby directed to provide for the payment of such funds described in paragraphs (a) and (b) as soon as may be practicable upon their receipt provided that each Service Board is in compliance with the requirements of Section 4.11 of the Act and this Ordinance.

(c) Transfer Capital: Subject to receipt by the RTA of sufficient grant proceeds from IDOT, there is appropriated, for expenditure by the CTA for capital projects, $10,200 million, consisting of grant funds from the Illinois Department of Transportation ("IDOT") pursuant to the Memorandum of Understanding ("the MOU") that RTA and the Service Boards entered into with IDOT on November 11, 2009.

(d) State Funding for ADA Paratransit Service: Subject to receipt by the RTA of sufficient grant proceeds from IDOT, there is appropriated, for expenditure by Pace for ADA Paratransit Service, $8.5 million, consisting of grant funds from IDOT pursuant to the MOU.

Upon receipt by the RTA of sufficient grant proceeds from IDOT, the Executive Director is hereby

directed to provide for payment of such funds described in paragraphs (c) and (d) pursuant to grant or intergovernmental agreements with the CTA.

Section Two:
Appropriation to the Regional Transportation Authority

In 2011 there is appropriated, for expenditure for the operating purposes of the RTA (the "Agency") the amounts specified on Schedule I-A as Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, pursuant to the 2011 Budget approved in Article I, from other receipts and revenues of the RTA.

In 2011 there is appropriated for transfer from the RTA's Fund Balance to the Joint Self Insurance Fund (JSIF), funds to reimburse the insurance premium and associated fees for liability and terrorism insurance for the RTA System's Loss Financing Plan the amount specified on Schedule I-A as RTA JSIF Funding.

The total appropriations as shown in Schedule I-A for 2011 Agency Administration, RTA Regional Services and Programs, and Regional Technology and Agency Capital, represent the legal level of budgetary control. The Executive Director is authorized to transfer up to 10% from and among each of these items.

ARTICLE III - GENERAL

Section One:
Implementation and Dissemination

The Executive Director is authorized and directed to take appropriate action to implement and enforce this Ordinance and to prepare and disseminate the 2011 Annual Budget and Program of the RTA in accordance with the Act and the policies established herein.

Section Two:
Organization of the RTA

The Executive Director shall organize the staff of the Authority, shall allocate their functions and duties, and shall fix compensation and conditions of employment. The Executive Director shall develop, and modify as may be necessary, Agency policies regarding travel, business and relocation expenses.

Section Three:
Fund Balance Policy

The provisions of the Fund Balance Policy adopted by Ordinance 98-15 are hereby reinstated for the 2011 budget and 2012-2013 Financial Plans.

Section Four:
Fund to Budget Policy

The provisions of the Fund to Budget Policy are hereby waived for the 2011 fiscal year.

Section Five:
Non-Waiver of RTA Authority

Nothing in this Ordinance is intended to or shall have the effect of (i) creating an obligation on the part of the RTA to provide funding to the Service Boards in excess of their respective statutorily allocated portions of the proceeds from taxes and State funds actually received by the RTA, nor (ii) waiving any discretion the RTA may have under law to amend the amounts appropriated to the Service Boards under the Ordinance, subject to compliance by the Service Boards with terms and conditions established by the RTA. Furthermore, nothing in this Ordinance is intended to or shall have the effect of waiving any discretion the RTA may have under law to subject to review the determinations made in this Ordinance, including, but not limited to, setting recovery ratios for the Service Boards, establishing exclusions or inclusions of certain revenues or expenditures from the calculation of

such recovery ratios, or determining the allowable uses of federal, state or local funds.

Section Six:
Executive Director's Authority to Apply for Additional Funds

The Executive Director is authorized and directed to execute and file applications on behalf of the RTA with the United States Department of Transportation ("USDOT"), Federal Transit Administration ("FTA"), the Illinois Department of Transportation ("IDOT"), and any other funding agency (collectively the "Funding Agencies") for any monies available for funding of the RTA Annual Budget. The Executive Director is authorized to furnish such additional information, assurances, certifications and amendments as the funding agencies may require in connection with such applications or the projects. The Executive Director is authorized and directed on behalf of the RTA to execute and deliver grant agreements and all subsequent amendments thereto between the RTA and the funding agencies. Further, the Executive Director is authorized and directed to take such action as the Executive Director deems necessary or appropriate to implement, administer, and enforce said agreements and all subsequent amendments thereto on behalf of the RTA.

