

**VETERAN'S PARKWAY, SPRINGFIELD  
WETLAND COMPENSATION SITE**

**ISGS #09**

FAP 662

Sangamon County, near Springfield, Illinois

**Primary Project Manager: Geoffrey E. Pociask**

**Secondary Project Manager:** not assigned

**SITE HISTORY**

- Spring 1997: ISGS initiated water-level monitoring to determine pattern of water-level fluctuation in the ponded area. Water in the ponded area was monitored throughout most of the growing season in 1997. Water-level increases were strongly associated with storm events. Upon determining the relationship between water levels in the pond and the adjacent creek, monitoring of the pond was discontinued in Fall 1997.
- July 1999: Water-level monitoring for the purpose of determining the extent of wetland hydrology was initiated at the request of IDOT. Three "S" wells were installed in the shallow exposed shelf in the northwestern corner of the excavation. A surface-water data logger was re-installed to monitor pond water levels.
- November 2003: Project completed, IDOT requested monitoring be terminated. All monitoring instruments were removed.