Section Seven:
Direction to File this Ordinance with Public Officials.

The Executive Director is authorized and directed to file the 2011 Budget and Program and a copy of this Ordinance with the Governor of Illinois, the Illinois General Assembly, the Comptroller of the State of Illinois, the Mayor of the City of Chicago and the Auditor General of the State of Illinois, along with an appropriate certification that this budget and program meet the requirements of the Act.

Schedule 1-A: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in thousands)

	2011 Budget	2012 Plan	2013 Plan
System-Generated Revenue

Total Revenue	**1,391,259**	**1,418,911**	**1,458,378**
Operating Expenditures			
RTA Total Funds for CTA Operations (2)	515,458	530,827	526,361
RTA Funds available for Metra Operations	318,146	327,397	332,300
RTA Total Funds for Pace Suburban Service Operations (3)	128,854	132,578	135,791
RTA Total Funds for Pace ADA Paratransit Service (4)	101,421	95,616	98,662
RTA Funding for Innovation, Coordination, and Enhancement (ICE) (5)	9,292	9,562	9,866
State Free Rides/Reduced Fare Reimbursement/Sales Tax Interest	35,270	35,270	35,270
Agency Administration	8,032	8,193	8,356
RTA Regional Services and Programs	23,738	24,213	24,697
Total Operating Expenditures	**1,140,211**	**1,163,656**	**1,171,303**
Debt Service & Capital Expenditures			
Principal and Interest	226,058	226,703	227,737
Regional Technology and Agency Capital	1,955	1,994	2,034
Transfer Capital - Metra Funds	-	-	5,525
Transfer Capital - State Funds to CTA per MOU (6)	10,200	11,207	11,204
Total Debt Service and Capital Expenditures	**238,213**	**239,904**	**246,500**
Total Expenditures	**1,378,423**	**1,403,560**	**1,417,802**
Fund Balance			
Beginning Balance (unreserved/undesignated)	5,655	13,111	23,082
Change in Fund Balance	12,836	15,351	40,576
RTA Joint Self Insurance Fund (JSIF) Funding (7)	(5,380)	(5,380)	(5,380)
Ending Unreserved/Undesignated Fund Balance	**13,111**	**23,082**	**58,278**
% of Total Operating Expenditures	1.1%	2.0%	5.0%
Total System-Generated Revenue Recovery Ratio %	53.4%	56.8%	55.5%
ADA Paratransit Recovery Ratio %	10%	10%	10%

(1) Includes PTF on the City of Chicago Real Estate Transfer Tax (RETT). (2) Includes PTF on the City of Chicago Real Estate Transfer Tax (RETT) and RTA discretionary funds available for region-wide capital or operating initiatives transferred to the CTA for preventive maintenance in the operating budget. (3) Includes Suburban Community Mobility Funds (SCMF) and South Suburban Job Access (SSJA) funds. (4) 2011 includes additional IDOT funding of $8.5 million per MOU. (5) Further actions are required to balance the ADA Paratransit budget, which may include, but are not limited to, adjusting service, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues, including 2011 funds from the ICE Fund that may be allocated pursuant to Paragraph 8 of Ordinance 2010-92. (6) Funding from the State (IDOT) for Debt Service per MOU. (7) RTA funds to purchase excess liability and terrorism insurance to provide protection against catastrophic loss.

Total Funding	**110,662**	**116,178**	**123,237**

(1) Increases the CTA's 2011, 2012, and 2013 funding marks set by Ordinance 2010-92 in the respective amounts of $10.153 million, $9.146 million, and $9.149 million. These RTA discretionary (transfer capital) funds had been provided to the CTA in their capital program. (2) CTA and Metra Federal 5307/5309 funds transferred from their capital programs for preventive maintenance; Pace Federal 5307 funds transferred from its capital program for service under contract (Capital Cost of Contracting). (3) RTA working cash borrowing to fill shortfalls in funding provided by public subsidies in 2009. Pursuant to Section 4.04 of the Act the borrowing is projected to be repaid in 2011 with subsequent working cash borrowing. (4) Further actions are required to balance the CTA financial plan in 2012 and 2013, which may include, but are not limited to, adjusting service, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues. (5) Funds that exceed the operating deficit of a Service Board (except for ADA Paratransit service) are retained by the Service Board and reserved for the capital program unless approved for operating use by the RTA Board. The amount retained by Metra in 2013 is $5.525 million of statutory funds identified as Transfer Capital - Metra Funds on Schedule 1-A. (6) Proceeds to pay ongoing operating costs (e.g. payroll, utilities, and fuel), and continuing project commitments requiring local match and/or 100% service board funds; conditions resulting from the past three years' economic downturn and state payment delays. (7) Balance of 2008 ICE funding appropriated by Ordinance 2008-28. (8) Further actions are required to balance the ADA Paratransit budget, which may include, but are not limited to, adjusting service, implementing efficiencies, reducing operating costs, and identifying additional funds or revenues, including 2011 funds from the ICE Fund that may be allocated pursuant to Paragraph 8 of Ordinance 2010-92.

Schedule I-C: **Recovery Ratio %**

	2011 Budget
CTA	
Recovery Ratio %	53.8%
Metra	
Recovery Ratio %	55.0%
Pace Suburban Service	
Recovery Ratio %	36.0%
Total System-Generated Revenue Recovery Ratio %	**53.4%**
Pace ADA Paratransit	
Recovery Ratio %	10.0%

The RTA Act allows certain expenditures to be excluded from the recovery ratio calculation including security, depreciation, CTA's pension obligation bonds, and facility leases. Metra's calculation includes capital farebox revenue. Metra and Pace calculations include part of the statutory expense exclusion which is not to exceed the respective amounts of $41.1 million and $15.0 million. The total system-generated revenue recovery ratio includes a statutory expense credit of $80 million.

Schedule 1-D: **RTA Statutory Sales Tax, Public Transportation Funds, and RETT Source and Distribution of Funds** (dollars in thousands)

Source of Funds	**2011 Budget**	**2012 Plan**	**2013 Plan**
Part I Sales Tax ("85% Sales Tax")			
City of Chicago (COC)	214,197	220,409	227,429

Total Part II - Sales Tax and RETT	**265,287**	**274,285**	**283,025**
Part II - Public Transportation Funds			
25% of new sales tax	60,322	62,071	64,048
5% total new/old sales tax & RETT	47,015	48,444	49,987
25% of RETT to CTA	6,000	6,500	6,708
Total Part II PTF	**113,337**	**117,015**	**120,743**
Total Part II - Sales Tax, PTF and RETT	**378,624**	**391,299**	**403,768**
Total Source of Funds	**1,222,390**	**1,259,534**	**1,299,657**
Distribution of Funds			
Part I Sales Tax Allocation *("85% Sales Tax")*			
RTA - 15% of Part I Sales Tax	101,252	104,188	107,507
CTA	271,850	279,734	288,644
Metra	229,294	235,943	243,458
Pace	72,617	74,722	77,102
Total Part I Sales Tax [1]	**675,012**	**694,588**	**716,711**
RTA - 100% of Part I PTF	168,753	173,647	179,178
Grand Total Part I Sales Tax & PTF	**843,765**	**868,235**	**895,889**
Part II Allocation (Sales Tax, PTF and RETT)			
RTA Total for ADA Paratransit Service	92,921	95,616	98,662
RTA Innovation, Coordination & Enhancement (ICE)	9,292	9,562	9,866
RTA Suburban Community Mobility Funding to Pace	18,585	19,124	19,733
COC RETT to CTA[2]	24,000	26,000	26,832
PTF - 25% of RETT to CTA	6,000	6,500	6,708
Total Part II Allocation before Service Board Distribution	**150,798**	**156,802**	**161,801**
Remaining Balance to Service Boards			
CTA - 48%	109,356	112,559	116,144
Metra - 39%	88,852	91,454	94,367
Pace - 13%	29,617	30,485	31,456
Total Part II Funds to Service Boards	**227,826**	**234,498**	**241,967**
Total Part II Funds Allocated (Sales Tax, PTF and RETT)	**378,624**	**391,299**	**403,768**
Total Distribution of Funds	**1,222,390**	**1,259,534**	**1,299,657**

Part I Sales Tax - Service Board Allocation Formula [1]	**City of Chicago**	**Suburban Cook**	**Collar Counties**
CTA	100%	30%	-
Metra	-	55%	70%
Pace	-	15%	30%
Total	**100%**	**100%**	**100%**

(1) The RTA Act directs 85% of these sales tax revenues to the Service Boards based on the allocation formula shown on this schedule. (2) The City of Chicago disburses RETT funds directly to the CTA; therefore these funds are excluded from RTA Revenues on Schedule I-A.

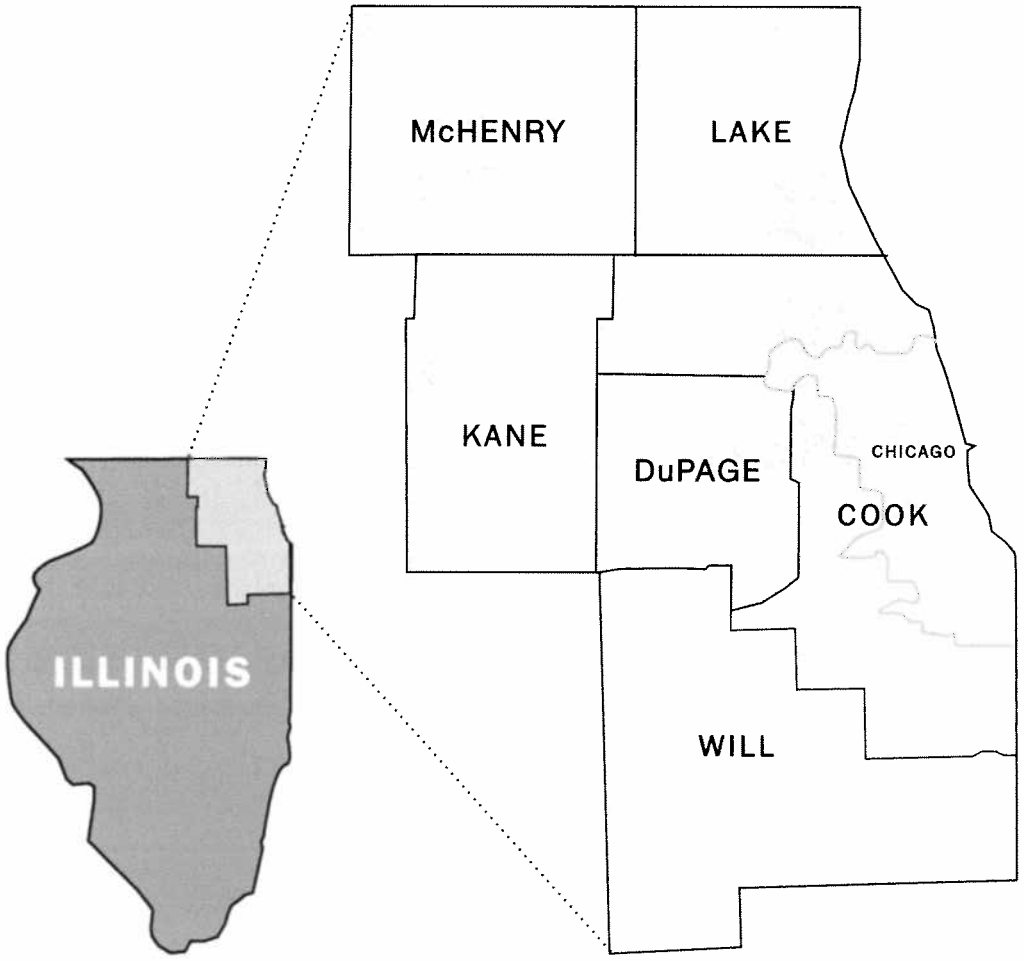
The GFOA Distinguished Presentation Award

The Government Finance Officers Association of the United States and Canada (GFOA) present an award of Distinguished Presentation to the Regional Transportation Authority, Illinois for its annual budget for the fiscal year beginning January 1, 2010.

In order to receive this award, a governmental unit must publish a budget document that meets program criteria as a policy document, as an operations guide, as a financial plan, and as a communication device.

The award is valid for a period of one year only. We believe our current budget book continues to conform to program requirements, and we are submitting it to the GFOA to determine its eligibility for another award.

2 Budget in Brief



System Overview

The Regional Transportation Authority (RTA/ Agency) provides funding, planning and fiscal oversight for regional bus and rail operations in the six-county northeastern Illinois region as set forth by the RTA Act. The Act designates the Agency as the primary public body in the region to secure funds for public transportation. The Agency is authorized to impose taxes in the region, issue debt, and is responsible for the allocation of federal, state and local funds to finance both the operating and capital needs of public transportation in the region.

The RTA Board of Directors governs the Agency. Three independent Service Boards, the Chicago Transit Authority (CTA), Metra commuter rail and Pace bus, have operational responsibility for public transportation within the six-county region and are governed by their own separate boards of directors. The CTA provides bus and rapid transit rail service in the City of Chicago and neighboring suburbs. Metra provides commuter rail service throughout the six-county region. Pace provides bus service in the suburbs and between the suburbs and the City of Chicago, and Pace provides ADA Paratransit service for the entire region (Exhibit 2-1).

Yearly, the RTA Board must adopt an annual budget, two-year financial plan and a five-year capital program for each Service Board. The principal features of this process are outlined in the following paragraphs. In September, the RTA Board approves the "marks" for each Service Board. The marks include the recovery ratio for the annual budget, operations funding for the annual budget and two-year financial plan, and the five-year capital program.

Exhibit 2-1: **RTA Organization Structure**

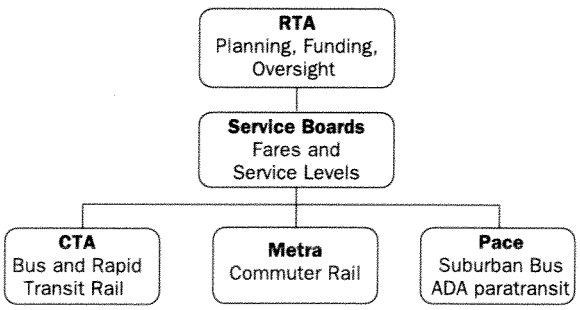


Exhibit 2-2: **Financial Relationship and Responsibilities of the RTA and Service Boards**

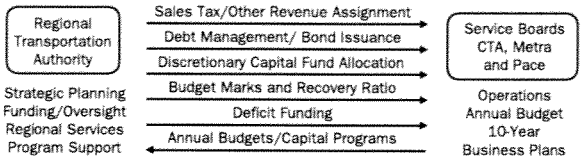


The marks guide the Service Boards' budgetary process. Each Service Board prepares and publishes, for public hearing and comment, a comprehensive budget document that is to conform to the RTA marks. After considering public comment, the CTA, Metra and Pace board members adopt their respective budgets.

In November, those budgets are forwarded to the RTA, which consolidates the Agency and the Service Board budgets into a proposed RTA budget document. The RTA Board releases this document for public hearing and comment before adoption in December.

Exhibit 2-2 illustrates the principal responsibilities and interactions between the Agency and Service Boards in the annual budget and capital program process.

Service Characteristics

There are more than 8 million residents in the six-county northeastern Illinois region, an area that covers 3,749 square miles. The RTA system includes more than 6,000 buses, rail cars and locomotives, plus over 860 vanpool vehicles serving customers on more than 350 routes through approximately 380 stations. In 2009, the regional public transportation system provided nearly 640 million trips including close to 3 million ADA Paratransit trips.

The system has a replacement value of over $42 billion (i.e. the asset value of the system's existing infrastructures excluding the CTA tunnels).

Exhibit 2-3: **RTA Statement of Revenues and Expenditures - General and Agency Funds** (dollars in thousands)

	2010 Estimate	2011 Budget
System-Generated Revenue		
RTA Sales Tax (Part I)	649,600	675,012
RTA Sales Tax (Part II)	240,875	241,287
State Public Transportation Funds - Part I (PTF)	162,400	168,753
RTA PTF (Part II)	111,343	113,337
State Financial Assistance (SFA)	123,000	123,000
State Reduced Fare & Free Ride Reimbursement	33,570	33,570
State Funding for ADA & Debt Service per MOU	13,599	18,700
RTA Agency Revenue	17,600	17,600
Total Revenue	**1,351,987**	**1,391,259**
Operating Expenditures		
RTA Total for CTA Operations	474,839	515,458
RTA Total for Metra Operations	292,100	318,146
RTA Total for Pace Suburban Service Operations	125,256	128,854
RTA Total for ADA Paratransit Service Operations	98,803	101,421
Funding for Innovation, Coordination, and Enhancement (ICE)	9,030	9,292
State Reduced Fare/Free Ride Reimbursement and Sales Tax Interest	35,270	35,270
Agency Administration, Regional Services & Programs	30,687	31,770
Total Operating Expenditures	**1,065,985**	**1,140,211**
Debt Service & Capital Expenditures		
Principal and Interest	211,165	226,058
Regional Technology and Agency Capital	3,038	1,955
Transfer Capital - Metra	17,997	-
Transfer Capital - CTA	20,353	10,200
Total Debt Service and Capital Expenditures	**252,553**	**238,213**
Total Expenditures	**1,318,538**	**1,378,424**
Fund Balance (undesignated/unreserved)		
Beginning Balance	(27,893)	5,656
Change in Fund Balance	33,449	12,835
Change in Funds Reserved	5,480	-
Use of RTA Funds for JSIF	(5,380)	(5,380)
Ending Unreserved/Undesignated Fund Balance	**5,656**	**13,111**
% of Total Operating Expenditures	0.5%	1.1%
System-Generated Revenue Recovery Ratio %	**52.1%**	**53.4%**
ADA Paratransit Recovery Ratio	10.0%	10.0%

With an average asset life of over 25 years, the RTA system needs more than $1 billion in capital funds each year just to keep the existing infrastructure in good repair.

Operating Budget

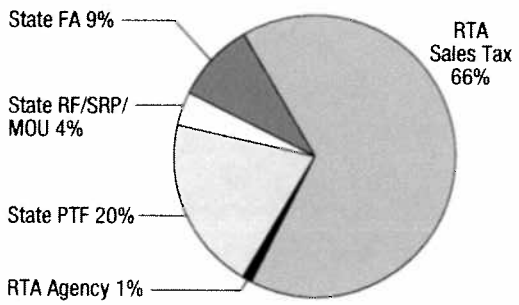
A statement of revenues and expenditures for the 2010 estimate and the 2011 budget is presented in Exhibit 2-3, and subsequent paragraphs summarize line item information. The statement of RTA revenues and expenditures from 2009 through 2013 is shown in the Region section.

Total Revenues

In 2011, total RTA revenues are projected at $1,391 million. This represents an increase of $39 million or 2.9% over the 2010 estimate of $1,352

million. RTA Sales Tax (Part I and Part II) of $916 million, account for 66% of these revenues, with receipts provided by the State's matching Public Transportation Fund (PTF) totaling $282 million or 20% of total revenues. The remaining 14% includes $123 million or 9% from a State Financial Assistance initiative to pay the debt service on RTA Strategic Capital Investment Program (SCIP) bonds issued for Service Board capital investment. The State also provides partial reimbursement for reduced fare and free ride programs (RF/FR) of over $33 million, and the State, by means of a Memorandum of Understanding (MOU) between the Illinois Department of Transportation (IDOT), the RTA, and the three Service Boards (CTA, Metra, and Pace), is providing funds for ADA Paratransit Service ($9 million), and the debt service ($10 million) on bonds issued by the RTA sufficient to provide $83 million of capital funding to the CTA. This $19 million combined with the $33 million for RF/FR totals $52 million or 4% of total RTA revenues. The remaining balance of $18 million or 1% is RTA/ Agency revenues which include receipts for sales tax interest, investment income, and grant funds for agency sponsored initiatives. Exhibit 2-4 illustrates this distribution.

Exhibit 2-4: **2011 RTA Revenue - $1,391 million**



Sales Tax and Public Transportation Funds

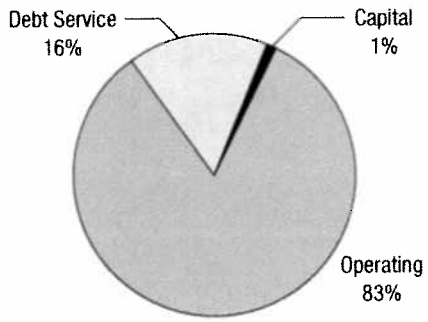
Sales Tax is the primary source of revenue for the RTA. The tax is authorized by Illinois statute, imposed by the RTA in the six-county region of northeast Illinois and collected by the state; receipts are disbursed by formulas detailed in the statue. Eighty-five percent of the sales tax (RTA Sales Tax – Part I) collected in the region, and sanctioned by statue prior to amendatory legislation in 2008, is allocated to the service boards; the RTA receives the remaining 15 percent. All receipts (RTA Sales Tax – Part II) authorized by legislation passed in 2008 are allocated for service operations and/or distinctive initiatives. The 2010 sales tax estimate and the 2011 budget year sales tax projections provided on Exhibit 2-3 were developed in August 2010, and were established after assessing state and regional economic data and national forecasts.

In accordance with the RTA ACT, the State Treasurer is authorized and required to transfer from the State of Illinois General Revenue Fund revenue identified in this document as Public Transportation Funds (PTF – Part I and Part II). PTF Part I receipts transferred are equal to 25 percent of net revenues realized from Part I Sales Tax, which flow directly to the RTA and are allocated at the discretion of the RTA Board for service and/ or capital program initiatives. PTF Part II receipts, from the amendatory legislation passed in 2008, are realized on: Part I sales Tax (5 percent), Part II sales tax (30 percent), a Chicago real estate transfer tax (RETT) 30 percent. Revenue provided by the 2008 legislation, by statute, is designated for certain operations and programs before formula distribution to the Service Boards; complete details regarding sales tax, public transportation funds, and RETT are provided in the Region Section of this document.

RTA Sales Tax (Part I) and Public Transportation Funds

The traditional RTA sales tax (identified in this document as RTA Sales Tax – Part I) has been the major source of funding for public transportation in northeastern Illinois for nearly three decades. As previously identified 85 percent of these RTA sales tax receipts are apportioned to the Service Boards by statutory formula; budgeted receipts for 2011 are $675 million.

Exhibit 2-5: **2011 RTA Expenditures** - $1,378 million



State Public Transportation Funds (PTF Part I) from Part I sales taxes are based on a formula tied to Part I sales tax results. The fund provides the RTA with a 25% match of its sales tax proceeds, which means that for every four dollars collected in Part I sales tax the RTA receives an additional dollar in PTF Part I; budgeted receipts for 2011 are $169 million.

RTA Sales Tax, PTF and Real Estate Transfer Tax – (Part II)

In 2008, State legislation increased the RTA sales tax rate throughout the region, raised the portion of RTA sales tax revenues matched by PTF, and increased the real estate transfer tax (RETT) in the City of Chicago. The revenue from RETT, which is collected by the City of Chicago, flows directly to the CTA and is not included in the RTA schedule of revenues and expenditures (Exhibit 2-3). However, PTF funds associated with RETT, by statute, flow through the RTA and are included in the RTA schedule of revenues and expenditures. The 2011 budget for Part II sales tax and PTF is $241 million and $113 million respectively.

State Financial Assistance

This revenue source is state-authorized assistance to reimburse the debt service expenses for RTA Strategic Capital Improvement Program (SCIP) bonds. Subject to the appropriation of funds by the state, the RTA will continue to be eligible to receive State Financial Assistance (SFA) payments. Projected receipts for 2010 and 2011 are $123 million.

Reduced Fare and Free Ride Reimbursement

This operating assistance is partial reimbursement from the State to the Service Boards for discounts and free ride programs mandated by law. This includes discounts to students, elderly, and disabled riders as well as free ride programs for seniors 65 and older, and any disabled person who qualifies for the State's Circuit Breaker Program. The funds are distributed by the state through the RTA and then to the Service Boards. The budget for 2011 is close to $34 million; remaining unchanged from receipts expected in 2010.

RTA/Agency Revenue

This RTA revenue category includes sales tax interest, investment income, transit benefit program revenue, and grant funds from state and local agencies for regional coordination and technology initiatives which help defray the cost of these Agency sponsored programs. Total receipts are budgeted at $18 million for 2011; on par the 2010 estimate.

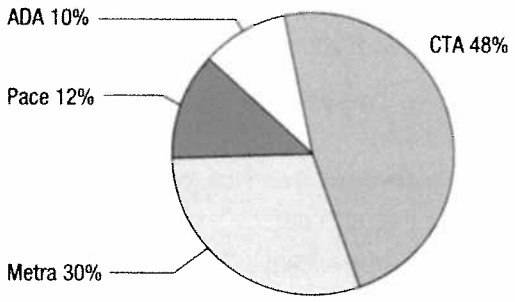
Total Expenditures

Total RTA expenditures (operating, debt service and capital) for 2011 are budgeted at $1,378 million. This amount is $59 million or 4.5 percent higher than the 2010 estimate of $1,319 million. Operating expenses of $1,140 million account for 83% of the expenditures, 16% or $226 million is used to cover the debt service on RTA bonds issued on behalf of the service boards for their capital programs and working cash borrowing needs, and $12 million or 1% is used to funds capital and technology programs (Exhibit 2-5 illustrates this distribution).

Operations Funding

The RTA's primary expenditure is the funding of Service Board operating deficits.

Exhibit 2-6: **2011 Funds for Service Operations - $1,073 million**



The RTA Board establishes "marks" for each Service Board to use in its proposed budget and program. The marks are set in September for the next fiscal (calendar year) period. Operating marks include a recovery ratio for the next budget year and operating funds for the budget and following two-year financial planning period. Operating deficits are primarily sourced from RTA sales tax, the State's PTF, and the City of Chicago's RETT. Other sources include federal funds, local program funds and intermittent use of fund balances.

RTA funds for operations are budgeted at $1,073 million in 2011. The CTA will use 48%, Metra 30%, and Pace 22% (12% for suburban bus service and 10% for regional ADA Paratransit service (Exhibit 2-6). The source of all funds and the amount of funds (Exhibit 2-7) used to balance each Service Board's 2011 operation deficit are identified in more detail in subsequent paragraphs.

CTA

The CTA's 2011 operating (deficit) funding need calls for public funding totaling almost $736 million. This figure includes statutory Part I and Part II sales tax (sales tax based on formulas set by state law) totaling nearly 382 million, $128 million from discretionary RTA funds (Part I sales tax and PTF funds the RTA receives for operating and capital expenditures as set forth by state law), $24 million from the City of Chicago RETT and the corresponding 25% or $6 million statutory Part II PTF, and $196 million from Federal 5307 Preventive Maintenance Funds. (Note: City of Chicago RETT funds flow directly from the City to the CTA and therefore are not included in the revenue or funding figures on Exhibit 2-3).

Metra

Metra's deficit funding for operations in 2011 is budgeted at $337 million. Metra will transfer $60 million of Federal capital Funds to operations

Exhibit 2-7 **2011 Service Board Deficit Funding** (dollars in thousands)

	2011				
			Pace		
Service Board	**CTA**	**Metra**	**Suburban Service**	**ADA**	**Total**
Operating Revenue	602,097	297,300	49,802	9,994	959,193
Operating Expense	1,337,755	634,202	183,320	120,656	2,275,933
Operating Deficit	**735,658**	**336,902**	**133,518**	**110,662**	**1,316,740**
Funding					
RTA Sales Tax (Part I)	271,850	229,294	72,617	-	573,761
RTA Sales Tax (Part II)	109,356	88,852	29,617	92,921	320,746
RTA Discretionary Funds	128,252	-	535	-	128,787
RETT/PTF	30,000	-	-	-	30,000
RTA Community Mobility and Job Access	-	-	26,085	-	26,085
Federal Funds	196,200	60,000	2,000	-	258,200
Additional State Funds - IDOT MOU	-	-	-	8,500	8,500
Other (1)	-	(41,244)	2,664	9,241	(29,339)
Total Funding for Operations	**735,658**	**336,902**	**133,518**	**110,662**	**1,316,740**

(1) Other: Metra's plan to fund operations provides a balance of $41.244 million available for capital investment, on-going programs and continuing operations commitments. Pace's suburban service amount includes CMAQ and JARC grant funds of $1.935 million, 235 thousand of unspent ICE funds, and prior service board funds (PBV) totaling $493 thousand. The ADA Paratransit amount is ICE funds used to balance the deficit as specified in Ordinance 2010-121.
